"To sell, improve, cultivate, farm, lease, let and otherwise dispose of real estate; to buy, sell and raise live stock; to locate, plat and improve townsites; to dig, bore or drill wells and make tunnels; to file upon, sell, purchase and appropriate water and water rights; to construct, purchase and maintain dams, ditches, pipelines, flumes, aqueducts, tunnels and reservoirs; to construct, acquire, lease, purchase, own and operate power and electrical plants; to purchase, construct and operate machinery and mechanical devices for the purpose of generating, transmitting and receiving electricity, power, light and heat; to erect, equip and operate a beet sugar factory; to purchase, own and sell personal property and to carry on a general merchandising business; to subscribe or donate funds, real estate or property to aid in the building of school houses, churches, or other public improvements for the promotion of the colonization of the property of said corporation or the improvement of Owens Valley; to borrow and loan money; and to do each and every kind of business above mentioned." etc.

The capital stock is $200 000. Los Angeles the principal place of business. The Directors named are T. E. Newlin, Los Angeles; Wm. E. Cox, Pasadina; W. V. Coffin, Whittier; W. H. Holabird, Los Angeles; Alvah Starbuck, Whittier.

Following the above the County Recorder filed for record sixty-five conveyances, being United States patents to individuals and their deeds to the Inyo Land Company, which is the Nevada corporation generally known as the Eastside or Inyo Canal Company. Then, through Trenmor Coffin, its President and attorney in-fact, that company transfers the entire property to the William Penn Colonial Association of California.

It consists of forty-four miles of main irrigating canals now operating and the surveyed line to the lake, together with 11,547 acres of land. The consideration was $150 000, revenue stamps to the amount of $73 being attached to the deed.

Upon request from Mr. Coffin, who has been at Los Angeles on the business, Mr. F. McIver yesterday formally turned the canal over to Wm. E. Cox, Esq., attorney and general manager of the new association. Mr. Cox stated to this scribe that he had continued the Reward Mining Co.'s lease, including power for the additional ten stamps to their mill; also, that during the fall the canal would be thoroughly cleaned out.

Section 2, T. 15 S., R. 36 E.—which is about three miles north of the Lone Pine Station—has been reserved for and will soon be surveyed out for a townsite.

The Company expects to do considerable advertising on this Coast and in the East, but lands will be sold to actual settlers only, who may come along singly or collectively.

Informing an Exchange

From the Mojave Tomahawk: "There is a concentrator and some other mining stuff in the Mojave yards for C. H. Cram, the Fairmont merchant. It is to be used on a pile of tailings at an old Inyo county mine somewhere near Lone Pine."

The "mining stuff" referred to is destined for the mill at Old Coso, which has recently passed into the hands of Mr. Cram, who purchased it from Mr. De Renzie. Locally, the property is perhaps better designated by referring to its builders—John C. Eddy and Jack Wilson. The present manager in charge is Mr. J. G. Kitchline. The mine, which was purchased from Ramon Canas, is situated on the northern end of the Coso mountains, some fourteen miles from Keeler and in plain view of Owens Lake. It is about ten miles from the mill and a new road is now being made from the mine to connect with that leading to the mill at the old town of Coso and its idle gold mines. A short distance up the canyon from that point is the site of the first reduction works ever erected in all of what is now Inyo County—the Josephine mill, which was burned by the Indians in 1862. To effect the best southern connection, this resumption of work will probably result in the reconstruction of the original road from Coso to Coso Hot Springs, which, with roads now in use, will connect Darwin with Little Lake, on the stage route to Mojave.

"In Shepherd canyon, an old timer Fitzgerald by name, was caught by the flood and swept into the unknown world. In this canyon is where our friend, Millspaugh, has just gone, carrying a number of men, his wife and one other lady, and a lot of mining machinery. Nothing has been heard of or from them, but we are hoping that none were injured."

Fitzgerald was not within thirty miles of Shepherd canyon, at which point the storm did no material damage. Brief reference to the new mining operations at that point is made in another item.

The Cerro Gordo cloudburst, which established new street grades in the town of Keeler, effected some damage not heretofore mentioned. About two hours before the freshet, there had been unloaded six car loads of lumber, most of which was was washed lakewards and recovered in a badly damaged condition. The material, comprising about 40,000 feet, has by this time been started by teams to its destination at the head of Shepherd canyon, about 47 miles from the railroad ending at Keeler. This new mining operation is being conducted by Mr. A. N. Millspaugh, of Los Angeles, who has recently purchased a number of claims the transfers which have not yet been filed for record. From this locality was obtained the iron used in the Modock furnaces for fluxing the rich "dry" silver ores of that famous camp, and it has since been asserted that this flux alone accounted for most of the gold that was in the "base" bullion sent to Selby.

The Fair Track and Park Program.

FIRST DAY—SEPT. 24.

Trotting, 2:30 class, 2 in 3; 1st $75, 2d $25.

Trotting, single mile, untried; 1st $50, 2d $25.

Running, vaquero race, 1 mile; free for all vaquero horses, race horses barred; horses to be ridden by owners, with full vaquero outfit; prize $40 Nelson saddle.

Baseball game.

SECOND DAY.

Trotting, 3-minute class, 2 in 3; 1st $75; 2d $25.

Running, Indian horses, 1 mile; 1st $15; 2d $5.

Running, ½-mile dash; 1st $50; 2d $10.

Baseball game.

THIRD DAY.

Running, mile dash, free for all; 1st $75; 2d $25.

Trotting, single mile, single buggy horses; must draw top buggy and never been started in any race; 1st $25, 2d $15, 3d $10; entrance fee, $2.50; no distance.

Walking match, draft teams to farm wagons, to haul driver and load of 3000 lbs.; 1 mile; 1st $15, 2d $10; 3d $5; no entrance fee; three or more teams to enter.

Baseball game; prize for the series, $150.

FOURTH DAY.

Trotting, free for all, 1 mile, 3 in 5; 1st $75, 2d $15.

Bicycle relay race, 5 miles, 5 riders to team; 1st team $25, 2d $10; no entrance.

Running, 1-mile dash, $50.

Ladies' tournament; 1st $15, 2d $10, 3d $5.

Entrance fee 10 per cent of purse, unless otherwise stated, in all races. Three or more to enter, to or more to start.

An Old Mine Revived.

Messrs. Geo. F. Willis and J. C. Roeper have leased for a term of two years and four months, and secured a bond thereon, the old Green Monster mine, which is situated at the base of the Inyo mountains directly east of town.

The property is owned by the Independence Mining & Milling Co., the directors and stockholders being D. C. Riddell, Henry Krebs, I. N. Thorne, Jas. Kane and J. Raum. This company was organized about twenty years ago, the original history of the mine running back into the very earliest days. The mine being patented was allowed to lie idle and in the shuffle became well nigh forgotten.

The principal work, however, was done in the early '70s by Supt. Wingard and later by Henry Krebs. Some six or seven hundred feet of tunnel was opened on a 20-foot ledge and they run away from that, finally recovering ore bodies by a crosscut. The principal value is copper, the low price of which at that time, together with prohibitive transportation charges, then rendered the property unprofitable. It is the most accessible mine in the county, as a half mile of track would make it possible to run the ore directly into the cars.

The leasers expect to have a trial shipment on the road next week, and should the returns prove satisfactory will arrange to make regular shipments in quantity.

Al. Staudinger, the marble worker, gave this office a call on Wednesday. It is his opinion that the Marble Company will resume active operations at the quarry early this fall. One of the chief difficulties encountered in handling the superb product lies in the fact that the railroads will and do haul Vermont marble over 3000 miles to San Francisco at a lower rate than the S. P. will deliver Inyo marble at the same point, on a haul of 500 miles.

Under the summer-day quiet of this burg for the past two weeks has been a strong current of discussion of the concerted and successful effort made toward discouraging whisky-selling to Indians. As a result of orders from an organization signing its notice "Committee of 145," four men have left for other localities, the list including Jesus Coronado, Manuel Leon, Peter King and a Chinaman. Ordinary prudence would suggest that others who have leanings toward this traffic be warned by the banishment of these men.—Register.

DIED.

CONTRES—At Lone Pine, August 27, 1901, Louis Contres, a native of California, aged 17 years.

Time and Telephone Work Wonders.

"I was startled the other day and in an entirely new way," said a prominent electrical engineer. "The use of the telephone has become so much a part of my life that in talking with my friends and acquaintances every few days I apparently kept up the acquaintance as of old, when I used to see them more regularly. A few days ago I had occasion to visit an old time friend of mine with whom I had talked probably once a week or oftener for the past three or four years, but whom I had not seen during that period.

"When I met him, I was startled. His black beard had turned gray, almost white, and he had changed in other respects, as was natural, during the three or four years of that period, yet through the use of the telephone I had in my mind's eye seen him as of old every time I had talked with him, and you may imagine how surprised, even shocked, I was to see this change in him.

"Did you ever have a similiar experience? I imagine the increasing use of the telephone causes many of them. You hear the usual voice on the telephone and mentally picture the friend as he looked when you saw him last, which may have been a year or several years in the past."—Electrical Review.

The Florida Razorback.

The Florida "razorback" is the hog indigenous to this climate and soil. He is usually large of limb and fleet of foot, being the only known porker that can outrun a darky. He has a tail of wondrous length, which, while he is in active motion, he twists into the tightest corkscrew, but with which while quietly feeding he raps his leathery sides much in the same manner that the docile cow uses her tail.

He is self supporting. He earns his own living and thrives equally well in the highwoods, in the flatwoods, in the hummocks and in the marshes. He subsists upon anything he can find above the earth or underneath its surface. He has a clear, farseeing eye and is very sensitive of hearing. Nature has equipped him with a snout almost as long as the beak of the wild pelican of Borneo, with which he can penetrate the earth many inches in quest of worms, snakes and insects.

He is the most intelligent of all the hogs and is likewise the most courageous. He has been known to engage in mortal combat with a coon for the possession of a watermelon and to rend asunder a barbed wire fence.—Forest and Stream.

Hints For Smokers.

Here is a good tip for a smoker: The best pipe grows foul sometimes, and the various patent cleaning devices are of little use in making it fresh. But if you pack the bowl tight with grass or hay and lay the pipe aside for a few days you will have it as sweet as when it was new. Talking about smoking, here is a good idea for lighting matches: Don't light them on your trousers, for you'll burn slits in them, nor on your shoe soles, for you'll rub the heads off. The plan is to rub them on a piece of paper—a folded newspaper, an envelope, a ticket. The silica in the paper acts like sandpaper.

Many people can't smoke a dozen cigarettes without getting a sore throat. Inveterate cigarette smokers are frequently troubled with a perpetual cold in the head. It is not the smoke that is to blame, but the dust. Now, if you use a cigarette tube—amber, cherry or cardboard—a tiny bit of cotton wool in the bottom of it will catch every particle of dust. Try this, and you'll have no more sore throats. But you may not enjoy the smoke.—Exchange.

When Hurry Was the Fashion.

The following extract from the London Times of May 14, 1801, gives an interesting picture of the good old days: "It is now the high fashion to run, or at least to trot, through the streets at a rate of six miles an hour. A running walk is absolutely necessary for any young man who has the least pretension to ton. You must lounge in a hurry and saunter with expedition. It is an old proverb, the more haste the worst speed, but Bond street daily shows us the more hurry the less to do. When we see our idle youths riding race horses, walking for wagers or boxing for fame, we must agree with Horace that 'strenua nos exercet inertia.'"

A Texas Gate.

A correspondent of Iowa Homestead sketches a Texas gate which he says is a good gate and when hung right

A HANDY GATE.

works easily. It is a good gate for a pasture when you want to put through a good many head of stock at once, or is a good gate where a division fence comes and you want a gate into each field. It can be made any width to suit. When the gate opens, the wire (an old clothesline) will wind around the top of center pole, and when relieved the weight of the gate closes it. It is 24 feet, but can be made any width. At A may be seen one of the hinges which holds the gate to the center hole.

One Thing and Another.

From water measurements made at Wheatlands, Wy., it appears that the greatest amount of irrigation occurs in June for all crops except potatoes and alfalfa, which receive the most water in July, and that whether a farmer needs the most water in June or July depends on the kind of crop of which he has the largest area.

Sugar beets are said to reach their highest degree of perfection commercially under irrigation.

Cold curing of cheese (60 degrees and below) is found decidedly the best by one of the stations.

Partridge Wyandottes are a new variety of the popular Wyandotte, a cross of Golden Wyandotte and Partridge Cochin.

A mixture of wood ashes and kerosene is one of the protections against striped cucumber beetles.

Couldn't Find the Corkscrew.

They live pretty well out, in a handsome home, but not near enough to a fire station to be "handy in case of accident." As the house is their own and their all the husband had been somewhat in terror of a blaze for some time. So he laid in a stock of hand grenades, those little glass bottles which are supposed to put out any fire that may start.

One day the blaze came. The cook started it in the kitchen. Then she fled howling to her room and began to pack her trunk. The wife prides herself on her ability to keep her head, so first she stepped to the telephone and turned in the alarm, and then she went for the hand grenades.

When the fire department did arrive, the men found her standing over the sideboard rummaging through the drawers. Copious streams of water soon drowned the blaze and ruined the lower floor, and the department left. Still she rummaged. Her husband came, called by the phone girl. He saw her there.

"Why, my dear girl," he said, "why didn't you use the hand grenades and stop the fire as soon as it started? Then the whole lower part of the house wouldn't have been soaked."

"John," she responded icily, "if you would just keep the corkscrew where it belongs, I could use the horrid old grenades. But it is gone, and how was I to open them?"—Kansas City Journal.

The Grand Medicine Man.

The ceremony of the Grand Medicine is an elaborate ritual, covering several days, the endless number of gods and spirits being called upon to minister to the sick man and to lengthen his life. The several degrees of the Grand Medicine teach the use of incantations, of medicines and poisons, and the requirements necessary to constitute a brave.

When a young man seeks admission to the Grand Medicine lodge, he first fasts until he sees in his dream some animal, the mink, beaver, otter and fisher being most common, which he hunts and kills. The skin is then ornamented with beads or porcupine quills, and the spirit of the animal becomes the friend and companion of the man.

The medicine men have only a limited knowledge of herbs, but they are expert in dressing wounds, and the art of extracting barbed arrows from the flesh can be learned from them.

In olden times—yes, to within the memory of living Ojibways—the medicine man at the funeral ceremony thus addressed the departed: "Dear friend, you will not feel lonely while pursuing your journey toward the setting sun. I have killed for you a Sioux, [hated enemy of the Ojibways], and I have scalped him. He will accompany you and provide for you, hunting your food as you need it. The scalp I have taken—use it for your moccasins."—Open Court.

LEGAL.

SHERIFF'S SALE.

BY VIRTUE OF AN EXECUTION, ISSUED out of the Superior Court of the County of Inyo, State of California, and to me directed and delivered, for a judgment rendered and entered in said Court, on the 23d day of May, 1901, in favor of Friederike Rhine and against George Vornberg, I have levied on the following property, to wit:

The "Corona" Mining Claim, situated in Mountain Spring Canyon, about one half mile northwest of Wild Rose Canyon and about one-fourth mile north of the Canyon Wagon Road, in what is sometimes called Argus Mining District, in Inyo County, State of California.

Notice is hereby given that on the THIRTY-FIRST day of AUGUST, 1901, at 10 o'clock a. m. of that day, in front of the Court House, in the County of Inyo, I will sell all the right, title and interest of said George Vornberg in and to the above described property, at public auction, for cash lawful money of the United States in hand, to the highest and best bidder, to satisfy said execution and all costs.

A. M. GIVEN,
Sheriff.

Dated the 6th day of August, 1901.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

J. J. WALL, Plaintiff vs. SURPRISE MINING AND MILLING COMPANY, a Corporation, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County of Inyo.

MACK & FORBES and W. A. HARRIS Attorneys for Plaintiff, Independence, Cal.

The People of the State of California send Greeting to Surprise Mining and Milling Company, a Corporation, Defendant.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the County of Inyo, State of California, within ten days after the service on you of this Summons—if served within this County; or within thirty days if served elsewhere

And you are hereby notified that unless you appear and answer as above required, the said Plaintiff will take Judgment for any money or damages demanded in the Complaint, as arising upon contract, or he will apply to the Court for any other relief demanded in the Complaint.

Given under my hand and the seal of the Superior Court of the County of Inyo, State of California, this 25th day of April, 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] Superior Court, County of Inyo. J. J. Wall, Plaintiff vs. Surprise Mining and Milling Company, a Corporation, Defendant.

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains of Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,100 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

To Mothers of Large Families

In this workaday world few women are so placed that physical exertion is not constantly demanded of them in their daily life.

We make a special appeal to mothers of large families whose work is never done, and many of whom suffer, and suffer for lack of intelligent aid.

To women, young or old, rich or poor, we extend an invitation to accept free advice. Oh, women! do not let

MRS. CARRIE BELLEVILLE.

your lives be sacrificed when a word of advice at the first approach of weakness, may fill your future years with healthy joy. Address a letter to Mrs. Pinkham's Laboratory, Lynn Mass., and you will not be disappointed.

"When I began to take Lydia E. Pinkham's Vegetable Compound I was not able to do my housework. I suffered terribly at time of menstruation. Several doctors told me they could do nothing for me. Thanks to the Pinkham advice and medicine I am now well, and can do the work for eight in the family.

"I would recommend Lydia E. Pinkham's Vegetable Compound to all mothers with large families."—MRS. CARRIE BELLEVILLE, Ludington, Mich.

Wholesale Bathers.

As regards facilities for bathing, which every Filipino demands, there is the open bay, with its miles of clean salt water, ready at any time of the day or year for a free bath. The genuine Filipino is half amphibious, loving the water and swimming like a fish. An example of this may be seen in the large tobacco factories of Binondo, with their 10,000 employees. When the day's labor is done, the thinly dressed workmen, men, women and children, speed laughingly to the bay, plunge into the waiting waves and come out clean, cool and refreshed.—Ledger Monthly.

Was It a Compliment?

It was at the end of her first week in the new school, she having been transferred from down town, that the teacher asked little Wilhelmina how she liked the new school. The little one's face brightened up as she answered:

"Oh, I like it first rate, and I like you too."

"That's very nice; but why do you like me?" queried the teacher.

"Oh, you see," said the little pupil, "I always did like a bossy teacher."

CURE SICK HEADACHE.

A Terrible Talker.

A well known Milwaukee lawyer with a weakness for long stories was a visitor at Madison "once upon a time," as the story books put it.

He saw upon the register of the Park hotel the name of Colonel Gabriel Bouck of Oshkosh and decided that he was in duty bound to call upon that Nestor of the Wisconsin bar, especially as they had both occupied the position of grand master of the grand lodge of Wisconsin Masons.

He called on Mr. Bouck in his room in the hotel and found the Oshkoshian in his shirt sleeves, yawning. He began on Masonry. First he gave his views of the brotherhood, from the building of Solomon's temple "without sound of tool or iron" down to date, and then he started in on the chapter. Finally, startled by an extra yawn, he broke off his story with:

"Well, Gabe, as I have been appointed trustee for the Asylum For the Deaf and Dumb I think I had better go to bed. I have to take an early train for Janesville."

"For land's sake! Is it possible that you are going to learn to talk with your hands too?" came the blunt reply from the old lawyer.—Milwaukee Sentinel.

Which of Your Eyes Cries?

It seems a positively absurd question to ask, "Which of your eyes cries?"

In an everyday, common or garden cry it is well known that salt tears make their appearance and rush away down the face seemingly as fast from one as from the other, whichever the "other" may be, but if careful note is made, more especially with emotional people, it will be found that one of the eyes has a special emotional tendency and often opens the tear valve before its companion has decided upon the unhappy event.

Probably the best method of discovering the emotional eye is to attend a pathetic stage play and when the weeping period comes along look out for tear No. 1.

The writer attended such a piece recently and was somewhat astonished to find that all his grief came from the right eye.

Whether the solution to the problem is to be found in the fact that he was leaning on his right arm must and can only be decided by an expert.

A Balloon Ascensionist Killed.

A balloon ascensionist was recently killed while making one of his daring trips. Life is too valuable to trifle with in foolhardy adventures. It is better to employ ourselves in peaceful pursuits where we may be secure. Then if we take care of our health, we can live to a good old age. The best means of promoting health is Hostetter's Stomach Bitters. This medicine cures dyspepsia, indigestion, constipation, flatulency and insomnia. Be sure to try it.

Clara—Evidently Mr. Sweetser is head over heels in love with you, Edith. Edith—Nonsense! Clara—Oh, but it's a fact. He actually said he delighted to hear you sing.

A Pure, Vegetable Compound.

No mercurial or other mineral poisons in Cascarets Candy Cathartics, only vegetable substances, late medical discoveries. All druggists, 10c, 25c, 50c.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents

That Cough needs Fryer's Abietene Cough Balsam.

How Banana Trees Grow.

It is a peculiar fact that but one bunch of bananas grows on a tree. After the fruit has been cut the tree is then cut down to the ground, and from the stump another tree sprouts which bears another bunch the following year. The greatest trouble of farmers is to keep the farms clear of sprouts. They shoot up from the roots of the tree for a radius of ten feet and grow like weeds.

As the fruit is cut from the trees it is placed on the backs of little pack donkeys and transported in this way to the coast. One donkey can carry from three to six bunches, according to the size of the bunches and the distance from the coast. In the season at Baracoa there are more than 3,000 donkeys that stretch along in a line for miles, plodding toward the coast with their loads of bananas.

Don't Dine Alone.

How many people dine alone? The restaurants all number solitary diners among their regular clientage. How many thousands of people, men or women, will eat a lone dinner or supper tonight in the cities and towns and hamlets of Christendom? The evil of eating alone is the subject of an earnest although cheerful warning from the London Lancet. The hygienic value of gregarious dining is insisted upon. The necessity of taking food in social fashion is an inherent racial sort of thing, and those who go against it for years usually have to pay for it with some of the ills of indigestion. Breakfasting alone is not bad for a busy generation, but dining alone is not a habit to be long continued, in civilization or out of it, without disastrous results.

CASTORIA

The Kind You Have Always Bought has borne the signature of Chas. H. Fletcher, and has been made under his personal supervision for over 30 years. Allow no one to deceive you in this. Counterfeits, Imitations and "Just-as-good" are but Experiments, and endanger the health of Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhœa and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

The Kind You Have Always Bought

Bears the Signature of

Chas. H. Fletcher.

In Use For Over 30 Years.

THE CENTAUR COMPANY, 77 MURRAY STREET, NEW YORK CITY.

GOOD Short Stories

Phillips Brooks once gave a new version of the "Jonah" story to a wondering skeptic, who said he doubted whether a whale's throat was large enough to swallow Jonah. "There was no difficulty," said the Bishop, "Jonah was one of the Minor Prophets."

In the days when Barnum's Museum was in the height of its popularity in New York, it was the custom of many people to bring their wives, children, and lunch-baskets, and make a day of it. This was not in accordance with Barnum's view of a profitable way to conduct a museum. One Saturday, when the army of picnickers were overcrowding the show and keeping others out, a brilliant idea occurred to Barnum. On a huge canvas he painted the word "Egress" in immense letters of green. This he placed over a doorway, and immediately attracted the attention of the crowd, which was just about to settle down for lunch. "Egress, egress!" cried the visitors; "faith! that's an animal we haven't see." "They found that animal," said Barnum, telling the story, "out in the street."

Many years ago, when Henry Labouchere was appointed to a diplomatic post somewhere in Europe, the British foreign office found that he was not at his post when he should have been. On making inquiries, they found that the new attache was at Berlin, many miles from his official destination; and his explanation was that, as he was not allowed traveling expenses and was not rich, he was walking to his office, and would reach the shores of the Bosphorus in due course. That was "Labby's" way of protesting against the non-payment of traveling expenses. His protest against pomposity was just as original. It was a pompous individual who called to see the British minister at Washington, D. C., when "Labby" was there. The minister was out, and the caller insisted on waiting. "Then pray take a chair," said the attache. After half an hour the pompous man grew impatient, and asked when the minister was expected back. "I don't know," said "Labby;" "he left for Europe this morning."

Some amusing instances of translators' misunderstandings are mentioned by the London Daily News. An Italian paper not long ago turned Kipling's "Absent-Minded Beggar" into a "Distracted Mendicant." A foot-note to the same version explained "son of a Lambeth publican" as a reference to Mr. Kruger! Another Italian editor, who translated a passage from an English paper about a man who had killed his wife with a poker, added an ingenuous foot-note to say: "We do not know with certainty whether this thing, 'pokero,' be a domestic or surgical instrument." In the French version of one of Scott's novels, a Welsh rabbit has to be dealt with. The translator, never having met with that article of food, naturally turned it into "un lapin de Galles," and in a foot-note explained that the peculiarly delicious flavor of the rabbits of Wales created a large demand for them in Scotland, whither they were exported in bulk that would compare with the trade of Ostend. The desperate expedient of the French translator of Cooper's "Spy," who had to explain how a horse could be hitched "to a locust," is also worth recalling. He had never heard of a locust-tree, and rendered the word by "sauterelle," or grasshopper. Feeling that this needed some explanation, he appended a foot-note explaining that grasshoppers grew to a gigantic size in the United States, and that it was the custom to place a stuffed specimen at the door of every considerable mansion for the convenience of visitors, who hitched their horses to it.

A STORMY WEDDING TRIP.

Adventures of a Newly Wedded Pair in a Little Boat.

The celebrated voyage around the world by Captain Josiah Slocum in his forty-foot sloop Dauntless has been matched by the wedding trip of Roy Ovaett, a lad of 19. Single-handed, Ovaett sailed an eighteen-foot sloop from Seattle to Seward City, which is near Juneau, Alaska. Then he put about and beat his way home again. Captain Slocum sailed with a boat. Roy Ovaett had scanty supplies, $10 in money, not a stick of spare canvas or a foot of extra spars, and a young wife to care for. That, in brief, is the story. Told in detail the narrative would make a book, says the San Francisco Call.

Ovaett is a modest young chap, with clear blue eyes and a frank smile. His wife is a beautiful young woman. She was Meg Goodell before her marriage, and the long months at sea have only added to the charm of her face.

The young couple were married early in last July, and a few days later the husband went to Frank Faber, who owns the Brighton boathouse, and rented a sloop named the Ultra. He told Faber he was going for a wedding trip, and the sloop was provisioned for a two weeks' cruise.

The Ultra left port on the 28th of last July. Three weeks later Faber received a letter from Allard Bay, in which Ovaett announced that he was going to take his wife to Alaska, and that he was not coming back.

From the day of the departure the Ultra was not spoken by any craft. She disappeared as completely as if she had sunk to the bottom of the Pacific. And that is what in time people came to believe was her fate.

Mrs. Ovaett, prior to her marriage, had lived with her grandmother, Mrs. Goodell, in a little cottage close by the water front. Mrs. Goodell gave up her grandchild as dead, and young Ovaett's family mourned for him as one lost to them forever.

Not long ago the Ultra sailed jauntily up the bay and dropped anchor off the Brighton boathouse. Many things happened during the long voyage to Alaska. There were storms and head winds. Provisions ran short—perilously short at times. Once they lived for two days on a handful of clams. On another occasion the Ultra staggered along in the teeth of a gale until her trysail parted, and for thirty-nine hours this boy stood at the tiller, holding her head close to the wind. Had the Ultra fallen off she would have upset.

Sitting in his cosy home, Ovaett told the story of his wonderful cruise along the shore of the north Pacific to Seward, Alaska. After working his way out into the ocean from Puget Sound, he took what is known as the inner passage to Alaska. That he was not wrecked a dozen times was due to vigilance and the numerous sheltered nooks along the irregular passage.

His two weeks' provisions were made to cover a much longer period by the practice of economy and the addition of fish and deer meat. Ovaett had no trouble obtaining plenty of fish, and when the meat larder ran low he resorted to the old-fashioned plan of "jacking" for deer. There are many places along the coast even now where deer may be killed with comparative ease. Ovaett had a gun with him and, owing to the necessity of making each shot tell, got good results.

The sloop touched at Allard Bay, from which point Mrs. Ovaett was sent home by steamer, while Ovaett sailed home without assistance.

FEW DIE OF OLD AGE.

What Becomes of the Dead in Nature.

Any one who has lived much in the open air must often wonder what becomes of all the animals and birds which die in the woods and fields. During the course of a whole year, the number of dead birds and animals seen is extremely small, and yet we know millions must perish annually. What becomes of them? Every wild animal's life is simply an everyday fight against violent death at the hands of some enemy. By day hawks sail overhead, and nothing seems to escape their wonderful eyes. By night owls fly with soft, muffled wings, and velvet-footed animals prowl everywhere. So it is merely a question of how long any animal or bird can delay the inevitable tragic end which must come to them. To realize how many small animals prowl through the woods by night, simply follow the bank of some small stream, where there are soft, muddy places; there you will find the tell-tale tracks in great numbers. These tracks tell how well the whole surrounding country has been hunted for quarry of all sorts.

Still, with all this evidence of mental powers used to foil their enemies of the woods, people will persist in speaking of animal instinct and human reason. Place man, with all his reasoning power, in the place of some animal or bird, and would his powers of mind save him from sudden death? Man is beginning to realize more and more fully that what he has of intellect is only a higher use and cultivation of what all nature possesses.

When an animal or bird becomes sick or old or infirm, it soon falls a prey to some of its enemies. It rarely dies a natural death when in the woods; for day and night its enemies are constantly about. What a wild animal's feelings must be, man cannot to-day realize, for he has gotten too far from his original savage state.—Louisville Evening Post.

Can Choose Our Enemies.

An open enemy is better than a gossiping friend. The story is told of a man in public life in Washington who once found himself surrounded by a host of self-appointed counselors, continually advising him, "as friends," of many astounding things, which a valued and lifelong intimate, also in public life, was alleged to be doing against him, says the Boston Globe. Bitterness beset the heart of the man when he heard that his friend had turned against him and he grieved.

Strangely enough, the friend was also grieving, for he had received tales which filled his heart with doubt of the loyalty of his lifelong friend. "The dog that will fetch will carry," says the old proverb; and the "friends" who had told tales to one of these men told the same sort to the other. They were politicians, place-seekers, hangers-on, who for their own ends employed gossip, and malicious gossip at that, to keep apart these two men.

But the plan did not work. The two men met, charged each other with coolness and finally learned that they had been the victims of tale-bearers. Then one of them said, "We can choose our enemies, but not our friends," and in saying it he enunciated a truth.

Clear the Tenements of Vice.

Speaking to the theme "A Better New York," W. H. Baldwin, Jr., chairman of the committee of fifteen, said that the keynote of civic purity is the purity of family life. "In New York," he continued, "there are 80,000 tenement houses and 2,300,000 people who live under laws governing tenement houses. Proper laws governing tenements are most important. So long as these evils exist and you and I don't move to help them we cannot expect a holy city. Let us demand that there shall be no form of vice in these houses. That is not politics. We are not interested so much in the older persons in the houses as we are in the children. It is our imperative duty to see that laws shall be enacted that will stamp out the tenement house evils."—New York Herald.

He Needed a Bath.

A young man who has a fine bird dog, was overheard bragging to his best girl the other day about the wonderfully keen scent of the animal. "Why," he said, "I wanted to go to the northwestern part of the county on business, and fearing that the dog would follow me I chained him up. I had been gone two hours and was fifteen miles from home when he broke loose and tracked me and found me merely by scent. What do you think of that?" "Well, I think you ought to take a bath," replied the young lady. And then he went home and licked the dog.

Initials.

Angelina—That was a lovely engagement ring you gave me last night, dear; but what do these initials, "E. C.," mean on the inside?

Edwin—Why—er—that is—don't you know? That's the new way of stamping eighteen carats!—London Tit-Bits.

After a boy passes ten, he grows so fast his father sighs every time he looks at him.

Impaired Digestion

May not be all that is meant by *dyspepsia* now, but it will be if neglected.

The uneasiness after eating, fits of nervous headache, sourness of the stomach, and disagreeable belching may not be very bad now, but they will be if the stomach is suffered to grow weaker.

Dyspepsia is such a miserable disease that the tendency to it should be given early attention. This is completely overcome by

Hood's Sarsaparilla

which strengthens the whole digestive system

The Deacon—Do you know what happens to boys who tell lies? Small Youth—Yes, sir; they gets off, sometimes, if they tells good ones.

I Will Give You $1000 If I Fail to Cure Any Cancer or Tumor I Treat

Before it poisons the glands or affects the bone. No knife, no pain, no pay until cured. An island shrub or plant makes the cures—the most wonderful discovery on earth today; 2000 Cancers cured on people you can see. A hard lump on the lip, face or anywhere is Cancer. Any lump in a woman's breast is Cancer. It seldom pains until past cure, and if large, it always poisons the glands in armpit and sides, then it is often too late and still no pain. Poor cured free if Cancer is small. Be sure to get my 126 page book, sent free, with symptoms, address and testimonials of thousands we have cured in California. Write them. Office, Dr. and Mrs. Dr. Chamley, 25 Third street, near Market St., San Francisco.

Lady (engaging a new cook)—"Are you sure you don't keep company with a policeman?" "Yes, I do, ma'am; but he's a very small eater."

BEST FOR THE BOWELS

If you haven't a regular, healthy movement of the bowels every day, you're sick, or will be. Keep your bowels open, and be well. Force, in the shape of violent physic or pill poison, is dangerous. The smoothest, easiest, most perfect way of keeping the bowels clear and clean is to take

A Forgotten Genius.

The history of wireless telegraphy would not be complete without some mention of Joseph Henry, America's greatest scientist, for it was he who first, in 1842, discovered the oscillatory character of certain electric discharges and who showed that these oscillations produced disturbances which could by suitable receivers be detected at distances of many rods and through intervening buildings, writes Professor Joseph Ames in The Review of Reviews. He even arranged an apparatus on this principle to respond to the lightning discharges of distant storms. The great genius of Henry was never more apparent than in his investigation of electrical discharges and their oscillatory nature. It is a lasting testimony to the ignorance among Americans of their own great men that the name of Joseph Henry was not included in the first 50 selected for the Hall of Fame of the nation.

Useful Cement.

A useful cement for mending earthen or stone jars, stopping leaks in the seams of tin pans or iron kettles or tightening loose joints of iron or wood is made by mixing litharge and glycerin to a thick cream. This will resist acids, heat and cold if the article is not used until the cement has hardened.

The Bill All Right.

"My dear sir, it strikes me that this is a pretty round bill."

"Yes, I have sent it around often enough to make it appear so, and now I hope to get it squared."—Baltimore Jewish Comment.

Needed a Chain.

A story is being told about a German who has a hotel far down town. An artist—one of those barroom artists who make pictures on mirrors with soap—called on the German the other day and asked for some work. "Well," the German said, "you might paint a brown bear on my sign. How much would you charge to do it?" "Two dollars," the artist answered. Thereupon the contract was made, and the bear was painted.

At the end of the job the artist said, "Don't you want me to paint a chain on the bear?" "Would you charge extra for that?" said the German. "Yes. That would cost $1 extra." "Then I can't afford to have it done." The artist departed. That night it rained, and, lo, in the morning the bear had vanished from the sign! The rain had washed it away.

The German sent for the painter at once. "My bear," he said reproachfully, "is gone." The other answered, "Well, I wanted to put a chain on it, didn't I?" The German then handed out $3, $2 for the painting of another bear, the third for a chain to make the picture permanent.

The chained bear now remains upon the sign impervious to the weather.—Philadelphia Record.

A Truly True Dog Story.

Here is an Australian dog story from the back blocks: A sheep dog had been brought from a station into a small township and fretted after the sheep. One day not a child was to be seen about the place, and as evening came the township became alarmed. Search was made, and the juveniles were found huddled up in the corner of a paddock, where the dog had rounded them up. He had no sheep to look after, so he took the children. The narrator of this lie guarantees it as a fact.

It Works Both Ways.

"You are an ungrateful child! If it hadn't been for you, I could have gone to the mothers' congress."

"If it hadn't been for me, you couldn't have gone, because you wouldn't have been a mother."—Cleveland Plain Dealer.

An Indigestible Man.

Kitty—But he is such an indigestible man.

Jane—Indigestible?

Kitty—Yes; he always disagrees with me.—Detroit Free Press.

It was a quarter of a century before the signing of the American Declaration of Independence that the first theater was opened in New York.

Fortune knocks once at every man's door, but misfortune drops in frequently without knocking.—Chicago News.

Adams' Sarsaparilla Pills

act gently and promptly on the liver, kidneys, stomach and bowels. They cure sick headaches, constipation, biliousness, stomach disorders, sallow complexion and are the only pills that will also purify and enrich the blood. Sold in 10ct. and 25ct. boxes by all druggists. Every box guaranteed.

Sarcasm.—The Boston little boy was very, very angry. "Emerson," he cried, seizing his companion by the hair, "I've a mind to civilize you within an inch of your life."

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

GEORGE WASHINGTON'S QUEUE.

It Hid a Luxuriant Suit of Straight and Very Dark Hair.

The Father of his Country concealed a luxuriant suit of hair beneath his queue wig. Many now wish the old fashion were in vogue, to conceal thinned hair or baldness. Yet no one need have thin hair nor be bald, if he cure the dandruff that causes both. Dandruff cannot be cured by scouring the scalp, because it is a germ disease, and the germ has to be killed. Newbro's Herpicide kills the dandruff germ—no other hair preparation will. "Destroy the cause, you remove the effect." There's no cure for dandruff but to kill the germ.

Fryer's Abietene Cough Balsam saves Doctor Bills.

A Chance for Our Young People.

Under the management of the new president, Barton Cruikshank, M. S., the Cogswell Polytechnic College of San Francisco, with its magnificent equipment and large endowment, is offering courses, tuition free, that are not to be obtained elsewhere. We call the attention of our readers to the music courses for piano instruction and for voice culture, to the shop courses, art courses, courses for surveyors, steam engineers, etc., all free, except for a fee of five dollars per term of twenty weeks to pay for materials used.

For Consumption try Fryer's Abietene Cough Balsam.

YOU KNOW WHAT YOU ARE TAKING

When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

Advice to Students.

To Whom It May Concern: The best College to attend for the purpose of becoming practical Stenographers is, in our judgment, the Gallagher-Marsh, Parrott Building, S. F., Cal. Ernest A. Gurvin, L. A. Washburne, W. J. Nicholson, Official Reporters Supreme Court, State of Cal. Send for catalogue.

SCHOOL CLOSED

The Teacher Injured in a Runaway Accident and Reported To Have Gone Insane.

In October, 1896, one Monday morning the Rushford school did not open and it was reported that the teacher had gone insane. The physician in attendance pronounced the trouble nervous prostration and said that school work was mentally and physiacly impossible. The teacher, who is now Mrs. L. A. Gullickson, of Rushford, Minn., in a recent interview published in the Star of that place, gives the true story of the event.

"To begin at the beginning," she said, "when I was about seven years of age, a sudden fright brought on a dreadful condition of nervousness. When, in 1896, I was injurd in a runaway accident, this, combined with my former trouble, made me so ill that I was unable to open school the following Monday."

"Was it true that you were reported to be insane?" asked the interviewer.

"Yes, and the members of my family thought I was becoming so. Words do not express the agony I endured with my head and eyes. The least noise would cut through my nerves like a knife. I was hot and cold by flashes, had piercing pains in my temples and in the back of my head and a red mist was constantly before my eyes.

"I was dizzy and faint with fearful nausea, which nothing relieved. I could take no solid food for ten days, but lived on milk and lime-water. When the doctor had treated me for nearly six weeks without helping me, Mrs. J. Webster, a nearby friend, recommended Dr. Williams' Pink Pills for Pale People. I took them faithfully for not quite three months and was perfectly cured. I have never heard of a single case where they did not prove beneficial and know of several persons who have taken them successfully for rheumatism."

Dr. Williams' Pink Pills for Pale People are not like other medicines. They act directly on the blood and nerves. This makes them invaluable in such diseases as locomotor ataxia, partial paralysis, St. Vitus' dance, sciatica, neuralgia, rheumatism, nervous headache, the after-effects of the grip, palpitation of the heart, pale and sallow complexions and all forms of weakness either in male or female. At all druggists or direct from Dr. Williams Medicine Co., Schenectady, N. Y. Price 50 cents per box; six boxes $2.50.

Beware of Ointments for Catarrh that Contain Mercury

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is tenfold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally, and made in Toledo, Ohio, by F. J. Cheney & Co. Testimonials free.

Sold by Druggists, price 75c. per bottle.

Hall's Family Pills are the best.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

His presents Desired—Mr. de Trop (at the door)—Is Miss Mabel at home? Maid—No, sir; but she says if that's a box of candy she saw in your hand ye might have it.

What S. S. S. Does for Children

Children are constantly exposed to all sorts of diseases. The air they breathe is filled with germs, sewer gas and dust from the filthy streets are inhaled into the lungs and taken into the blood. At the crowded school rooms and other public places they come in contact almost daily with others recovering from or in the first stages of contagious diseases. You can't quarantine against the balance of the world, and the best you can do is to keep their blood in good condition, and thus prevent or at least mitigate the disease. You have perhaps learned from observation or experience that healthy, robust children (and this means, of course, children whose blood is pure) are not nearly so liable to contract diseases peculiar to them, and when they do it is generally in a mild form. On the other hand, weak, emaciated and sickly ones seem to catch every disease that comes along. This is because their blood is lacking in all the elements necessary to sustain and build up the body. Poisons of every description accumulate in the system, because the polluted and sluggish blood is unable to perform its proper functions.

Such children need a blood purifier and tonic to give strength and vitality to their blood, and S. S. S., being a purely vegetable remedy, makes it the safest and best for the delicate constitutions of children. S. S. S. is not only a perfect blood medicine, but is pre-eminently the tonic for children; it increases their appetites and strengthens the digestion and assimilation of food. If your children have any hereditary or acquired taint in their blood, give them S. S. S. and write to our physicians for any information or advice wanted; this will cost you nothing, and will start the little weaklings on the road to recovery. Book on Blood and Skin Diseases free.

A BALLAD OF LOVING.

"Oh, Love will find the way, dear lass;"
Quoth Colin to his queen,
As swiftly o'er the border side
They fled to Gretna Green.
Fast, fast behind her father rides,
But naught the lovers stay.
The goal is reached, the knot is tied,
For Love has found the way.

"Oh, Love will find a way, dear lass"—
That was in days of old;
Pray tell me, dainty, modern maid,
Have lovers' hearts waxed cold?
If such a summons came to-night,
Would you the call obey
And trust a voice that laughing, cried
"Oh, Love will find the way."

"Oh, Love will find the way, dear lass—"
Why doubt the saying's truth?
For what can check the passion tide
'Twixt love-sick maid and youth;
Yes, Jill will nod assent to Jack
Whene'er he choose to say:
"Come fly with me, the world is wide
And Love will find the way."

"Oh, Love will find the way, dear lass,"
And youth must have its due,
Though oft the story has been told
The tale is ever new;
Just as it was in by-gone years
So shalt it be to-day,
When artful Cupid tempts a maid
Sweet Love will find the way.
—Chicago Inter Ocean.

THE WEDDING CORONAL

A VERY small room, in a very small house, with a very small fire burning in the grate—this is our scene. There was no ornament, unless the pure white curtains, and the yellow dimple of the April sunshine on a somewhat faded carpet might be characterized as such, and the fresh loveliness of two girls who sat in the apartment struck you like an incongruity, it seemed as if they must be there by mistake!

"Half a pound of beefsteak, Ruth, and a few potatoes, and a loaf of bread; that will do, I think," said the elder, thoughtfully, to a tall, gaunt old woman with a little market basket on her arm, who stood in the middle of the room, as if awaiting orders.

"Ain't that are a pretty clus' dinner for three, Miss Josephine?" said Ruth, giving her rusty black bonnet an extra twitch.

"I know it, Ruth," laughed the girl; "but we must regulate our expenditure according to our resources, you are aware. See!"

She held up a lank little purse as she spoke. Ruth smiled too—but she was looking, not at the purse, but at Josephine Carey, standing where the sunshine threaded her brown curls with gold and melted into hazel wells of light under her long dark lashes.

But she was not as regally beautiful as her sister. As Cecile Carey sat in the antique easy chair by the smoldering remnant of fire, it would scarcely have been difficult to fancy her a crowned queen.

She looked fretfully up from her embroidery as Josephine spoke.

"Ruth, do bring a few oranges for dessert—I cannot live on this beggarly diet!" she said.

"We cannot afford it, Cecile," interposed Josephine, gently.

Cecile pouted.

"You don't care whether I starve or not."

Josephine's lip quivered.

"Dearest Cecile! is it not better to bear up cheerfully and strive not to repine?"

"As if one could help repining in this dismal hole! And then since papa's bankruptcy and death our friends have all deserted us—of course, they would not come to such a place as this."

"Of course, then, they are not worth our regrets. But, Cecile, you should not say all. Mr. Archcliff has been here several times."

"Yes," said Cecile, a little consciously, as if she would have added, "And I defy him to stay away while I choose to keep him with a smile or a glance. "But, then, Josephine, he is our lawyer."

"The law business has long since come to an end," said Josephine, archly. "Never mind, Cecy, we won't investigate his motives too closely; and now, where is my sewing?"

Cecile looked rather scornfully at the plain calico dress which the busy fingers of her sister were working on.

"Things will be different when I am Mrs. Archcliff," she mused to herself. "I wonder if he will come here to-day; he has been absent since Wednesday. I wonder——"

And she resumed her embroidery, while her thoughts wandered away through the pearly colonnades and mist-bright homes of a Chateau d'Espagne, whose minarets and spires gleamed through the far-off sunshine of the future.

The sunshine was creeping up the wall like an ebbing tide of gold, and the coarse indices of the wooden mantel clock were pointing to somewhere about 5, that afternoon, when Ruth put her stiff muslin cap into the room where Cecile was dozing over a book, and Josephine still at work over the calico breadths.

"If you please, young ladies——"

"Well?" drawled Cecile, sleepily.

"Mr. Archcliff is here."

And, without further ceremony, she ushered the lawyer into the apartment.

A tall, stately man, somewhere between 30 and 40, with dark, heavy hair, straight features, and eyes full of quiet, thoughtful strength, he entered with the same chivalrous respect he had been wont to show the sisters when they dwelt in a superb mansion, and were clothed with purple and fine linen.

"I have come here on business," he said, breaking the momentary pause that ensued after the usual greetings; "business that imminently concerns both of you young ladies. While examining some wills and leases relating to an entirely different case, I accidentally stumbled on a clue which, when followed up, brought me to the knowledge that you are heirs to considerable property, which has for some years been enjoyed by those who possessed neither right nor title to it."

"The wretches!" interrupted Cecile, passionately.

"Nay," he said, gently, "the present possessor is quite ignorant that he has done any wrong, whatever suspicions his father may have had on the subject."

"And how soon—when——" stammered Cecile.

"Do you mean how soon do you come into possession?" he asked as she paused abruptly. "Within a very few weeks, I trust—as soon as the troublesome forms of law can be gone through with. Acting as your legal advisor, I have already given notice to the young man."

"Then it is a young man. Poor fellow!" sighed Josephine. "What sort of a person is it, Mr. Archcliff?"

"I know nothing, Miss Josephine, except that he is about 16, and a cripple."

"A cripple?"

"Yes; a martyr, I am told, to spinal disease."

"And is this the only property he possesses?"

"All, I believe."

"But tell me about it, Mr. Archcliff!" interrupted Cecile, with kindling eyes and deepening color. "This property—in what does it consist?"

"In Audley Hall and its estate to begin with, and, further, in stocks, land, mortgages and various railroad shares, amounting altogether, I think, to something like fifty thousand dollars."

"Twenty-five thousand each—that is very little," pouted Cecile, rather disappointed. Mr. Archcliff smiled.

"For you to gain, perhaps; but a great deal for him to lose."

He glanced at his watch and rose.

"I will see you again to-morrow morning, young ladies. In the meantime, I suppose I have your authority to proceed as expeditiously as possible?"

"Certainly," said Cecile, eagerly. "Pray let there be no delay that can be avoided. I am all impatience to come into my new property."

She smiled as she spoke—a smile that made her seem like some fair-haired angel. The lawyer looked at her with a long, penetrating glance, as he bowed good-by. Cecile wondered, with a beating heart, what that grave, wistful look meant.

"Put up that horrid calico thing, Josey!" she exclaimed, when they were alone together. "Don't, pray, work any more to-day. I'll send Ruth out after some oranges and wine jelly and iced cake and cream meringues, and we'll have a nice little banquet. Oh! if you knew how I have longed for these little dainties after our anchorite fare! Why are you looking so grave, Josephine. Why don't you rejoice with me?"

Josephine looked up into her sister's radiant face.

"Because, Cecile, I see nothing to justify us in any great amount of rejoicing."

"Nothing? Josephine Carey, what do you mean?"

Josephine rose and stood quietly before her sister.

"Cecy, look at me!"

"So I do look—what of it?"

"I am strong and healthy, am I not?"

"Yes—of course."

"With hands that are not useless and a heart that will not fail?"

"Yes."

"And do you suppose, Cecy, that I, with all these priceless blessings at my command, will stoop to take a poor cripple boy's inheritance from him?"

"But it is not his; it is ours!"

"No matter whose it is—I will not take it! Oh, Cecile; do you suppose my heart is of stone or adamant?"

"But Mr. Archcliff——"

"As a lawyer—as our lawyer, Mr. Archcliff has acted entirely right. He has discovered this inheritance and taken proper steps to place it in our hands—it is for us to decide whether we will accept it or not!"

"As if we should hesitate for a moment!"

"I shall not, Cecile; this poor cripple has greater need of the money than we."

"Josephine, are you in earnest?"

"I am."

Cecile grew scarlet with anger.

"Very well—you will do as you please. I shall not relinquish my share of this scanty property for a baseless whim. Is it not sufficient that this boy, or man, or whatever he is, has enjoyed our rights and comforts all his life?"

Josephine did not answer; she saw how useless it was to argue with her sister, but not the less was her own mind made up.

And when Mr. Archcliff called the next morning, Cecile detailed to him what she called her sister's absurd Quixotism.

"Say what I will, she cannot be turned from this ridiculous piece of folly," concluded Cecile, "and she wishes you to deed back her half of the estate and money to this young man."

"And you, Miss Cecile!"

"I? Oh, I am troubled with no such ultra scruples of conscience. I shall, of course, desire to come into possession as soon as possible. Audley Hall will be a very pleasant change after these miserably cramped quarters!"

"Does your sister accompany you?"

"Oh, no—she will remain here and open a little day school. The idea of Josephine Carey teaching school for a living!"

When Josephine returned from a brief walk, she found her sister in high spirits.

"Did you tell him, Cecy?"

"Yes."

"What did he say?"

"Nothing at all—it is evident he is very highly displeased, however."

Josephine's heart sank within her.

"I must do my duty," she thought, pressing her hand to her throbbing temples, "no matter whom it may offend. My duty—my duty!"

It was almost a sob, in its agonized intensity.

"You will come and see me soon, at Audley Hall," said Cecile Carey, bending her sweet eyes on Mr. Archcliffe's grave brow, as he bade her adieu at the railroad depot. He bowed quietly and stepped back, just as the train began to move. Cecile drew a long breath.

"Strange that he has not proposed," she thought. "But there will be no lack of opportunities at Audley."

Selden Archcliff did not return directly to his office, although there was a considerable arrear of business awaiting him in those dingy precincts. He went, instead, to the little room where Josephine Carey was crying quietly on her sister's empty chair.

"I know I am very foolish," she faltered, "but my little school commences to-morrow, and I have such a brief time left for tears!"

It was the first time he had seen her since the evening he had brought tidings of the discovered inheritance. Since then she had shyly avoided his presence, dreading to read disapproval in his face. Now, however, there was no evading the ordeal—it must come!

"Miss Carey," he said earnestly regarding her, "I have come to speak to you with reference to this very unusual decision of yours respecting the Audley property. Few girls in your circumstances would have acted as you have done."

Her bright cheek caught a more vivid rose.

"You think I have acted wrongly?"

"Let me tell you what I think. It was a deed whose noble magnanimity is beyond all praise. You have abandoned comparative ease, and devoted yourself to a life of toil, because you thought it right. I am learning now for the first time the true emblems that dwell in a woman's nature. I loved you before—need I say how much dearer you are become to me now? My little heroine will you trust the priceless heart to me? will you be my wife?"

"But, Mr. Archcliff——"

"Well?"

"I fancied that you loved Cecile!"

He smiled, "I have loved you, dearest, since I knew you first, scarcely a year ago. But you have not answered my question yet!"

The soft brown eyes, dewy with a sense of great happiness that was in store for her, were raised to his with innocent frankness.

"I love you, Mr. Archcliff," she said with a shy dignity that was like herself. "But never dreamed you could love an insignificant little creature like me!"

He drew her toward him with a caressing fondness that was like new life to her starved heart! He loved her—that was enough!

The little school was never opened—and when Cecile read the long letter that reached her the very next mail, she bit her beautiful lips until the scarlet blood started.

"Fool that I have been!" she muttered. "And to think how skillfully that unconscious little Josey has played her cards! Audley Hall, indeed! Why the Archcliff estates are ten times as large! Fool! fool! to blunder with such a fatal mistake.

And the same June that brought a wreath of white roses to Josephine Carey's sunny curls brought also the dawn of a new bliss to her girl heart. Selden Archcliff thought his wife had never looked so lovely as she did on her wedding day!—New York News.

Evenly Divided.

A lesson in arithmetic is no joke,—a painful reality, rather,—yet a Boston schoolboy is alleged to have been inspired to humor by the very worst of the problems in long division.

After he had failed on the sums the teacher set, he asked permission to give one of his own. The privilege was granted.

"My aunt has eight children," he said, "and she doesn't like to favor one above another. She was at the market the other day, and she bought eight apples for them, one apiece; but when she got home she found she'd lost one apple. All the same, she divided the apples so as to give each child the same number. How did she do it?"

The class hadn't got along to fractions, and the boy insisted that his aunt knew nothing about algebra. So the puzzled teacher finally asked: "Well, how did she divide the seven apples so as to give each of the eight children an equal number?"

"She made apple sauce."

Disappointed.

"With the promising idea of naming my boys," said a white-haired man "so that there could be no nicknames—which I have always detested—in the family, we called the first Edmund, the second Edward, the third Edgar, the fourth Edwin, the fifth Edson, and the sixth Egbert."

"That surely served your purpose, didn't it?" asked one of the listeners.

"Not at all," rejoined the patriarch, rather shamefacedly. "Beginning with the eldest, they were known as Eddie, Chuck, Bim, Snorkey, Muggins, and Pete, and every mother's son of them answered proudly to his nickname."

Don't place too much confidence in the smooth individual. It is the rough cogs in the wheels that make the clock reliable.

AUTOMOBILES FOR STREET CAR SERVICE.

Street cars without tracks, cable, trolley, or horses and, most of all, without franchises, soon will be running regularly on the streets of Chicago. The first one of the omnibus automobiles has started on its regular route between Jackson boulevard and Lincoln Park. It is the first automobile in Chicago to carry forty or more people. The passenger on the "Imperial" may take his choice between two decks. No matter where he goes, the promoters of the omnibus line declare, he will be provided with a seat. The omnibus is thirty feet long. It is equipped with four driving wheels with motor hubs, the tires being of solid rubber.

From a beginning with one vehicle and one route the company promises to extend its service to carry passengers on a number of routes into the heart of the city. From the moment every seat in an omnibus is taken the vehicle will become an "express car," say the promoters, and will make no stop on the route until the first passenger reaches his destination. The cabs are to be lighted and heated by electricity and electric push buttons are provided at every seat. The strength of the driving wheels is expected to enable each omnibus to carry a trailer. Each wheel is a driving unit, the two front wheels being steering wheels as well. The storage battery system will be used and the vehicles will be charged at the end of each run, which will not average more than four or five miles. The Hub Motor Transit Company is incorporated for $1,000,000.

STORY-TELLING PROPENSITY.

Gave a Dinner to His Friends and Got Even.

"There is a world of truth in the statement that we can never outlive our doings on this earth," remarked the story-teller to a New Orleans Times-Democrat man, "and this applies with double force to the man who makes a practice of telling stories. I travel a great deal, and necessarily see and hear a great many funny things. I always remember the funny side of what happens, and have the reputation of being able to return from a funeral with a joke. But there is much discomfiture, after all, in the life of a story-teller. I frequently have men tell me my own stories. 'By the way, George,' said a friend of mine yesterday, 'I have a rich thing to tell you about something that happened to me out in Denver recently;' and he told me the story, and I laughed heartily over it. The thing had happened to me in Kansas City. I was conversing with another friend an hour later, and he broke into the conversation with the heartiest laugh I ever heard. 'That reminds me, George,' he said, 'of a thing that happened to me in St. Louis;' and he proceeded to tell me the story of the thing that had happened to my other friend in Denver and to myself in Kansas City. I never gave the snap away, because I was getting something on the side all the while, but I was promising myself all the time to make a good, strong play for even. I was stopping at a hotel where all the men had registered, and I asked three men who had told me about a funny thing that had happened to them to take supper with me. I got them grouped around the table, and things went along smoothly enough for awhile, but no stories had been told. Finally I started the business. 'I want to tell you gentlemen about a funny thing that happened to me,' I said, laughingly, but without looking at them, because I was really tickled over a very dry joke. As I proceeded I noticed that my friends became unusually quiet, and when I had laughed my way up to the climax of the story I glanced at them, and they had the dryest case of grins I ever saw. I had told them the Denver story, the same story they had told me; but after it was all over they appreciated the joke and promised to give due credit hereafter."

COLLEGE GIRLS AS WIVES.

"The Educated Woman Is the Best Equipped of Her Sex."

It is now admitted, especially in America, that a woman is as much entitled to education as a man; that thorough school training may be of great benefit in the discharge of her every duty as wife, mother and matron, and that it is unfair, as well as unjust, to a young woman to send her forth manacled by ignorance to take part in the strenuous life confronting every man and woman of to-day. The educated woman is the best equipped of her sex for wifehood, says the Cincinnati Commercial Gazette. By education is meant not, of course, mere book learning, but that culture which is physical, mental, ethical and industrial.

That girl is right who states: "From my judgment, a college-bred, practical girl is more fitted for a housekeeper or wife than girls that have been less fortunate, and you men that expect so much want to stop and look at things from an intelligent standpoint. We are all born with more or less knowledge of housekeeping; we are born with that motive in view, just as much as we are born girls; we are impressed from babyhood almost that we are some time expected to have the same responsibilities that our mothers have. Now, I say that the technicalities of law, medicine, music, art in all its phases, help to perfect our understood allotment."

The kind of man worthy a wife is able to select from those who spent their time in college one who acquired the knowledge needed for use in all the walks of life. The true college-bred woman can give, when called upon, practical illustrations of useful knowledge. In some instances—too many indeed—the knowledge of the college girl has, after her marriage, no call for active exercises. She marries either an inferior man or one who places her in a position without due freedom of action. The woman in such case is to be pitied rather than blamed for lack of success in housekeeping. It is not her lack of knowledge, but her surrounding that is at fault.

EDITORS WHO DON'T WORK.

Jacob Riis' Experience in Seeking a Place as a Reporter.

Things enough happened to take down my self esteem a good many pegs, says Jacob A. Riis in the Outlook. My father had edited our local newspaper and such little help as I had been of to him had given me a taste for the business. Being of that mind, I went to the Courier office one morning, and asked for the editor. He was not in. Apparently nobody was. I wandered through room after room, all empty, till at last I came to one in which sat a man with a paste pot and a pair of long shears. This must be the editor. He had the implements of his trade. I told him my errand while he clipped away.

"What is it you want?" he asked, when I had ceased speaking and waited for an answer.

"Work," I said.

"Work!" said he, waving me haughtily away with the shears. "We don't work here. This is a newspaper office."

I went, abased. I tried the Express next. This time I had the editor pointed out to me. He was just coming through the business office. At the door I stopped him and preferred my request. He looked me over, a lad fresh from the shipyard, with horny hands and a rough coat, and asked:

"What are you?"

"A carpenter," I said.

The man turned upon his heel with a loud, rasping laugh, and shut the door in my face. For a moment I stood there stunned. His ascending steps on the stairs brought back my senses. I ran to the door and flung it open. "You laugh!" I shouted, shaking my fist at him, standing half way up the stairs. "You laugh now, but wait——" And then I got the grip of my temper and slammed the door in my turn. All the same, in that hour it was settled that I was to be a reporter. I knew it as I went out into the street.

A Remarkable Family.

John Chandler, who resides in Allen County, is the father of twenty-nine children, twenty-one of whom are living and have families. These twenty-one children have an average of five children to each family, thus making Mr. Chandler the grandfather of 105 persons. But this is not the full extent of his offspring, for he has thirty-five greatgrandchildren, so it will be seen that Mr. Chandler stands pater familias of 162—an achievement rarely equaled. It is certainly not paralleled when the fact is considered that the members of this large family are all living.

Mr. Chandler is a remarkable man in several other respects. Although 75 years of age and residing in the hills of Allen County, he reads current literature and keeps himself informed on the leading topics of the day. His eyesight is perfect, and he reads the finest print without the aid of glasses. He is an expert rifle shot, and spends a great deal of his time squirrel hunting. He cast his first ballot for a Presidential candidate in 1848 for Taylor, the Whig nominee, but for the past fifty years has voted the Democratic ticket. His wife, who is three years older than he, is hale and hearty.—Bowling Green Times.

Considerate of Its Soldiers.

The Haitian government is very considerate of the comfort of soldiers. Every picket is supplied with a chair.

When a boy is not invited to a party he hangs around the outside to see how things are going.

OUR BOYS AND GIRLS.

THIS IS THEIR DEPARTMENT OF THE PAPER.

Quaint Sayings and Cute Doings of the Little Folks Everywhere, Gathered and Printed Here for All Other Little Ones to Read.

How to Make a Good Kite.

Kite-flying is one of the best outdoor amusements that a boy could have; indeed, we know a good many men that enjoy it as much as they did when they were young. The writer of this paragraph is one of them. There is a fascination about it that is not easily described. City boys have little chance to indulge in the sport, except when they go to the country or the seashore, during vacation, but those that live in the suburbs, or in places where they may conveniently reach the open fields, ought all to have their kites.

Fancy designs of all kinds are sold in the shops, but if a boy wishes to have all the fun that there is in the sport he ought to make his own kite. Besides, it will give him better service.

The accompanying cut shows how a good flyer may be made. Out of some straight-grained, light wood—cedar preferred—make four sticks, about one-eighth of an inch in thickness. Let two of them be 22 inches in length; one 17½ inches, and the other 13¾ inches. Place them as shown in the picture, and tack them firmly where they cross. Cut little notches at the

A GOOD FLYER.

ends of the sticks, and put a string around the whole frame, making it taut and tying it so that it will not slip.

Now cut out a piece of very thin manila paper—tissue paper would do, but thin manila is more serviceable—one inch larger, all around, than the frame, and paste the edge over the string. Make a small hole in the end of the sticks at A, B, C, D, E and F, and put in a string loosely from A to F, from B to E, and from C to D. Make a string loop from E to F, to which the tail of the kite is to be attached. The strings must come through to the paper side of the kite, not the stick side.

The cord by which you are to fly the kite should be attached where the strings cross each other; do this with a loose knot enclosing all the strings. For the tail, use a strip of muslin about one inch in width, and fifteen feet in length and attach ten bobs made of paper rolled up. If the kite should dive, add more tail until it sails steadily.

Use fine, but strong, cord for the flying, and don't attempt it in a high wind. Kites always fly better in a moderate wind.

The Rival Hoppers.

Beneath a tree with spreading boughs,
On margin of a pool,
A bloated frog croaked merrily,
Fanned by the breezes cool.

His vis-a-vis a grasshopper
Upon the other shore,
Whose famous leaps are chronicled
In books of childish lore.

Now both were hoppers of renown;
The one that was so thin
Sent a swift challenge to the frog
To jump—and see who'd win.

A twinkle shone in froggie's eye,
He answered with a wink;
Then both shot upward in the air,
And then—what do you think?

Why, froggie settled down again
Beneath a toadstool gray,
Ready for other bits as sweet
That chanced along his way.

For crafty was the heart that beat
Beneath that mottled coat;
He timed his leap so grasshopper
Jumped right down froggie's throat.
—Youths' Companion.

Picture Titles.

Can you guess the title of the book I am thinking of?

In imagination I see a picture of it; I see a long, sandy stretch of shore, the waves dashing up against the rocks and hear the song of a robin. The merry laugh of a fisherman's son is borne to me from the distance. Out in the water a boat is anchored and the crew are casting their nets over the side. So my picture fades.

Can you tell me the name of my story?

Why, you say, "Robinson Crusoe," of course!

Now I will picture another title for you. These are two books. One is a sequel to the other.

I see a schoolroom. The sun is shining on the floor and on the desks, showing many a cut and scratch. Seated at the desks are many little boys and girls learning how to spell C-A-T, cat, and D-O-G, dog. Some day, thinks their teacher, these little boys and girls will be men and women, but they will still carry the C-A-T and D-O-G with them and will say categorical and dogmatic.

Now, what are the titles of my books?

Right: "Little Men" and "Little Women."

Onion Dance.

Have you ever heard of an "onion dance?" That is the name of a curious festival held every year in the City of Berne, Switzerland. It takes place after the great market day, when thousands of pounds of onions are bought and sold.

On the Sunday preceding the market day the onions remain in the street, covered with cloths of every description, and early Monday morning the sale begins. For two days every one you meet has at least one string of onions.

A few days later comes the dances. Every saloon and hall is decorated, and the young peasants, girls and lads, come to town and make merry. Every hall is crowded with a jostling throng of ruddy-faced peasants, and dancing is kept up till the small hours of the morning.

Boy Hunter.

There is a 6-year-old boy in California who can outhunt many a man. The plucky youngster is Austin Otis. His home is in the wooded hills about 15 miles back of Cozadero, where his father owns some 5,000 acres of land. The boy has lived among the hills all his life. He went hunting recently with no companion but a half-breed foxhound. Within two hours he had killed a young buck weighing 65 pounds. He can bring down a deer with as clean and pretty a shot as can any veteran hunter in the country. He has a keen eye and a stout heart.

"Dolly's Name."

Speaking of dolls, by the way, the "Dorothys" of to-day may be surprised to know that their beautiful name was once so common among children in nearly every household that it came to mean merely "baby," and that this was the way its nickname "Dolly" happened to be applied to the wooden puppets that all children played with in those old days.

Tommy's Complaint.

Sunday School Teacher—What do we learn from the story of Samson?

Tommy (mournfully smoothing his ragged locks)—That it doesn't pay ter have women folks cut a feller's hair.

A SEVERE TEST.

Barbaric Sweethearts Must Be Heroic to Be Worth Having.

Among the Arabs of Upper Egypt the youth who proposes to a girl must submit to a whipping at the hands of all her male relatives; and, says a dry narrator, "if he wishes to be considered worth having, he must receive the chastisement, which is sometimes exceedingly severe, with an expression of enjoyment."

Not infrequently it is the maiden herself who imposes the test. The Sakalava girls of Madagascar make their lovers stand at a short distance from a clever spear thrower and catch between the arm and side every spear thrown at them. If the youth "displays fear or fails to catch the spear, he is ignominiously rejected, but if there be no flinching and the spears are caught he is at once proclaimed an accepted lover."

Worse than this is the trial enforced upon their suitors by the Dongolowee girls. When in doubt as to the respective merits of two rivals, the young lady fastens a sharply pointed knife to each elbow; then, seating herself between her lovers, she drives the blades slowly into their thighs, and the hero who takes the greatest length of steel without a murmur wins the bride.

Maj. Mitchell, in his "Expeditions into the Interior of Eastern Australia," says of the natives on the River Darling, that all their ideas of fighting are associated with the possession of gins or wives, and that after a battle the wives "do not always follow their fugitive husbands from the field, but frequently go over, as a matter of course, to the victors." "None but the brave deserve the fair" is a maxim well understood of most barbaric races.—Chambers' Journal.

An Ingenious Apparatus.

A motor has been designed in France which may be attached to the front of any vehicle and driven like a horse. It is provided with reins for steering and stopping the machine. A pull on either rein turns the apparatus in the corresponding direction, while a steady pull on both reins slows down the motor and applies the brake. There is also a secondary pair of reins for bringing the vehicle to a standstill. But the most extraordinary motor in the world is that being erected by a French doctor, in which he intends, with two students, to make a trip round the world. It will contain two sleeping apartments, a large work-room, and four large tanks for storing oil. It will unquestionably be the largest motor ever built.

Overbalanced.

Miss Swagger—Exponents of physical culture tell us that we should not incline the upper part of our bodies forward in walking.

Miss Swelldom—I know, but it's simply impossible to stand erect while they wear these hang-over-in-front hats.—Ohio State Journal.

Original.

Fond Mother—Our John is certainly original.

Fond Father—Why?

Fond Mother—He's writing a graduating speech about Abraham Lincoln.—Ohio State Journal.

The balance of trade is not always a political platform scale.

THE PROSPECTING HABIT.

The fascination which prospecting has for its devotees often excites the wonder of people who have had no personal experience with allurements of searching for hidden wealth in the mountains. Once the prospecting habit gets a good hold of a man it usually sticks to him until he gets too feeble to follow a mule up a mountain trail, or, in the meantime, he has not had the good fortune to strike a bonanza. Even then he is liable to sell out his claim before he realizes its richness and start after another one.

Starvation often stares him in the face. He sometimes escapes death from exposure and frost bites only by a miracle. But neither hardships nor privations can induce him to give up his chosen calling.

The secret of this mysterious enchantment is revealed in a brief dispatch from Boise, Idaho. Three brothers had just returned from the Thunder Mountain district, bringing with them from $17 000 to $20,000 in gold. This comfortable clean-up was taken from the ground in about eight days. The men have for years been placer miners. They may have picked up but little, yet a strike of this sort was always before their eyes, and now it has come after years of fruitless toil and is repaid in the returns of a few days. It is just such chances as this that keeps the prospector ever hopeful, be his discouragements and disappointments ever so numerous. The same allurements which attach to gambling fascinates the hunter of mines. He knows that there are big odds against him, but the stake is also a big one. He hazards a day's work in the hope of winning a fortune. The days pile up into years and years often become a life time without the capital prize being struck. But there is always the thought that it may be only one day or one week distant, and he keeps on putting up his labor for another turn of the wheel. He has added and still is adding untold wealth to his country and so increases the chances for prosperity of you and every other person in the land. When he makes a winning the whole country shares it with him, and no one is the loser.—Salt Lake Herald.

The officers of the government of the United States have just given away a hundred million dollars belonging to the people. They did this by holding a lottery out in Oklahoma and dividing among thirteen thousand people about two million acres of as fine land as ever laid out of doors. We think this kind of generosity is without credit. That land could have been sold and the proceeds applied to the reclamation of the millions of acres of arid land which requires but little improving to make it as productive and valuable as the land thrown away in Oklahoma. We want a Pacific cable to Honolulu and to the Philippine Islands. That hundred millions would have gone a long ways toward paying for that. We want our internal water ways improved and that one hundred millions would have gone a long ways towards paying for those improvements. There are a dozen directions in which this money could have been profitably expended, but the powers that handle the affairs of the government prefer to throw away the hundreds of millions which could be obtained from the sale of land and tax the people for the improvements. If private concerns handled their business affairs with the same stupidity shown in handling government matters they would soon be in bankruptcy.—Argus.

The Sacramento Record-Union calls attention to the fact that the big shows are getting too much free advertising, and warns the press to stop it. The "Pan-American" is the last to pass the hat in this respect, and the St. Louis show will be the next. The latter is as meritorious as any of its predecessors, but the press has had its eye opened and will probably go slow in according it the privilege of its predecessor. These shows receive enough to pay for their advertising, and should do so. The St. Louis one has received $16,690,000 and doesn't need to beg publicity from any paper in the Union.

It is impossible to conceive a greater blow, not only to American labor, but to its dignity, than the swarming of the country with an inferior race, whose wants are so few and easily satisfied that in the natural course of events they would soon supplant the white laborer in many of the industrial branches, or compel the white workmen in those branches to accept the pittance which would not provide him with a tithe of the physical accompaniments to civilization which is a God-given right to him to enjoy.—Reno Journal.

The end of litigation has not yet been reached in the Fair case, but it is near enough to show the folly of clinging to millions when in sight of the grave. The actual value of the estate is figured at $17,872,645. There are heavy fees yet to be paid, but according to a report "it is estimated that $5,000,000 will remain for each of the late Senator Fair's children." These figures show that the costs of the long litigation foots up $2,872,645.

Styria, a duchy having a population of about 1,500,000 and lying south of Gratz, the mountainous portion of the great German confederation, is noted for its arsenic eaters. Arsenic eaters abound in every city, village and neighborhood, and in thousands of cases every adult in a family uses it almost the same as sugar, consuming about five and a half grains in the 24 hours.

MINING LAW POINTS.

In its department headed "Concentrates" a late number of the Mining and Scientific Press (S. F.) says:

The Supreme Court of California has reversed in the Tuolumne county case of J. M. Burns vs. the owners of the Mt. Lily mine the finding of the trial court. The facts were that Burns, who was employed by the defendants grading a mill-site on public land which was not claimed as a mine, discovered a pocket containing $25,000 gold, which the owners of the Mt. Lily mine took possession of. Burns brought suit to recover the value of the gold. The trial court decided that the gold belonged to Burns' employers. The Supreme Court has reversed this decision and decided that the gold that an employee finds on public lands belongs to him as discoverer and not to the employer.

The General Land Office of the United States has always held that it was necessary to show a discovery of valuable mineral on a mining claim before it could be patented. In the oil land contests, so called, between scrippers and locators the decisions of the Commissioner and the Secretary were that the locators had a grant right of occupancy of the land that prevented lieu scrip from attaching. The decisions did not make the locations patentable without a discovery. The Land Department recognized physical conditions in its decision and refused to take away from a locator acting in good faith his right to discover the petroleum by the expenditure of his labor. But there was nothing in the decision which would permit a mere locator without discovery of petroleum to patent the ground.

The new California Code makes it the duty of Supervisors on application of parties interested to cancel the assessments and delinquent taxes on all possessory rights which under instruction of the State Board of Equalization have been heretofore assessed and taxed. The provision is made retroactive. It affords a method of clearing up the titles to many mining claim locations. Under the laws in force before the new provision came into effect if taxes became delinquent on mining claims, even if they were abandoned, they were sold to the State. The State, however, could acquire no title to public lands of the United States by virtue of a purchase at sale for delinquent taxes, and the only effect was to cloud titles, which can now be simply and inexpensively cleared.

A prominent Navy official is quoted as saying: "If there is to be any international trouble about the Isthmus of Panama because of the little scrap between the governments down there, it will be caused by some fool commander of one of the foreign warships that are being rushed down there by several European governments, who have been filled up with the idea that the United States is preparing to grab and hold the Isthmus. So far as the natives are concerned, the affair is merely the customary thing down there. A regiment of United States troops could whip any force that either of the alleged combatants have in the field or are likely to have. The only sensible thing to do is to let them alone. If Columbia fails to keep the Isthmus of Panama neutral and open to traffic, the United States is bound by treaty to do so, and will. What those foreign naval officers will do no man can say, but I regard their presence down there as a menace to the peace of the world. If they violate the Monroe doctrine in the slightest manner, there will be trouble and a heap of it right there. This country isn't hunting for war, but it is prepared to uphold the Monroe doctrine regardless of consequences."

At the rate of 2:02¼ to the mile, Crescens travels 43.20 feet in a second Maud S., trotting in 2:08¾, traveled 41.10 feet a second, and would be six and one-half seconds behind him when she finished, or a distance of 267.85 feet, and Dexter, at a rate of 2:17¼, went 38:50 feet per second, and being 15 seconds behind Crescens at the finish, the distance in feet would be 387.50. The rate of the slower horse in feet must be multiplied by the number of seconds by which he is beaten to get the result in such calculations as this.—Breeder and Sportsman.

New Jersey will derive an income this year of more than $2,000,000 from State taxes on corporations organized and doing business under its laws. No fewer than 4,525 companies were incorporated in the State in 1900, according to a statement issued by the Secretary of State. The trust evil has no terrors for New Jersey.

It is conservativly estimated that there are seventy-five millions of acres of land that can be rendered productive by a thorough system of water storage and irrigation, as is made possible by the winter snow and waterfall and the topography of the country where artificial means for moisture is required.

The agitation for a change in the date of inaugurating Presidents so as to fix it for the end of April instead of March 4 is going briskly on in the East, and it begins to look as though there might be something done about it at the coming session of Congress.

Los Angeles is the American city which shows the most rapid gain in population. It was settled by the Spaniards in 1782. gained 350 per cent in population between 1880 and 1890, and 100 per cent between 1890 and 1901.

An oil contract of 5,000,000 barrels is reported with the Hawaiian sugar refineries. That is a big thing and will help out oil interests very largely. It is to be delivered at the rate of 67,000 barrels a month.

The government has just let a contract for three billion postal cards.

The Riverside Press relates the following, at the expense of a former well-known Invoite:

Attorney Gill tells a good story on himself connected with the recent trial of McIlvane for illegal liquor selling. He employed a stenographer from out of town to take the evidence. The stenographer asked the use of Gill & Gibson's typewriter to transcribe the evidence, and when Mr. Gill asked him to copy six pages of brief in another case he charged $6 for doing the work. He then put in a bill for $20 against McIlvane, and Attorney Gill put his O. K. on it. The next day the bright stenographer found that McIlvane was out of town and said that he must have his money immediately. The accommodating attorney got the amount out of the bank and neglected to get back the bill which he had O. K-d, and Mr. Stenographer went to Los Angeles and sold it. Yesterday a letter came from some Los Angeles attorneys informing Mr. Gill that they had a bill for $20 with his O. K. on it, and asked him to forward the amount. The general opinion is that the soda water is on Attorney Gill.

The Third Assistant Postmaster General has favored us with a copy of the new rules and regulations about the postal charges for transmission of mail matter of the second class. In our opinion the effect will prove of decided advantage to the legitimate newspapers of the country, as—we hope—it will kill off the class of things that are distributed for nothing in order to get pay for vilainous advertising. It ought, also, to make some premium distributing and lottery concerns feel like very small change. An enormous saving of mail carrying expenses is anticipated, tending to the reduction of letter postage.

A merchant cannot make money without the aid of his clerks. A manufacturer cannot make any money without the aid of his workmen. A general cannot win a battle without the aid of his soldiers. The interests are all interwoven and the merchant, the manufacturer and the general should recognize men for success and treat them accordingly.

The annual report of the Commissioner of Pensions shows that there are nearly one million pensioners upon the rolls. During the year ending June 30th they gained in number 4,206. It is now thirty-eight years since the civil war closed. At this rate will some skilled mathematician please figure out how many pensioners there will be ten years hence?

Lately a resident of Verdi was arrested and fined $20 for catching and keeping a trout less than six inches long. Ex-President Cleveland was arrested for exactly the same offense, only his little fish was a bass. But he got the other fellow to assume guilt and pay the $2 fine.

NEW ADVERTISEMENTS.

Special Master's Sale.

IN THE CIRCUIT COURT OF THE UNITED STATES, IN AND FOR THE NINTH CIRCUIT, SOUTHERN DISTRICT OF CALIFORNIA.

Northern Division.

WELLS, FARGO & COMPANY, a corporation, Complainant,

vs.

RATCLIFF CONSOLIDATED GOLD MINES, LTD., a corporation, EDWIN C. NICHOLS, JOHN DOE, RICHARD ROE and JAMES DOE, Respondents.

UNDER AND BY VIRTUE OF A DECREE of foreclosure and sale rendered in the Circuit Court of the United States in and for the Ninth Circuit, Southern District of California, Northern Division, on the 29th day of August, 1901, in the above entitled cause, wherein complainant, Wells, Fargo & Company obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of Eighteen Thousand Four Hundred Nineteen and 3-100 Dollars ($18419.03), and the cross-complainant, Edwin C. Nichols obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of Eighty Thousand One Hundred Thirty-Eight and 72-100 Dollars ($80,138.72), and the cross-complainant Vulcan Iron Works, impleaded under the name of John Doe, obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of One Thousand Four Hundred Ninety-five and 63-100 Dollars ($1495.63),

I am commanded, as Special Master in Chancery, to sell in one parcel the following described property, to-wit;

The following named mining claims, mill sites, water rights and locations, situate in the County of Inyo, in the Southern District of California, and known and designated as the "Joker," "Texas," "Grover Cleveland," "John G. Carlisle," "Sunrise," "Kentucky," "Never Give Up," "Treasure Vault," "Big Brown," "Joker Extension," "W. G. Extension" and "Little Tim" mining claims, and the "Cleveland" mill site and certain water rights known as the "Sale's water right," "Wingfield and Harrison water right," "Dover water right," "James Wingfield water right," "McNulty water right," which said mining claims, mill sites and water rights are more particularly described in the notices of location thereof filed in the office of the County Recorder of said County of Inyo, including all buildings and improvements thereon; and more particularly, One (1) 2-stamp mill and building connected therewith and appurtenant thereto, and all machinery and appliances contained therein; One (1) air compressor plant and the building appurtenant thereto and all receivers, pipe lines power, tools, machines and machinery to operate the same or appurtenant thereto; One (1) Cyanide plant and all tanks, pipe lines, pumps, zinc boxes machines and machinery, and appliances to operate the same and all the appurtenances to said plant; One (1) Aerial Tramway and all cables, buckets structures, machines and machinery and all appurtenances to and of said tramway; all tools and implements of all kinds used or for use in and about said property; all pipe lines appliances and appurtenances from said water rights; and ware house No 1 and all stores and supplies therein; ware house No. 2 and all stores and supplies therein; Superintendent's residence and office and all furniture, fixtures and supplies therein contained; Assay office and laboratory building and all furniture and fixtures, tools, appliances, appurtenances and supplies therein; mill boarding house and all furniture, fixtures, appurtenances and supplies contained therein; mine boarding house and all furniture, fixtures, appurtenances and supplies contained therein; Mill foreman's dwelling house and buck house and all furniture, appurtenances and contents thereof. All right in powder, fuse and caps contained in the powder magazine. All live stock, vehicles, harness, stables and equipments; all wood, cables and tools; all blacksmith shop buildings, tools and appurtenances connected therewith and appurtenant thereto, together with all and singular the hereditaments and appurtenances thereto belonging or in anywise appertaining

PUBLIC NOTICE is hereby given that on

Wednesday, the 9th day of October, 1901,

at the hour of 12:00 o'clock noon of said day, at the front door of the Court House of the County of Inyo, State of California, in the town of Independence, County of Inyo, State of California, I will, in obedience to said decree of foreclosure and order of sale sell in one parcel the above described property to the highest bidder for cash, gold coin of the United States, for the satisfaction of said indebtedness.

Dated, this 22d day of August, 1901.

HENRY B. STEWART,
Special Master in Chancery.

SUPERIOR COURT

Hon Walter A Lamar, Judge.

SEPT 5, 1901.

Walter M. Willett, Pltf., vs. T. B. Balch et als., Dfts.

Trial postponed until Saturday, September 7, 1901.

Real Estate Transfers.

Recorded since last report:

E. H. Sterling to Eliza Watterson—Lots 5 and 8 in Block Q, Academy Addition to Bishop; $10.

W. H Menke to Presbyterian Church—Old M. E. Church lot in Bishop; $10.

MARRIED.

MILLER—WALLACE. At Hawthorne, Nev., August 27, 1901, J. C. Miller and Miss Mattie Wallace all of Big Pine.

Social dance at Mairs' Hall to-morrow evening.

Labor Day was very generally unobserved in Independence.

J. J. Stewart, E. H. Edwards and others were up from Lone Pine Saturday.

Last Tuesday Harry Cole started out with a four horse load of good things Tonapah.

The Camp Independence School will open next Monday, with Miss Clara Reynolds as teacher.

The Independence school began last Monday with an enrollment of 40 pupils. J. Walter Hanby in charge.

A four-horse load of selected copper ore from Ubehebe District has been landed at Keeler this week, for shipment.

P. H. Mack, Esq., reached here on Saturday last, and stayed at home almost an entire week. His present trip to Los Angeles, however, will be brief.

In order to settle conflicting reports a farmer correspondent suggests that the Tonopah Bonanza publish a list of prices or market rates for vegetables, grain and things in that camp.

Strohmeyer's freight team passed northward this morning. On his down trip had he been one day later or a day earlier, his train would have been caught in the cloudburst either at Coyote Holes or Red Rock.

Messrs. A. W. Ushark of Mojave, W. R. Fales and C. H. Elliott of Los Angeles, Thos. A. West of Compton, litigants and witnesses, are in town. The case comes up in the Superior Court tomorrow, when the lawyers are expected, and grows out of some disputation concerning the Amargoza nitrate beds.

Fred Burkhardt was up from Lone Pine last Monday, receiving orders for all kinds of work in his line. While there is such a thorough watchmaker and jeweler right here at home it is foolish business for any one to send such work away. Patronize home mechanics and you will be better satisfied with yourself and the results.

According to all accounts the good people of Big Pine did honor to themselves by honoring the distinguished visitors attending the Conference. The Carson & Colorado railroad management furnished its finest car for the reverend gentlemen, while at Hawthorne Mrs. R. J. Laws personally supplied the down-coming train with ample luncheon, and upon its outgoing the same thoughtful provision was made by the ladies of Big Pine. The lecture on Monday evening by Bishop McCabe, upon "The Bright Side of Libby Prison"—told from experience—netted the local parsonage fund about $150. Bishop received some votes as the place for holding conference next year, but Reno carries off the honor.

The following Big Pine items arrived just a little too late for publication last week:

Rock formerly taken for granite has proven very valuable ore at Gold Mountain, southeast of Silver Peak.

Geo. Albright has suspended work on the mill at Montezuma for a few days, awaiting the arrival of a shaft and belting from San Francisco. Local miners claim that the Montezuma mine under the management of Superintendent Nolan is more of a miners' home than any other place on this side of the Sierras.

Louis Williams and R. Ocier left Wednesday to look at some ledges discovered some time ago. Hope that the boys will "strike it."

Wacoba road and the Deep Spring toll road are in condition for travel. The borax teams, engineered by Jake Shoemaker, left Tuesday for the works, loaded with feed stuff and supplies.

FATAL ACCIDENT.

A Fall Ends the Life of a Pioneer

DIED.

DENSMORE—Near Camp Independence, Inyo County California August 31st, 1901 SANFORD A. DENSMORE, a native of Maine, aged 62 years, 9 months and 14 days.

Sudden deaths by accidental means occur all over the world every day, but a realization of the sadness of such casualties is only brought home when a friend and an esteemed fellow citizen of our midst happens to be the victim.

About 10 o'clock on Saturday morning last word was brought from Camp Independence that Mr. Densmore had sustained a fall and was very badly hurt. Upon the return of Dr. Woodin, an hour or so later, it was learned from him that the unfortunate had met with almost instant death. On that morning the ranch haying crew began stacking. The deceased was on the stack, which had reached a hight of some eight feet, and when the derrick load came over from the wagon he drove his fork into the hay and began pulling it over toward himself while he was standing on the very edge. The fork pulled away and losing balance he fell backward to the ground. His neck was dislocated and when reached by one of the men a moment afterwards a faint tremor of the chin was the last indication of departed life.

He was buried on Sunday, the following day, at the Odd Fellows Cemetery in Independence, from his peaceful home of many long years to an abode in eternity. Although the sad news traveled rapidly, and the notice too short for many of his old time friends to come here and pay their last tribute of respect, there was a gathering from twenty miles or more around to lay him under the sod of the valley which he had done so much for. Rev. John J. Pardee, a former minister here, came from the Conference at Pig Pine and conducted the funeral ceremonies, aided by an able choir. The pall-bearers were Fred Schabbell, Henry Fehrman, John Shepherd, David Stubblefield, P. W. Forbes, J. S. Gorman, O. I. Mairs.

Sanford A. Densmore was born at Waldoboro, Maine, Nov. 17, 1838. He came to California in 1852, when but 14 years of age, by way of Panama, landing at San Francisco. He was in the oft-noted rush to the Frazer River gold excitement, returning to Chico, where he worked in the Bidwell orchard. As a volunteer he served through the Pitt River and Pyramid Lake Indian wars. He followed the Washoe silver excitement and went to Virginia City in 1863 where he worked in the mines. January 4, 1864 he enlisted as Sargeant in Company "C," First. Batt. Inf Nev. Vols., to serve three years or during the war, and was discharged with honor at Fort Churchill, Dec 23, 1865, at the close of the trouble. While in the United States' service he came to Camp Independence January 1, 1865. After the military discharge mentioned he returned to Owens Valley—then organized into Inyo County—and Nov. 3, 1867, was married to the sorrowing wife who now survives him. F. E. Densmore, Esq., is the only issue of that union.

In the past the writer hereof has had occasion to refer to Sargeant Densmore about the history of the Nevada soldiers in this valley, and found that his exact memory of dates and circumstances were all correct. Last week he informed us that he had just bought a place down in Riverside, and expected to leave here next month to spend the winter amid the fruits and flowers of Southern California. But he was of the earliest and up to the fast one of the most successful orchardists on this side of the Sierras. Loyal to his chosen business, his family and his country, straightforward and friendly with all, he enjoyed the universal respect of our people, comrades and citizens.

Conference Appointments.

At the conference of the M. E. Church, held at Big Pine last week, assignments for the Nevada Mission for the ensuing year were made as follows:

Austin—S. W. Albone.
Battle Mountain—P. H. Willis.
Big Pine—G. H. Smith, from Utah.
Bishop—J. M. Wilson.
Bodie—Rev. Burnett.
Carson—E. E. Dodge.
Cedarville—John Telfer.
Davis Creek—To be supplied.
Fall River—J. Johns.
Genoa—W. P. Rankin.
Greenville—T. H. Nicholas.
Hawthorne—To be supplied.
Independence—R. Fysh.
Janesville—M. W. Frary.
Lovelocks—J. H. Rosen.
Loyalton—A. K. Stewart.
Yerington—F. R. Winsor.
Paradise—N. E. Gibbs.
Quincy—D. S. Wigstead.
Reno—Rev. Phelps.
Ruby Hill—J. Arthur.
Susanville—T. Taylor.
Truckee—H. O. Edson.
Tonopah—To be supplied.
Virginia—J. J. Pardee.
Wellington—G. M. Bigelow.
Winnemucca—G. C. King.
J. M. Spangler—Missonary to South America.

For a long time the fury of the public against a baseball umpire who decided against a favorite has been a subject of jesting, but at a recent game in Indiana an umpire was actually killed by a mob that objected to his decisions.

A New York bank cashier has just retired after investing $15,000 of the bank's money in unremunerative tickets on horse races. Either banks or horse races will have to be abolished if that sort of thing keeps up.

"It appears harder for the detectives to get that $25,000 reward from the Selby company than it was to get the $300,000 out of the mud." Exactly.

The Fair Track and Park Program.

FIRST DAY—SEPT. 24.

Trotting, 2:30 class, 2 in 3; 1st $75, 2d $25.

Trotting, single mile, untried; 1st $50, 2d $25.

Running, vaquero race, 1 mile; free for all vaquero horses, race horses barred; horses to be ridden by owners, with full vaquero outfit; prize $40 Nelson saddle.

Baseball game.

SECOND DAY.

Trotting, 3-minute class, 2 in 3; 1st $75; 2d $25.

Running, Indian horses, 1 mile; 1st $15; 2d $5.

Running, ½-mile dash; 1st $50; 2d $10.

Baseball game.

THIRD DAY.

Running, mile dash, free for all; 1st $75; 2d $25.

Trotting, single mile, single buggy horses; must draw top buggy and never been started in any race; 1st $25, 2d $15, 3d $10; entrance fee, $2.50; no distance.

Walking match, draft teams to farm wagons, to haul driver and load of 3000 lbs.; 1 mile; 1st $15, 2d $10; 3d $5; no entrance fee; three or more teams to enter.

Baseball game; prize for the series, $150.

Trotting, free for all, 1 mile, 3 in 5; 1st $75, 2d $15.

Bicycle relay race, 5 miles, 5 riders to team; 1st team $25, 2d $10; no entrance.

Running, 1-mile dash, $50.

Ladies' tournament; 1st $15, 2d $10, 3d $5.

Entrance fee 10 per cent of purse, unless otherwise stated, in all races. Three or more to enter, to or more to start.

The new smelter will be erected within the next week or two by the Vulcan Smelting and Refining Company. It is an open secret that this plant is being put up not to make money out of, but merely to advertise the new smelter, for which great things are claimed. The only charge that will be made will be merely to cover the cost of working. The Vulcan people expect to have Judge Hayton's thirty-ton smelter blown in by the 9th.—Reno Journal.

F. H. Heald is at the coal mines. He reports about three feet of coal of good quality and the prospect for more very good. This is very different from the 7 foot vein advertised so extensively and is good enough to make a very valuable property. It never pays to exaggerate when the truth will be found out sooner or later. A three-foot vein of coal on the desert is a fortune for its owners.—Randsburg Miner.

Since the Supreme Court of Missouri has declared unconstitutional the law imposing a tax upon mortgages the rate of interest on real estate loans has fallen from 8 per cent to 5 per cent. It will be seen that while the law stood the borrower had to pay the tax in the form of interest and something over besides.

According to recently compiled statistics the average length of life in this country in 1880 was but little over 35 years, but in 1900 it was more than 55 years, so perhaps by the end of the century the average man will live long enough to make it worth while being born.

The New York World quotes Admiral Watson as having said: "If any naval officer asserts that Admiral Schley is a coward and the fact comes to my knowledge I will see that the delinquent is given a chance to vindicate his opinion before a court-martial. I will prefer charges myself."

It is said that the failure of his cylindrical balloon has decided Santos-Dumont to make the next one "ellipsoidal," and if there is any possibility for a balloon to travel on its name or its shape, the new one ought to go a long way.—Call.

The fact that the big steel trust paid nine millions in dividends on watered stock lately does not tend to increase public sympathy for its cause in the contest with the strikers, whatever its merits or demerits.

A Nebraska paper remarks that the biggest trust nas been discovered at last. It is the country newspaper trust. They trust everybody, get cussed for trusting and trusted for cussing—and finally get busted by trusting.

Three wars, six revolutions and several common "uprisings" are now going on in Central and South America. Arnica and accident insurance policies ought to be in demand down that way.

The Southern Pacific has made reduced rates from all points to Sacramento for those wishing to visit the State Fair. The round trip will expire on the 16th.

The British government has paid over $5,000,000 in cash for the horses it has bought in Missouri and Kansas since the beginning of the South African war.

The 2000 persons in Oklahoma named Smith are to hold a convention. Should this movement spread all other organizations might as well stand aside.

One fare and a third to Sacramento and return during the State Fair from all points in California on the lines of the Southern Pacific.

Salt Lake and New York will soon be connected by telephone and the rate will be $6 for one minute's conversation.

The grand Knights Templar Conclave at Louisville has adjourned, to meet at San Francisco in 1904.

KAFFIR CORN.

Its Value Where Corn Is an Uncertain Crop—Effect on Butter.

If Kaffir corn, which has been such a good yielder and drought resister, should be excluded from the ration of the dairy cow, many farmers in central and western Kansas would be obliged to quit the dairy business. The Kansas experiment station has fed the grain and fodder of Kaffir corn for months at a time and has never experienced a particle of trouble from its producing a poor quality of butter. During the months of February and March, 1898, the station herd was fed almost exclusively on Kaffir cornmeal for the grain ration. The butter was tested by competent judges and pronounced excellent in quality. Since this time both the grain and the fodder of Kaffir corn have been used as the whole or part of the ration, the milk being sent to the Manhattan creamery, where it has been saved to use in the making of starters. The milk has also been used each year at the dairy school both with and without milk from other sources. It has been specially sought for by our cheese boys in their effort to make a first class quality of cheese, and in no instance have we heard a single complaint from the use of the college milk on account of the cows being fed on Kaffir corn.

When the season is a poor one for the curing of the crop and the grain has been left on the fodder, considerable crop which otherwise would go to waste, from the the feeding is done just before or at milking time, particles of this dust, with all the germs that they carry with them, will undoubtedly find their way to the milk pail and may cause a poor quality of butter.

This points to the necessity of feeding after rather than before milking. In this way Kaffir corn, properly balanced, is one of our best feeds for a dairy cow and should be grown extensively where corn is uncertain.

When Mayor Meets Mayor.

Civic characters of local fame imbued with a sense of their own importance are not wholly unknown in this country, a fact which may account for the familiar ring of the following story found in "Highways and Byways In East Anglia:"

Mayor Wakefield one day set out for the next town with a load of hay. On the way a truss fell from the load, and he applied to a passerby for assistance in replacing it. The man addressed, instead of rendering willing aid, drew himself up to rather more than his normal height and said:

"Are you aware that you are addressing the mayor of Lynn?"

"Man," replied Wakefield, "that don't make no odds. I'm the mayor of Cattle Rising. Now will you lend a hand?"

"With pleasure," replied the mayor of Lynn.

Antique Clocks.

A common trick of clock makers and repairers of years ago, when the craze for antique "grandfather" clocks first showed itself, was to alter the names and dates of the original makers on such of these clocks as came to them. This trick has made it difficult to prove the exact age of an old clock now, even by experts, and still more difficult to learn the name of the real maker. Reputable repairers do not follow the practice in these days, having realized that it results in the end in injury to the business.—Jewelers' Circular-Weekly.

Ceaseless Growth of the Ears.

The systematic examination of more than 40,000 pairs of human ears in England and France has resulted in some interesting conclusions. For one thing, it is ascertained that the ear continues to grow in the later decades of life. In fact, it appears never to stop growing until death. A woman who has small, shell-like ears at 20 years of age will be very apt to possess medium sized ears at 40 years and large ears at 60.—Saturday Evening Post.

A Puzzler.

Lady Passenger—Do you know, captain, I have never been able to understand how you find your way across the ocean?

Captain—Why, by the compass. The needle always points to the north.

Lady Passenger—Yes, I know, but supposing you want to go south?—Glasgow Times.

The Same Old Cry.

"I wonder what Eve said when she found she had to leave the garden of Eden," said Mr. Grumpin's wife.

"It was just about what all women say when they are starting on a journey. She complained that she didn't have a thing to wear."—Washington Star.

Wanted Her to Have the Best.

Nell—Rather conceited, isn't he?

Belle—I should say. He said the best was none too good for me, and then he proposed.—Philadelphia Record.

A Good Knight.

"Don't you think that if I had lived in the days of old I would have made a good knight?" asked the young man who had been talking ancient history from 8 to 11 p. m.

"I don't care so much what you would have made then," wearily observed the young lady, "but you might see what kind of a good night you can make right now."—Baltimore American.

Evolution of Corn.

Corn, with its 24 to 32 rows under cultivation, was once but a coarse grass, hiding each seed it produced under a husk, as wheat and oats now do. Brought out to the light and sun, with a chance to get at enough plant food, it has worked its way up to eight rows of seeds, covering these with one husk. The farmer and nature together have added the extra 16 and 24 rows.

Willing to Help.

"The echo is much more effective," said the guide in the Alps, "if a shot is fired. Has anybody a revolver?"

"I don't happen to have my gun with me," remarked the Chicago man of the party, "but here's a knife."—Exchange.

Most of the dandies of the Georgian period took as great a pleasure in seeing themselves caricatured as our generation does in seeing their photographs in the shop windows.

The refining of sugar was invented in Antwerp in the sixteenth century.

THE ONION THRIPS.

"White Blast" Is Its Work—Whale Oil Soap the Remedy.

The onion thrips (Thrips tabaci) has been found to extend from the Atlantic to the Pacific oceans. The effect of this insect upon the onion is known as the "white blast," from the fact that the tops are prematurely whitened and become wrinkled and shriveled. The rasping of the leaves is done by such slender mouth parts and the insect is so small that the injury has more the appearance of a fungus or bacterial disease than of insect work.

Recent investigations have shown that the insect passes the winter months in matted grass, among old weeds and other rubbish as well as among cull onions and refuse that have been left over in the fields in the fall.

Onion growers are familiar with the fact that the depredations of this insect appear earliest and are the most emphasized along the margins of fields or plots or in spots over the fields. The reason for this is that the insect winters over in these places. It makes its way from the grassy margins or from the grassy banks of ditches to the rows of onions adjoining. It winters over in the piles of culled onions and refuse in the fields and begins its work there, spreading from thence outward.

Wherever the grass and weeds along ditches can be rooted up and destroyed it prevents the harboring of this pest. Wherever the old, dry grasses and weeds along the margins of onion plants can be destroyed by fire they will destroy myriads of the pest and to prevent their breeding the next season. With frequent drenching rains there is not much likelihood of a severe outbreak, but in case of drought the insect is likely to work more or less serious injury in extensive onion fields.

A spray of one pound of whale oil soap dissolved in eight gallons of water will destroy the pest, and the use of this mixture is recommended on the first appearance of the insects in the fields. At time of first appearance it will probably only be necessary to treat very small areas along the margins of fields or the small, isolated spots previously mentioned in order to permanently check their increase.

Pennsylvania Weasels.

Possibly few who read of "kings' robes of royal ermine" appreciate that the rightful and first possessors of the beauteous coat is sometimes a denizen of the Keystone State. It may be that some subtle force suggested to turncoat monarchs to choose the pelt of this animal for their own. In fact, during the greater portion of the year the ermine is a plain egg sucking weasel. As winter comes on he assumes a white coat, with a black tipped tail.

Putolus noveboracensis, as the scientist calls the weasel or ermine, ranges from North Carolina away up into Canada. It is rare, however, to take ermine or white coated weasels in Pennsylvania, although two specimens have just been received at the Academy of Natural Sciences from Sullivan county. In fact, south of Pennsylvania the weasel never changes color in winter, and this fact goes far to substantiate the theory of protective coloration. Thus when snow covers the ground the white ermine becomes nearly invisible, while in his weasel's guise during the summer he is not nearly so conspicuous as he would be did he wear his white coat all the year round.

Another interesting fact is that while the animals that live in the north always change color those in the south do not, the reason being that their white color would not protect, but destroy, them, as there is almost no snow in the south.—Philadelphia Record.

Notice to Cattlemen.

All cattlemen wishing permits to graze their cattle in the Forest Reserve, or foothills of the Reserve, for Spring and Summer of 1902 should make application at once, to

ANDREW PRICE,
Supervisor Forest Reserve.

TO LAKE TAHOE.

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains of Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,100 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above. Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

Automobiles as Transport Wagons.

Experiments in France have provd convincing, and the French believe they are certain to play a role of much importance in modern warfare. It is odd to note the different uses to which nature and science are put. On the battlefield they fight for the destruction of life, while throughout the country, Hostetter's Stomach Bitters fights to preserve it. For fifty years the Bitters has been curing dyspep-ia, indigestion, constipation and bilious-ness. It will also prevent malaria, fever and ague.

Some wimen are like cheap calliker—it don't take long fer their beauty to fade.

Disfigured Skin

Wasted muscles and decaying bones.

What havoc!

Scrofula, let alone, is capable of all that, and more.

It is commonly marked by bunches in the neck, inflammations in the eyes, dyspepsia, catarrh, and general debility.

It is always radically and permanently cured by

Hood's Sarsaparilla

Which expels all humors, cures all eruptions, and builds up the whole system, whether young or old.

Hood's Pills cure liver ills; the non-irritating and only cathartic to take with Hood's Sarsaparilla.

KILL THE DANDRUFF GERM

Or Your Hair Will Fall Out Till You Become Bald.

Modern science has discovered that dandruff is caused by a germ that digs up the scalp in scales, as it burrows down to the roots of the hair, where it destroys the hair's vitality, causing falling hair, and, ultimately, baldness. After Prof. Unna, of Hamburg, Germany, discovered the dandruff germ, all efforts to find a remedy failed until the great laboratory discovery was made which resulted in Newbro's Herpicide. It alone of all other hair preparations destroys the cause, you remove the effect.

Don't Accept a Substitute!

When you ask for Cascarets, be sure you get the genuine Cascarets Candy Cathartic! Don't accept fraudulent substitutes, imitations or counterfeits!

YOU KNOW WHAT YOU ARE TAKING

When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

Fryer's Abietene Cough Balsam guaranteed for Croup.

The Single Thought.

"Ah," sighed the fond mother, "two souls with but a single thought!"

"Yes," echoed paterfamilias, "and less than one dollar. I don't know how they're going to make it, Mary, unless—er—perhaps that single thought they've got is that papa's going to put up for two."—Denver Times.

In the Dumps.

There was once upon a time an Egyptian king, so it is said, who built a pyramid and died of melancholy. His name was Dumops. The memory of his tragic history is perpetuated every time we say we are "in the dumps."

SSS and OLD PEOPLE

Bad Circulation is the cause of most of the ills that come with old age. With advancing years there is a decline of strength and vigor—the machinery of the body moves with less speed and accuracy. Because of the weak and irregular action of the heart the blood moves more slowly, becomes impure and loses much of its life-sustaining properties, and muscles, tissues and nerves literally starve for lack of nourishment. A sluggish and polluted circulation is followed by a long train of bodily ailments. Cold feet, chilly sensations up and down the spine, poor appetite and digestion, soreness of the muscles, rheumatic pains, hard and fissured skin, face sores, chronic running ulcers on the lower limbs and other parts of the body—these and many other diseases peculiar to old people are due to a lack of healthy blood and imperfect circulation. Restoration to health must come through the building up and purification of the blood, thus adding strength and tone to the vital organs and quick, healthy action to the circulation.

S. S. S. being strictly a vegetable blood remedy and the best tonic, makes it the most valuable and efficacious of all medicine for old people. It is free from all mineral ingredients, and mild and pleasant in its action. It cures blood diseases of every character, even those inherited or contracted in early life. As the system gets under the influence of S. S. S. there is a marked improvement in the general health, and as richer and purer blood begins to circulate through the body the appetite improves, and there is a softness and elasticity about the skin that you have not noticed for years; sores begin to heal, pains in muscles and joints gradually cease, and you find that it is possible to be happy and healthy even in old age.

Our medical department is in charge of physicians who make a study of blood and skin diseases. If you would like to have their opinion and advice in your case, write them all about it and you shall receive such information and advice as you want. This will cost you nothing. Others have found our medical department of great benefit to them—their cure being much more rapid as the result of some special directions received from our physicians.

Don't be your own doctor when you can get medical advice free. Book on Blood and Skin Diseases mailed to all who desire it.

Matrimony In Gilbert Islands.

Women of the Gilbert islands being merely regarded as cattle or any other property, writes Arthur Inkersley in The Overland Monthly, the matrimonial knot is easily tied and just as easily untied. If a man fancies a girl, he seizes her by the hair of the head, wherever she may be, despite her protestations, and drags her away to his home. Her resistance is not often serious, the pretense of refusal being due to the coquettishness inherent in the sex. When the couple reach the house of the groom, a wedding feast is furnished forthwith, to which all the immediate friends of the bride and bridegroom are invited. But an acceptance of the invitation implies the contribution of some viands to the entertainment. Matrimony is attended by no further ceremony than this. When a husband grows weary of his wife, he simply orders her to leave him, and if she does not he turns her out of doors.

Never Left the Road.

An old negro in a neighborhood town arose in prayer meeting and said: "Bredderin and sisterin, I been a mighty mean nigger in my time. I had a heap er ups and downs, specially downs, since I j'ined de church. I stole chickens and watermillins, I cussed, I got drunk, I shot craps, I slashed odder coons wid my razor, and I done er sight er odder things; but, t'ank the good Lawd, bredderin and sisterin, I never yet lost my religion!"—Blue Ridge (Ga.) Post.

[illegible] to the pea family and is called the "moving plant" on account of the manner in which its leaves turn around of their own accord or go by jerks, without being touched or in any way disturbed. Sometimes only one or two leaves on a plant will be affected; at other times they will all perform jumps and gyrations simultaneously. It is observed that the movements are most energetic when the thermometer marks about 80 degrees.

Why France Lags Behind.

Frenchmen do not want to rule; they want to live. The pursuit of life, of laughter, of charming sensations, of intelligent apprehensions, of individual development of character—it may all be more important, more vital to human existence than the preoccupation to rule oneself and others, to make laws and to fight.—Steevens' "Glimpses of Three Nations."

Accommodating.

Jinks—Have you got quarters for a dollar, old man?

Winks—My vest pocket is rather crowded, but pass it over, and I'll try to make room for it.

Science AND Invention

The sun is nearer to the earth in winter than in summer; the northern hemisphere of the earth is turned from the sun, however, so that the sun's rays strike at an angle, not directly as in summer.

The French art critic, M. Arsene Alexandre, has discovered that our machinery shows a distinct beauty of racial type. The national character is clearly marked, he thinks even in our locomotives. This theory is an ingenious one and is worthy of elaboration.

According to the distinguished French anthropologists, Gabriel and Adrien de Mortillet, there was a junction between Europe and America by way of the British Isles, the Faroes, Iceland and Greenland in what is known as the Chellean epoch, which is supposed to have ended a hundred and fifty or sixty thousand years ago.

Some curious botanical experiments made at a zoological laboratory at Naples are reported by Hans Winkler. A flowerless aquatic plant, that grows normally with its roots in the sand and leaves in water, was inverted, specimens being placed with the leaves buried in the sand and the roots floating. The roots changed to stems and leaves, the buried parts becoming roots.

In 1895 a French chemist discovered rays emanating from the element uranium, which possessed the properties similar to the Roentgen rays. Recent experiments by the Berlin High School of Technology proved that a new element is responsible for the Becquerel rays—and the interesting fact has been observed that these rays render almost every transparent substance luminous in the darkness. The rays make it possible to tell genuine diamonds from artificial ones in the dark.

The size of eggs among nesting birds ranges from that of the ostrich to that of the humming-bird, it being primarily dependent on the size of the bird, but also on the condition of the young at birth, the eggs of birds whose young are born feathered being proportionately larger than the eggs of those whose young are hatched naked. The period of incubation is more or less closely related to the size of the egg, being about fourteen days in the humming-bird and forty-two in the ostrich.

A London electrician, W. Duddell, recently gave an exhibition of a novel musical instrument, composed of a series of electric arc lights, which played a popular air. When the current is passing through solid carbons they give off a musical sound, and by placing a shunt across the carbons, connected with a keyboard, Mr. Duddell was able to vary the sounds through the scale of two octaves. The keyboard served to vary the self-induction and capacity in the shunt circuit, and by employing four arcs in series, the intensity of the sounds was made sufficiently great.

The Reverend Father Grison, of Stanley Falls, Africa, writes that Europeans have a very inaccurate idea of tropical temperatures. He passed eight years at the equator on the Pacific coast, he says, and never saw the mercury above 85 degrees, while at Stanley Falls the maximum is 90 degrees, and the nights are deliciously cool. On the other hand, there are frequent tempests of indescribable violence, and Father Grison has counted 66 lightning flashes in one minute, the thunder being continuous, and has seen 10 thunderbolts strike within a radius of a few hundred meters in the space of two hours.

A PECULIAR DEATH SENTENCE.

Curious Phraseology Used by a New Mexican Judge.

Probably the best anecdote of Judge Benedict is that told relative to his sentence of death pronounced upon Jose Maria Martin, who was convicted of murder in the District Court of Taos County, New Mexico, under a state of facts showing great brutality, and with absolutely no mitigating circumstances, says the Taos Cresset. Judge Benedict said:

"Jose Maria Martin, stand up. Jose Maria Martin, you have been indicted, tried and convicted by a jury of your countrymen, of the crime of murder, and the Court is now about to pass upon you the dread sentence of the law. As a usual thing it is a painful duty, Jose Maria Martin, for the judge of a court of justice to pronounce upon a human being the sentence of death. There is something horrible about it, and the mind of the Court naturally revolts from the performance of such a duty. Happily, however, your case is relieved of all such unpleasant features, and the Court takes positive delight in sentencing you to death.

"You are a young man, Jose Maria Martin, apparently of good physical constitution and robust health. Ordinarily you might have looked forward to many years of life, and the Court has no doubt that you have, and have expected to die at a green old age; but you are about to be cut off in consequence of your own act. Jose Maria Martin, it is now the spring time, in a little while the grass will be springing up green in these beautiful valleys, and on these broad mesas and mountain sides flowers will be blooming, birds will be singing their sweet carols and nature will be putting on her most attractive and gorgeous robes, and life will be pleasant and men will want to stay; but none of this for you; the flowers will not bloom for you, Jose Marie Martin; the birds will not carol for you, Jose Maria Martin; when these things come to gladden the senses of men you will be occupying a space about six by two beneath the sod, and the green grass and these beautiful flowers will be growing above your lowly head.

"The sentence of the Court is that you be taken from this place to the county jail; that you be kept there safely and securely confined, in the custody of the sheriff, until the day appointed for your execution (be careful, Mr. Sheriff, that he has no opportunity to escape and that he be at the appointed place at the appointed time; that you be kept so, Jose Marie Martin, until (Mr. Clark, on what day does Friday, about two weeks from this time, come?) (March 22, your honor)—very well, until Friday, the 22d day of March, when you will be taken by the sheriff from your place of confinement to some safe and convenient spot within the County (that is in your discretion, Mr. Sheriff; you are only confined to the limits of the County), and that you there be hanged by the neck until you are dead; and the Court was about to add, 'may God have mercy upon your soul,' but the Court will not assume the responsibility to ask an all-wise Providence to do that which a jury of your peers refused to do—the Lord couldn't have mercy upon your soul. However, if you affect any religious belief, or are connected with any religious organization, it might be well enough to send for your priest or your minister, and get from him—well, such consolation as you can; but the Court advises you not to place any reliance upon anything of that kind.

"Mr. Sheriff, remove the prisoner."

SLOWEST SHIP IN THE WORLD.

Characteristics of a Vessel That Had Had a Wonderful Career.

The slowest sailing vessel in the world, the Italian brig Anita S., which was twice given up as lost on voyages from South America to Baltimore, recently arrived at Nantes, France, from Martinique, in the West Indies, after months, says the Baltimore American. This vessel has also been 103 days from Rosario to Santos, 166 days from Buenos Ayres to Plymouth, 122 days from Cardiff to Montevideo, 205 days from Paysandu to Baltimore, 108 days from Brunswick to Paysandu, 234 days from Paysandu for Baltimore, and 84 days from Baltimore to Maranham.

On a voyage from South America to Baltimore the Anita S. was three months at sea without a man on deck who understood navigation which usually occupies about fifty days. When a month out from Montevideo a knot in one of the planks in the hull under the water line fell out, and a big leak was opened. It required the best efforts of the crew at the pumps to keep the vessel free of water. The cargo had to be shifted to tilt the vessel and bring the leak above water, when the hole was plugged up.

The labors of the mate in the perspiring hold overheated him, and his sudden change to a cooler atmosphere on deck made him ill, and he was laid up in his bunk many months ago with what seemed to have been pneumonia. This deprived the vessel of its executive working officer. Later while Capt. De Rosa was running along the deck he fell and broke a kneecap. He was obliged to go to his berth. This deprived the brigantine of her two officers, both of whom were confined to the cabin. There was not a man among the crew who understood navigation. The vessel was sailed by members of the crew, who consulted the sick officers in the cabin. As a result, the voyage was prolonged and the provisions ran short.

On another occasion the brig was over 100 days getting from Baltimore to Brazil. She was five days sailing down the bay. The Anita S. is the only deep-sea vessel steered by a tiller seen here in years. Her cabin is below deck. She was recoppered before she sailed from Baltimore. It was then observed that the Italian oak frames placed in the vessel when she was built at Cassano, Italy, in 1876, were still sound and strong.

Changes in the Holy Land.

Yankee ingenuity and commercial vigor are doing wonderful things in the Holy Land, says the Washington Post.

Until a few years ago, it was said that if one of the prophets had returned to the scenes of his earthly activities he would have had little difficulty in recognizing them, except for the change in the character of the population. The hills and valleys of old Judea had otherwise taken little note of the flight of the centuries.

But our consuls write to the Department of State that times are changing even in Palestine and Syria. The railway from Joppa to Jerusalem, at first an experiment, has been put upon a paying basis, and other lines which will connect it with points of interest up and down the valley of the Jordan have been projected, or are actually in course of building. In Jerusalem there are now electric lights, telephones, phonographs, sanitary plumbing, modern stores, and, in short, most of the comforts of civilized life.

Trolley lines are talked of to connect Jerusalem with Bethany, Bethlehem, the Lake of Galilee, Samaria, Jericho, Nazareth and other places made familiar through Bible history. With the introduction of these insignia of modern activity, the Palestine of the past will vanish.

Eve's Apple.

A fruit supposed to bear the mark of Eve's tooth is one of the many botanical curiosities of Ceylon. The tree on which it grows is known by the significant name of "the forbidden fruit," or "Eve's apple-tree."

The blossom has a very pleasant scent, but the really remarkable feature of the tree, the one to which it owes its name, is the fruit. It is beautiful, and hangs from the tree in a peculiar manner.

Orange on the outside and deep crimsons within, each fruit has the appearance of having had a piece bitten out of it. This fact, together with its poisonous quality, led the Mohammedans to represent it as the forbidden fruit of the Garden of Eden, and to warn against its noxious proprieties.

The mark upon the fruit is attributed to Eve. Why the bite of Adam did not also leave its mark is not known, but as only one piece seems to be missing, its loss is ascribed to the woman.

Treats Himself Occasionally.

"He's too miserly to live."

"I admit he's sparing enough generally, but he gives himself a treat on holidays and Sundays."

"He does?"

"Yes. On these occasions he always reads some of the most tasty recipes he can find in the cook book."—Philadelphia Press.

SYSTEMIC CATARRH

Peculiar to Summer Weather Promptly Cured by Pe-ru-na.

MISS MARIE COATS.

Miss Marie Coats, President of the Appleton Young Ladies' Club, writes the following concerning Peruna:

Appleton, Wis.

The Peruna Medicine Co., Columbus, O.:

Gentlemen—"I find Peruna an excellent spring and summer medicine and am glad to call the atention of my friends to it. When that languid, food no longer tastes good, and small annoyances irritate you, Peruna will make you feel like another person inside of a week. I have now used it for three seasons and find it very reliable and efficacious."—Marie Coats.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. Hartman, giving a full statement of your case and he will be pleased to give you his valuable advice gratis.

Address Dr. Hartman, President of The Hartman Sanitarium, Columbus, Ohio.

Russ House, San Francisco, Has Been Completely Modernized.

Within the past year there has been a great demand made by those visiting the city for accommodations that have a semblance to their home surronndings. Realizing this want, Colonel J. S. Young of the Russ House has gone to an expense of over $70,000 to obtain the desired result. The first step taken was to tear down the plastering in every room. Over 1000 loads of old plastering were carted away before the work of modernizing the house was completed. From one end of the hotel to the other has been repapered and repainted, while new furnishings are to be seen on every hand. The building now contains twenty-one suites of rooms which have private bath adjoining and over 300 other rooms for those who wish for less pretentious accommodations. The new plumbing is of the most modern sanitary kind, and has been inspected by the local health authorities, who have given their indorsement to it, as being the most complete in the city. An electric service is now in use throughout the building, while every room is supplied with hot and cold water. The locksmith has visited all the doors and put on new locks of the most improved pattern. These locks have a set bolt which can only be opened from the inside.

The Russ House is famous for the good table it sets. In fact, many of the business men who have offices in the insurance district are to be seen at the noon hour in the dining room. A visit to the kitchen shows that none of the Oriental races are employed, and there is a cleanliness that speaks well for the thoroughness of the management. This part of the hotel is so situated that it is by itself, and there is no chance of the odor of cooking being found outside its doors. In fact, the Russ House is one of the most modern hotels in the city and the latest to be thoroughly renovated. It is an ideal place at which to stop. Everything is congenial, and one feels at home the moment he passes the front doors.—S. F. Post, July 26th.

The Best Prescription for Malaria

Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c

Adams' Sarsaparilla Pills cure sick headaches, constipation, biliousness and dyspepsia. They also purify the blood. Sold in 10c and 25c boxes by all druggists.

Got Grip? Try Fryer's Abietene Cough Balsam

I do not believe Piso's Cure for Consumption has an equal for coughs and colds.—JOHN F. BOYER, Trinity Springs, Ind., Feb. 15, 1900.

When Jack Tar Whistles.

The first time I went to sea I was whistling blithely one day, for the sun was bright and the breeze was fresh and the tub was spanking along under all her canvas, when a sailor warned me to stop, writes Charles M. Skinner in Lippincott's Magazine. I asked why. He said the wind was coming up fast enough as it was and that if I kept on whistling I would be fetching a gale about their ears. Afterward I learned that it is permissible to whistle during a calm, and indeed I have known captains and mates to turn toward the quarter from which they wished the wind to spring and whistle for some minutes. But it is against all custom to whistle when the wind is rising, for that is notice to Davy Jones that you want more, and he may turn on a hurricane.

A Pot Walloper.

The parliamentary register for 1896 showed that there was then only one pot walloper in all England. One seeing the term for the first time might easily imagine that a pot walloper was a species of ichthyosaurus or some other reptile of a past age. It will be discovered upon inquiry, however, that the term "pot walloper" is literally one who boils a pot and was applied to voters in certain boroughs of England where, before the passage of the reform bill of 1832, the qualifications for suffrage was to have boiled (walloped) his own pot in the parish for six months.

A Curious Tree.

There is a curious combination tree in West Stockbridge, Mass. It is primarily a maple which measures, a foot from the ground, 12 feet 3 inches in circumference. Fifteen feet from the ground there are one or two birch limbs growing, and higher up are currant and raspberry bushes which bear fruit each year. It is not stated whether the sugar made from its sap has a raspberry flavor, or the birch bark a currant color and taste, or the berries a spicy tang of birch. It is very old and bids fair to stand for many years longer.

The Important Thing.

"Do you think it makes much difference which planet a person is born under?"

"Not a bit, so long as he keeps on the earth."—Town and Country.

If a man is treated well at home, he would rather eat at home and sleep at home and loaf at home than anywhere else.—Atchison Globe.

It is never too late to learn, but when a man thinks he knows it all that settles it.—Chicago News.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

Fryer's Abietene Cough Balsam saves Doctor Bills.

A STARTLING STORY

TOLD BY A KANSAS CITY NEWS AGENT.

In an Interview He Relates How He Accomplished What Many Others Have Failed to Do.

Jack Williams of No. 401 Delaware street, says the Kansas City, Mo., Journal, is well known as an enterprising news agent and a thoroughly reliable man. He had been a sufferer from kidney trouble and endured much pain from it until recently, when he tried Dr. Williams' Pink Pills for Pale People and with such success that within a short time he was entirely and permanently cured. To a reporter he said:

"For two years I had pains in the back constantly, causing me serious inconvenience. But I did not attempt to do anything for my complaint until the latter part of last winter, when I saw an advertisement of Dr. Williams' Pink Pills for Pale People and decided to see what they would do for me. I was relieved within one week after I began taking them; the pains disappeared and so complete was the cure that I have not found it necessary to take further treatment nor have I been troubled at all by the disease since.

Kidney complaint is an insidiuous disease. First come almost unnoticed pains in the back and some slight inconvenience. The pains grow gradually worse and the inconvenience greater till finally, if not given medical treatment, the person suffers awful torture and becomes unfit to follow his ordinary occupation. Blood poisoning sets in, the constitution is wrecked and death often results.

Mr. Williams took the one unfailing remedy and was readily cured within a few weeks. His statement was sworn to before Lionel Moise, a notary public, and the facts above will bear the most searching investigation. Dr. Williams' Pink Pills for Pale People will not only effect a cure in cases similar to the one above, but, acting directly upon the blood and nerves, are an unfailing specific for such diseases as locomotor ataxia, partial paralysis, St. Vitus' dance, sciatica, neuralgia, rheumatism, nervous headache, after-effects of the grip, palpitation of the heart, pale and sallow complexions and all forms of weakness either in male or female. At all druggists or direct from Dr. Williams Medicine Co., Schenectady, N. Y. Price 50 cents per box; six boxes, $2.50.

The demand for all kinds of engineers and surveyors from the Hawaiian Islands and the Philippines is so great that the Van der Naillen School of Engineering of San Francisco has sent recently to those islands three mining engineers, six assayers and two land surveyors. Now is the time for young men to study engineering.

That Cough needs Fryer's Abietene Cough Balsam.

If you are troubled with pimples, sallow complexion, impure blood or poor digestion, use Adams' Sarsaharilla Pills. They improve the complexion and positively cure constipation. 10c, 25c, at all drug stores.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

The famous Gilt Edge Whiskey is for sale by first-class dealers in your community, and is especially recommended to those that have not tried it. Call for it the next time you want a good whiskey. Wichman, Lutgen & Co., San Francisco, Cal., sole proprietors for U. S. A.

For Consumption try Fryer's Abietene Cough Balsam.

BAD BLOOD

"CASCARETS do all claimed for them and are a truly wonderful medicine. I have often wished for a medicine pleasant to take and at last have found it in Cascarets. SUNDAY AFTERNOONS.

From the window of the chapel softly
sounds an organ's note,
Through the peaceful Sabbath gloaming
drifting shreds of music float,
And the quiet and the firelight and the
sweetly solemn tunes
Bear me dreaming back to boyhood and
its Sunday afternoons;

When we gathered in the parlor, in the
parlor stiff and grand,
Where the haircloth chairs and sofas
stood arrayed, a gloomy band,
Where each queer oil portrait watched us
with a countenance of wood,
And the shells upon the whatnot in a
dustless splendor stood.

Then the quaint old parlor organ, with
the quaver in its tongue,
Seemed to tremble in its fervor as the
sacred songs were sung,
As we sang the homely anthem, sang the
glad revival hymns
Of the glory of the story and the light
no sorrow dims.

While the dusk grew even deeper and
the evening settled down,
And the lamp-lit windows twinkled in
the drowsy little town,
Old and young we sang the chorus and
the echoes told it o'er
In the dear, familiar voices, hushed or
scattered evermore.

From the windows of the chapel faint
and low the music dies,
And the picture in the firelight fades be-
fore my tear-dimmed eyes,
But my wistful fancy, listening, hears
the night wind hum the tunes
That we sang there in the parlor on those
Sunday afternoons.

TAKING HIS ADVICE

MR. SHELDON was the principal merchant in the important manufacturing town of Tormont. He was proud of his wealth, but he was still more proud of the fact that he had made it all himself, and his pride was greatest because he had made it by never allowing anybody to get ahead of him.

"That's the secret of success in life, Harry," he said, one day, to his favorite clerk. "Sharp's the motto, if you wish to rise. I don't mean you should cheat; that, of course, is both wrong and ungentlemanly." (Mr. Sheldon prided himself, also, on being what he called "a gentleman," and above all little meannesses.) "But always be wide-awake, and never let anybody cheat you. I've noticed, by the bye, that you've seemed rather downhearted lately. If it's because you've your fortune yet to make, don't despair; but follow my advice. An opening will come at some time for something better than a clerkship, and though I shall be sorry to lose you, yet I'll give you up, if it's for your interest."

"Thank you," said Harry, apparently not a bit cheered up by this cool way of being told he had nothing to expect from Mr. Sheldon; "but it's not exactly that. I suppose I shall get along somehow."

"What is it, my dear boy, then? I really take an interest in you, as you know"— and he did, so far as words were concerned. "Perhaps I can give you some advice."

"Well," said Harry, with some hesitation, "I'm in love, and——"

"In love!" exclaimed the rich merchant. "In love, and with only a clerk's salary to marry on. It will never do—never do, Harry. Marriage for one like you is fastening a millstone round your neck, unless, indeed"—and he stopped, as if a bright thought had struck him—"unless, indeed, the girl is rich."

"She is rich, or will be, I suppose," answered Harry, "for her father is a wealthy man. But that's just the difficulty. Her father would never let her marry a poor man; and she won't marry without his consent."

"What a miserable tyrant!" said Mr. Sheldon. "If I was the lover, Harry, I'd run off with her. I'd checkmate the old curmudgeon in that way," and he chuckled at the imaginary triumph he would achieve. "'Pon my soul, I would! I never, as I told you, let anybody take a rise out of me."

"But would that be honorable?"

"Honorable? Isn't everything fair in love and war? I thought you had some pluck, Harry. How I should like to see the stingy old hulk rave and stump about on his gouty toes—for he must be gouty—when he heard of your elopement!"

And he laughed till his portly sides shook at the picture he had conjured up.

"He'd probably never forgive me," said Harry, dejectedly. "And then what could I do, with a wife brought up to every luxury, and only a poor clerk's salary to support her on?"

"Never forgive you? Trash and nonsense! They always do forgive. They can't help it. Besides," with a confidential wink, "I think I know your man. It's that skinflint Meadows. I've heard of your being sweet on his daughter. She's a pretty minx, though she is his child. Oh, you needn't deny it. I saw how you hung about her at our party the other night; and when I joked about it with my daughter the next morning she as good as admitted that it was true, saying it would be a good match for you. Now, I owe old Meadows a grudge. He tried to do me in those railway shares last winter, and I mean to pay him for it, somehow. I tell you what I'll do. I mustn't ask, mind you, who the girl is. Mum must be the word. I mustn't, of course, be known in the affair; but I'll give you a leave of absence for a month and a check for £50 to pay for your wedding trip if you'll make a runaway match. Is it agreed? Well, there's my hand on it. Here's the check, Egad! Won't the old rascal howl when he hears how we've done him!"

Harry seemed to hesitate, however, and it was not till Mr. Sheldon, eager to see his old commercial rival put at a disadvantage, had urged him again and again, and promised to stand by him, that he finally consented, and took the check which his employer persisted in forcing upon him.

The next morning Mr. Sheldon came down to breakfast in high glee, for a note had reached him just as he was shaving, which ran as follows:

"Dear Sir—I have, with much difficulty, persuaded her to elope. It was not, however, till I showed her your check that she would consent to do so. She said that she was sure you would not recommend anything that was wrong; that you would advise her as if you were her own father, and she hopes you will stand by us. We shall be married to-morrow, before Mr. Meadows is up. Very thankfully,

"HARRY CONRAD."

The old gentleman brought the note with him to the table, opened it out before him, adjusted his spectacles and read it over and over again.

"I'd give a £10 note," he said chuckling, "to see the old fellow's face when he hears how Harry has done him."

It was the custom of Mr. Sheldon to read his newspaper at breakfast, while waiting for his only child and daughter, who, a little spoiled by overindulgence, was generally late.

But this morning Matty was later than ever.

The banker had read all the foreign, as well as the home news, and even reperused Harry's note, and still she had not made her appearance.

"The lazy puss!" he said at last. Then he looked up at the clock. "Half an hour late! Now, this is really too bad. John!" he cried, addressing the manservant at the sideboard, "send and see why Miss Sheldon doesn't come down. Tell her," with a severe air, "I'm tired of waiting."

John came back in about five minutes, looking very much flustered.

"If you please, sir," he stammered, "Miss Sheldon's not in her room, and the maid says that the bed looks as if it hadn't been slept in all night."

The rich merchant's jaw fell.

He started up, with a cry of agony, to go and see. But he was prevented by the footman appearing at the door with a telegram.

"A telegram!" cried the merchant, unfolding it with his trembling hands. "What can it mean? Has she been found dead anywhere?"

This was the telegram:

"Dear Father—Harry and I were married at 8 o'clock this morning. I would not consent to an elopement till Harry assured me you had advised it, and had shown me your check as proof. He says you promised to stand by us, and I know you pride yourself on never breaking a promise. We wait for your blessing. MATTY."

"Well, I never!" ejaculated Mr. Sheldon, when he had recovered breath. "The impudent, disobe——"

But here he stopped—stopped, and mopped his bald head, which, in his excitement, had broken out into great drops of perspiration. He remembered that he had himself advised Harry to elope, and that, if the story got wind, he would be the laughing stock of the town, including—hardest cut of all—Mr. Meadows. He remembered, too, that he had but one child, and that she was all in all to him.

So he accepted the inevitable and telegraphed back:

"You may come home, and the sooner the better, so as to keep the £50 for pin money. Tell Harry he's too sharp to remain a clerk, and that I take him today into partnership. Only he must remember that partners never tell tales out of school. God bless you!

"H. SHELDON."

The runaways returned by the next train. The marriage proved, too, an eminently happy one. The story never got out. We only tell it now in confidence.—Woman's Life.

Sparrows Riddle a Polecat.

"You have often heard of the ferocity of birds, no doubt," said William Anderson, hardy old woodsman, who lives on the lower Ohio, "but I doubt if you ever heard of birds attacking and killing an animal that one would imagine could whip three or four fierce curs. While hunting down in the flats near the mouth of the Green River several years ago, I saw a large and fierce skunk beat an ignominious retreat after trying in vain to best several English sparrows, and later, when the skunk had screwed his courage up to the sticking point again, I saw those same insignificant-looking little birds tear the animal to shreds. When my attention was first attracted the sparrows were flying from one side of the thicket to the other, twittering like mad. When I went to learn the cause the skunk, badly frightened, was dodging from one side to the other of a log, trying to escape the savage attacks of the feathered tribe. The birds didn't mind me, but kept dashing their little bills into the skunk's well-punctured hide. When the skunk started across an open space to the cover of near-by driftwood his tormenters pounced upon him and riddled the poor cat's hide."—Louisville Post.

Melbourne's Growth.

Melbourne, which consisted of thirteen huts, and was known as Beargrass, at the time of Queen Victoria's accession, is now classed as the seventh city of the British Empire, coming in after London, Liverpool, Glasgow, Manchester, Birmingham and Calcutta.

Unless you have a good deal of will power, you are apt to make mistakes on Sunday that will cause you to feel wretched on Monday.

ANNA GOULD'S SISTER-IN-LAW.

Senorita Natico Terry, Who Has Married De Castellane's Brother.

Senorita Natico Terry, whose marriage to the Count Stanislas de Castellane, brother of Count Boni de Castellane, is announced, is the daughter of Senor and Senora Francisco Emilio Terry, of Cuba, New York and Paris. She is a niece by marriage of the prima donna, Sybil Sanderson, and a granddaughter of the late Tomaso Terry, the fabulously rich Cuban planter, who began life as a peddler of cheap jewelry in Havana and ended as one of the richest land-owners on the island. The new Countess Castellane is 22 years old. She was educated at a convent in Paris, and has lived in great seclusion, after the fashion of aristocratic French girls. She is said to speak with equal fluency French, Italian, German, English, and Spanish, and brings to her titled husband a fortune which while large is by no means equal to that of the young woman whom Count Boni de Castellane married. Count Stanislas is a larger and more manly edition of his brother Count Boni, with whom he has lived for the last few years.

"Marry, my sons, and marry happily, but be sure and marry money. I have no money to leave you."

This injunction was given by that sage old worldling, the Marquis de Castellane, as his sons arrived at the years of discretion. They have followed his advice with the most absolute filial duty. Count Boni got Anna Gould and

NEW COUNTESS CASTELLANE.

the most money. Count Jean captured the rich widow of Furstenberg, Marie Louise of Talleyrand-Perigord. And now comes along Count Stanislas, the last of the trio, whose marriage is announced to the daughter of Emilio Terry, of the rich and famous Cuban-New York family of that name.

While Count Stanislas does not secure as much money, perhaps, to help regild the ignoble escutcheon of the Castellanes as Boni or Jean, he gets a wife whose face is described in the Paris chronicles as delicious to look upon.

Curiously enough, in two instances the money procured to the Castellane family by the advice of this up-to-date Polonius to his sons was made by two peddlers in America. One was Jay Gould, who peddled mousetraps; the other was old Terry, the sugar man, who started in life peddling cheap jewelry.

GIRL GOLFER MAKES SPLENDID SCORES.

Much interest has been aroused at Rome, Ga., in the splendid golf playing of Miss Edith Mallory, of Memphis. Miss Mallory drives better than most men who play golf, and her playing has been a revelation to many. She has defeated or tied seven of the ten young

MISS EDITH MALLORY.

men she has played against in Rome. Miss Mallory was the champion golfer at Hollins' Institute, Virginia, and holds the woman's record on the celebrated Burlington (Ia.) golf course. She has never been defeated by a Southern girl in a championship game and is very enthusiastic about golf.

Vicarous Bliss.

At the return on Saturday of the Leeds engineers, who have been serving in South Africa, the unfamiliar khaki made it difficult to discriminate, and one young lady was a little too hasty. Rushing forward with outstretched arms she threw them around the neck of one of the men and passionately kissed him again and again. Then drawing back her head to gaze at the loved face (as she thought) she recoiled abashed, and exclaiming, "Oh! You're not my brother!" retreated covered with blushes, and was lost in the crowd.—Leeds Mercury.

Free Libraries Not Wanted.

Free libraries are not wanted in some parts of London. The three adjoining parishes of Islington, St. Pancras and Marylebone have refused to establish them even where the books were offered as a gift.

THE WORLD'S COAL

Facts and Calculations Touching Increased Price.

ASTOUNDING FIGURES

Annual Output When Considered in Bulk Gives Rise to Fears.

But 1,000 Years of Reserve Left Surely Allays All Anxiety—The Imagination Staggers Under the Array of Facts Illustrated by Diagrams and Fortified by Calculations—A Train 71,000 Miles Long to Transport Our Annual Product.

THE coal barons announce that the price of coal will advance by a fixed gradation according to a schedule agreed upon by the producers. We are also told that the coal supply will be exhausted in a few years. The first announcement, says Pennsylvania Grit, of Williamsport, is a stubborn fact which will not yield to argument; the other statement will appear less alarming if we examine it in the light of such information as we are able to get.

According to statistical reports the output of coal in the United States last year was in round numbers 250,000,000 tons. As a ton of coal in strata represents about one cubic yard, last year's output was 250,000,000 cubic yards. This amount of coal would make a stack a mile square and approximately 400 feet high. It is an enormous quantity, and we may be excused for some alarm when we are told that the reserve supply will soon be exhausted. But it may be well to look into the matter a little before getting into a panic of fear. However, before relieving our distress of mind, let us enjoy a brief season of additional shivers.

Thirty Years' Product.

Somebody has estimated that during the past thirty years we have mined 5,000,000,000 tons of coal. Do we realize what that means. This quantity of coal, estimating a ton at a cubic yard, and dealing in round numbers, would make one cubic mile; that is, a block one mile high, one mile broad, and one mile thick. But this calculation is made on the basis of coal closely compacted in the strata. When coal is brought to the surface it gains about one-third in bulk. Let us suppose, therefore, that each ton of coal after being extracted from the mine occupies a space of about forty cubic feet. This is not uncommon allowance for storage. It follows, therefore, that one cubic mile of coal in the mine becomes on the surface 1 1-3 cubic miles. A person with a taste for mathematical calculations can figure out that 1 1-3 cubic miles of material would build a wall 160 feet high, 140 feet broad at the base, 100 feet wide at the top, and 2,000 miles long. In other words, the coal that has been mined in the United States within thirty years would build a Chinese wall of the dimensions given, across the United States from the lowest point in Texas to the northern boundary of North Dakota, and extending 200 miles into British territory.

Or, 1 1-3 cubic miles of material would construct an enormous breakwater running out to sea twenty-two miles, one mile wide and 320 feet high.

In order to get a clearer conception of

A WALL OF COAL, 2,000 MILES LONG.

what an enormous bulk is represented by the output of coal for one year, let us undertake to move it. For convenience we will assume that a coal car is thirty feet long and carries twenty tons. On this basis it would require 12,500,000 cars to hold 250,000,000 tons of coal, and if the cars were put into a train, making no allowance for coupling spaces, the train would be over 71,000 miles long. Such a train would practically extend three times around the globe. Multiply this yearly output by 20 and we have the jumped estimate for the output for thirty years. In this case the train would consist of 150,000,000 cars and would be 1,420,000 miles long, or long enough to reach round the world fifty-nine times.

Here is another aspect of the question. Assuming that our average annual output is 220,000,000 tons, a week's output would build a pyramid by the side of which the Great Pyramid of Cheops would be dwarfed to comparative insignificance; and every ten minutes there is raised 15,000 tons of coal. Suppose we take a gigantic pair of scales, and in one pan put one of our large new battleships weighing 14,600 tons, and in the other pan the coal mined in a single period of ten minutes. The battleship would be elevated to a position neither natural nor dignified, yet in accordance with the inexorable law of gravitation.

But of the great mass of coal we produced in 1900 only 7,000,000 tons were exported. Nevertheless, comparatively insignificant as this amount seems in

HAULING ONE YEAR'S OUTPUT OF AMERICAN COAL.

comparison with the total output, it would require about 334,000 cars of twenty tons capacity each to haul it to the seaboard for shipment, and it would supply cargoes of 3,500 tons each to 2,000 vessels. England exports annually 42,000,000 tons of coal, and, to transport it, 12,000 vessels, each of carrying capacity of 3,500 tons, are required.

71,000 Trainloads.

Let us imagine a condition in which our entire annual output would be exported. In that case we should have 71,000 trains each a mile long carrying coal from the mines to tidewater, and the seas would be crowded with more than 70,000 loaded ships. If we carry the calculations still further and deal with the output for thirty years, the merchant marine devoted to the coal carrying trade would be swelled to the stupendous number of 1,420,000 ships.

These calculations give us something of an idea of the extent of the coal mining industry, and dispose our minds to accept without question the alarmist reports sent out from time to time coincidently with the announcement of an advance in the market price. However, there is another side to the question. It is estimated that the area of coal lands in the world is 472,000 acres, distributed as follows: China and Japan, 200,000; United States, 194,000; India, 35,000; Russia, 27,000; Great Britain, 9,000; Germany, 3,600; other countries, 3,200. It is also estimated that the coal supply of China, Japan, Great Britain, Russia, Germany, and India is 303,000,000,000 tons, an amount sufficient to supply the world for 450 years at the present rate of consumption. The coal still unmined in the United States is estimated at 500,000,000,000 tons in round numbers, an amount regarded as sufficient to extend the period of the world's consumption to 1,000 years, at the present rate.

Now, we have here something to allay our anxiety on the score of speedy exhaustion of the coal supply. Few of us will live 1,000 years, and we can safely rely upon the inventive genius or discoveries of future ages to supply a substitute for coal long before the stock runs short. If coal continues to advance in price at the rate at which it is going this year, the capacity of the public to purchase will have ceased long before the available supply shall have been exhausted.

It may not be amsiss to attempt to represent the reserve supply of coal in this country by means of a diagram, using only round numbers and approximate dimensions.

If the coal mined within thirty years is equivalent to a block of the dimensions of a cubic mile, the reserve may be indicated by a block 100 times as large in cubical contents. That is to say, the coal still in the bowels of the earth would make a cube of 100 miles dimensions. As a matter of fact, if the coal supply is 500,000,000,000 tons, the cube would be very close to 173 miles in height, breadth and thickness, and the thirty years' output would be a cube of about 1.73 miles. But for convenience the even numbers are used, though they are far below the actual figures. The proportions, however, are given with sufficient accuracy.

A London paper has dug up a procla-

TEN MINUTES' OUTPUT.

mation issued 600 years ago by Edward I., which indicates that coal was not appreciated so much by the people of the fourteenth century as it is now. The proclamation is referred to in 1652 as follows:

"Whereas in the year of our Lord God 1306, King Edward the I by proclamation prohibited the burning of sea cole in London and the suburbs to avoid the sulferous smoke and savor of the firing * * * there is so great scarcity of wood throughout the whole kingdom that * * * the inhabitants in general are constrained to make their fires of sea cole or pit cole even in the chambers of honorable personages. Within thirty years last the nice dames of London would not come into any house or room where sea coles were burning nor willingly eat of the meat that was either sod or roasted with sea cole fire."

World Need Not Worry.

Now the world is beginning to worry lest it be not able to get enough coal to burn. It may be of interest to know what proportion of the world's total output of coal is credited to the various coal producing countries. In 1899, the last year in which statistics are available, the production in metric tons was as follows: United States, 228,717,579; United Kingdom, 223,606,668; Germany, 135,824,427; Austro-Hungary, 36,000,000; France, 32,779,965; Belgium, 21,917,740; Russia, 13,000,000; Japan, 6,650,000; Australasia, 6,700,000; India, 5,000,000; Canada, 4,141,000; Spain, 2,742,000; Mexico, 409,125; Sweden, 239,344; Italy, 375,000; all other countries, 3,500,000; total, partly estimated, 727,603,661.

Thirty American States and territories, including Alaska, produce coal of one kind or another. Even Nebraska produced 1,000 tons in 1899. Pennsylvania led with 133,585,274 tons; Illinois was second with 23,434,445; West Virginia third with 18,201,189, and Ohio fourth with 16,695,449 tons. With the exception of Indiana, the other States which produce coal to the amount of 1,000,000 tons annually are: Alabama, Colorado, Indian Territory, Iowa, Kansas, Kentucky, Maryland, Missouri, Montana, New Mexico, Tennessee, Virginia, Washington, and Wyoming. Several of these States produce upward of 4,000,000 and some as high as 6,000,000 tons annually.

For the year 1899 the total bituminous output was 191,561,350 tons, valued at $172,406,670; anthracite, 60,577,398 tons, valued at $103,048,780. Kentucky produced 36,639 tons of cannel coal valued at $91,597. Grand total, 252,115,387 tons; valued, $276,147,056.

The Land of the Lazy Man.

"In a late sojourn in Honduras," said L. B. Givens, "I came to the conclusion that it was a paradise for lazy men. Everything grows luxuriantly, with but little labor on the part of the natives, and many crops do not need replanting more than once in eight or ten years. The country offers fine inducements to enterprising men, but it is hard for a white man used to civilized ways to go down there and dwell among an ignorant lot of natives who are 100 years behind the times. A man would have no congenial society, and might as well be an exile.

"The natives usually live in bamboo houses, though in the towns the dwellings are of adobe. Children go naked for the first two or three years of their life, and the attire of the adults is rather scant. The government is liberal with concessions in order to encourage the development of the country's resources, but there is no general rule governing the granting of privileges; it all depends on how good a bargain may be driven. The climate is very salubrious and laziness is about the only prevailing disease.

American Sewing Machine.

There are made on the average in the United States, it is computed, 500,000 sewing machines a year, and the extent of the sewing machine business is shown by figures which, if not sustained by official corroboration, might be thought to be extravagant. There are sixty-five sewing machine factories in the United States, with a gross capital of $20,000,000, giving employment to 10,000 persons and having annual receipts of more than $15,000,000.

The American sewing machine industry is sufficiently large to supply not only the home market, but the foreign market as well, and nine-tenths of all the machines made in the world are produced in the United States, and practically all of them are protected by American patents, and are the results of Yankee ingenuity, preseverance, and discovery. In the figures of the sewing machine business of this country the important item of repairs to machines are not included. It is a separate branch of the business, maintained apart from the manufacture of machines, and gives employment to a considerable number of persons. American sewing machines to the value of about $4,000,000 a year are shipped to other countries, and there is practically no country where the benefits of civilization are known in which the American sewing machines are not in use.—New York Sun.

Cheap Tea.

Tea drinkers will be surprised to learn that in Mincing lane the Ceylon leaves from which their favorite beverage is brewed has been sold at the fabulously low sum of five cents per pound. This is probably a record price for tea, and it has caused a great deal of indignation among the planters in the island of the "spicy breezes," who declare that the stuff thus sold can be little better than rubbish, and is calculated to bring the products of Ceylon, and India generally, into disrepute. It would be interesting to know how much per pound the public were asked to pay for the article, or how much a cup they gave for the water in which it had been steeped for a certain time. —London Daily Telegraph.

Why do people give advice? Fools won't take it, and wise men don't need it.

INDEPENDENCE, CAL.,

FRIDAY, SEPTEMBER 13 1901

WHAT NEWSPAPERS ACCOMPLISH.

The value to a community of a live newspaper can scarcely be estimated in dollars and cents. The good it does is performed in such a diversity of ways and on such a variety of occasions that the average edition of any well conducted newspaper must of necessity contain an infinite amount of the very best class of advertising, given free of charge; indeed, for which no adequate charge could be made.—Salt Lake Herald.

There is not a resident of a town where a newspaper is published who is not benefitted pecuniarily by its publication, and the better support such paper receives the greater advantage to all of the business interests of the town. No better estimate of the enterprise and business capacity of the people of a town can be made than by examination of the advertising columns of their local paper. If they are well filled it denotes general prosperity and a spirit of enterprise and liberality upon the part of the citizens, while a scanty array of straggling ads. is a sure indication of either poverty of resources or the parsimonious methods of the business men. The narrow-minded merchant who thinks that money paid for advertising is thrown away would realize the idiocy of his belief inside of a week were the paper or the papers of his town to suspend publication. It would be the worst "black eye" that could be given to the town or its inhabitants. It would be worse than the failure of a dozen of the most prominent business establishments of the place, and as bad as the "petering out" of the principal mines in a small mining town, whose business was entirely dependent upon the mineral product of the district.

Some people are inclined to regard newspaper publishers somewhat as mendicants, and that money paid them for legitimate work is given in charity. As a matter of fact newspaper publishers donate more to the public in the way of free advertising of the resources of the section; encouragement and promotion of public and private enterprises and a hundred other things, the cost of the type-setting alone of which is ten times more than is bestowed in charity and donated for public purposes by any begrudger of the publisher's compensation for a few inches of space in the columns of his paper.—Nevada State Journal.

Allow us to remind our cotemporaries of another matter of fact. A newspaper office is a manufacturing concern that invariably brings more money into a town than it sends out for material, and nine times out ten, always being a supporter of home interests, pays the merchants more than it receives from them.

A statement going to show the marvelous increase in the use of postal facilities by the American people is that of the Director of the Bureau of Engraving and Printing at Washington, just issued, in which it appears that the number of postage stamps sent out for use during the current fiscal year includes 1,300,000,000 one cent stamps, 3,500,000,000 two-cent stamps and 309,236,000 of higher denominations. The total, including special-delivery ten-cent stamps, is 5,116,236,000 against 4,377,727,000 for the previous fiscal year, an increase of over one and a half billion stamps. It is not easy to grasp the full significance of these stupendous totals. A few calculations may help. According to these figures stamps will be issued this year to supply every man, woman and child in the United States with at least sixty stamps each. Distributed among the population of the entire globe they would supply each person with postage for not less than three letters. Placed side by side in a continuous line the total issue would girdle the entire earth three times, forming a variegated ribbon around it nearly three inches in width. If spread out in the same manner across the United States the stamps would form a paper sidewalk from New York to San Francisco over three feet wide. Pasted into a stamp collector's book of the conventional size, the issue for the year would fill half a million volumes, which, placed one upon another, would form a solid column over twenty-five miles high. If it is true, as Edward Everett Hale says, that the United States postal system is the greatest of popular educators, these figures will serve to show the extent of Uncle Sam's present service as a school teacher.

The hot blood of the belligerent southern republics is noticeably cooling under the influence of our Government's signified willingness to act as mediator. The eagerness of Colombia to fight Venezuela, Ecuador and Nicaragua all at once, while at the same time wrestling with a formidable rebellion, has greatly abated. Colombia has promptly accepted the tender of mediation made by the United States. Venezuela is still somewhat inclined to be agressive, but there is not much doubt that she will soon follow the lead of the sister republic in submitting to arbitration.

The coyotes out about Pioche know a thing or two. A band of them will set up a racket on the edge of town and one will take a flying trip through the village, trailing all the dogs in the place after him. While he is leading the canines off into the hills the other members of his tribe sneak in and loot the chicken houses.

Clergy half-fare permits are to be extended to cover the entire territory between Chicago and the Pacific Coast.

Andrew Carnagie has offered $20,000 to Riverside for a free public library.

THE ASSASSINATION.

News of the heinous and dastardly attempt to murder President McKinley at Buffalo last week is now so widespread that it is scarcely necessary for this paper to attempt to give an account of the outrage from the voluminous details already known to its readers.

Independent of the profound respect always accorded to the personality of our nation's chief executive, with ever a pride in his freedom to be with and of the people, eighty million free people feel the blow as one aimed at their own breasts and their own liberties.

The question of the present is, How long are the American people going to permit the existence of such hideous vipers as Czolgosz, with his nestlings of like anarchistic names?

Laws by Congress, rushed through this winter, should define these offscourings as traitors or foreign spies, even in time of peace punishable by death for conspiracy and treason.

Then shut the gates against the hordes. They are not entitled to breathe the air of a land like this. An anarchist cannot be innocent, and if he gains a foothold on American soil his proper place is six feet under the surface.

UNFAVORABLE REPORTS.

All the week long hopes of the world have been buoyed by the favorable tone of the bulletins promulgated by the surgeons, but this morning great anxiety is renewed.

BUFFALO, Sept. 13, 6 a. m.

President's condition very serious and give rise to the greatest apprehension.

His bowels have moved well, but his heart does not respond properly to stimulation. He is conscious. The skin is warm and pulse regular at 126; respiration, 30; temperature, 100.

8:55 a. m.

President's condition somewhat improved during the last two hours. There is a better response to stimulation. He is free from pain and is conscious. Pulse 128; temperature, 99.

Two months have passed since the beginning of the great strikes at Pittsburg and San Francisco. With the end of every week during that period the week ahead has been looked forward to anxiously but hopefully. The strain upon both sides in immediate interest has been terrible, and the loss to all concerned has been deplorable. The indications are now favorable for a resumption of all business that has been crippled by strikes and lockouts. There is no doubt that in the steel trade both sides are eager for a settlement. In San Francisco the situation is so deplorable that the present condition of affairs cannot continue much longer. The greatest sufferers, and the class in most imminent danger of overwhelming loss, are the great wheat-growers, who propose to go to the bay en masse and load their own grain on the hundreds of ships waiting cargo. In other lines where friction has developed between workers and employers, the direful experience at Pittsburg and San Francisco is likely to act as a sad and costly warning.

The new constitution of Alabama limits the meetings of its State legislature to a session of fifty days, once in four years. We believe that Alabama is the first to adopt quadrennial sessions. In some of the States there are annual, but in the majority of them they are biennial. Then the constitutional limit of fifty days is less than in other States, with possibly two or three exceptions. But the general feeling is increasing that frequent meetings are productive of harm rather than good, and for other reasons than the expense of holding them. If the experiment in Alabama is successful it will doubtless be followed by other States.

The State Bank Commissioners have issued a statement showing the financial condition of forty-seven interior savings banks at the close of business on August 7th, 1901. In comparison with the last annual statement a gain is shown for the year of $5,580,455.45 in the assets and of $5,133,036.73 in the deposits. This showing of prosperity in the interior is fully in accord with the progressive gain reported for the past year by the city banks, which, including the seventeen commercial banks, five national banks and nine savings institutions, made a clear gain in deposits of $19,351,786 52

It is a common misapprehension among people who know nothing about farming than anybody can be turned into a useful farmer or farmhand at a moment's notice, but any farmer will tell you that "5000 of the unemployed men of the metropolis" dumped, without experience or aptitude, on a farming section would be as useful and desirable as 5000 woodchoppers dumped into steel rolling mills or 5000 plow hands into a cigar factory or 5000 sailors put to setting type in printing offices.—N. Y. Press.

Sixty of 400 school teachers who embarked on a transport from San Francisco some time ago for the Philippines fell under Cupid's darts, and were married upon the arrival of the ship at Honolulu. The delegation was pretty evenly divided as to sexes, and there's no telling what a wholesale crop of educated matrimony will result when the vessel arrives at Manilla. The Government has unwittingly developed a new scheme.

The Chicago Tribune says that morally and physically Chicago is a better place to live in than New York. Fortunately, the great majority of the American people are not obliged to live in either city

In the draughting department of the State Mining Bureau a mineral map of Inyo County has just been completed, and a register of the mineral deposits will be finished during the winter. It is the desire of Mineralogist Aubury to compile a mineral map, with accompanying register, of each mineral producing county in the State, the same to be revised yearly as development progresses. Each of these maps is compiled from the latest official map of the county with any corrections possible to obtain. Each mine or producing mineral deposit is located as exact as possible on the map, with a number, and the register furnishes a description of the same, with information of a general character. Some changes will be made in the character of the registers, which it is hoped will be an improvement on those previously issued. A plain statement of facts will be given, and all mines will be treated alike, as under this system it will be impossible to "boom" or favor one property more than another. The Mineralogist has instructed his assistants to furnish facts and not theories, so that any literature that may be issued by the Bureau will be accurate and beyond question.

Those interested in the Mammoth Coal Company are considerably elated over the reported new discovery of coal on their property twenty miles north of Randsburg. It is reported that on the fifth level, at a depth of 138 feet, the miners have opened a vein of coal that measures nine feet. When the information was sent the miners had not passed through the body to determine the thickness of the body of coal. The deposit is on 160 acres of land at the rim of the basin near Black Mountain and has only been discovered by faithful prospecting during the past five years. Tests have been made of this new coal and it is said by experts to carry less than one per cent of sulphur, the demand made by the naval department may be met, and that it would then be made available for steam purposes. The property is owned entirely by Los Angeles capitalists.—Los Angeles Herald.

The wealth of Mr. John D. Rockefeller of the Standard Oil Company is now computed at $1,000,000,000. In making mention of this the Tombstone Prospector characterizes it as "incredible." It does seem incredible when gauged by another fact, which is this: Had Mr. Rockefeller been born on the first day of the Christian era and lived to the present day, or say to January 1, 1901, and had he during all those 1900 years saved one dollar every minute of them he would not have as much money as he is credited with having. In 1900 years there are 693,500 days, 15,644,000 hours equal to 998,640,000 minutes. From this it is seen that at the rate of a dollar a minute for all those 1900 years he would still be short on the $1,000,000,000 he is said to possess.

Cayenne pepper does not come from a pepper plant, nor Burgundy pitch from Burgundy. Jerusalem artichokes do not come from Jerusalem, nor turkies from Turkey. Camel's hair brushes are made from the tail of the squirrel. German silver is not silver, and it was invented in China. Cork legs are not made of cork, neither do they come from Cork Ireland. Prussian blue does not come from Prussia. Irish stew is not an Irish but an English dish. Cleopatra's Needle was set up a thousand years before that lady was born. Shammy leather is not the hide of a chamois, but the flesh side of sheepskins.—Rural Press.

And a book "bound in calf" has never had anything in common with a calf—excepting, sometimes, its author.

The cost of obtaining a patent to a mining claim is subject to considerable variation. Outside of the land, for which $5 an acre is paid for lode claims and $2 50 an acre for placer claims, the costs are: Deposit with the Surveyor General for official work on survey plats and stationery, $40; deputy surveyor from $40 to $200, dependent on the time required to do the surveying in the field; notary fees for survey and application for patent, $10; $30 to $60 for newspaper publication of application; attorney's fees not less than $50; Register and Receiver Land Office fees, $15. The total, without the land, will be from $200 to $400.

The Steel Trust makes ninety per cent of the coke of the United States, seventy-five per cent of the coarse sizes of steel billets, seventy-five per cent of the tee rails, ninety per cent of the railroad rails, eighty-five per cent of the plates, ninety per cent of the wire. It owns 1000 miles of railroad, with 306 locomotives and 38,000 cars. It mines from 35,000,000 to 50,000,000 tons of coal per annum, and pays out in wages $500,000 per day.

A cow in New York State is creating quite a sensation among the yeomanry who attended the county fairs. Although full grown she is only twenty-eight inches tall and thirty-six inches long. She is perfect in form and is milked each day on the grounds. The cow at present gives eight quarts of milk twice a day She weighs 117 pounds.

The fight for the extension of the Chinese exclusion act is on and every Californian should sign a petition asking Congress to pass a more stringent law than the one we now have. Every man who earns his bread by the sweat of his brow is interested in keeping Chinese coolies out of this State.

The Census Bureau reports that there are 30,000 flour mills in the United States and 40,000 breweries. Maybe the breweries were the easiest to find and enumerate.

Coal will be $1 a ton higher on the Atlantic coast next winter than it was a year ago. The wages of the miners have been raised ten cents a ton.

IN THE CIRCUIT COURT OF THE UNITED STATES, IN AND FOR THE NINTH CIRCUIT. SOUTHERN DISTRICT OF CALIFORNIA.

Northern Division.

WELLS, FARGO & COMPANY, a corporation, Complainant,

vs.

RATCLIFF CONSOLIDATED GOLD MINES, LTD., a corporation, EDWIN C. NICHOLS, JOHN DOE, RICHARD ROE and JAMES DOE, Respondents.

UNDER AND BY VIRTUE OF A DECREE of foreclosure and sale rendered in the Circuit Court of the United States in and for the Ninth Circuit, Southern District of California, Northern Division, on the 23th day of August, 1901, in the above entitled cause, wherein complainant, Wells, Fargo & Company obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of Eighteen Thousand Four Hundred Nineteen and 5-100 Dollars ($18,419.05), and the cross-complainant, Edwin C. Nichols obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of Eighty Thousand One Hundred Thirty-Eight and 72-100 Dollars ($80,138.72), and the cross complainant Vulcan Iron Works, impleaded under the name of John Doe, obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of One Thousand Four Hundred Ninety-five and 93-100 Dollars ($1495.93),

I am commanded, as Special Master in Chancery, to sell in one parcel the following described property, to-wit:

The following named mining claims, mill sites, water rights and locations, situate in the County of Inyo, in the Southern District of California, and known and designated as the "Joker," "Texas," "Grover Cleveland," "John G. Carlisle," "Sunrise," "Kentucky," "Never Give Up," "Treasure Vault," "Big Brown," "Joker Extension," "W. G. Extension" and "Little Till" mining claims, and the "Cleveland" mill site and certain water rights known as the "Sale's water right," "Wingfield and Hamison water right," "Dover water right," "James Wingfield water right," "McNulty water right," which said mining claims, mill site and water rights are more particularly described in the notices of location thereof filed in the office of the County Recorder of said County of Inyo, including all buildings and improvements thereon; and more particularly, One (1) 20-stamp mill and building connected therewith and appurtenant thereto, and all machinery and appliances contained therein; One (1) air compressor plant and the building appurtenant thereto and all receivers, pipe lines, power, tools, machines and machinery to operate the same or appurtenant thereto; One (1) Cyanide plant and all tanks, pipe lines, pumps, zinc boxes, machines and machinery and appliances to operate the same and all the appurtenances to said plant; One (1) Aerial Tramway and all cables, buckets, structures, machines and machinery and all appurtenances to and of said tramway; all tools and implements of all kinds used or for use in and about said property; all pipe lines, appliances and appurtenances from said water rights; and ware house No. 1 and all stores and supplies therein; ware house No. 2 and all stores and supplies therein; superintendent's residence and office and all furniture, fixtures and supplies therein contained; Assay office and laboratory building and all furniture and fixtures, tools, appliances, appurtenances and supplies therein; mill boarding house and all furniture, fixtures, appurtenances and supplies contained therein; mine boarding house and all furniture, fixtures, appurtenances and supplies contained therein; Mill foreman's dwelling house and bunk house and all furniture, appurtenances and contents thereof. All right in powder, fuse and caps contained in the powder magazine. All live stock, vehicles, harness, stables and equipments; all wood, cables and tents; all blacksmith shop buildings, tools and appurtenances connected therewith and appurtenant thereto, together with all and singular the hereditaments and appurtenances thereto belonging or in anywise appertaining

PUBLIC NOTICE is hereby given that on

Wednesday, the 9th day of October, 1901,

at the hour of 12:00 o'clock noon of said day, at the front door of the Court House of the County of Inyo, State of California, in the town of Independence, County of Inyo, State of California, I will, in obedience to said decree of foreclosure and order of sale sell in one parcel the above described property to the highest bidder for cash, gold coin of the United States, for the satisfaction of said indebtedness.

Dated, this 22d day of August, 1901.

HENRY B. STEWART,
Special Master in Chancery.

Hon. Walter A. Lamar, Judge.

SATURDAY, Sept. 7, 1901.

Walter M. Willett, Plaintiff, vs. F. B. Balch et als.

Defendant granted a judgment of dismissal.

Real Estate Transfers.

Recorded since last report:

Jas. Daniels to Ada Buck—Lots 6 and 7 in Block A Academy Addition to Bishop; $85.

S. G. and Carrie A. Gregg to Mrs. Mary Alice Robinson—Lots in Big Pine; $1.

Fair begins week after next.

Messrs. Naylor and Laird are making a test shipment of ore from the old Rex Montis mines.

Admission Day, Tuesday, September 9th, was also very much unobserved by the officials and good people of Independence.

Mr. E. G. Fletcher was in town this week, but failed to make his usual visit to Black Rock; cause given was excessive heat. He went to church instead.

Forest Rangers Naylor and Carrasco have returned from their labors on the Kings River trail. It was badly damaged by the late storm, but is now in good condition.

James G. Dehy and A. G. Klamt, students in Stanford University, were in town over Sunday. Mr. Dehy, brother of our District Attorney, has taken up civil engineering and kindred studies.

There is good news in the fact that the Reward people have made an entirely new strike. It is a cross vein at the bottom of the mine, about two feet wide and averaging $150 per ton.

Dave Rogers and the Mairs brothers, Paul and Howard, have returned from a fishing excursion in the Sierras. They brought down 134 of the finest and largest trout that have been seen here for years.

Decided about your exhibits at the Fair? Inasmuch as there will be in attendance a good many strangers and possible future settlers, there should be a good showing made from every locality in the valley.

If townspeople wonder why their cows get home so late let them wonder why the boys don't close the school yard gates at night, and then the boys will wonder why the trustees don't get the aforesaid gates repaired.

David Holland and Mr. Eaton, the latter a Los Angeles mining man, passed through town en route to Silver Peak. They will examine a mine belonging to L. Chittenden, which is reported to be a very fine property.

John Heckel passed through town last Wednesday, on his way to some new point on the railroad near Santa Monica. "Johnny" was a soldier of early days, and a carpenter and printer from way-back, and old-timers here wish him luck.

Messrs. Montgomery, Bunney and Fyler have been out hunting deer for several days. They brought in some tracks and distributed them around to friends who say that they don't fry very well. The hunters report that they will try again. Nit.

Next Monday, September 16th, will be observed at Lone Pine by the usual celebration in honor of the anniversary of the independence of Mexico. There is always a good time upon these occasions, and we will guarantee that all visitors will receive the most courteous and hospitable attention.

The Board of Supervisors will meet on Monday next pursuant to law, for the purpose of levying taxes for the current fiscal year. The State rate has been fixed at 48 cents on each $100 of taxable property—a reduction of 1.8 cents from last year. With a substantial increase of taxable property on the county roll a reduction of tax rates might, under ordinary circumstances, be looked for at the hands of the Board. But the almost total lapse of revenue from sheep license together with the extraordinary drafts upon the hospital and road funds will offset all that. Even with light expense for criminal trials, there cannot be a much lower rate established until the bonded indebtedness, with its annual interest charge of $5,000, shall have been paid off. The total expenditures for the last fiscal year was $55,032.63, of which $9035.00 was received from licenses and poll taxes. At the same rate of expenditure the State and county property tax might be fixed for this year at the rate of $2.02 on each $100 of valuation.

Southern Inyo Notes.

The Randsburg correspondent of the Los Angeles Mining Review among his other notes gives the following:

The Ballarat section, which for the past few months has had few or no chips in the game, is looking up promisingly, and parties in from there state that the prospects for a successful season are good. The Ratcliff property, which for a long time was the mainstay of the camp, but which unfortunately got into litigation, is about to be extricated from its difficulties and within sixty days will likely be running with a full complement of men. During its palmy days the Ratcliff gave steady employment to forty or more men, and for a long time before its shut-down was producing not less than $20,000 per month.

Arrangements are also being made to start up the Stebbins [Panamint] property in the same camp.

At Mountain Springs, in the Argus range, George H. Lewis is preparing to begin work on the South Inyo group. A five-stamp mill is on this property, and in days gone by produced considerable of the yellow metal. The ore, however, is somewhat refractory, and the tailings will eventually have to be subjected to some leaching process.

In the Slate Range, Messrs. Dean & Jones are preparing to start up their San Francisco mine, which has laid idle for the past three months pending repairs and addition to the mill and cyanide plant.

A Horrible Suicide

About 8:30 o'clock last Wednesday evening an inmate of the County Hospital at Camp Independence retired to a small outbuilding in the rear, surrounded himself with loose papers and set it all on fire. Other patients had gone to bed but one of them finally saw the blaze and gave the alarm. The structure had been nearly consumed and within it was found the charred remains of a man who had evidently planned his own horrible ending.

Justice Davidson, acting as Coroner, yesterday morning summoned a jury and made a full inquiry as to the facts. The jury found that "the deceased was named William J. McKinley; that he was a native of Ohio, aged 58 years" and that he "came to his death from the effects of a fire; that the fire was started by the deceased with suicidal intent while temporarily insane." Little or nothing was known of the man here, except that he has been an inmate of the hospital for the past two years and a half.

The Tonopah Bonanza of Saturday last says:

Tuesday's mail brought returns from the Selby works to the aggregate amount of $34,416.77. This amount is net, after deduction of railroad freight and treatment charges. The highest returns in the lot was on four tons of selected ore shipped by the company, which yielded 775 ozs in silver and 12 ozs in gold or a total value of $705 per ton. The average value per ton on all returns received is about $196 per ton.

One lease received $7,918 by Tuesday's mail. Another lease received $6,885 at the same time.

Wednesday was a record breaker in the amount of ore shipped from the camp in one day. On that day 63 tons left the camp for Sodaville by freight wagons. The value of this 63 tons at a moderate estimate is $10,000: not a bad day's work and a strong index of the future.

There are now on the road hauling ore and freight between Sodaville and Tonopah 510 animals.

J. S. Stotler, a former prominent merchant of Ballarat, is here and will engage in business.

Chickens are worth $8 per dozen in Tonopah.

Remember the Date

Rebekahs of Olive Lodge, No. 222, will give a dance at Mairs' Hall, Independence, on the evening of Friday, September 20th, for benefit of the Orphan Home.

Admission, $1. Lunch will be served by the ladies of the Order, at a charge of 25 cents per plate.

Replying to a question asked him by T. F. A. Connelly, a few days ago, as to whether there was any good railroad news for Inyo, Superintendent R. J. Laws said that daily train service would be put on the road within a month, possibly less time. This authoritative statement is good news, surely.—Register.

A Salt Lake company has purchased three mining claims in Tonopah and will at once start work on two shafts, each of which is to be sunk 500 feet. At this depth cross-cutting will begin and the true value of the ledge ascertained. Contrary to general impression, there is considerable property in Tonopah not handled by the original company.

The United Verde copper mines of Arizona are a never-ending source of computation. The latest value placed upon them as stated in an exchange, is $2,500,000,000. If Senator Clark could suddenly convert them into that much solid coin Mr. John D. Rockefeller's billion would look mighty bilious.

The California and Nevada Marble Co., incorporated in Dakota, will soon begin active operations at the Lindsay quarries in Mono County. President J. A. McNaughton is now on the ground, making plans for cutting and shipping a large quantity of the marble, which brings fancy prices in San Francisco.

The Virginia Report has good authority for the statement that negotiations are in progress for exploring the Brunswick lode with a recently patented drilling machine that has a capacity of sinking to a depth of 5000 feet.

Meerchaum is a silicate of magnesia and is found chiefly in Asia Minor and Greece.

The Fair Track and Park Program.

FIRST DAY—SEPT. 24.

Trotting, 2:30 class, 2 in 3; 1st $75, 2d $25.

Trotting, single mile, untried; 1st $50, 2d $25.

Running, vaquero race, 1 mile; free for all vaquero horses, race horses barred; horses to be ridden by owners, with full vaquero outfit; prize $40 Nelson saddle.

Baseball game.

SECOND DAY.

Trotting, 3-minute class, 2 in 3; 1st $75; 2d $25.

Running, Indian horses, 1 mile; 1st $15; 2d $5.

Running, ½-mile dash; 1st $50; 2d $10.

Baseball game.

THIRD DAY.

Running, mile dash, free for all; 1st $75; 2d $25.

Trotting, single mile, single buggy horses; must draw top buggy and never been started in any race; 1st $25, 2d $15, 3d $10; entrance fee, $2.50; no distance.

Walking match, draft teams to farm wagons, to haul driver and load of 3000 lbs.; 1 mile; 1st $15, 2d $10; 3d $5; no entrance fee; three or more teams to enter.

Baseball game; prize for the series, $150.

FOURTH DAY.

Trotting, free for all, 1 mile, 3 in 5; 1st $75, 2d $15.

Bicycle relay race, 5 miles, 5 riders to team; 1st team $25, 2d $10; no entrance.

Running, 1-mile dash, $50.

Ladies' tournament; 1st $15, 2d $10, 3d $5.

Entrance fee 10 per cent of purse, unless otherwise stated, in all races. Three or more to enter, to or more to start.

New Cyanide Method

The theory that ores cannot be successfully worked by the cyanide process until they have been pulverized has been exploded by the management of the McKean quartz mine on Boulder Creek. A Siskiyou paper says that a box of the tailings was brought into Yreka lately, and it would have been difficult to have convinced an experienced mining man that the alleged tailings were genuine had it not been for the unquestioned character and reliability of the man who gathered them. Instead of being a mass of pulp they consist of pieces of quartz varying in size from an inch to two inches in thickness. No crushing process is used other than a common rockbreaker. The product is then cyanided and so successfully that Judge Reed at his laboratory was unable to find, after a thorough test, any value in the box of tailings submitted. This is destined to revolutionize the cyanide process where the character of the quartz will permit of practical operation of the plan used at the McKean mine, because it will materially lessen the expense of working. The theory is that the gole in the interstices or matrices of the quartz which is broken open and the gold exposed by the action of the rockbreaker, thus leaving it free to be precipitated by the solution.

New Game Law.

1. It shall be unlawful to hunt and kill peddlers, feather renovators, stock food peddlers or wheat fan distributors between January 1 and December 1.

2. It shall be unlawful to shoot, trap, wound or maim any book agent, insurance agent or sewing machine agent between sunrise and sunset.

3. It shall be unlawful to ensnare, entrap, invigle or entice any old maid into any kind of matrimony between the last day of May and the first day of April, by the use of net or fascination known to horrid men.

4. Widows, straight or grass, are not on any account to be molested in the quest of game between the front gate and the parlor sofa during the time for which eligible bachelors and consolable widows are liable to be at large and unprotected.

5. The man with a grievance and the woman with a mission may be exterminated at any time, and the county authorities are empowered and authorized to offer bounties for scalps of this kind at any regular session.

6. Hoss traders and crap shooters are not killed on the first day of the week commonly called Sunday, nor is it lawful for editors to go gunning for delinquent subscribers after 10 a. m.

The new yacht Constitution has been shelved and the old Columbia elected to defend the cup against the Shamrock. It is maintained that Lipton acts more like an American than do the aristocrats of the New York yacht club, whose snubs have caused the owner of the Independence to break up that splendid craft.

The Boston Globe, in reviewing the early organization of labor unions, notes that in 1849, during the first strike on record at Lowell, the women were as vigorous as the men, and states that a girl only 11 years old was characterized as the "ring leader."

Because the Colusa Sun totally worsted the San Francisco Examiner in an argument the latter cuts the Sun off its exchange list. The Suns mourns—according to the loss. The INDEPENDENT has always managed without it, as will many others hereafter.

Judging by his recent defiant appointments to office of the most notorious henchmen, Governor Gage is getting the Republican machine into fine shape to be completely knocked out at the next election.

The great American nation wants to read President McKinley's Thanksgiving Proclamation.

A square foot of honeycomb contains about nine thousand cells.

SWINE BREEDING

Many farmers object to fall litters, thinking that they require more care through the winter and that they do not get as large returns for the feed, writes Waldo F. Brown in National Stockman. That it requires more care I admit, but the farmer has more time to care for them. I think with a good warm house and an attendant careful to see that the openings are closed in cold weather I can get as good results from winter litters as from the spring pigs, and, taking a series of years, I find that I have received a somewhat higher price for my fall litters sold in the spring than from those that were farrowed in the spring and sold in the fall. I think also that as a rule the sows are in better condition for farrowing and less liable to loss of their pigs and care for them better when farrowed in October than when farrowed in the early spring, especially in March. In this latitude (Ohio) we rarely have cold storms or severe winter weather until late in November and frequently not until the latter part of December, so that our pigs are well started before the weather is bad.

Judicious Mating.

Too much attention cannot be paid to the proper mating of breeding animals in order to secure good results, said Professor Kennedy before the Illinois Swine Breeders' association. This will apply more to the selection of the sire than sow, for his influence is very great in the herd and will determine to a very great extent the type of the whole herd. Avoid the common error of today in selecting a fine boned hog. Progeny from such a sire will not bear up the load of a well developed body, particularly when being transported to market. In making the selection of a sire always bear in mind the type you already have in your herd on the part of the sows—i. e., Are they too long in the body, too high off the ground, too fine in the bone, too short, etc.? Then select a boar of the opposite type to correct these errors. You cannot lay too much stress upon the matter of judicious mating.

Ashes, Coal and Salt For Hogs.

My hogs get all the wood ashes, coal ashes, soft coal or hard coal they will devour, and fattening hogs when confined will eat a good deal, says C. S. Arnold in The Breeder's Gazette. I believe the ashes or coal supply a need, keep the animals flourishing and tend to prevent worms and cholera. I formerly got coal siftings from the coal yards, but I have substituted soft coal ashes from the creamery furnace in addition to wood ashes from the house. It is amusing to see the swine stand around the ash pits eating ashes and hunting for the bits of coal, crunching them with much seeming delight. As to salt, my hogs never seemed to care for it, though I give them all they want, putting it in a separate place so as not to compel the hogs to eat what they do not want in order to get what they do want.

THE Goat Herd

In 1849 an importation of nine goats came into South Carolina from Angora, a province of Turkey, in Asia Minor. From that date to the present about 400 Angoras have been imported and distributed through different parts of the United States. The majority of these animals now in the country and called Angoras are not strictly pure bred, but are crosses on the common goat. The characteristics of the latter disappear in the fourth and fifth crosses, and we get a pure white, good shearing goat, with long, silky mohair.

The Angora goat grows to the same size as sheep, but does not mature so rapidly. A 6 months' old lamb will weigh more than a kid of the same age with equal care; therefore the goat is not as good to raise for the early market, but this is more than offset by the fact that it carries its lamb, or soft joint, longer than a lamb does, and its life is much longer than that of a sheep. It is a prolific breeder and a productive shearer until it is 12 and 14 years old. It lives and thrives in any climate or country where sheep live and prosper. It readily adapts itself to the surrounding conditions, from the rich field of the valley to the rugged mountain wastes. All the shelter it needs in this climate (Kansas) is an open shed, facing the south, which it can go under to protect itself from the cold rains and snow of our northern winters. Keep it dry, especially after shearing, and it will stand any amount of cold weather. It feeds and does well during the winter on corn fodder, straw and coarse hay, with a little grain during March and the first of April to strengthen it for the kidding season of May.

Notes About Goats.

Angora goats thrive excellently in southern Georgia, so far as latitude and climatic conditions are concerned.

Maltese goats generally average less than Angoras. The so called Maltese are of various colors.

Mature Angoras, except where specially fed, average in weight from about 75 to 90 pounds, though fat wethers will often go over 100 pounds.

The flesh of Angoras, now known as Angora venison, is scarcely distinguishable from mutton. The flesh of the Maltese is usually of a darker color and more gamy in flavor.

The fleece of what is known as the Maltese is often of somewhat long, shaggy character, but is not salable. I do not know that any have been bred in America long enough to have developed their milking qualities to full capacity, so that the milk yield varies very much in all herds.

Too Rich For Him.

Jinks (meeting Winks in light lunch cafe)—Hello! What are you doing here?

Winks—Getting my lunch, of course.

Jinks—But I thought you were keeping a swell restaurant down town.

Winks—So I am, but I wouldn't keep it long if I ate there. It's too expensive.—Philadelphia Press.

The immortal Shakespeare is said to have worn earrings, and Charles I is reputed to have been the owner of a magnificent pair of pearl earrings, which he bequeathed to his daughter the day before he was executed.

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains of Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing one day in their journey) by taking the 7:10 a m train of the Virginia & Truckee Railroad, arriving Reno at 7:10 a m, arriving at Carson City 8:25 a m, where well-equipped stages connect promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City; there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets to Truckee, by above route, for sale at Ticket Office, Reno, $6.00. East-bound passengers leave Truckee early in the morning (Tickets for sale at Stage Office in Truckee) for the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned Reno for Virginia City, 52 miles, where a entire day may be pleasantly and profitably spent examining the famous Comstock Mines (shafts being worked to a perpendicular depth of 2,000 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table. Round Trip Tickets for sale at Ticket Office, Reno.

What is Ovaritis?

A dull, throbbing pain, accompanied by a sense of tenderness and heat low down in the side, with an occasional shooting pain, indicates inflammation.

On examination it will be found that the region of pain shows some swelling. This is the first stage of ovaritis, inflammation of the ovary. If the roof of your house leaks, my sister, you have it fixed at once; why not pay the same respect to your own body?

You need not, you ought not to let yourself go, when one dose of your own sex

MRS. ANNA ASTON.

holds out the helping hand to you, and will advise you without money and without price. Mrs. Pinkham's laboratory is at Lynn, Mass. Write a letter there telling all your symptoms and get the benefit of the greatest experience in treating female ills.

"I was suffering to such an extent from ovarian trouble that my physician thought an operation would be necessary.

"Lydia E. Pinkham's Vegetable Compound having been recommended to me, I decided to try it. After using several bottles I found that I was cured. My entire system was toned up, and I suffered no more with my ovaries."—MRS. ANNA ASTON, Troy, Mo.

A Slight Deficit.

A weather stained, creaking wagon drew up in front of a photographer's establishment in a Georgia town. Beneath its body a lean hound came to a standstill. A man clad in jeans trousers, homespun shirt and guiltless of coat or vest emerged from the vehicle's anterior extremity. Settling his soft slouch hat on the back of his head, he adjusted his lone gallus and gave the lines to the wife and baby within. Behind these, from the dome of canvas beyond, peered, big eyed and solemn, numerous editions of the lord and master.

Entering the shop, the stranger paused before a case of sample photographs and, pointing to one, said, "Mister, what d'yer charge fer takin picters like that?"

"Three dollars a dozen," replied the clerk.

Thrusting his hands into his pockets, he turned thoughtfully toward the wagonful of offspring. "Waal, I reckon I'll have ter wait a bit," he said softly to himself. "I ain't got but 'leven."—Harper's Magazine.

A Combination Tree.

A pine tree and a birch tree have grown so close together in Woolwich, Me., that one trunk serves for both, sending forth pine branches on one side and birch on the other. The union seems a happy one in spite of the fact that the two trees are as widely separated by the botanists as two well can be, and the gnarled branches of the pine embrace the birch in a most affectionate manner.

They Were Discovered.

When they went into the hotel, he was determined to do nothing to betray the fact that they were newly married. He took up the pen for his first registration under the new conditions and with an old married man look and sweep of indifference wrote, "Mr. and Mrs. Mary Tompkins."

"Will you have the bridal chamber, Mr. Tompkins?" asked the clerk.—New York Herald.

Sorry He Spoke.

Guest (indignantly)—Waiter, there are feathers in the soup!

Waiter (inspecting it)—Why, so there are. I thought I was giving you gravy soup. It's chicken broth, sir; costs sixpence more. (Changes figures on the bill.)—Exchange.

STUB AND THE DIAMOND LOCKET

NOW, you'll notis," said Stub, "dat fellers in books an' stories allers has er chanst ter do sumpen great, dat makes 'em great, an' gits der names in der poipers. But do we git dat chanst? Not on yer life!"

Stub sliced a splinter of wood off the edge of the empty crate he was sitting on, and began to whittle it with a very rusty knife. The boys were sitting in the alley, waiting for their "extry." The day was hot and stifling, there was no air stirring, and "der gang" were feeling very tired. Papers did not sell fast on hot days nor stormy days, and it was hard work to earn enough even to afford the extra penny for a swim in the dingy bathhouse down near the rolling mill.

"It makes yer sick tryin' ter act on der square an' be honest, sometimes," said Jimmy Hobbs, wiping his dirty face with a still dirtier and very ragged shirt sleeve.

Stub picked up his knife again and went back to his whittling, with a sober face. The world seemed all wrong, somehow. Other boys had good clothes and good homes and plenty to eat and long vacations at lakes and in the mountains in the summer. He had never had good clothes in his life. He never remembered having all he wanted to eat except at the Christmas and Thanksgiving "feeds" given to the newsboys yearly. All he knew of the lakes was what he could see from the crowded docks, and he knew nothing of the mountains except from picture papers. It did not seem right.

Yet he had always tried to "keep square." He would not pick pockets. He had a very dim and hazy recollection of a sweet mother-face that he hugged close to his heart under the

"WHO TAUGHT YOU WHAT WAS 'ACTING SQUARE'?"

ragged little shirt, and somehow that mother face seemed to come to him more clearly when anything tempted him that was not just "square."

"Extry!" yelled Jimmy suddenly. And Stub started up with the rest of the boys as the gong sounded down the alley. The next moment he was in line, struggling and yelling with the rest, while the men shoved bundles of papers out to them and they paid for their little brass checks at the window. Then he was on the street with the cry that the men had given out: "Extry! All about de big railway ax'dent! Extry!"

Along the running board of an electric car he darted to the smokers' seats. They were always the most hopeful. An elderly gentleman boarded the car at the same time and motioned Stub. He stood on the running board as Stub gave him the paper and took the coin. Then the boy dropped to the ground. As he did so something rolled at his feet—something bright and glittering. Stub stooped and picked it up, and it proved to be a plain gold locket, with one spot of vivid light in the center. And Stub gasped as he realized that he held in his hand what was, to him, a small fortune. For the spot of vivid, dazzling light was a diamond of considerable size.

Stub, tightly grasping his valuable find in his hand, darted through the throng of wagons and carriages to the sidewalk. There he stood staring after the car. "It was der ol' gents," he muttered to himself. "I seen it swing from der chain uv his ticker. It mus' uv caught in der seat as he got in der car. An'—an'—he looks a rich un. He kin buy anudder—lots more. An'—an'—me—I ain't had a square meal dis summer."

The papers were under his arm, forgotten. The locket was clenched in his fist. And down the crowded street he could see the car that bore the elderly gentleman, slowly making its way. He watched it dully. Then he muttered to himself again.

"It—it goes round der loop. It—goes round der loop."

Far down the street he saw it at last turn a corner and disappear. Then he turned and looked up the street at his left. In a few minutes the car would pass that corner a block above.

"He kin—buy more—" he muttered the words again, still watching that corner. Then suddenly the crowded street blurred for a moment and he saw that sweet mother-face that sometimes seemed so dim when he tried hardest to remember it. It was so clear now—so clear!

Stub swallowed a lump in his throat, then with one spring he cleared the gutter, dodged an express van, bumped against a stately policeman, swung around a clanging automobile and footed it as fast as he could up the crowded sidewalk. In and out the crowd of business men and shopping women he darted like an eel, then swung to the curb as he neared the corner. Beyond him was the car, already crossing the street. Setting his teeth, Stub again cleared the gutter with a bound and flew up the track.

The motor and trailer were bounding ahead, but an Italian, with his fruit cart got in the way. It was a moment's pause, and Stub did his best. Panting and gasping, he reached the trailer, caught the rail and sprang to the step. Then he saw the elderly gentleman, quietly reading the paper Stub had sold him.

Stopping at his elbow, Stub reached out a grimy little fist between the gold eye glasses and the paper, and opened his fingers.

"Please, sir, yer dropped it. An'—an'—— I jest ketched der car."

The elderly gentleman stared at the locket, picked it up from the grimy hand, and then Stub quietly dropped to the ground as the conductor pushed him to one side. Making his way to the sidewalk, Stub stood still for a moment.

"I didn't git even er dime," he said, blankly, to a wooden Indian that stood in front of a cigar store. "Not even er dime."

He shifted his papers to the other arm, pushed his ragged cap back from his wet forehead, wiped his face on his arm, then opened his mouth.

"Extry! All 'bout der big rail——"

A hand came down on Stub's shoulder, and he looked up straight into the gold-rimmed glasses of the elderly gentleman.

"I want to talk to you a minute, young man," said Stub's customer. "I suppose you eat ice cream and—such things? Come in here. It is rather noisy on the sidewalk for conversation."

A little frightened and a little delighted, Stub walked along toward a confectioner's near by, the firm hand still on his shoulder. Soon he was sitting at a small round table with a big glass of ice cream soda in front of him.

Stub set to with a will, and the twinkling eyes of the old gentleman studied his face sharply through the gold-rimmed glasses till the cream had disappeared.

"And now," he said quietly, "tell me all about finding that locket."

And Stub told him. The old gentleman listened attentively.

"Why didn't you keep the locket?" he asked.

"Why—it—it wouldn't ha' been actin' square," stammered Stub.

"Oh! And who taught you what was 'acting square?'" queried the old gentleman.

"Me mudder," replied Stub, in a low voice.

"And where does she live?"

"She—she's dead," said Stub.

"Ah! And what is your name?" asked the old gentleman.

"Stub—er—I mean, me right name is Disbro—Stanley Disbro," said Stub, reaching down for his ragged little cap. But when he sat up again the cap dropped from his fingers. He looked at the old gentleman—who had grasped the edge of the table with both hands and was staring at him—with terror. For the old gentleman's face was white and his mouth was working strangely. The next moment he had taken the locket from his pocket and had opened it with shaking fingers and thrust it across the table toward Stub.

And Stub?—Stub looked down with wondering eyes and saw, framed in the delicate gold, the fair, sweet mother-face that he had cherished so long in his boy memory. And on the other side of the table the old gentleman was sitting with his head bowed in his hands. And Stub, awed and still, knew that he was crying.

And afterward Stub learned all about it—how the old gentleman's daughter had married against his wishes and he had disowned her. And then Stub told his part—of his father's death, and his young mother's struggle with poverty till she followed her husband to the shadow land. And of her teachings to "act square," that he could not forget, even though he went hungry.

And two weeks after Stub was living in a snug cottage on the lake shore, far from the city heat and noise. And there were bathing and boating and games in the sand, and three square meals a day, with lunches between, and a donkey and cart, all his own, and a happy old gentleman whom he called affectionately "gran'dad." And last, but not least, there was a houseful of noisy and delighted guests, who once had been known in newspaper alley as "der gang."—Chicago Record-Herald.

Humming Birds in This Country.

While the eastern part of the United States can lay claim to only one representative of the humming bird family, the western part is more richly favored. In all, seventeen species have found their way into the limits of the United States. However, ten of these really belong to the Mexican group, appearing only accidentally on this side of our southern border. This leaves only seven which really belong to this country, and we cannot even claim a monopoly of them, for most of them are migrants, breeding within our limits, but going further south in winter. Indeed, only one of them, called the Anna humming bird, ventures to spend the winter in the warm valleys of California. All the rest move down into Mexico to find a winter home. One of these Western species is an extensive traveler. It is called the rufous-backed hummer. In summer it has been found in Alaska as far north as the 61st degree of north latitude. As this little migrant spends the winter in Mexico, it must accomplish a journey of considerably more than 2,000 miles from its most northern to its most southern report.—New York Evening Post.

Turtle Worshsp.

At a place called Kotron, on the French Ivory coast, the natives believe that to eat or destroy a turtle would mean death to the guilty one or sickness among the family. The fetich men, of which there are plenty, declare that two years ago a man went to sea fishing. In the night his canoe was thrown upon the beach empty. Three days afterward a turtle came ashore at the same place with the man on his back alive and well. Since that time they have never eaten or destroyed one of that species, although they enjoy other species.

If one happens now to be washed ashore, there is a great commotion in town. Firstly, the women sit down and start singing and beating sticks; next a small piece of white cloth (color must be white) is placed on the turtle's back. Food is then prepared and placed on the cloth, generally plantains, rice and palm oil. Then, amid a lot of more singing, dancing and antics of the fetich people, it is carried back into the sea and goes on its way rejoicing.—London Express.

The Child Wives of India.

The latest government census in India showed 6,016,759 girls between 5 and 9 years of age who were already married, of whom 170,000 had become widows.

General Debility

Day in and out there is that feeling of weakness that makes a burden of itself.

Food does not strengthen.

Sleep does not refresh.

It is hard to do, hard to bear, what should be easy,—vitality is on the ebb, and the whole system suffers.

For this condition take

Hood's Sarsaparilla

It vitalizes the blood, gives vigor and tone to all the organs and functions, and is positively unequalled for all run-down or debilitated conditions.

HOOD'S PILLS cure constipation. 25 cents.

Advice to Students.

To Whom It May Concern: The best College to attend for the purpose of becoming practical Stenographers is, in our judgment, the Gallagher-Marsh, Parrott Building, S. F., Cal. Ernest A. Gurvin, L. A. Washburne, W. J. Nicholson, Official Reporters Supreme Court, State of Cal. Send for catalogue.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

Chocolate.

In South America the retail price for the better grades of chocolate averages about $1 a pound, while in Italy, France, England and in the United States the better grades sell at a much lower price. In America the ordinary chocolate of trade sells for about one-third of the price that is charged for it where it is produced. The cause of this, the producers say, is that the original product is adulterated greatly before reaching its final market, a cheaper article than the cocoa bean constituting the large proportion of 90 per cent of the chocolates of commerce.

The cocoa bean from which chocolate is manufactured is produced in its finest form in Venezuela, though various other parts of Central and South America grow and export large quantities. Two crops of the bean are gathered each year, and the manufacture consists simply in grinding up the beans into a meal and then adding sugar and arrowroot, with the necessary flavor, usually vanilla or cinnamon. The mass is moistened until it is in a semifluid state, after which it is run into molds of the proper shape.

Cave Dwellers In Dieppe.

People who only know the gayer side of Dieppe would be surprised to hear of the existence of the cave dwellers there. One is apt to connect such people with the knawed bones and flint implements of prehistoric times. But here they are at Dieppe within a stone's throw of the casino, and they may be seen any day about the town selling the shellfish from the rocks outside their habitations. They have certain marked characteristics, one being a peculiar complexion of their own that can be traced largely to a disinclination on the part of the cave dweller to avail himself of the water that washes so close to his door. Their language also is peculiar, but whether it really belongs to the stone age no one seems to have discovered. They have to hold a license from the municipality, though, which savors of no age but the present.—London Chronicle.

England's Old Common Field System.

A "common field" is quite distinct from a "common." It is a field belonging to numerous owners. The land consists of long narrow strips, perhaps not more than ten yards wide and running parallel with one another. What are the exact rules of cultivation that obtain in Kent today we do not know, but of old it was usual to have a regular rotation, such as wheat one year, barley or oats the second and fallow the third. When the crops were harvested, each member of the community getting his or her share, all could put in their cattle, which roamed over the whole field, feeding on the stubble, etc. And this was termed the "right of sack." The "common field" system was gradually done away with by statutes in the reigns of George III and William IV.—London Express.

Time to Go to Work.

A woman was once trying to induce General Sherman to use his influence for her son in order that he might be given a place in the army, for which, however, he had shown no particular fitness. "His father was in the army," said the urgent mother, "and so were his grandfather and his great-grandfather, and it seems as if he ought to follow the line."

"Hm! Three generations in the army," said the general. "Don't you think, madam, that it is about time for one member of the family to work for a living?"

Sweeping Back the River.

Some time ago two hulking hoboes who had just dismounted from a Central freight train asked a Yonkers man for a loan of 10 cents to secure some food. He took them to a restaurant and promised to provide them with work as soon as they had finished eating. When they reported for work, he said: "Boys, my cellar's full of water, and I want you to pump it out. I've fixed these hand pumps right here on the sidewalk. Never mind the people. When they come along and ask questions, just you say nothing, but pump till the water's out of the cellar. Keep cool. Don't hurry, but pump, and I will pay you well."

Now, a tributary to the Nepperhan river ran through this man's store cellar and out under the sidewalk, and the pumps reached down into the river. The water pumped out by the hoboes ran into the sewer and back into the Nepperhan, but as the sidewalk was tightly flagged the pumpers didn't know the size of their job.

The street became jammed with spectators, who roared with merriment as they watched the hoboes. All but the men at the pumps knew what was up. When the sun went down, it descended on the wrath of two Weary Willies, armed with coupling pins. They hunted all night for their kind employer, but he was in New York telling his friends.

A medical journal declares that lentils are not only richer in proteids than peas or beans, but are also more digestible.

QUEEN VICTORIA'S HAIR.

Its Profusion, at Her Age, Had Always Been a Wonder.

Over 80 years old, Queen Victoria yet had luxuriant hair, which had for years been a marvel. The court physician, following Prof. Unna's discovery, treated her Majesty's scalp with a germ destroying preparation, which he always kept secret. It is now known, however, that the remedy for dandruff, the germ destroying element, is embodied in Newbro's Herpicide, the only hair preparation on the market that does destroy the dandruff germ. Without dandruff, hair will grow profusely, and falling hair will be stopped. "Destroy the cause, you remove the effect."

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

I WILL Give You $1000 If I Fail to Cure Any Cancer or Tumor I Treat

Before it poisons the glands or affects the bone. No knife, no pain, no pay until cured. BEST FOR THE BOWELS

Cascarets

CANDY CATHARTIC

10¢ 25¢ 50¢
ALL DRUGGISTS.

CANDY CATHARTIC — Cascarets taste good. Eat them like candy. They

SWEETEN THE STOMACH — Cascarets sweeten the stomach by cleansing the mouth, throat and food channel. That means, they stop undigested food from souring in the stomach, prevent gas forming in the bowels, and kill disease germs of any kind that breed and feed in the entire system.

PURELY VEGETABLE — Cascarets are purely vegetable and contain no mercurial or other mineral poison. They consist of the latest discoveries in medicine, and form a combination of remedies unequaled to make the blood pure and rich and make clean skin and beautiful complexion.

LIVER TONIC — Cascarets tone the stomach and bowels and stir up the lazy liver. They do not merely soften the stools and cause their discharge, but strengthen the bowels and put them into lively, healthy condition, making their action natural.

MILD BUT SURE — Cascarets never grip nor gripe. They act quietly, positively and never cause any kind of uncomfortable feeling. Taken regularly they make the liver act regularly and naturally as it should. They keep the sewerage of the body properly moving and keep the system clean.

BOON FOR MOTHERS — Cascarets increase the flow of milk in nursing mothers. If the mother eats a tablet, it makes her milk mildly purgative and has a mild but certain effect on the baby. In this way they are the only safe laxative for the nursing infant.

CURE CONSTIPATION — Cascarets taken patiently, persistently, will cure any form of constipation, no matter how old or how often other remedies have failed. They are absolutely guaranteed to cure any case, or purchase money will be cheerfully refunded.

NEVER SOLD IN BULK — Cascarets cost 10c, 25c, 50c a box. Samples sent free for the asking. We publish no testimonials but sell Cascarets on their merit under absolute guarantee to cure. Buy and try a box to-day, or write us for free samples and booklet.

Mercury AND Potash

Everybody knows that Mercury is a dangerous medicine even when administered in very small doses, and few constitutions can stand it for any length of time.

Potash produces inflammation of the stomach and bowels, and a dangerous form of dyspepsia and often chronic diarrhœa follow its use.

Now, the doctors will tell you if you have Contagious Blood Poison you must take these minerals for two years or longer; first, a course of Mercury, and when your teeth get so sensitive and sore that you can't eat, and the gums have a spongy, unnatural appearance, you are told to stop and a change to Potash is made. When the stomach rebels you are put on Mercury again, and so on *ad infinitum*, or until the system becomes so thoroughly saturated with these poisonous drugs that the most disgusting sores break out on the body, the bones become diseased, and the muscles and joints are racked with the most torturing pains. Mercury and Potash drive the eruptions and blotches from the skin, but the virus remains in the blood and the reappearance of the old symptoms and the occasional sore mouth show that the poison is still active, and you can never hope to completely eradicate it by this method of treatment.

When I was about twenty-one years of age, or eighteen years ago, I contracted Blood Poison in a bad form, and am satisfied that the rapid progress the disease was making would soon have made me a life-long invalid or ended my life. As my system came under the influence of S. S. S., the sores, splotches and pimples gradually disappeared and soon no evidence of the disease was left. I am now thirty-nine years old, and have seen no signs of it during the past eighteen years. S. S. S. does all you claim for it. WM. EMERSON, Pevely, Mo.

S. S. S. is the only antidote for this destructive virus, and an infallible remedy for this peculiar poison. It destroys and eradicates every particle of the poison, and makes the blood as healthy and pure as before the disease was contracted.

S. S. S. is the only purely vegetable blood purifier known, and we offer $1,000 for proof that it contains any mineral ingredient whatever. The general health improves as the Specific purges the system of impurities, and as new, rich blood begins to flow in the veins the unsightly sores and other evidences of blood poison disappear; strength returns and you are forever rid of this loathsome disease.

Our Home Treatment Book on Contagious Blood Poison tells you all about the symptoms, different stages, etc., of this disease. We will mail you a copy free.

If you need advice or special directions, write our physicians; it will cost you nothing and may hasten your cure. THE SWIFT SPECIFIC CO, ATLANTA, GA.

$100 REWARD will be paid to any reader of this paper who will report to us any attempt of substitution, or sale of "something just as good" when Cascarets are called for, and furnish evidence upon which we can convict. All correspondence confidential.

THE VOICE IN THE CHOIR.

Up in the music loft I heard
A voice of wondrous tone,
Like warbling of a happy bird
That joyed o'er winter flown.

As singer I was never plann'd;
So I could not aspire
To rise to such a height as stand
Beside her in the choir.

I loved her, and I thank my wits
Another plan I knew;
I tried it, and—well, now she sits
Beside me in the pew.

Her voice sings, and my heart replies
Rejoicing in love's crown;
She "raised a mortal to the skies,"
I "drew an angel down."
—Town and Country.

HOW JACK GOT EVEN

AT the beginning of the spring term of his junior year "Jack" Long was sent home from college in disgrace. For some months he had been on the tenth course of discipline, and when he was discovered to be the ringleader of a gang of juniors who had stolen the seniors' mortar boards and tied the President of the class of 1900 to an oak tree on the campus the faculty decided that it was time to act. They sentenced "Jack" to temporary retirement, only promising that if he did the proper amount of

"HE PROPOSED TO HER ONE MOONLIGHT NIGHT."

work out of college he might be permitted to graduate with his class.

Prof. Thomas Erskine Hope was "Jack's" class officer that year, and was held chiefly to blame for the decision to send him home. Prof. Hope, irreverently called "Skinny" in joint allusion to his middle name and to his gaunt and emaciated figure, was a young man not much older than "Jack" and his fellows of the junior class. He had worked his way through college and had taken a post-graduate course at a German university, coming back then to take the chair of botany at his alma mater. He was a young man who took everything seriously, as one might have known after looking at his little brown side whiskers and the white string tie which always encircled his neck. He had no sympathy with and no understanding of the point of view of rich and fun-loving youths like "Jack," to whom life was still a jest. But whatever the professor undertook he did thoroughly, which accounts for the rapidity with which "Jack" Long advanced through all "courses of discipline" allowed by the college rules, until finally he was rusticated on motion of "Skinny." And "Jack" and his classmates, with whom he was popular, held many a conference to discuss ways and means of getting even with "Skinny."

When "Jack" went home for the Easter vacation it was understood that he would not return until the next fall, a matter which gave that young man small concern. He looked upon it simply as a chance to enjoy himself.

In pursuance of that idea he was delighted when his mother announced that as "Jack" would not be busy in college the family would move up to their Pike Lake cottage in northern Wisconsin on June 1, a month earlier than usual.

The family consisted of "Jack," his mother, and his pretty sister, Fanny, who was just out of finishing school.

When commencement was over "Jack" had a couple of the "fellows" from college up to spend a month with him, while Miss Fanny was hostess for a bevy of pretty girls, of whom the most important, from Jack's standpoint, was Miss Helen Harvey, a black-eyed daughter of Louisiana, who was spending her first season in the North.

"Jack" had met Miss Harvey at the school which she and Fanny both attended, and had so far lost his heart to her as such a thing was possible to him. Now he found himself more strongly under the spell of the old infatuation. With a quick yielding to impulse which was characteristic of him, he proposed to her one moonlight night under the oaks and was laughed at for his pains.

"Why, Jack," said the smiling Miss Helen, "you're really amusing. You've never taken anything seriously in your life, and so you mustn't expect me to listen to you. The idea of a reckless boy like you, who's just been expelled from college, talking about getting married is absurd. Besides, I don't love you Now, let's go back to the house."

For the next month "Jack" repeated his proposal on an average of once a week. Each time he got practically the same answer. He discovered that under her light and gay manner Miss Helen Harvey was really an extremely serious young woman. She even had "views" of life, and she told "Jack" that the man she married must be one who had "a work" to do in the world.

One good quality about "Jack" Long was the fact that he was persistent and hopeful, and he never for a minute gave up the idea of winning the girl's consent at some time. But he and the other "fellows" agreed that she was a sad flirt.

Then something providential happened. A log hotel stood on the lake shore close to the Longs' cottage. It was patronized chiefly by hunters and fishermen, who came up for a week or two at a time, and "Jack" and his college friends had found plenty of good fellows among them. One night when they dropped into the hotel "office" they were startled to see none other than Prof. Thomas Erskine Hope. The professor was sitting in a big chair with his back to them, and when they boys had made certain they were not mistaken they slipped out of the hotel without a word. Here was a heaven-sent opportunity for them to get even with "Skinny." How would they do it? They might "send him to Coventry," but that would probably suit him exactly.

"I suppose," said Fred Elliot, who, next to "Jack," was the wildest man in the class of '01, "that old 'Skinny' has come up here to study coniferous cryptograms in their native haunts. If we let him alone that'll be just what he wants. We've got to get up some other scheme to make him miserable."

It took until midnight to decide on a plan of action. When the boys went to bed they were agreed that poor old "Skinny" would soon be "up against it." They had a scheme which they were sure would result in his undoing. They could hardly wait until morning to try it on.

Now, at college Prof. Thomas Erskine Hope was noted as the most modest and retiring of men. At sight of a woman he blushed, and he almost resigned his chair when co-education was introduced into the college. The plan of the conspirators was based on their knowledge of this fact. They would go over to the hotel in the morning and welcome the "dear professor" with the "glad hand." They would insist on his coming over to the cottage, where he would be presented to Miss Fanny and her girl friends, and, by way of preparing a pleasant time for him, they would tell the girls in advance of what was on deck.

"And if he once gets his eyes on Helen Harvey," said Fred Elliot, "he'll never have another quiet moment, eh, Jack?"

Next morning the plan was carried out. It worked to perfection. The poor professor blushed and stammered when he was presented to the array of girls, and he almost had a fit when Miss Helen sat down beside him and asked about his work. The conspirators went out into the woods and almost exploded with laughter when they heard "Skinny" accept an invitation to stay to luncheon at the cottage.

That afternoon the plot thickened. The professor did not go out to study conifers until 4 o'clock. When he started out Miss Helen Harvey went with him, carrying a basket and a

"WHEN HE STARTED MISS HARVEY WENT WITH HIM."

trowel. It was almost dinner time when they came back, and Helen appeared intensely interested. She insisted that the professor stay to dinner.

"We've found three rare varieties," she said at the table, "and Prof. Hope is going to show me how to identify them after dinner."

The professor and Miss Helen worked over their books and specimens until after 10 o'clock that night, and when the somewhat worried "Jack" went in to ask Helen to come out in the moonlight and sing he was told to run along and not bother. Next day the professor and Helen had another engagement to look for conifers, and they spent the evening again poring over their specimens.

The boys felt that their joke was rather getting away from them. 'Jack' put on a playful manner and ventured to remark to Helen one morning a couple of weeks later that "she was leading old 'Skinny' a merry chase." To his astonishment the young woman flushed up rosy red and declared that if he was alluding to Prof. Hope as "Skinny" he had better mend his manners. That she found a man who had some serious purpose in life a great relief as compared with a lot of idlers. That convinced "Jack" that matters had gone quite far enough, and he determined to do something desperate.

One afternoon Helen and the professor, who by this time were inseparable, had rowed across the lake to a bank where the professor felt sure he would find something new in the line of lichens. They had pulled up the boat on the bank and had disappeared into the woods when "Jack" and young Elliot came up.

"We'll steal the boat and hide it," said Elliot, "and then, when they've both had a good scare we'll go back and give them the laugh. They make me tired, and I think it's about time that Helen let up on poor old 'Skinny,' anyhow. She'll drive him daffy."

The professor's boat was hidden and the boys waited for the couple to reappear. When an hour had gone by and there was still no sign of them both "Jack" and Elliot began to get alarmed.

"There are plenty of cats in the woods, you know," "Jack" said, "and now and then a bear. I guess we had better go and see if anything has happened to them."

Accordingly the boys got out of the boat and pressed their way into the woods. As they broke through the underbrush which cut off a little moss-covered knoll from the water a sight met their eyes which startled them both into speechless and open-eyed silence.

Helen was sitting on top of a low stump. At the foot of the stump knelt the professor, looking up at the girl and holding one of her hands tightly clasped in his.

"A-hem," said Elliot.

The professor turned and Helen climbed down from the stump and stood at his side.

"Youung gentlemen," began old "Skinny," in his most formal classroom manner, "Miss Harvey has promised to be my wife. We had not intended to announce it until after I have had the honor of calling upon her father, and I am sure we can trust to your honor as gentlemen to keep our engagement a secret until you are released by a public announcement. In the meantime, Mr. Long," went on "Skinny," "I have to thank you for bringing a great happiness into my life."—Chicago Tribune.

FIRST MINISTERS IN VIRGINIA.

All-Round Men, Who Went to Cock-Fights as Well as Prayers.

Landon Knight, the correspondent, has made a special study of the early church history of Virginia. The fruit of one of his latest journeys is a timely and patriotic article, "Where the Spirit of Independence Was Born." It appears in the Woman's Home Companion. He touches many old customs, and has the following to say of the ministers of the established church:

"If there is a striking characteristic of this early church it was the mutual devotion of pastor and flock. In this day, when the church and its members occupy so largely a merely business relation to each other, it is difficult for us to understand the regime of that time. With tender words of hope the pastor soothed and strengthened the departing soul; he married them, he settled family quarrels, and if he were not present when they came into the world he was pretty sure to be on the premises, for the rector of that day loved excitement. He occupied in nothing a position apart from his parishioners, but lived the fullness of their lives, thought with them, ate with them, and, it must be confessed, drank with them, sometimes to excess. If he did not like to miss any races, and frequently himself rode the winning horse under the wire; if sometimes he presided with great dignity and fairness as referee at aristocratic cocking mains, or put new life into the betting by offering to wager a year's tithing on the winning bird, he was at all times an elegant gentleman in all that the word implies; his teachings were sound, and despite his faults his influence was decidedly good. Narrow in some things and very intolerant in others, he was nevertheless religious, and it may be said of him, as it was of poor Dick Steele, that he spent his time equally between sinning and repenting. In the ceremonials and outward forms of religion he was a martinet, and he could forgive a duel somewhat more readily than absence from church."

Jefferson's Horse Like David Harum's

Many of Joseph Jefferson's amusing sayings are quoted by James S. Metcalfe in the account in the Ladies' Home Journal of a visit paid to the veteran actor in his winter quarters at Palm Beach, Florida. He uses a tricycle for the short journeys possible about that place. Once, as he dismounted from it, he remarked: "My horse is like David Harum's; he'll stand without hitching. And he's better than a bicycle because he doesn't have to have anything to lean up against." On another occasion, when caught in a rain storm and the wind made it difficult for one rain-coat to keep both the actor and his companion dry, Mr. Jefferson said, philosophically, not complainingly, "I don't mind being wet all over, because then you don't notice any one place. But this being wet in spots kind of calls your attention to them."

Lines on Dean Swift.

The subjoined lines on the "witty dean" were affixed on the night of his installation, in 1713, to the doors of the cathedral of Saint Patrick:

This place he got by wit and rhyme
And other ways most odd;
And might a bishop be—in time—
Did he believe in God.

Look down, Saint Patrick!—look, we pray,
On this thy church and steeple;
Convert thy dean on this great day,
Or else God help the people.
—Notes and Queries.

Doctors Scarce in Hungary.

In Hungary there are thousands of villages and hundreds of small towns without a doctor within ten miles.

Do good for good's sake and seek neither praise nor reward.

Every man knows worse of himself than he knows of others.

CIVIL WAR HERO GONE.

The recent death of Gen Daniel Butterfield at his country home in New York takes from the muster rolls of the Civil War almost the last of the surviving general officers of the volunteer army. He was never a soldier of surpassing genius or achievements, but his patriotism was unquestioned and his services to his country were important and long continued. From the time when, as Colonel of a New York regiment, he volunteered to drill the home guard organized for the defense of the national capital until the final surrender of Lee, he was almost continuously in active service, taking part in twenty-eight battles, being twice severely wounded, and three times breveted for bravery. When the war was over Gen. Butterfield held commission as a Major General of volunteers, and also held a brevet of the same rank in the regular army. Though he retired from the army in 1869 to take up large responsibilities in civil life, he never lost his strong patriotism and his military spirit. When the Spanish-American war broke out he strongly urged upon the Secretary of War the advisability of calling out the members of the Grand Army post to which he belonged, the members of which were ready to fight again for the country they had once defended. Though not a graduate of West Point, he was by instinct and training a soldier, and his body was buried in the national cemetery on the Hudson, where sleep so many gallant soldiers.

"THE OTHER WOMAN."

To Her Pierre Lorillard Left a Handsome Share of His Estate.

It has become the rule rather than the exception that the wills of men of great wealth are contested by the natural heirs, who are disappointed with the shares bequeathed them or indignant at the provision made for some person or persons whom they consider as having no moral or equitable right to share in the estate. Unfortunately in many instances these contests are accompanied by revelations of discreditable chapters in the lives of the testators, which during their lives have been sealed books to the general public.

The will of the late Pierre Lorillard, who died recently leaving an estate of $4,000,000, is to be contested because of a handsome bequest to Mrs. Lillie Al-

MRS. LILLIE ALLIEN.

lien, who was not a relative, but who was the friend and companion of Mr. Lorillard for several years just preceding his demise.

To his widow Mr. Lorillard bequeathed an annuity of $50,000. To two grandsons he left $800,000. The balance of the estate, excepting the famous Rancocas stock farm in New Jersey, is left in trust to his three children, they to have the income; the estate to go to his grandchildren on the death of their parents. The stock farm, valued at $200,000, is bequeathed to Mrs. Allien.

It is not the mere matter of money which inclines the Lorillard heirs to contest the will. Mrs. Lorillard's son and daughters are determined that what they consider her rights shall be upheld. They object to any recognition of the other woman.

Mrs. Allien, Mr. Lorillard's friendship for whom is declared to have been a scandal at Newport by his daughter's husband, is a beautiful woman, tall, with a charming figure and great brown eyes. She is about 33 years of age. In 1891, when she was Lillian Barnes, she met Mr. Lorillard and he was captivated by her beauty. Soon afterwards she went on a long cruise with him, and from that time forward they were rarely separated. She was the ruler of his yacht and presided at his table when he entertained. Protests from his family were of no avail.

Four or five years ago Lillian convinced Mr. Lorillard that she should wed. An Englishman, Lewis Allien, little known in New York, became her husband. The ceremony that gave Lillian Barnes the name of Allien was performed in a New York church. Pierre Lorillard was present and it is said gave the bride to the husband. Some servants acted as audience and witnesses.

When the ceremony ended the bride coolly nodded adieu to her husband at the church door. She spoke to him as one who addresses an ordinary acquaintance. In truth she did not know him very well. Mrs. Allien entered Mr. Lorillard's carriage and was driven away. Allien caught a train for the West and, it is reported, he has obligingly died.

Mrs. Allien lives at No. 11 West 31st street, the home which Lorillard gave her years ago. Her father lives with her. Here Mr. Lorillard, being estranged from his wife, lodged whenever he was in the metropolis.

Mrs. Allien was abroad eight months with Lorillard when his health was failing, and she accompanied him when he came home to die. She was with him at the Fifth Avenue Hotel when he died. Mrs. Lorillard was notified that her husband was dying and wanted to see her. The family are divided in their statement as to whether Mrs. Lorillard went to the hotel. It is generally believed she answered her dying husband's summons, that she met Mrs. Allien and that a painful scene ensued.

While the stock farm is all that Mrs. Allien receives by her admirer's will, it is claimed that he had provided for her very liberally during the years they were together, presenting her with whole blocks of stocks and bonds. Her jewels are among the finest in New York.

Mrs. Allien feels no doubt that the courts will uphold her rights in the will. She has stated that she and Mr. Lorillard were merely good friends and companions, and that they never met until after Lorillard and his wife were estranged.

Machine Threads Needles.

A little machine which threads 1,000 needles a minute is in Minneapolis. It was seen by L. S. Donaldson, of Minneapolis, in St. Gall, Switzerland, on a recent visit, and he had it sent to his place of business in Minneapolis, merely as an exhibit. The purpose of the machine is to thread needles that are placed afterward in an embroidery loom for making the Swiss or Hamburg lace. The device is almost entirely automatic. It takes the needle from a hopper, carries it along and threads, ties the knot, cuts the thread off a uniform length, then carries the needle across an open space and sticks it in a rack. The work of threading these needles was formerly done by hand, and the advance from what may be done by hand to a thousand a minute by machinery is an index of the progress of the Swiss republic.—Chicago Journal.

Canal Tolls.

The toll on an ordinary ship passing through the Suez Canal averages about $4,000. The distance is ninety-two miles.

Every one in the world has kin that become a problem at a time of a wedding or a party.

If there is a drunkard in a brass band, it is nearly always the bass player.

Neighbors.

Jacky and Janie live side by side;
They're neighbors close in a cozy way,
And oh, what pleasure they have indoors
Or out in the street at play!
Ah, deary me! If they'd always agree,
What fun they could have in their play!

For Jacky and Janie keep "house" and "school,"
And sometimes they set up a store and trade;
But once in a while things don't go right,
And they quarrel then, I'm afraid.
Yes, deary me! These two disagree
And quarrel at times, I'm afraid.

Then they play apart for the morning through,
And never a neighbor's word they say;
But they don't seem happy—I wonder why—
And it isn't a pleasant day.

Ah, deary me! Why can't they agree,
And make it a pleasant day?

But after luncheon they sidle out,
And Janie, perhaps, has a piece of cake,
And she stands close up to the garden fence,
So Jacky a bite can take.
For, deary me! They soon would agree
If Jacky a bite would take!

She holds it out with a sidelong glance,
And Jacky moves up and takes a bite.
And then—the trouble is past and gone;
They will play together till night.
Yes, deary me! They now can agree,
And they'll play together till night!
—Youth's Companion.

The Shadow Dance.

Money Earning for Little Folks.

It may be a help to those who are teaching little people to earn and save—an important lesson—to read the following list of ways in which children have earned money, as compiled by the Congregationalist:

Washing windows.
Picking apples and other fruits.
Raking up leaves.
Doing errands.
Picking over raisins.
Weeding in the garden and the paths.
Picking up pins at a cent a dozen.
Raising vegetables.
Caring for animals.
Washing and wiping dishes.
Ironing.
Singing for the old folks.
Hemming papa's handkerchiefs.
Dusting.
Beating rugs and mats.
Stoning cherries.
Making and selling paper pillows.
Gathering and selling wild flowers, autumn leaves, etc.
Mending.
Caring for the baby.
Hemming towels, etc.
Waiting on grandpa and grandma.
Reading aloud.
Caring for the table silver.
Making and selling lamp-lighters and iron-holders.
Self-denial of candy, sugar, butter, etc.

How Paper Will Float.

I fancy that if questioned most people would say that a sheet of paper would not float for any length of time on water, and certainly would not bear any weight. But experiment proves the contrary. Indeed, the number of things that can be done with floating paper will not only surprise old people, but will furnish amusement for children. A sheet of ordinary writing-paper, if properly adjusted, will float for an apparently indefinite period. Four half-sheets which I floated by way of a test were as dry on the upper surface after having been on the water for ten days as when I first placed them on the liquid.

But what surprised most of all was to learn the weight these floating papers can carry. One day while I was experimenting with them I rather carelessly placed a large wooden spool on one of the half-sheets, expecting, of course, to see the paper go to the bottom immediately. This did not happen, however, and my aroused curiosity prompted me to add greater weight. Recklessly I laid my four-bladed penknife on top of the spool; to my astonishment the paper still remained floating; and even when I placed on more freight, in the shape of four one-cent pieces, it obstinately refused to sink.—Woman's Home Companion.

Got the Job.

A young man who is now well up the list of high-salaried officers of a big manufacturing company said several days ago that he owed his first opportunity to show his ability to the fact that he was not afraid to soil his clothes. He was one of half a dozen young men just graduated from scientific schools who entered the shops of this company as students.

They were expected to show that they were practical workmen, but most of them preferred theory to practice. The manager of the company was a self-taught man, and he didn't take much stock in scientific schools.

The young man who has succeeded took his measure accurately, and, putting on old clothes, went to work in the shops. Whether by accident or design he was noticed by the manager one day stretched out on his back under a heavy casting, with a hammer and cold chisel in his hand working away as if he had no higher ambition. A week later the manager summoned him to the office.

"Didn't I see you under the casting several days ago?" he asked.

"Yes."

"Well, I find that we have a vacancy on our staff now, and you may fill it if you choose."

The young man did choose, and his progress has been rapid. He does not have to soil his clothes now to prove his ability.

Tit for Tat.

"Mamma," said 3-year-old Maggie, "I love grandpa so much that when I grow up I'm going to marry him."

"Why, dear," replied the astonished mother, "you can't do that. He's my father."

"Well, what if he is," rejoined Maggie. "You married my father, didn't you?"

Proved by the Book.

"What did Columbus discover?" asked the teacher of the juvenile class.

"The Atlantic Ocean," answered the small boy at the foot of the class.

"How do you know that?" asked the teacher.

"Because," replied the youthful student, "my book says he came across it."

Little One Wanted to Know.

"But you know, children," said the Sunday school teacher, who had been talking of the soul's immortality, "that when we die it is only our bodies that are buried."

"Please, sir," queried a small pupil, "what do they do with our heads?"

Worse Than Whipping.

Tommy—Does your mamma ever whip you?

Johnny—No; but she does worse than that.

Tommy—What does she do?

Johnny—Washes my neck every morning.

Sacred Hash.

Succotash was a new dish at small Bobby's house, but he evinced a decided fondness for it, and, passing up his plate for a second portion, said: "Mamma, please give me some more of the sacred hash."

GREAT RIVER OF SIBERIA.

Floating Down the Amour Is the Experience of a Lifetime.

A traveler in Siberia had the novel experience of floating down one of the greatest rivers in the world—the Amour—which is practically unknown to geographers as yet. "At Khabaroffsk," he says, "though we were more than 500 miles from its mouth, it was fully a mile and a half wide and flowed in a strong, full current, which fact we realized for many a day thereafter as we made our slow and toilsome way against it. The Amour is one of the few greatest rivers of the world. In length it is equaled by no river in Europe and is surpassed only by the Yang-tse-Kiang and Yenisei in Asia, by the Nile and Congo in Africa and by the Amazon and McKenzie in America, though if we reckon the Mississippi and Missouri as one river it is longer than any of them except the Nile. Its water is somewhat muddy at Vladivostock, but nothing like the consistency of the Mississippi at St. Louis. It cannot be said to be 'both food and drink.' As we ascend its swift current it constantly grows clearer, until 1,000 miles further up it is about the color of white wine and is sweet and wholesome to the taste.

"Its shores are still in their virgin greenery. For hundreds of miles at a time one sees not a cultivated field, though doubtless some such tilled land lies back from the river and out of sight. Great wood piles for the use of the frequent river steamers are the most common objects that show the hand of man, but even these are often in desperately lonely spots, so that one can scarcely believe that they were ever visited by human beings. And yet all this immense river basin of 500,000 square miles is apparently fertile and habitable and when we saw it is was glowing in rich and brilliant verdure. Surely the world is not yet overpeopled while such a lordly domain is waiting for the plow and the reaper."

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, SEPTEMBER 20.....1901

PRESIDENT ROOSEVELT.

Inexorable fate drops into the Presidential chair the youngest man who ever held that high office. This event is precisely what the Republican party not intend when they, in order to carry New York, forced Mr. Roosevelt onto the Vice Presidential shelf. Notwithstanding his creditable and progressive record, evidence of statemanship, conservative judgment and all that is yet to be shown. If, in his administration, the Mark Hannas and Matthew Quays of politics become less conspicuous, the new President will acquire all the more cordial public sentiment at home as well as greater respect from abroad.

Under the present law of succession, Secretary of State John Hay becomes Vice President. Pursuant to precedent, all other members of the Cabinet will resign in a body, perhaps to be reappointed.

NAMES OF THE BREED.

"What is in a name?" with its inappropriate illustration, is an old-time saw, which comes with new teeth. It is a 10 to 1 bet that Emma Goldman is not the true name of the arch-fiend of the anarchists. It will develop into something akin to Czolgosz, which offers a huge problem unsolvable to nine-tenths of those who attempt to pronounce it. It is one of those names which the English alphabet cannot spell phonetically and which the average English speaking person stumbles over in trying to express. Written according to its sound, the name of Czolgosz, or its nearest equivalent, is "Tcollgosch," or, more broadly speaking "Shollgosch." The former pronunciation is the one given by Sergeant-Capt. Tevisain of the Chicago detective bureau, who is a Russian and who is familiar with the varied dialect in Polish-Russia, from whence the parents of Leon Czolgosz came to this country. "Cz" is represented in the Russian alphabet by a character which is pronounced much the same as though one was suppressing a sneeze—"tch." The next two letters—"ol" are pronounced in combination, as though written "oll," and the remaining letters of the name—"gosz"—may be given the sound of "gosch."

There is no essential difference in the true meaning of the terms Democrat and Republican. In all its true literal meaning the party style of Socialist is more impressive and expressive than either In comparison the difference between any of these organizations and the Anarchists and Nihilists is as heaven is to hell. McKinley's manly address at the Buffalo Expesition was in the main an indorsement of the original Democratic doctrine of free trade, under disguise of James G. Blaine's phrase of "reciprocity." The whole political business might be comprehended under the slogan of America for Americans, which incoporates all adopted, educated and loyal citizens. For the present and henceforward all will join in letting the whole world know that we propose to keep up our style of representative government, and that while we have no "rulers" our executive officers must be held inviolate, else wrath and hemp for disturbers.

The autopsy on the remains of President McKinley showed that no human skill, apparently, could have prevented the fatal termination. It was found that the wound had gangrened at various places, and there had been no healing process at any stage. Some of the physicians in attendance are of the opinion that the bullets in the revolver used by the assassin were poisoned. Whether this theory is the correct one can easily be determined, as the revolver, together with the remaining bullets, are in the possession of the authorities. If it should be determined that poisons was used words will fail utterly to voice the abhorrence of the people toward the spirit of anarchism that dictated such a method.

Returns were received during the past week to the net amount of $19,576 64 after deduction of railroad freight and treatment charges. The highest return was on a small shipment from lease No. 35, which gave a return of 776 ozs. in silver and 15.36 ozs. in gold, or a total value of $718 80 per ton. Another high return was from a small shipment from lease No. 82, which gave a return of 717 ozs. in silver and 9.25 ozs. in gold per ton. The lowest return received was on ore which gave a return of over $150 per ton.—Tonopah Bonanza.

Tonopah has nine Deputy Sheriffs New mining camps always attract a considerable quantity of the lawless element, but the number of peace officers at Tonopah indicates a greater quantity than the usual proportion of that class. But they keep things straight all right.

A ministerial combine has been formed in San Diego and divorced persons will have a hard time in getting married. However, the festive Justice of the Peace is not troubled by religious scruples and will continue to do business at the regular rate.

There is no question about this being a sorrowful epoch in history. If the hideous work of assassination is to continue pupils of the little red school house will have more concern for the personal safety of the President than ambition to become such.

The decision of the Supreme Court which requires the publication of a summons to continue ninety days has already caused a judgment in a Sacramento case to be set aside.

DEATH OF THE PRESIDENT.

President McKinley died at 2:15 a. m. September 14th. His last conscious hour on earth was spent with his wife, to whom he devoted a life time of care.

He died unattended by a minister of the Gospel, but his last words were a humble submission to the will of the God in whom he believed. He was reconciled to the cruel fate to which an assassin's bullet had condemned him, and faced death with the same spirit of calmness which has marked his long and honorable career.

His last words, reduced to writing by Dr. Mann, who stood at his bedside when they were uttered, were:

"Good bye, all; good bye. It is God's way. His will be done."

Such was the placid recognition of fate that accompanied the last brave breaths of a dying American. The words are those of a martyr, the very pathos of which tends to make us all savages in the pursuit of vengeance, retributive and corrective justice to the inhuman agents of a terrible crime.

ABOUT HOW OIL WAS MADE.

J. W. Treadwell, writing for the Mining and Engineering Review, tells something about how oil was made and where to expect to find it:

"The oil fields of California have had more lies told about them than have fallen even to the inheritance of the saints, whose lot in this life is to be troubled on every side with slanders. The Kern River oil field is perhaps the least understood of all the fields, and yet the geology of that now celebrated field is really a better established fact, or series of facts, than that of any oil field in the world, by means of actual penetration and measuring of the strata.

"To understand the fixed geology of the field it is only needed to know the logs of all the 400 wells or more which have been bored into the quarternary covering of the tertiary sands into which the petroleum had been sucked and settled through the millions of years before the present age. In those days it happened that the grinding glaciers of a frozen world rolled over an empty wasted surface, which through millions of years, bereft of all life was easily torn up by the awful shakes and quakes, the upsettings and the overturnings and the truly devilish destruction which were wrought by the vast bottomless lake of fire that has been, and is now, in the center of our little world, as every scientist knows must be the case.

"The rolling inland sea, which had filled the immense valley of the Sacramento and the San Joaquin and its branches in the Santa Rosa, Sonoma and Napa Valleys, etc., had fed and nourished the fossils of the later tertiary sandstones, and all that life had ended in an overwhelming cataclysm of every part of the world, when the burning fires of the "hell" under our feet had evaporated the carbons of the lignites of the tertiary times, and mingling them through sulphur and steam, had made ready the hydrocarbons, which really are the foundation of smokeless explosives, of all scents and colors, alcohols, ethers, varnishes and many other things.

"Then in the glacial ages wherever these floods of petroleum were covered by the vast deposit rolled from the mountains there the oil fields of to-day are to be found. But wheresoever these sandstones have been shaken up, thrown over, twisted round, torn and cracked, and heaved thousands of feet into the air, the petroleum has evaporated, as it always will do, and as it has done in some parts of Central California.

Old Panamint to Be Worked.

Although the price of silver remains low such improvement has been effected in the treatment of the ore that a much larger per cent of profit is possible to the experienced miner than was the case only a few years ago. This in a measure explains the revival of silver mining. The latest addition to the producing silver mines will be the old Panamint, that has been closed down for the past twenty-five years. This is the mine, it will be recalled, on which Senator Jones and Senator Stewart sunk something like $750,000 before realizing it could not be made to pay under the conditions then existing. It is located at at an altitude of 10,000 ft. on Telescope Peak, one of the Telescope Range. The equipment of the mine is very complete. There is a smelter, a 200-horse power engine, two 200 horse power boilers, an assay plant, several discarded 10-stamp batteries, one good one. A commodious hotel is still standing. Taxes have been delinquent for several years past and recently the property was sold by the Sheriff of Inyo County to satisfy this indebtedness for $5000 or $6000 to a Mr Pedley. Mr. Pelley has secured the services of Mr. Stebbins of Ballarat as manager. Mr. Stebbins has put in concentrators that will reduce the ores 30 to 1, and the concentrates will be treated on the ground; an ore crusher is also being installed. As a preliminary to active operations the mountain roads leading to the mine have been put in good shape.—Randsburg Miner.

It is not too much to say that the Los Angeles Herald's Sunday paper is the best in the west. It contains more good, high-grade reading matter than any other magazine issued in connection with a newspaper outside of New York city in the whole country. Its illustrations are always good, too, and its general make-up is unexcelled.

Quicksilver is a mineral product that most all miners use, but they nearly always prefer to let some other fellow dig it. For the amount, value and widespread occurrence of the product, there are fewer producers of this metal than any other.

The only trustworthy divining rod that has ever been made is fortunately cheap. It has a steel head and a wooden handle and is shaped something like an anchor. Any man who wants one should go to a hardware store and ask for a pick.

Admiral Howison will probably be glad he escaped before the thing is over

WASSERMAN, KAUFMAN & CO.,

The Nonpariel Dry Goods Store, Sacramento, California.

SHERIFF'S SALE.

BY VIRTUE OF AN EXECUTION, ISSUED out of the Superior Court of Los Angeles County, State of California, and to me directed and delivered, for a judgment rendered and entered in said Court, on the 27th day of July, 1901, in favor of J. S. Stoller and against Mineral Hill Gold Mining Company, a Corporation, I have levied on the following property, to wit:

One Six-Stamp Quartz Mill; Cyanide Plant; one 6409-foot Tramway, together with all the appurtenances and appliances thereof.

The "Mineral Hill" Mill-site; one Boarding House; one Bunk House; one Assay Office, and all improvements thereon.

The "Mineral Hill" Mining Claim.

The "Mineral Mound" Mining Claim.

The "Breakaway" Mining Claim; one Boarding House; one Bunk House; one Blacksmith Shop.

All situated in South Park Mining District, Inyo County, California.

Notice is hereby given that on SATURDAY, OCTOBER 12th, 1901, at 12 o'clock M. of of that day, in front of the Court House, in the County of Inyo, I will sell all the right, title and interest of said Mineral Hill Gold Mining Company, a Corporation, in and to the above described property, at public auction, for cash, lawful money of the United States in hand, to the highest and best bidder, to satisfy said execution and costs.

A. M GIVEN, Sheriff.

Dated September 18th, 1901.

LEGAL.

Special Master's Sale.

IN THE CIRCUIT COURT OF THE UNITED STATES, IN AND FOR THE NINTH CIRCUIT, SOUTHERN DISTRICT OF CALIFORNIA.

Northern Division.

WELLS, FARGO & COMPANY, a corporation, Complainant,

vs.

RATCLIFF CONSOLIDATED GOLD MINES, LTD., a corporation, EDWIN C. NICHOLS, JOHN DOE, RICHARD ROE and JAMES DOE, Respondents.

UNDER AND BY VIRTUE OF A DECREE of foreclosure and sale rendered in the Circuit Court of the United States in and for the Ninth Circuit, Southern District of California, Northern Division, on the 20th day of August, 1901, in the above entitled cause, wherein complainant, Wells, Fargo & Company obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of Eighteen Thousand Four Hundred Nineteen and 5-100 Dollars ($18,419.05), and the cross-complainant, Edwin C. Nichols obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of Eighty Thousand One Hundred Thirty-eight and 72-100 Dollars ($80,138.72), and the cross-complainant Vulcan Iron Works, impleaded under the name of John Doe, obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of One Thousand Four Hundred Ninety-five and 63-100 Dollars ($1495.63),

I am commanded, as Special Master in Chancery, to sell in one parcel the following described property, to-wit:

The following named mining claims, millsites, water rights and locations, situate in the County of Inyo, in the Southern District of California, and known and designated as the "Joker," "Texas," "Grover Cleveland," "John G. Carlisle," "Sunrise," "Kentucky," "Never Give Up," "Treasure Vault," "Big Brown," "Joker Extension," "W. G. Extension" and "Little Till" mining claims, and the "Cleveland" mill site and certain water rights known as the "Sale's water right," "Wingfield and Harrison water right," "Dover water right," "James Wingfield water right," "McNally water right," which said mining claims, mill site and water rights are more particularly described in the notices of location thereof filed in the office of the County Recorder of said County of Inyo, including all buildings and improvements thereon; and more particularly, One (1) 20-stamp mill and building connected therewith and appurtenant thereto, and all machinery and appliances contained therein; One (1) air compressor plant and the building appurtenant thereto and all receivers, pipe lines, power, tools, machines and machinery to operate the same or appurtenant thereto; One (1) Cyanide plant and all tanks, pipe lines, pumps, zinc boxes, machines and machinery and appliances to operate the same and all the appurtenances to said plant; One (1) Aerial Tramway and all cables, buckets, structures, machines and machinery and all appurtenances to and of said tramway; all tools and implements of all kinds used or for use in and about said property; all pipe lines, appliances and appurtenances from said water rights; and ware house No. 1 and all stores and supplies therein; ware house No. 2 and all stores and supplies therein; superintendent's residence and office and all furniture, fixtures and supplies therein contained; Assay office and laboratory building and all furniture and fixtures, tools, appliances, appurtenances and supplies therein; mill boarding house and all furniture, fixtures, appurtenances and supplies contained therein; mine boarding house and all furniture, fixtures, appurtenances and supplies contained therein; Mill foreman's dwelling house and bunk house and all furniture, appurtenances and contents thereof. All right in powder, fuse and caps contained in the powder magazine. All live stock, vehicles, harness, stables and equipments; all wood, cables and tents; all blacksmith shop buildings, tools and appurtenances connected therewith and appurtenant thereto, together with all and singular the hereditaments and appurtenances thereto belonging or in anywise appertaining

PUBLIC NOTICE is hereby given that on

Wednesday, the 9th day of October, 1901,

at the hour of 12:00 o'clock noon of said day, at the front door of the Court House of the County of Inyo, State of California, in the town of Independence, County of Inyo, State of California, I will, in obedience to said decree of foreclosure and order of sale sell in one parcel the above described property to the highest bidder for cash, gold coin of the United States, for the satisfaction of said indebtedness.

Dated, this 22d day of August, 1901.

HENRY B. STEWART, Special Master in Chancery.

se6t4

DESERT-LAND, FINAL PROOF.

UNITED STATES LAND OFFICE, INDEPENDENCE, CAL., Aug. 29, 1901.

NOTICE IS HEREBY GIVEN that Harriet T. Skinner, of Citrus, Inyo Co., California, has filed notice of intention to make proof on her desert-land claim No. 75 for the E½ of SE¼ Sec. 9, Tp. 14 S., R 36 E., M. D. M., before the Register and Receiver at Independence, Cal., on MONDAY, the 30th day of September, 1901.

She names the following witnesses to prove the complete irrigation and reclamation of said land: Finlay McIver, Max M. Skinner, J. V. Skinner, Charles A. Skinner, all of Citrus Inyo Co., Cal.

S. W. AUSTIN, Register.

THE BLEEDING CURE.

A RELIC OF THE MEDICAL METHODS OF A CENTURY AGO.

The Barbarous Practice of "Cupping" Suffering Humanity Still Has Its Adherents—The Operation a Somewhat Delicate One.

One hundred years ago the sovereign balm for every ill, from fainting to fever, was bleeding. The wonder is that a human race was left to admit the folly of the practice. It was the correct method of the day, recommended and employed by the best physicians of the time. The surgeon who attended George Washington in his last illness first set about bleeding his august patient. The story is that he took several cups of blood from the vigorous arm of Washington and then diagnosed the case. Washington died. Some say that if he had not been bled he probably would have lived.

The cry comes, But that was a century ago! In sharp contrast stands the wonderful advances made by modern surgery. Thankfully it may be said that such is the truth. But sometimes customs die hard, and today the doctrine of "cupping" has devotees as faithful as those who gave up their life sustaining fluid in Washington's time. This is a startling statement. The writer would have been skeptical if he had not learned its truth himself.

In the seventeenth and eighteenth centuries this grewsome form of treatment was the work of the barber. That guild has maintained its prerogative into the twentieth century. In a certain little side street in New York, crushed between two towering brick buildings, stands a timid story and a half frame house. The suggestive striped pole which emblazons the art of the dweller within juts over the walk. In the window hangs a sign bearing the word "Cupping." If today were set back to 1700, the pole alone would tell the story. Times, they say, have changed, and so the sign.

The barber is a German. He was much surprised at the question asked. Everybody knew that cupping was a necessity, especially in the spring, he said. Sometimes, he added, he was so busy that little time remained for his shaving and hair cutting of customers.

"Ach, yes," said the barber, "it keeps me a busy man. How strange you say that you thought it no longer was practiced. People come here morning, noon and night every day, but mostly do they come here in the spring and fall. It is then that the blood needs drawing off. If you have a pain in your head, you come to me. I take my little cup, burn the air in it out, push down my little knives just behind your ear on the neck, and when the cup is full I take it away. If your headache is not better yet, I take another cup, so be it that the bleeding stop not, upon the other side. Maybe your back pains; I cut you a little on the side. Your arm pains; I draw the blood from your wrist."

The barber bared his arm. The skin was crossed with tiny, pale nicks, like those one sees on the wrist of a morphine victim.

"Twelve is the number of cups I draw at one sitting," the barber said. "It is a bad pain that will not be gone then. If you come again the next day with the pain, I draw off more until the ache has disappeared completely."

The cups look like sherry glasses with the stems removed. The knife, or lancet, is arranged like a name stamp. Pressure on a spring plunger drives the little blades, which are arranged in pairs or triplets, into the skin. It is here that the skill of the operator comes into play. When the incisions are made in the neck too violent, a tap on the plunger might mean the severing or wounding of an artery. Pressure too light would not let the blood flow fast enough. The barber must have a trained touch.

Upon the condition of the cup much depends. The air is exhausted by means of a tiny alcohol flame. This makes a vacuum. The cup is pressed on lightly, but firmly. The blood rushes under the skin beneath its rim; then, like a flash, the little knives are pushed down, and the bleeding begins. The operator never takes more than 12 cups at one sitting. That would mean perhaps a half pint of blood.

This system of bleeding for human ailments harks back to the earliest times. All through the middle ages it was the healing balm for the sufferings of mankind. The ancients firmly believed that the loss of blood in this manner drew from their systems the "noxious humors" which afflicted them. The advent of the modern school of medicine and surgery did away with the process as a universal therapeutic measure. It was not until the nineteenth century was nearly half completed, however, that physicians abandoned it as a practice.—New York Tribune.

A Trait of the Sex.

A traveling man who had been absent on a long trip just returned, and his 4-year-old daughter would not at first come near him. Every time he approached her she ran away. The father finally sat down on the floor and, picking up some toy dishes, asked his daughter to come and play party with him.

This had the desired effect, and the child came and played with her parent, who asked her why she didn't come to him before.

"Oh, papa," replied the youngster, "I'm so shy."—Pittsburg Press.

Sweeping.

A young man who had just entered the office of Jeremiah Mason, the great New Hampshire legal luminary, to study law asked him where he should begin. Mason, pointing to the books on the library shelves, answered laconically, "Anywhere."

The Play.

Henry J. Byron, one of the wittiest of English playwrights of a score of years ago, remarked on one occasion: "A play is like a cigar. If it's good, everybody wants a box; if it's bad, all the puffing in the world won't make it go."

Sarcastic.

"Why did you leave your last place?"

"Master was too sarcastic."

"How was that?"

"Well, I told him I seen a snail on the garden path, and he says to me, 'You must have met it.'"—Moonshine.

What She Saw.

It was at the Normal school that this happened, and the class laughed. It was a laugh on the teacher, too, but he didn't get angry, although it did break into the serious contemplation of serious studies with which he was trying to interest the students.

It was in the study of psychology, and they were discussing what ideas first entered the human mind when certain words were spoken or written—whether the mind thought of one certain object designated by the word or the whole general class which is embodied in that word. To experiment on this mental phenomenon in order to bring it more clearly to the attention of the students the professor said he would write a word on the board and then let one of them tell instantly what impression was made upon her mind.

He called upon one of the pupils to be ready to think quickly and tell exactly what her first thought was after she saw the word which he was about to write. He stood close to the board, so that the word was hidden by his shoulders until he turned. He wrote the word "pig," and all of the class saw it except the girl who was standing ready to make reply. When he turned, he didn't get out of her way, and she couldn't see the word. In reply to his sharp, quick question, "Now, what do you see?" she replied naively, "I see you." And the class laughed.—Milwaukee Sentinel.

Advice In His Answers.

The Rev. John McNeill was holding a revival service at Cardiff, Wales, and announced that he would answer any question about the Bible. At once a note was sent up to him reading as follows:

"Dear Mr. McNeill—If you are seeking to help young men, kindly tell me who was Cain's wife."

That seemed a poser, and the audience waited with intense interest, tempered with amusement, to see how the good man would extricate himself. After a pause he said:

"I love young men, especially young inquirers for light, and I would give this young man a word of advice. It is this: Don't lose your soul's salvation looking after other people's wives."

The Inventor of the Flouring Mill.

About the year 70 B. C. Mithridates, king of Cappadocia, one of the most ingenious and able princes of the time, invented the first mill driven by water. This triumph of his skill and ingenuity he caused to be erected in the immediate vicinity of the royal palace. In the course of time the Cappadocian bakers became celebrated and were in great demand throughout all parts of the world as then known.

These mills were usually placed upon boats on the river, being so elevated and contrived as to be easily driven by the water, and the millers were thus enabled to move from place to place, distributing the meal to their customers.

A Professional Blunder.

"I am satisfied now that I have made a professional blunder in your case," the physician said, noting the symptoms of his patient.

"A blunder, doctor? Don't I seem to be improving fast enough?"

"You are improving too fast. Your malady had begun to interest me exceedingly, and I wanted to see what it would develop into if allowed to run, but I stupidly gave you a prescription that has knocked it entirely out of your system."—Chicago Tribune.

Not Correlative.

Mrs. Housekeep—Do you really mean to say you are looking for work?

Harvard Hasbeen—No, lady; that's neither what I said nor what I meant to say. I said I was looking for employment.—Philadelphia Press.

Settled.

Two ladies contended for precedence in the court of Charles V. They appealed to the monarch, who, like Solomon, awarded, "Let the eldest go first." Such a dispute was never known afterward.

In the fourteenth century the slaughter of women and children after a town or castle had been taken by storm was one of the most common occurrences of war.

The rooster makes two-thirds of the noise, but the hen does all the work.—Chicago News.

Busy Days.

"I suppose the demands on the time of a successful financier are very great."

"They are," answered the highly prosperous citizen. "I am kept so much occupied telling young men how to succeed in life that I scarcely get an opportunity to attend to my regular business."—Washington Star.

SUPERIOR COURT.

Hon. Walter A. Lamar, Judge.

TUESDAY, Sept. 17, 1901.

J. S. Stotler, Plaintiff, vs. M. A. Newmark et al, Defendants.

Defendants granted judgment of dismissal and costs of suit.

Real Estate Transfers.

Recorded since last report:

Jas. P. Thomas to W. J. Dunn—Deed for right of way to road near Warm Springs; $10.

J. E. Randle to Geo. Hall—Lot in Big Pine; $160,

August Lagier to Geo. Hall—Lot in Big Pine; $225.

Geo. Montgomery to A. W. Eibeshutz—Undivided one-sixth interest in four mining claims, Wild Rose Dist.; $261.

Fair weather for the Fair.

Much delayed railroad freight is now being received.

A trip by railroad from here to the Fair and return will cost only $2.

A. F. Mairs and Geo. McConnell are back from a long trip over the mountains.

Get ready for the grand ball and supper to be given by the Rebekah Lodge to-night.

Looks like there is to be a general livening up within a radius of twenty miles roundabout Ballarat.

Messrs. S. E. Vermilyea and White Smith, of the Bishop legal contingent, were in town last Monday.

A Big Pine letter states that the Inyo Academy at Bishop will be reopened about New Year, under the supervision of the M. E. Church.

Piles of building material are fast accumulating on the site of Bert. Rhine's new residence, opposite the school house, and the carpenters have begun work.

Louis Munzinger, of the Bavaria Brewery at Bishop and the pioneer of Inyo in that line, was greeting old Independence friends yesterday.

Sam Yandell, who has been scattered around the desert mines for the past three years, was in town during the week en route for a visit to his home at Bishop.

The Mineral Ranch mines and mill in the Panamint mountains — the well-known Anthony property — has been started up under the management of Mr. Grey, under bond.

W. E. Doty, the eye specialist, announces that he will shortly pay Independence a professional visit. Supervisor Yaney and others from Bishop speak in high praise of his work.

P. H. Mack, Esq., has been called East by the very serious illness of his mother. While at Los Angeles, a week or so ago, he received a telegram from Boston and immediately started for that point.

Thos. Leatherdale, having swung around the circle of the northern mining camps, returned to Independence yesterday, with the opinion that the Panamint country is about as good as any of them.

Messrs. Roeper & Willis, lesses of the Green Monster mine, last week shipped fifteen tons of ore to the smelter of Pyne & Co. at Alameda. A trial shipment of this size ought to afford a pretty fair test.

On account of the President's death the celebration at Lone Pine last Monday was conducted very quietly. Those who attended from here report having enjoyed a splendid dance in the evening.

Mr. J. H. Story, from the southern country, has become telegraph operator and chief clerk at the Nothan Rhine mercantile establishment, vice Mr. A. S. Nibecker, who has gone on a business trip to Los Angeles.

Tonapah has a large sick list, a fact mainly due to the impure water which they are compelled to use. For this and many other reasons it were well for workingmen to stay away from there at present. But the man who ships out to them seasonable ranch supplies is entitled to a white credit mark.

Messrs. Thorpe & Cook are about starting a new tunnel to open out gold gravel in Mazourka Canyon, at a point about one-half a mile below their 4000-foot drift. Although encountering some auriferous gravel, the long tunnel did not strike bed rock, but it is calculated that the new one will, at a distance of 1800 feet. That paying gravel exists in extensive beds throughout the lower section of the long canyon, at least, has been and is being demonstrated beyond the shadow of a doubt.

VAPORIZATION.

A Request for Reasons for the Procrastination of Some Young Men in Certain Matters.

A Ballarat aggregation
Demands an explanation
Of the seeming relaxation
Of previous exhileration.

Show us some consideration;
Let us quit our speculation;
Give us some real consolation;
Send us a communication
And relieve us of vexation.

Take an observation;
Show no hesitation;
Hold a consultation;
Indulge in meditation,
Or we'll make investigation
And insist on arbitration.

What means this segregation?
Why this procrastination?
Can you spurn the imputation
That you've suffered dislocation?
Canst deny the allegation
That you've had a separation?

We've performed an incantation;
We have met with condemnation;
We have reached our limitation
And pray for reformation.

It is our determination
To assist the restoration,
And insure amalgamation
Of Lone Pine conglomeration.

Excuse this recitation—
It needs interpretation;
It is only the emanation
Of diseased imagination.

In the Inyo publications
We have seen no applications
For licenses to wed.

F. W. G.

Ballarat, Cal., Sept. 12, 1901.

The Tax Levy.

The annual special meeting of the Board of Supervisors, for the purpose of effecting the tax levy, began on Monday evening last, with all the members present—Chairman Jas. Jones and Messrs. Boland, Cooley, MacKenzie and Yaney.

The official notice from the State Board of Equalization announced the State rate of 48 cents on each $100. The railroad assessment is at the rate of $1,115 03 per mile, amounting to $82,791. Adding this to the County assessment roll makes a total footing of $1,885,336.

The County tax was fixed at $1 67, which, with the State rate, amounts to $2 15 on each $100 of taxable property, apportioned to the various funds as follows:

General Expense	35
Salary	45
Hospital	17
General Road	20
Bridge	05
County Bond	15
School	30
State	48
Total	$2 15

Levy was made for special tax to meet the school bonds still outstanding, as follows:

Station	.15
Poleta	.10
Valley	.10
Big Pine	.40
Fish Springs	.30
Taboose	.15

At a regularly arranged special meeting held on the following day, the Board ordered the publication of an avertisement calling for sealed proposals for painting the Court House, inside and out, varnishing of furniture, etc., the same to be opened on Thursday, Oct. 10.

After allowance of the following mileage and per diem claims the Board adjourned: Jas. Jones, $18 30; Wm. P. Yaney, $23 80; T. C. Boland, $21 50; N. J. Cooley, $26 40; J. A. MacKenzie, $28 80.

The Memorial Service.

While following Presidential and Gubernatorial proclamations, in the impressive memorial services held last evening our people honored the illustrous dead in the most fitting form and ceremony.

The Court-room drapings were truly artistic; surrounding a fine large portrait of President McKinley were military and society insignia enfolded with the American colors draped in crape emblems of sorrow.

As presiding officer, Superior Judge Walter A. Lamar favored the very large and deeply attentive audience with remarks replete with feeling and thought.

An able Choir, under the leadership of J. Walter Hanby, with Mrs. Nettie Webb at the organ, rendered "Eventide."

Invocation, by Mrs. Mary Austin.

Biographical sketch of the martyred President, by Wm. D. Dehy, Esq.

"Rest at Eve," by the Choir.

Reading, Mrs. Stevens' lines upon the Death of William Henry Harrison, by Miss Etta Wood.

"Soldier's Farewell," by the Chair.

Memorial Address, by P. W. Forbes, Esq.

Presentation of floral offerings were made on behalf of the Masons and from the school children. A handsome wreath, the tribute of Andrew Price, a personal friend of the deceased President, was presented and received with overcoming emotion.

"Nearer, My God, to Thee" was then most appropriately and effectively rendered by the Choir.

The general Committee of Arrangements, which had been appointed at a meeting held on the previous day, is entitled to credit for the admirable judgment and ability displayed.

All the Federal offices in Independence—the Land Office, Post Office, Weather Bureau and office of the Forest Reserve, have been appropriately draped in mourning the whole week long. For the rest, the stars and stripes at half-mast over the court house, offices and business places speak more eloquently than words.

J. J. Gunn has returned from San Francisco, and expects shortly to resume work on his noted Minnetta mines near Modock. While below Mr. Gunn became heavily interested in oil properties in Monterey County, which, however, have not proved paying so far. He says that on account of the general depression in the oil business the 50 Oil Company, which owns lands near the Lake, have decided to let matters rest for awhile. It is probable that the Adams Company will put down a well or wells this fall,

The Fair Track and Park Program.

FIRST DAY—SEPT. 24.

Trotting, 2:30 class, 2 in 3; 1st $75, 2d $25.

Trotting, single mile, untried; 1st $50, 2d $25.

Running, vaquero race, 1 mile; free for all vaquero horses, race horses barred; horses to be ridden by owners, with full vaquero outfit; prize $40 Nelson saddle.

Baseball game.

SECOND DAY.

Trotting, 3-minute class, 2 in 3; 1st $75; 2d $25.

Running, Indian horses, 1 mile; 1st $15; 2d $5.

Running, ½-mile dash; 1st $50; 2d $10.

Baseball game.

THIRD DAY.

Running, mile dash, free for all; 1st $75; 2d $25.

Trotting, single mile, single buggy horses; must draw top buggy and never been started in any race; 1st $25, 2d $15, 3d $10: entrance fee, $2.50; no distance.

Walking match, draft teams to farm wagons, to haul driver and load of 3000 lbs.; 1 mile; 1st $15, 2d $10; 3d $5; no entrance fee; three or more teams to enter.

Baseball game; prize for the series, $150.

FOURTH DAY.

Trotting, free for all, 1 mile, 3 in 5; 1st $75, 2d $15.

Bicycle relay race, 5 miles, 5 riders to team; 1st team $25, 2d $10; no entrance.

Running, 1-mile dash, $50.

Ladies' tournament; 1st $15, 2d $10, 3d $5.

Entrance fee 10 per cent of purse, unless otherwise stated, in all races. Three or more to enter, to or more to start.

Osito and Edna R. Victorious.

Under the caption of "Mulholland's Racers Win" the Sacramento correspondent of the San Francisco Call, September 13th, says:

"It was quite a profitable afternoon for Irving Mulholland, the Inyo horseman. He captured the special 2:14 trot with Osito and the 2:12 class race with Edne R. Osito sold a mild favorite in the pools, and the only other starter to furnish an argument was Alta Veta. The last named horse won the second heat, but in the following two lacked the footing of the McKinney horse.

"But five came down for the word in the pacing number. In each heat except the third Edna R. nearly lost the other side wheelers. This one she dropped to Gaff Topsail and then came out in the fourth and made the latter look as if his topsail had been blown to shreds."

Osito's time—2:16¾; 2:17; 2:18; 2:16.

Edna R—2:16½; 2:18½; 2:17¼; 2:24.

Osito and Edna R. are entered for the races beginning next Monday on the Oakland track, for $500 purses in each class. Mr. Mulhollands horse Peter Jackson is entered for the 2:30-class trot at Los Angeles.

Special Rates for the Fair.

E. B. Yerington, C. & C. Freight and Passenger Agent, has notified Secretary Yaney that the following special rates will be allowed, account District Fair, tickets to Bishop and return:

On sale September 24th, void after September 28th—

Hawthorne	$7
Rhodes or Sodaville	6
Belleville or Candelaria	5
Benton	1 50

On sale September 21st and 24th, void after September 30th—

Alvord	$1
Citrus	2
Lone Pine	2 50
Keeler	5 50

Ball and Supper To-Night.

Rebekahs of Olive Lodge, No. 222, will give a danee at Mairs' Hall, Independence, on the evening of Friday, September 20th, for benefit of the Orphan Home.

Admission, $1. Lunch will be served by the ladies of the Order, at a charge of 25 cents per plate.

Stebbins, of Panamint, has his road up the canyon almost completed; a few more days and he will be able to haul up the concentrators and start up the old mill. His amalgamatnr, Bob Hughes, has arrived, Mr. Jacobs, with an expert from Salt Lake, took in the camp, visiting Ratcliff mines and King Con. property. Mr. Jacobs is general manager of the Salt Lake & Mercur railroad, and was here partly in the interest of the Clark road.—Ballarat cor. Register.

Just What Your Eyes Need.

I'll tell you after scientifically testing them. This service and advice free. If glasses are needed I select the best and most effective kind, and charge moderately for them. Will be in Independence shortly.

W. E. Fory,
Graduate Optician.

Reno is to be made a division for postal clerks after October 15th. About 50 clerks will make their homes in Reno, their payroll amounting to about $4000 per month.

"Does it hurt to be lynched?" asked the tenderfoot, timidly.

"Not after it's over," replied Lariat Luke, sagely.

DIED.

HALL.—At Bishop Cal., Sept. 11, 1901, Samuel Hall a native of Pennsylvania, aged 76 years, 11 months, 19 days.

TO LAKE TAHOE

A TRIP OF RARE ITEREST.

Passengers on west-bound overland trains o Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leav promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the mo ning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spen examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,10 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

UNKNOWN; UNTOLD.

IT HAD been a horrible year that 1795, perhaps even worse than its predecessor, 1794. Thousands of suspected and acknowledged nobles thronged the prisons, to be led forth in carts, batch by batch, as an offering to the murderous guillotine. Men, women, children—none were spared. Amongst those now expecting death at the Conciergerie prison were the old Marquis de Vaudmont and his young daughter Helene; by some, perhaps fortunate, mistake the poor girl had not been incarcerated with the ordinary crowd of aristocrats which filled the dungeons, but had been allotted a separate cell, where old Mathieu, the jailer, came once a day with the meager meal of bread and soup and water. Mathieu's daughter, Elise, occasionally was allowed to visit the female prisoners, and by a word, an encouragement, sought to console the often broken-hearted captives.

Elise had long resided near Lille with her aunt and uncle, and her dearest bosom friend was Rosine Pichou, their only daughter. It was a great shock to Elise when she saw poor Helene de Vaudmont brought in one night by the terrible soldiers of the revolution, for Helene was the "young lady" of the castle which had for many generations ruled the little village where the Pichous had lived. Often had Elise and Rosine experienced the kindness of the Vaudmonts, who, though aristocrats, associated freely with the simple village folk. Then the fearful revolution had burst forth, spreading terror in every corner of the land. Young de Vaudmont had joined the Royalist troops of Conde and the "emigres," and added laurels to the old family name; yet he had longed to revisit the place of his birth, and had ventured, under a disguise, to re-enter France; a friend followed him, and one dark and stormy night the old gentleman and Helene clasped the young man to their bosoms.

Hector de Vielleroche, young De Vaudmont's friend, soon won the hearts of all—of all, yes, for poor Rosine loved him, though he never saw it, blinded, as he was, by his own passion for Helene; the months passed, each day bringing news of fresh atrocities all over the country; then came the summons for the young men to gather once again round the banner of the fleur-de-lis, and both obeyed.

It was a sad parting, Helene and Hector vowing eternal love, and poor Rosine following with her heart the unsuspecting loved one.

How the authorities learned that the young royalists had been for months secreted at the castle none could tell; but suddenly the place was invested with soldiers, and old M. de Vaudmont and his daughter were carried off to Paris to be cast in the dungeons of the Terror.

"You will try and help me, Rosine," pleaded Hector de Vielleroche, who had braved a thousand dangers to re-enter France and to try to save his bride.

"But how?"

"Could you not persuade Elise to allow mademoiselle to escape?"

"Elise!" cried the young girl; "Elise! I have a plan, yes," she said. "I will help you; I will try to save her," and she turned away to hide the tears that crept up into her eyes.

He wondered, but did not understand.

"What are you going to do?"

"Go to Paris!"

"We had better start at once," said the young man.

"I will start at once," she answered; "you stay here concealed."

The busy guillotine had spread sorrow in many a family; all over the country a bloody stream flowed freely; on the Place de la Revolution Fouquier-Tinville's victims increased in an alarming manner; amongst the doomed batch that was to amuse the Parisians on the next day was Helen de Vaudmont; her father had preceded her in the next world some time before.

"I must see her, Elise," said Rosine eagerly.

"But I cannot get the keys!"

"O yes, you can—you must; surely you would not let the poor mademoiselle die without a word of comfort?"

"No, no," answered Elise, sobbing; "what are we coming to!"

Trust to woman's wit to obtain what she desires; Elise managed to get possession of old Mathieu's keys for an hour or so, and Rosine was admitted to the cell, where on a straw pallet lay Helene de Vaudmont.

"Dear mistress," she cried, kneeling beside the young captive, "cheer up; I bring you good news."

"Good news to me, Rosine; what good news can I expect? The best news would be that of my approaching deliverance by the——"

"O, say not that! say not that!"

"You are right; it is wicked to grumble against fate," she added listlessly. "But what about your good news, dear Rosine!"

"I can set you free!"

"Thank you, kind, good Rosine, thank you! But what is liberty to me—no home, no family, no——"

"M. de Vielleroche waits for you," said Rosine quietly, and it hurt her poor loving heart to say these words to her rival.

"Hector, O Hector!" and Helen sprang up, animation in her countenance, her eyes sparkling. "But——"

"But—no but," said Rosine firmly; "change clothes with me and slide out while I talk to Elise—she is sure not to notice your clothes immediately."

"But you?"

"O, that's all right! They have probably forgetten you, and consequently will forget me," she added, though she knew Helen's name was to be called on the morrow!

Helene escaped unnoticed, even Elise in the dark passages failing to detect the fraud, for Elise respected what she thought was Rosine's grief and did not speak to her.

And when, that same night, Rosine was bundled off to the Conciergerie dungeons none knew of the substitution in the hurry for more victims.

It was only some months afterwards that Helene and her husband, who had reached Switzerland in safety, knew of the sacrifice of the loving Rosine; a paper came to Hector through an emissary—a line only—one line:

"Hector, I am glad to give my life to see you happy. Rosine."

* * * * * * *

Many, many years have gone by; Louis XVIII. was on the throne, a throne on which he was to sit but a short while—yet he was there long enough to restore to Helene de Vaudmont her fortune and property, and when France once more changed its ruler the new government, in its policy of reconciliation, did not disallow the grant.

Hector and his wife often talk of Rosine to their many children, and when the whole family gather to pray Rosine's name is always mentioned with feelings of live, and reverence, and gratitude.—The Ludgate.

GREAT WEATHER SHARPS.

Olden-Time Sailors on the Gulf of Mexico Were Experts.

"The greatest weather sharps in the world," said a citizen, who takes an interest in meteorology, especially of the goosebone brand, "were the old-time sea captains in the gulf and coast trade. Squall smelling was a necessary part of their business, for, as you probably know, the biggest dirty weather factory in the universe is the Caribbean Sea. There are no such things as times and seasons down there, and what's coming next is a matter of pure chance. It may be a dead calm and it may be a rip-roaring hurricane, so the men who cruised in those waters before we had any signal service to help them out had to keep continually on the alert, and it's no wonder that some of them acquired a skill that seemed next door to supernatural.

"It became a sort of instinct, a second nature, with them, and they couldn't tell how they did it themselves. They would predict changes before they were even hinted at in the glass; they would anticipate the very caprice of the wind, and many a time they saved their ships and their skins by quick, sharp orders which for the moment appeared to be nothing short of preposterous. Of course it was all a matter of minute observation, a good deal of which was no doubt unconscious. They had learned by long experience to read meaning in the different forms of clouds and the way the cloud strata lay in the upper air; the water was an open book to them, and they would detect a hundred and one small atmospheric phenomena invisible to the ordinary observer.

"I was on the ship of one of these famous old weather prophets years ago on a voyage to Havana. We were just entering the harbor when the captain, who had been moody and distraught for several hours, suddenly called the mate and ordered him to get anchored as quickly as possible and make everything fast for a hurricane. The mate made a mild protest. 'The glass is pretty steady, sir,' he said. 'Never mind,' said the captain, 'it's a-comin' all the same!'"—New Orleans Times-Democrat.

Poverty Not a Barrier.

Poverty is not always a barrier to success or to greatness. Often it has contributed to both these ends. It is the fierce fire combined with the cold blast that helps to make iron into steel. Edison was so poor a boy as to be compelled to sell newspapers on a railroad train in order to gain his boyhood sustenance. Poverty made him familiar with work, and work sharpened his mind and afforded suggestion for his inventive genius to work upon. Mr. Hay, president of the Southern Pacific Railroad at a salary of $55,000 a year, twenty years ago was a poor young man and working for the company of which he is now president for $40 a month. Benjamin Franklin was a poor boy, half-starved, at the printer's trade, but his poverty did not prevent him from rising to the head of his profession, or from becoming one of the ablest statesmen and most successful diplomats of his time. The immortal Lincoln, too, studied and his transcendant genius ripened in poverty's school. Poverty and grit ever have and ever will fashion sterling character into great and successful men.—Northern Christian Advocate.

Novel Remedy for Hiccoughs.

In a down-town restaurant the other night a man who had been dining with a party of friends suddenly leaned over and coughed convulsively.

"Hiccoughs" said one of his friends. Hiccoughs it was.

"When you get into spasmodic muscular action you'd better begin work on your will," said one of the men. "Many persons die from hiccoughs."

"What shall I do to stop them?"

"Take nine swallows of water."

He took them and hiccoughed at the finish.

"Hold your breath," said another man.

The sufferer held his breath and when he had to breathe again the hiccoughs were still with him.

"Swallow a piece of bread."

The man swallowed five pieces without effect.

A young woman at the next table leaned over and said: "Pardon me, but if you will eat a dish of ice cream you'll thank me for the remedy.

A waiter brought a dish of ice cream. The man ate it all, and his hiccoughs vanished. It is said that this recipe never fails.

Some men are willing to take taffy by the keg. It is a safe rule to remember that when a man compliments you extravagantly, he has some design in view: you do not deserve extravagant praise.

One of the last things a girl does before getting married is to get her teeth fixed.

When a preacher talks loud enough to be heard two blocks, that is his way of giving his yell.

MOST BEAUTIFUL OF WASHINGTON WOMEN.

Baroness Hengelmuller von Hengervar, wife of the Austro-Hugarian minister, is easily the most beautiful woman in the diplomatic corps, if not the most beautiful in Washington, where she reigns as one of the most popular hostesses of society. As a girl she was so noted for her personal beauty and so sought by artists that before her first marriage she bore the distinction of having had over a thousand pictures made of her. She was born the Baroness Dunin-Borloski, of Silesia, coming

MADAM HENGELMULLER VON HENGERVAR.

of an old and famous territorial family. When 15 years of age she married an officer in the Russian army, Gen. Tazsinowski, and from this marriage four daughters were born. At the age of 23 the baroness was left a widow, and shortly after married the present minister to the United States, Mr. Ladislaus Hengelmuller von Hengervar. Another daughter is the result of this marriage. Baroness Hengelmuller owns five automobiles, all of different styles, which she can operate in the most expert manner.

RECENT JUDICIAL DECISIONS.

A building contract is held, in Spence vs. Ham (N. Y.), 51 L. R. A. 238, not to be substantially performed where there is an omission to comply with the requirements as to girders and a partition, when this omission creates structural defects which can be remedied only by a partial reconstruction of the building.

A stipulation in a contract between a general insurance agent and a solicitor that the latter shall not be the agent of the company is held, in Hall vs. Union Central Life Insurance Company (Washington), 51 L. A. R. 288, ineffectual to relieve the company from liability for his acts within the scope of his employment in the collection of premiums.

In erecting and maintaining a city prison a municipal corporation is held, in Gray vs. Griffin (Ga.), 51 L. R. A. 131, to be exercising a purely governmental function, and therefore not to be liable in damages to a person arrested and imprisoned therein by its police officers for injuries caused by the improper construction of negligence in the maintenance of the prison.

Cases in which drummer and traveling agents of nonresidents have been held exempt from State license taxes on the ground that they are engaged in interstate commerce, as is shown in a note in 14 L. R. A. 97, are distinguished in the case of Racine Iron Company vs. McCommons (Ga.), 51 L. R. A. 134, which holds that a traveling agent who takes orders but receives the goods in bulk upon shipment from another State and then breaks the packages and distributes the contents among his customers is not engaged in interstate commerce.

Early Harvard Graduate.

At many of the college and university commencements the guest to whom the greatest honor has been paid was the earliest living graduate of the institution. At almost all of them the younger men present took time to drink a toast to the continued good health of the "silver gray" who holds the title of the oldest son of his alma mater. Among all the universities few, if any, boasted of a living graduate who left college as long ago as the Rev. Joseph Warren Cross, who graduated from Harvard with the class of 1828. That was 73 years ago, when Mr. Cross was a youth of 20. After graduation he entered the ministry of the Congregational Church, and for more than half a century he lived at West Boylston, Mass., where he was pastor of the Congregational Church. Now, retired from active life, he is living with his daughters at Worcester, Mass., still a strong and vigorous old man at the age of 93.

REV. CROSS.

Milk as a Food.

The high place milk once held on the dietary list seems to be undermined. We know now that it is too heavy for the stomach when other food is taken; that unless it is sipped it forms a mass that is not easy to be digested; that when taken on an empty stomach bread or crackers should be broken into it to avoid the formation of curd-like matter; but with the addition of lime-water it may be used with impunity. Brought to the scalding-point it is most nourishing. Care should be taken that it does not boil, for boiled milk is not to be used except for special needs. Prepared as kumiss milk it is most valuable, but by those to whom it is unpleasant buttermilk is substituted.—Woman's Home Companion.

War Destructive to Forests.

Twenty-five years ago, in 1876, Servia was clothed with forests, and was aptly termed "the land of the forest;" but the Servian-Turco trouble of 1876-78 played havoc with the forests. Thousands of acres were stripped of trees in order to serve for fortifications or to bar the advance of the Turkish army or to warm the great masses of troops that camped on the land during two winters. The war was followed by a period of ruthless destruction of the forests, vast tracts being sold at a ridiculous price or denuded to supply the railroads.—National Geographic Magazine.

Lots of people envy the fire cracker, which gets a blowing up only once in its life.

Cloud Mountains.

The highest of all the clouds are those delicate, white, fibrous, detached masses of frozen vapor; always seem high against the blue sky. The topmost point of the highest of these may be ten miles above the earth. They are called cirrhus clouds. Altogether there are ten principal types of clouds. The lowest, known as the stratus, are really horizontal sheets of lifted fog seen on damp days or in very damp localities. These clouds are only a few hundred feet above the earth.

Some of the vast bodies of vapor are higher than the tallest of the Alps. They are undoubtedly snow capped—veritable mountains of ice and snow. It has been discovered that the temperature on one such summit was 75 degrees below zero.

Were it possible for us to ascend in a balloon and penetrate one of these snow capped peaks from base to summit we should travel first through a layer of dry air, vapor and water, a third of freezing vapor, water and ice, and finally through the summit, composed of dry air, vapor and ice, but no water.

Getting Away From Land.

The question has been asked, Is it possible to sail 1,000 miles from land? This can be done at several points. By leaving San Francisco and sailing northwestward into the north Pacific a spot is reached where there is no land, not even an islet, for 1,000 miles in any direction. So, too, sailing from the southern point of Kamchatka southeastward ships reach a point equally distant from land of any kind, the nearest to the north being the Aleutian islands and to the south the outlying members of the Sandwich group. In the southern Indian ocean it is possible to sail 1,000 miles out from the southern points of Australia and New Zealand and still be as far from any other land, and the same may be done in a westerly direction from Cape Horn. Indeed, from this point a much longer distance might be reached, for the southern Pacific between the Horn and New Zealand covers a space of 80 degrees of longitude and 40 of latitude of absolutely unbroken sea, making its central point over 1,200 miles from anywhere.

Wild Zebras.

The zebra when wild is a ferocious animal, and an unwary hunter is likely to suffer from its teeth and hoofs. The author of "Kloof and Karroo" says that a Boer in Cape Colony had once forced a zebra to the brink of a precipice, when the desperate creature turned upon him, attacked him with its teeth and actually tore one of his feet from the leg.

Another author writes of a soldier who mounted a half domesticated zebra. The creature, after making the most furious attempts to get rid of its rider, plunged over a steep bank into the river and threw the soldier as it emerged.

While the man lay half stunned upon the ground the zebra quietly walked up to him and bit off one of his ears.

The Penalty of Being Idle.

Idleness is at the bottom of the drunkenness, gluttony and sensuality which compass the destruction of one section of the community at the present time. It is at the bottom of that particular form of heartache which is the plague of women—the heartache of a purposeless, miserable existence. Such women often look forward to marriage to cure them, but when they are married and settled the old malady recurs, and in our own day we see them running hither and thither after that elusive something. Others try to find a cure in the suffrage and others again in cigarettes.—Sarah Grand.

Arsenic Eaters.

Styria, a duchy having a population of about 1,500,000 and lying south of Gratz, in the mountainous portion of the great German confederation, is noted for its arsenic eaters. Arsenic eaters abound in every city, village and neighborhood, and in thousands of cases every adult in a family uses it almost the same as sugar, consuming about five and a half grains in the 24 hours.

Old Church Lotteries.

A citizen of Wilkinsburg, Pa., owns an old lottery ticket which reads as follows: "No. 257. Presbyterian church lottery. Authorized by law. This ticket will entitle the possessor to such prize as shall be drawn to its number, if demanded within 12 months after the drawing, subject to 20 per cent deduction. M. Wilkins, president of the board of managers. Pittsburg, June 3, 1807."

Maid Worth Having.

The Mistress (entering the kitchen)—Jane, didn't I hear a dish break a minute ago?

The Maid.—I hope you did, mem. It made noise enough. If you hadn't heard it, I should have thought you were getting deaf, and that, you know, would be awful.—Boston Transcript.

That Cough needs Fryer's Abietene Cough Balsam

Adams' Sarsaparilla Pills cure sick head aches, constipation, biliousness and dyspepsia. They also purify the blood. Sold in 10c and 25c boxes by all druggists.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c

Fryer's Abietene Cough Balsam guaranteed for Croup.

GRATIFIED AMBITION

ODD USES TO WHICH SUDDEN RICHES ARE SOMETIMES PUT.

Why the Beggar's Bridge That Spans the River Esk Was Built—An Englishman Who Indulged In a Wild Orgy of New Shoes.

People who after years of grinding poverty suddenly come into great wealth sometimes put their new fortunes to peculiar uses. Certainly they should be allowed to do so without harsh criticism, for the strangest things done by the newly rich are done to realize a dream which has cheered the heart when the days were full of trouble scarcely to be borne and helped to lighten the great load of poverty.

What poor man has not found a cheap and certain comfort in the midst of afflictions by imagining what he "would do if he were rich?" When wealth comes suddenly and unexpectedly and the dreamer sets out to realize his dream, people say, "How eccentric!" Eccentric it may be, but it is the gratified ambition of a lifetime.

A while ago an Englishman, who all his life had never been able to keep his feet shod properly, suddenly came into a large fortune. The first thing he did was to give an order for shoes to several shoemakers, so arranging it that he could put on a new pair of shoes every day in the year. How often had he said to himself in his years of poverty, when his toes were sticking out of his shoes or the water coming into them, "Oh, if I ever get any money won't I just blow myself on shoes!" The opportunity came, and the first thing he did was to indulge in an orgy of new shoes.

A miner who came into an unexpected fortune gave a great feast to his old workmates. Often when the miners were eating the contents of their dinner pails down in the dim galleries of the mine he had thought of what a feast he would like to see spread there for himself and his fellow workmen. So when he came into his fortune he had one of the galleries of the mine lighted and decorated and a great and costly feast served there to the miners, at which he presided.

Another man who suddenly became rich bought all his particular friends a complete outfit of clothing, even going so far as to furnish each of them with a gold watch and chain. Then he invited them to a famous feast, at which all sorts of expensive luxuries were served. When the guests reached their homes, each found an envelope with $50 in it and a note saying that the money was to pay for a short vacation. This generous man unfortunately died in want and misery not long after receiving his windfall.

A rather romantic way of spending money was that adopted by the builder of the Beggar's bridge, which spans the river Esk. When poor, he had the greatest difficulty in meeting his sweetheart, who lived on the opposite bank of the river, owing to the Esk often being swollen and so impassable, even to a good swimmer. The ardent lover, when distraught one day, registered a vow that if ever he became rich he would take good care that no Eskdale lover should ever suffer again in the manner he suffered. He became rich and fulfilled his vow by the erection of the Beggar's bridge.

But there are persons, too, who instead of dreaming in their poverty of giving pleasure to their fellows meditate mischief and when they acquire sudden wealth proceed to their revenges. Not long ago a London charwoman found herself possessed of a large fortune. She immediately bought several fine turnouts and spent most of her time for a few weeks in driving slowly by the houses of her former employers to "show off." Against one woman who had employed her she had an especial grievance, so she bought the house the hated one lived in and raised the rent.

A Birmingham man who received a small legacy invited every tramp he could find in the city to meet him at a certain public house. The tramps came in large numbers and had a hearty meal, after which they were served with pipes and tobacco. They had plenty to drink, and music and songs followed, as did also police court proceedings, owing to a free fight which ended the remarkable entertainment.—London Chronicle.

Unpleasant to Have Around.

"Are you still engaged to Mr. Briggs?"

"No; I broke it off last week. I was afraid to marry him. He knows too much. I gave him some ribbon to match. He found it in the first store he went to, and he bought it for 2 cents below the regular price."

Iceland exports sulphur, Iceland moss, wool, dried fish, sealskins and oil, whale oil and baleen, eiderdown, bird skins and ponies. Its manufactures are entirely domestic.

The English Are Unmilitary.

Partly from historical and partly perhaps from racial causes the English are essentially unmilitary. They resent the control of soldiers. They distrust military ideals. No government that ever existed in this country was more unpopular than that of Oliver Cromwell and his major generals. Its unpopularity left an indelible mark on English institutions. For many years it made it impossible to have a standing army. Even when the course of events made it necessary to concede that much to the military necessities of the time it still remained a maxim for centuries with all politicians that as little power as possible must be granted to the soldiers; that their business was to fight our wars, and, this being done, that there was little or no place for them in the body politic.

We do not think it necessary to defend this attitude of mind. Like most popular feelings, it is largely unjust, but also, like many popular feelings, it is based to some extent on a true conception. Politically, using the word in its largest sense, the domination of the military idea in a state is calamitous. It tends, we believe, to destroy individuality and is a serious menace to individual liberty.—English Monthly Review.

The Third Handle.

The best account of the origin of the loving cup comes from the late Lord Lyons, British embassador at Paris. Henry IV of France while hunting became separated from his companions and, feeling thirsty, called at a wayside inn for a cup of wine. The serving maid on handing it to him as he sat on horseback neglected to present the handle. Some wine was spilled, and his majesty's white gauntlets were soiled. While riding home he bethought him that a two handled cup would prevent a recurrence of this, so his majesty had a two handled cup made at the royal potteries and sent it to the inn. On his next visit he called again for wine, when, to his astonishment, the maid, having received instructions from her mistress to be very careful of the king's cup, presented it to him by holding it herself by each of its handles. At once the happy idea struck the king of a cup with three handles, which was promptly acted upon, as his majesty quaintly said, "Surely, out of three handles I shall be able to get one!" Hence the loving cup.

Spirits Above and Below.

"Many years ago," writes a New Hampshire clergyman in the Boston Journal, "it was the custom to store liquors in church cellars in Boston; not all of them, but many of them. As late as 1850, and probably later, the cellar of the stone church on Bowdoin square was used by the Trull distillery near by (Pitts street, if I am right) for the ripening in hogsheads of New England rum. Some one found a hymn-book in a pew and copied in there the following verse:

"There are spirits above and spirits below,
The spirits of love and the spirits of woe.
The spirits above are the spirits of love;
The spirits below are the spirits of woe.
The spirit above is the spirit divine;
The spirits below are the spirits of wine.

"I have myself frequently watched the men putting hogsheads of rum into the cellars or taking them out."

Still More Counterfeiting.

The Secret Service has unearthed another band of counterfeiters and secured a large quantity of bogus bills, which are so cleverly executed that the average person would never suspect them of being spurious. Things of great value are always selected for imitation, notably Hostetter's Stomach Bitters, which has many imitators but no equals for disorders like indigestion, dyspepsia, constipation, nervousness and general debility. Always go to reliable druggists who have the reputation of giving what you ask for.

It ain't no credit ter a feller to admit thet he's wrong, unless he does somethin' to make it right ag'in.

If you are troubled with pimples, sallow complexion, impure blood or poor digestion, use Adams' Sarsaparilla Pills. They improve the complexion and positively cure constipation. 10c, 25c, at all drug stores.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

Fryer's Abietene Cough Balsam saves Doctor Bills

THE HAIR BRUSH.

Breeds Dandruff, which Causes Falling Hair and Finally Baldness.

Prof. Unna, Hamburg, Germany, European authority on skin diseases, says that dandruff is as contagious as any other malevolent disease, and that one common source of the spread of dandruff is the use of the same hair brush by different persons. The way to avoid catching dandruff or any other disease from another's brush, is to insist on the use of Newbro's Herpicide. It not only kills the dandruff germ, but it is also an antiseptic that will prevent the catching of any disease whatever through contagion of another's brush.

Got Grip? Try Fryer's Abietene Cough Balsam

ECZEMA

Eczema sets the skin on fire. The acid poisons in the blood are forced out through the pores of the skin, causing intense redness, burning and itching. So terrible is the itching at times, especially when the body is overheated, that the almost distracted sufferer feels that he could tear the skin to pieces, and that he must scratch or go crazy. He knows from experience that this only makes matters worse, but, made desperate by the terrible burning and itching, he is for the time being indifferent to after effects. There are several forms of Eczema, the moist, or weeping kind, that comes in little pustules which discharge a watery, sticky fluid, which dries and peels off in bran-like scales. So profuse is the discharge at times that large scabs or crusts form, which are both painful and troublesome, and not easily removed. Red, disfiguring bumps and sores are symptoms of Eczema. The dry form usually attacks the head, hands and feet; the skin, becoming hard and rough, often cracking open and bleeding, and attended with much itching. Eczema depends upon a poisoned condition of the blood, and local applications, while soothing and cooling, and may to some extent relieve the inflammation and itching, cannot be considered cures, because external remedies do not reach constitutional or blood diseases. Salves, ointments, powders, lotions and soaps do more harm than good, by smearing over and sealing up the pores of the skin, thus forcing the poison back into the blood. S. S. S. antidotes and neutralizes the acid poisons and drives out of the circulation all impurities and humors, and the pure, rich blood that is carried to the diseased skin quickly allays the inflammation, opens the clogged up pores, and the skin becomes soft, smooth and ready to perform its proper functions. To be rid of Eczema you must first purify and build up the blood, and nothing so surely and effectually does this as S. S. S., the only guaranteed purely vegetable blood purifier. Send for our book on blood and skin diseases, and write our physicians for any information or advice you may desire. Medical advice and book free. THE SWIFT SPECIFIC CO., ATLANTA, GA.

Mr. L. Marno, Escondido, San Diego County, Cal., writes: "My body broke out with a rash or eruption which in spite of all efforts to cure continued to get worse. The itching, especially at night, was simply terrible; it would almost disappear at times, only to return worse than ever. I had tried many highly recommended preparations without benefit, and hearing of S. S. S. determined to give it a fair trial, and was inexpressibly delighted when a few bottles cured me entirely, removing every blemish and pimple from my body. I shall not fail to recommend S. S. S. whenever an opportunity occurs.

Salt Rheum

You may call it eczema, tetter or milk crust.

But no matter what you call it, this skin disease which comes in patches that burn, itch, discharge a watery matter, dry and scale, owes its existence to the presence of humors in the system.

It will continue to exist, annoy, and perhaps agonize, as long as these humors remain.

It is always radically and permanently cured by

Hood's Sarsaparilla

which expels all humors, and is positively unequalled for all cutaneous eruptions.

Good luck's liable to sneak in the back way while ye're a-lookin fer him at the front door.

How Colorado Desert Was Formed.

Everybody knows, without looking at the map, how Lower California runs south from the Pacific coast like a sort of tail, separated from the United States—for it is a part of Mexico, as some people are not aware—by a long arm of the sea called the gulf of California. Once upon a time the gulf extended in a northward direction 300 miles beyond its present inland limit. Into this northerly extension the great Colorado river emptied millions of tons of detritus annually until the deposit accumulated in quantity sufficient to shut off the upper part of the gulf, which was thus transformed into a lake. To begin with, of course it was a salt lake, but it gradually became fresh through the influx of water from the Colorado. Thereupon fresh water fishes, mollusks and other creatures not of the brine were developed in it, and in this way it happens that the dry bottom today is covered with their fossil remains.

HER ANSWER.

They were old friends, but they hadn't met
In many, many years;
And the tide of life had hurried on,
With its joys and hopes and fears;
But both the women had met at last—
Old playmates once again;
They talked of girlhood's dreams, now past—
Its buoyant hopes, now slain.

"Ah, Kate," said Madge, "you're not the same—
You've lost your charm of face—
You've lost your pretty, rosy cheeks—
You've lost your form of grace.
Your chestnut hair has turned to gray,
Your lips have lost their red;
All things are changed—and soon our day
Will turn to night instead."

"Dear one," Kate said, "I've nothing lost,
For here's my hair of brown
On Fred's dear head—my eldest born—
And Bess has not a frown
On her sweet face, that's just like mine
Of thirty years agone—
While Kittie's blue eyes dance and shine
Like sunlight in the morn.

"Mine shone in just the self-same way
When you, dear, saw me last,
And Margaret's lips are just as red
As mine in days long past,
No, no, my dear, I've nothing lost,
My life is on the wane;
My children have my own youth cost—
In them I live again!"
—Success.

All's Well that Ends Well

DOWN the lane leading to John Delane's farmhouse, one beautiful June evening many years ago, could be seen a steady stream of vehicles of all descriptions. Every farmer for miles around had been invited to the wedding of Mary Delane, and to-night the auspicious event was to take place. Preparations had been made on a grand scale; John Delane had determined to make this, the wedding of his only child, a memorable event.

The match between Mary Delane and Shaun Brady had been brought about and perfected by Pat Mulcahy, a renowned matchmaker. Mary was an exceptionally pretty girl, and as good as she was pretty. Shaun Brady was twice her age, possessing an unenviable name and many enemies; but, as John Delane remarked, "a moneyed man has many jealous friends," and money Shaun had in plenty, that covered all deficiencies, moral and physical, in John Delane's eyes.

Mary Delane had no love for Shaun Brady, she well knew that her life would be in many ways a hard one, but she had been badgered by her father until she had said yes with a heavy heart.

The bridegroom and priest had not yet arrived, but the dancing began, Tom Harty, the fiddler, playing "The Wind That Shook the Barley" in finished style. Mary did not participate, reserving her first dance for her future husband. She received the guests as they came, standing proudly beside her father, her face white as marble.

Her thoughts were wandering far and wide when a voice aroused her and sent the blood to her cheeks.

"God save all here!"

"God save you kindly, Dan," she heard the company respond in unison, and then Dan Reardon was shaking the hand which she mechanically outstretched.

In a moment he had gone, mingling among the guests.

"More power to ye," he said to the fiddler, as that worthy man finished.

"An shure," answered Tom, "it's having the loikes of a fine bouchal like yerself beside me that gives me the power."

Dan joined in the general laugh.

"It's about time the groom and his riverence were here," said Mary's uncle.

"Oh, they'll be here directly now," said John Delane. "Shure she'll be taken from me soon enough."

Dan Reardon sat by the porch door, gazing abstractedly into the darkness outside; Mary watched him from her place beside her father, and as that good man arose in answer to a servant's call, she slipped quietly over to where Dan was.

"A penny for your thoughts, Dan," said she.

"They're priceless, miss," said he, "for I was just thinking of the wan I love best in this dreary, bitter world."

"Indade!" said Mary. "An' shure it's a nice girl she must be, to win your love."

She said this lightly, though her heart was heavy.

"She is the sweetest woman that ever put a foot on the ground."

"An' I suppose she returns your love, Dan?" she asked, interrogatively.

"Oh, no, no, miss! Shure it's little she knows of the love I have for her, and in wan way I'm glad. It's impident she'd think me, widout a pinny to me name, to have serious thoughts about her."

"If I'm not too bold, Dan, I'll be after axin' you who she is, an' its anxious I am to know."

But this question seemed to cause Dan the greatest confusion, and, strange to say, when Mary looked at him and their eyes met, she also grew confused.

"Och, shure, Miss Mary," he stammered, "you'd be the last one I'd tell. Don't ax me no more, shure it's only folly on my side."

"Well, then, Dan, you can tell me whether she is dark or fair."

"Well, I'll say this much, miss, that to me she's the fairest girl in Kerry."

"Give me her initials, thin," coaxed Mary, "an' maybe I can guess."

"Arrah, now, don't say no more about it."

"But you must tell me," she insisted. "I'll not let you alone till you do."

"Well, thin, since you're so detarmined, I'll take the consequences an' tell you; her name is"—here he waited for a moment—"Mary Delane."

Mary blushed like a wild rose, and stammered:

"Oh, Dan, shure you can't mane me?"

Dan looked her full in the face as he said, quietly:

"It's you, I mane, Mary; but don't be angry; shure I thought I'd cut my tongue out before I'd tell you, but you drove me to it. Oh dear, oh dear, an' on your weddin' night, too! Don't mind me, miss; I'll not trouble you in any way again, but call God's blessings down on you this night, an' my constant prayer will be for your happiness."

"An' do you think I could be happy with Shaun Brady?" asked Mary, with an upward glance.

"Well, I hope you'll be," he answered evasively.

"An' what's the good hoping any such thing, when you know, well as I do, that happiness and I will part forever when I marry Shaun? I have been forced into it, an' shall try to do my duty; it's too late now to turn back."

Dan looked up, with determination in every line of his fine face.

"No, Mary," he said, "it is not too late. If you care for me, or think that in time you could give me your precious love, I say again that it's not too late."

"Oh, Dan, shure you forget that I'm to be married this night. His riverence and Shaun are expected any minute."

"I'm not forgettin' the fact, and it's a short time you have to decide. We'll run away, an' go straight to Father Duffy's an' be married, an' wid you at my side to give me courage I'll work my fingers off to give you comfort."

Then Mary, with love-lit eyes (oh, so different from the downcast Mary of an hour ago) and blushing cheeks, consented.

"I'll go wid you, Dan. My heart you possess, an' you might as well have me wid 't. Go round to my bedroom window; I'll drop my mantle out, an' you must wait by the old fort. I'll follow as soon as I can without raising suspicion."

Two weeks from that memorable night the runaways returned, and were welcomed heartily to the village. Mary resolved to ask her father's forgiveness; she loved him dearly, and her conscience troubled her. She insisted on Dan's accompanying her. The old man grew white with anger when he saw the culprits before him.

"Away wid ye! You beggar—you thief of the night—you come here and stand forninst me, wid brazen impidence, after stealin' the apple of my eye, my only child! Away wid ye!"

"All right, sir," said Dan, his head thrown back, "we'll go. Come on, acushla! but I'd have you know, sir, that I'm no beggar; I'm well able to make a livin' for my wife, an' I'll do it wid God's help."

The old housekeeper came into the parlor a short time after, and was much surprised to see Mary sitting close beside her father, Dan in the best chair the house afforded, and all three as contented as they could be.

"Shure it isn't an hour ago," she told the dairy maid, "since John Delane said, wid his own lips, 'I'd not forgive thim, Mrs. McCarthy, not if they wint down on their binded knees!' An' now look at 'em!"—Chicago Times-Herald.

How They Began.

"None shall wear a feather but he who has killed a Turk," was an old Hungarian saying, and the number of feathers in his cap indicated how many Turks the man had killed. Hence the origin of the saying with reference to a feather in one's cap.

It was once customary in France, when a guest had outstayed his welcome, for the host to serve a cold shoulder of mutton instead of a hot roast. This was the origin of the phrase, "To give the cold shoulder."

In one of the battles between the Russians and Tartars a private soldier of the former called out: "Captain, I've caught a Tartar!" "Bring him along, then!" answered the officer. "I can't, for he won't let me!" was the response. Upon investigation it was apparent that the captured had the captor by the arm, and would not release him. So "catching a Tartar" is applicable to one who has found an antagonist too powerful for him.

"Deadhead," as denoting one who has free entrance to places of amusement, comes from Pompeii, where the checks for free admission were small ivory death's heads. Specimens of these are in the museum at Naples.

That far from elegant expression "to kicked the bucket" is believed to have originated in the time of Queen Elizabeth, when a shoemaker named Hawkins committed suicide by placing a bucket on a table in order to raise himself high enough to reach a rafter above, with a rope about his neck, then kicking away the bucket on which he stood.

New England Pride Was Manifested

Miss Bigelow—One o' them upstart summer boarders got sot on right sma't yisterday. He wanted to hire Jim Bunker to be skipper on his pesky sailboat!

Miss Willis—An' what did Jim tell him?

Depopulation of France.

The French census shows that the population of France has decreased by 12,883 in five years.

AHEAD OF COLUMBUS.

BUDDHISTS VISITED THIS CONTINENT IN FIFTH CENTURY.

Professor Fryer, of the University of California, Is Responsible for This—The Evidence Is Documentary—Ancient Record Still Preserved in China.

Prof. Fryer of the University of California brings to light new evidence tending to prove that Buddhist priests discovered America 1,000 years before the sailing of Columbus. "The evidence is both documentary and substantial," says Harper's Monthly.

Of the evidence of early Chinese documents, Prof. Fryer says:

"The narrative states that there was a Buddhist priest named Hui Shen, originally a native of Cabul, who, in the year 499 A. D., during the reign of the Emperor Yung Yuan, came from the country of Fusang to Kingchow, the capital of the dynasty of Tsi, situated on the River Yang-tse. The country being in a state of revolution, it was not till the year 502 that he had an opportunity of going to the court of the Emperor Wu Ti, of the new Liang dynasty. He gave presents to the Emperor of curious articles brought from Fusang, among which was a material looking like silk, but the threads of which could support a great weight without breaking. This was evidently the fiber of the Mexican agave. He also presented a mirror of a foot in diameter, possessing wonderful properties, and resembling those in use in Mexico and other localities in America at that time. The Emperor treated him as an envoy from Fusang, and deputed one of the four principal feudal lords, named Yu Kie, to interrogate him respecting the country, and to take down his story in writing. This was accordingly done, and we have what is undoubtedly the original text, with only perhaps here and there a typographical error which can be easily explained.

"Among other things, Hui Shen said that the people of Fusang were formerly in ignorance of the doctrines of Buddha, but during the reign of the Chinese Emperor Ta Ming, of the Sung dynasty, or A. D. 458, there were five bikshus, or Buddhist monks from Cabul, who traveled there and promulgated the knowledge of the doctrines, books and images of Buddhism. Their labors were successful, so that they ordained monks from among the natives, and thus the customs and manners of the people were soon reformed. He gave particulars of the journey through the Aleutian Islands and Alaska, with the length of the route and a description of the inhabitants. He described the country of Fusang as 20,000 li, or 6,500 miles, to the east of Kamschatka, and also due east from China. It grows great numbers of fusang trees, which, when they first appear above ground, are like bamboo shoots, and the people eat them. Threads are spun from the skin of the plant, which are woven into cloth from which clothing is made, or else it is made into embroidery. They also use the fibrous material of the fusang for making paper. These and many other features seem to point unmistakably to the Mexican agave. Red pears are mentioned, which agree in description with the fruit of the prickly pear, while grapes are represented as plentiful. There is plenty of copper, but no iron; and no money value is put on gold or silver. Their markets are free and there are no fixed prices.

"The manners and customs of the people, their forms of government, their marriage and funeral ceremonies, their food and clothing, the method of constructing their houses, the absence of soldiers and military weapons, cities and fortresses, are all particularly noted, and agree with what is found in no country bordering on the Pacific, except on the continent of America in general, and in Mexico in particular. To suppose that Hui Shen could have invented all these statements, and that his story can be satisfactorily explained upon any other theory than that he had actually made the journey which he so truthfully and soberly describes is, to say the least of it, absurd."

FAMOUS WESTERN PREACHER.

Rev. Dr. Thomas is a Power in the Christian Ministry of Chicago.

One of the most famous preachers in the West is Rev. Dr. H. W. Thomas, of Chicago, pastor of the People's Church. More than twenty-one years ago Dr. Thomas was deposed as a preacher of the Methodist Episcopal

REV. DR. H. W. THOMAS.

Church. His views were first criticised as being unorthodox, and at the Rock River conference he was asked to withdraw from the church, which he refused to do. His trial for heresy was ordered, based upon three counts. The first was unbelief in the inspiration of the Bible; the second was of heterodox teachings as to the doctrine of atonement; and the third was as to the endless punishment of lost souls. He was condemned on the last two counts, but the vote was close.

With the church closed to him Dr. Thomas was not without a strong following, and his next sermon was preached to these from the stage of Hooley's Theater. This was the beginning of the People's Church, which now fills McVicker's Theater every Sunday morning, and whose influences have been widening for more than a score of years. Dr. Thomas is in his seventieth year. He to-day is one of the most liberal of Christian teachers. He is reaching out for men, irrespective of creed. He often says: "When I first began to preach we preachers were fighting each other so hard we had no strength left with which to fight the devil."

In the pulpit Dr. Thomas is a striking figure. His speech is slow and measured. He has no tricks of oratory, no gesticulations, nothing theatrical. Only as he warms to his subject his speech quickens and his voice rises in his earnestness. His sermons are clear, lucid, and finished, and when one has gone out from his church he finds that he has absorbed a lesson.

WINNER OF $40,000 OKLAHOMA HOMESTEAD.

The name of Miss Hattie H. Beals of Wichita, Kan., was the second announced in the drawing for homesteads in the Lawton district of Oklahoma, and she was thereby entitled to the second best claim in the district, estimated to be worth $40,000. Miss Beals is 23 years old and is an operator in the telephone exchange at Wichita. She already has received a number of marriage proposals, but would-be suitors will get nothing but disappointment, for Miss Beals is engaged to be married to Ernest Dill, a street car conductor of Kansas City. When she was informed of her good luck in the drawing she wired to Washington and asked whether she could be married to Dill and retain her land. When told that she could not until she had proven up her claim she decided to let the marriage wait and will settle down on the land with her mother. She filed her name for the drawing while on a visit to Oklahoma.

J. PIERPONT MORGAN.

The Great Central Figure in the Big Steel Strike.

J. Pierpont Morgan, the great central figure of the steel strike, received his early education in finance in London

J. PIERPONT MORGAN.

and through an intimate connection with the famous Peabody banking house. He made acquaintances and friends at that time since of powerful influence for him. He was born wealthy, and when he succeeded to his father's estate he had an intimate alliance with the Drexels of Philadelphia which added to the strength and fame of his own name. He is popularly supposed to control more invested capital and more free money than any living man, not excepting the Rothschilds. The railroad interests which are now in his care represent nearly $1,000,000,000 in capital. Mr. Morgan is a big man physically, very chummy with intimates, but reserved before the world. He is passionately fond of yachting, rare books and rarer paintings.

LIFE OF THE PHILIPPINE GIRL.

She Arises Early to Attend to Religion and Household Duties.

The life lived by the Filipinos is not an intricate life, says Ramon Reyes Lala in the Ledger Monthly, nor is Philippine etiquette the highly involved system that is found in the old and artificial society of western lands. I do not know that I can better describe it than by following a society young lady of Manila through the ordinary events of one day's existence. It may interest American women to know how their sisters beyond the seas pass their lives.

The day of the fair Filipino is a long one. With her there is no lazy rising to a 9 o'clock coffee and toast. She is usually up with the sun, not later than 6, and, if very religious, as early as 4, that she may attend early mass. Breakfast is set early, about 6 o'clock. Then come the morning duties of the household, sewing, washing, cooking, or whatever there may be, for our young lady is not expected to spend her days in idleness. The midday meal is taken at 12 o'clock, in order that the warmest hours of the day may be the hours of rest. About two hours are thus spent in the enjoyment of the siesta, when our lady fair arises, refreshed and ready for the later pleasures of the day.

At 4 o'clock the "afternoon tea" is served. This is a light repast, usually consisting of chocolate, with rice and cakes, or other simple viands. Then, at the hour of 5:30 or 6 o'clock, the carriage is brought out and the daily ride taken to the Luneta, the beautiful park on the bay south of the city. Here the military band discourses sweet music every evening, and the beauty and fashion of Manila meet and enjoy the evening air and melodious strains. Returning from the drive about 7 o'clock, the evening meal, or supper, comes next in order, after which our belle of Manila is free for any mode of spending the evening hours that may appeal to her; perhaps a friendly visit, a trip to the theater or opera, or an "at home" to receive callers. Early as she arose bedtime often comes late, and no hours more than nature demands are spent in the enjoyment of slumber. Going to rest, however, is different there and here. Ladies, even of the highest social rank, do not sleep in a bedstead, but prefer the floor, lying on a petate, or mat, which is provided with a long bolster or pillow, and covered with the conventional mosquito netting.

A BROKEN HEART.

Being the Narration of a Wonderful Tale of Golf and a Hawk.

I should like to narrate the following which is mostly true. Some years ago, I was playing in a match in India, Bangalore vs. Madras, when a hawk suddenly swooped down on my ball and carried it off in its claws. I appealed to my adversary to allow me to drop another ball, but he was one of our canny brethren, and replied: "Eh, no, man; lost ball, lost hole." This did not admit of argument. Some weeks afterward I went for a walk before breakfast, and climbing a rocky eminence to see the view, I came across a hawk's nest, and by it a dead hawk, and in the nest—my golf ball; both the hawk and the ball were quite warm. I sent the hawk to the curator of the museum, and asked for a post mortem; his verdict was "a broken heart," and on my telling him the story he had no doubt that the poor bird had expired in its vain effort to hatch out my "silver-town."—London Globe.

Rarely Attractive.

Conscription claims a large share of the adult population of Portugal, and the women do a good deal of field work. This they begin at a very early age, and do it well and happily, doubling the actual work power of the country; and they show great happiness and content amidst it all. Fond of show and ordanment, they have a better apparent stamina than the corresponding classes in Scandinavia, or even in Switzerland. They "feed" better than in those countries; at a small farm house you may get neither white bread nor ham, but the split codfish, as in Iceland, is never wanting, and is well dressed up at short notice. It is impossible to travel in Portugal without having this national dish thrust upon you; it needs an acquired taste, and is rarely attractive to the ordinary palate till after fuller acquaintance, and the excellent sauce of hunger to go with it.

A boy says at least twenty times a day, "Let me alone!"

THE OMNIGRAPH.

An Instrument Which Simplifies Instruction in Telegraphy.

An instrument which is designed to simplify instruction in telegraphy, and to impart in a comparatively short time a complete knowledge of the Morse alphabet, has recently been introduced by a company in New York city. Patents have been applied for. The Omnigraph, as the instrument is called, consists of a baseboard on which are secured an ordinary key and sounder, between which a disk is mounted, formed on its periphery with teeth. A spring contact adjacent to the wheel engages the peripheral teeth of the disk. Although irregular, the arrangement of the teeth is arbitrary. For if the disk be rotated by means of a small crank-shaft geared with the disk-shaft, the spring contact is forced outwardly by the teeth, but drops back by its own elasticity, and thus makes and breaks the circuit. The experienced telegraph operator detecting these makes and breaks at the sounder, recognizes them as the dots and dashes of the Morse alphabet. A close inspection of the disk would reveal to him that the teeth are so arranged as to spell the sentence. "John quickly extemporized five tow bags." If the disk be rotated forwardly, this sentence,

THE OMNIGRAPH.

thus oddly worded to include every letter in the alphabet, is ticked off at the sounder; if rotated in the opposite direction, the sentence will be telegraphed backward.

The disk is completely under the control of the students. It can be rotated as slowly as desired; or it can be so rapidly turned that its curious sentence will be received at the sounder with a speed that would open the eyes of a good operator. Moreover, the message on the desk is transmitted with a distinctness and faultlessness which the most perfect operator can never hope to attain. At first blush it might seem that the student simply learns one sentence forward and backward, and that the instrument is a good teacher only within very narrow limits. But this disk can be partially rotated forward and backward any number of times, in any place, so that the letter to be transmitted cannot possibly be anticipated. Thus the student learns how to receive a cipher message, the meaning of which he cannot know.

When sufficient proficiency has been obtained in receiving messages from the sounder, the student can learn to transmit messages in the regular method by means of the key which forms part of the apparatus.

WORTH NEARLY A BILLION.

For Ten Years John D. Rockefeller's Income Has Been $30,000,000 a Year.

The statement has been published in New York upon the authority of a Wall street banker, who has close business relationship with the Standard Oil Company, that John D. Rockefeller's wealth is now nearly $1,000,000,000. The following table of the oil king's holdings is given:

Standard Oil stock, $300,000,000; United States steel stock, $75,000,000; Amalgamated Copper, $50,000,000; American Sugar, $20,000,000; gas com-

BILLIONAIRE ROCKEFELLER.

panies in Greater New York, $85,000,000; gas companies in other cities, $50,000,000; railway securities, $200,000,000; industrial and miscellaneous, $150,000,000; realty, $15,000,000. Total, $945,000,000.

The banker is quoted as saying: "I don't think any man will deny that Mr. Rockefeller has made an average of $30,000,000 a year for ten years. The reinvestment of this sum alone, supposing he had no principal, at 5 per cent compound interest, would mean the addition of more than $400,000,000 to his riches.

"His Standard Oil holdings in three or four years have doubled in market value; his railway and other securities have advanced tremendously, and in the past three years his wealth has increased to a sum which would astonish the American people if the actual figures were laid before them."

HOW TO SECURE HAPPINESS.

Author of "Heavenly Twins" Expresses Her Opinion.

To an audience assembled in St. George's Hall Mme. Sarah Grand, who quite recently addressed herself to the alluring subject of "mere man," discoursed upon the above theme, which furnished her with not a few opportunities for satirical but on the whole good-humored comment on human and social follies and foibles.

Mrs. Grand is a fluent and voluble lecturer, whose rapidly expressed utterance would paralyze the efforts of the most expert stenographer, but, in the main, her monograph resolved itself into an optimistic reply to Mr. Mallock's time-worn conundrum, "Is life worth living?" At the same time her observation of things and people does not always lead her into roseate paths of criticism. Thus, on the subject of men's kindness—as distinct from women's—she lays it down that "it is more often the expression of their own satisfaction than the outcome of a desire to please." On the other hand, she concludes that men understand the art of happiness far better than women.

There is nothing new or startling in the propositiaon that "there is joy to be found in congenial work, just as in congenial play," but Mrs. Grand's sly remark that people derive solace from the disagreeable business of getting up early on a cold morning from the airs of superiority they can assume for the rest of the day is not without humor. The highest forms of happiness, she declared, are easily attained. "The simple hospitality offered with grace and affection gives far more pleasure than the magnificent entertainments of the rich, whose imprudence and self-satisfaction are only equaled by the irritation they excite in their guests." Indeed, according to this lady novelist, "in smart society there is no such thing as 'noblesse oblige.'" Furthermore, she is of opinion that, although the art of happiness is still in its infancy, "everybody knows how to be disagreeable," and that one great cause of unhappiness is "our indifference to the happiness of others."

Mrs. Grand pleaded, not a little eloquently, for "harmonious surroundings" as being among the makings of happiness in life. In the home one should avoid the trumpery and the tawdry, and be content to have about one a few good, beautiful things. It was no surprise to learn from her lips that every girl ought to be encouraged to work and become independent, and her description of marriage as "the most arduous of all professions for a woman" must be reckoned among the lecturer's most effective epigrams.—London Telegraph.

TOO MUCH FAULTY ENGLISH.

People Have Grown Careless in Their Rhetoric—Some Familiar Errors.

The books of rhetoric used to tell us that the great qualities of style were perspicuity, energy and elegance, or clearness, force and grace, and that as a means toward these and for other reasons it was important to be concise, to avoid needless words. Whether they no longer teach thus, or their pupils disregard their instructions, you can scarcely read a page or a column anywhere without meeting words that add nothing to others with which they are immediately connected. Thus:

Thought to himself. How else should he think? If he thought aloud you would have to say so. Either he "said to himself"—which is another way of putting it—or he simply "thought."

Nodded his head. If he had nodded his legs or his elbows the case would be more notable. He might properly "shake his head," for he could shake other things; but in the present state of language one can nod no other part of himself or of creation than his head.

Together with. If John went to town with his wife they went together; if they went together he was necessarily with her.

Month of May, summer season, etc. Everybody knows that May is a month and summer a season.

Rose up. If people were in the habit of rising down, or if it were possible to do so, this would not be tautological.

It will not do to say that these specimens abound in the best writers, and are therefore justifiable. They are not the best writers when they write in this way, through pure carelessness, for they know better. Homer sometimes nods, but his nodding did not produce the "Iliad." We want to follow the best writers in their excellencies, not in their errors.—Frederick M. Bird in Literary Era.

How They Met.

Bennet Burleigh, the English war correspondent, is authority for the following strange story: One day last autumn two officers, newly arrived from different parts of up-country, met at Cape Town. Rather lonely and a good deal bored, they scraped acquaintance and found one another agreeable. When the dinner-hour came they agreed to dine together.

The keen edge of appetites having been taken off by a good dinner, the senior officer became a trifle more expansive.

"Do you know," said he, "I rather like you, and there's something about you that seems familiar, as if we had met before. I am Maj. S. of the——"

There was an unrehearsed scene as the two khaki-clad warriors sprang to their feet and pounded each other on the back—which is the Briton's way of falling on the neck and weeping. They had not met for years, and the baby brother had meantime sprouted into a tall youth with an incipient mustache.

True Love.

"Well, I'm on the lookout for another girl."

"Ah! then Miss Pechis has turned you down?"

"Oh, no. She accepted me last night, but the ring I had was too small for her. I've got to find a girl it will fit."—Philadelphia Press.

When a woman hears of another woman's age, she involuntarily does a job of subtracting, with her own age as the figure.

A handful of common sense is worth a bushel of the other kind.

INYO INDEPENDENT.

INDEPENDENCE, CAL.,

FRIDAY, OCTOBER 4, ...1901

IRRIGATION vs. DROUTH.

Purely for its novel, scientific interest we give this week an article setting forth the theory that irrigation in the West is the cause of the phenomena known as heat waves, and that on this account the benefits of irrigation are more than outweighed by the evils resulting therefrom.

On behalf of the inland "desert" States the INDEPENDENT has been and is a strenuous advocate of the use of governmental power and money for the reclamation of arid lands—for providing homes and for the growing of grass where there was none. But, in the particular case of Owens Valley the irrigation of every acre of our own available soil should be an accomplished fact before the waters are drawn away to other counties by the Government or anybody else.

The article referred to radically contravenes General Hazen's conclusion that new verdure spread over large areas increases precipitation. We are satisfied that if records had been kept thirty years ago, to furnish data for comparison, it would be conclusively shown that there has been an increased annual rainfall in this valley. Owing to the local influence of the vast mountain uplifts no "phenomena known as heat waves" can prevail at any time. We relegate that business to the Death Valleys, where irrigation, artificial or otherwise, does not figure in the scheme of heat.

In relation to the article, and communicating with the Independence observer, the acting chief U. S. Weather Bureau says:

"You will please call the attention of your local press to this article and say that the entire scientific staff of the Weather Bureau condemns the theory set forth as being absurd. Its injury to the cause of irrigation, if accepted, is manifest."

The author of the new theory has the reputation of a student and his argument is along original lines as to the scientific application of observed facts. Instead of cavalierly dismissing the whole proposition as "being absurd," why does not some one of "the entire scientific staff" condescend to enlighted lay minds as to wherein the absurdity lies?

We might intimate that "Farmer" Dunn is perhaps pandering to Eastern prejudice and antagonism toward the West whenever an appropriation is in contemplation, or that possibly he likes to discomfit his peers in the realms of meteorology and climatology, but that would not answer his argument.

The highest of all the clouds are those delicate, white, fibrous, detached masses of frozen vapor, always seem high against the blue sky. The topmost point of the highest of these may be ten miles above the earth. They are called cirrhus clouds. Altogether there are ten principal types of clouds. The lowest, known as the stratus, are really horizonal sheets of lifted fog seen on damp days or in very damp localities. These clouds are only a few hundred feet above the earth. Some of the vast bodies of vapor are higher than the tallest of the Alps. They are undoubtedly snow capped—veritable mountains of ice and snow. It has been discovered that the temperature on one such summit was 75 degrees below zero. Were it possible for us to ascend in a balloon and penetrate one of these snow capped peaks from base to summit we should travel first through layer of dry air, vapor and water, a third of freezing vapor, water and ice, and finally through the summit, composed of dry air, vapor and ice, but no water.

Everybody knows, without looking at the map, how Lower California runs south from the Pacific Coast like a sort of tail, separated from the United States—for it is a part of Mexico, as some people are not aware—by a long arm of the sea called the Gulf of California. Once upon a time the gulf extended in a northwest direction 300 miles beyond its present inland limit. Into this northerly extension the great Colorado river emptied millions of tons of detritus annually until the deposit accumulated in quantity sufficient to shut off the upper part of the gulf, which was thus trasformed into a lake. To begin with, of course, it was a salt lake, but it gradually became fresh through the influx of water from the Colorado. Thereupon fresh water fishes, mollusks and other creatures not of the brine were developed in it, and in this way it happens that the dry bottom today is covered with their fossil remains.

The San Pedro, Los Angeles and Salt is about to let some contracts at the Salt Lake end of the line. While the route from the city to the new-built grade in Meadow valley wash is not yet made public, the engineers are said to have secured a good line and there will be no difficulty in getting to that section of the route. In the meantime the company is preparing to advertise for bids and within thirty days some announcements will be made that will be a surprise to the public generally.—Salt Lake Tribune.

In Bath, England, a man was arrested, convicted and fined £40, or $200, for selling fresh butter containing 23.84 per cent of water, and salt butter containing 23.74 per cent, the lawful amount in butter not being to exceed 16 per cent.

The strike riots in San Francisco begin to make things look squally for that burg. Who furnishes the most ammunition?

The Court of Inquiry is likely to persecute Admiral Schley into a Presidential possibility.

NATURE'S REVENGE.

The Washington Star prints an article from the pen of E. B. Dunn, who formerly became somewhat noted as an original investigator while in the service of the United States Weather Bureau, wherein the scientist sets up the general proposition that great heat follows irrigation. He says:

There has recently afflicted the States west of the Mississipi river a heated spell which, for suffering inflicted on human beings and for damage done to stock and crops is perhaps unexcelled in the weather records. For a period of several weeks temperatures ranging in the neighborhood of 100 degrees have burnt the life out of vegetation, so that the full extent of the loss will not be known for a long time yet. "Visitation of Providence" is the phrase by which such a calamity is usually described, but a careful consideration of the circumstances indicates rather that the late destructive hot wave is the result of man's own devices; that the work of years whereby he has sought to turn the land to his own purposes is now bringing about an unexpected and alarming result. In short, there is sound reason for believing that where man has altered the landscape nature has followed by changing the weather.

It has been advanced by one of the leading papers of Colorado in suggesting an increased appropriation from Congress for the extension of artificial irrigation in the States west of the Mississippi river that the great heat waves visiting that section are modified by the irrigation system, and a further extension of these water ways would have an effect in preventing or dissipating the intense heat and be the means of saving crops in the future. While this statement may appear to have the right ring and show that the cause for the loss of crops in that section had been discovered and point out a way to remedy the evil by an appropriation from Congress, there is another side to the question. Has not irrigation brought into existence the very evils which its advocates claim that it has destroyed? Is not nature, whose waste and and places have been watered by man's artifice, scourging the land with fiery panishment in revenge for that interference with her plans? There is certainly ground enough for belief in this theory to give pause before we assume broadly that irrigation is a mitigant of blighting heat and a savior instead of an incendiary of crops?

Certain parts of the country have, in the geologic development of the earth through thousands of centuries, become almost drained of moisture. In all other respects the soil is admirably suited to man's purpose, farming or stock raising. If the settler can bring water thither, the wilderness will blossom into riches for him. So he sets about tapping streams, scores or even hundreds of miles away and presently the dry soil is drinking in moisture from long lines of ditches. New vegetation springs up; cattle spread abroad over the ranges; land that was worth no man's attention assumes a value, and settlers begin to flock to the region. From the point of view of the earth from which we live the results are highly satisfactory.

But the atmosphere which surrounds the earth, and of the mysterious and often terrific working of which we know so little, is a highly volatile and sensitive element. Changes in the earth's surface may have far-reaching effects upon the surrounding air. If a great body of water were suddenly introduced in a region which before had been a desert, such as was suggested in the induction of the ocean into the Sahara, there is no doubt but that tremendous and permanent atmospheric alterations would result. Similarly it is reasonable to suppose that the irrigation of a great tract of land in the west will have been accompanied by alteration in weather conditions, not only local, but widespread in influence. And here is a significant fact bearing upon this question.

In 1890, when I made a careful investigation for the Scientific Academy of New York of the theory that our climate was changing in consequence of a shifting of the gulf stream, I found the alteration of weather conditions was much greater in the central west and in that part of the country just east of the Rocky mountains than along the Atlantic coast. Furthermore, it developed that many low pressure storms originated in the great plateau of the Rocky mountains, that some moved slowly northeastward, while others lingered with little or no energy until the whole central mountain system would be enveloped in an oblong barometric depression extending over several States and into the upper Missouri valley. Often these depressions were divided by areas of high pressure forming two distinct low pressure centers of what was a sort of barometric trough. During the existence of these low pressure areas the temperature to the east and south of them was above the normal. Many low pressure areas passing inland from the north Pacific were drawn out of their natural course southward into the States east of the Rocky mountains, as shown by charts of storm tracks of the weather bureau. Some reason for this must exist. To all appearances the reason was artificial irrigation.

Now let us see how the recent terrible heat wave that has burned up the corn and other crops in the middle west came about. In the irrigation region of southeast Montana, northern Wyoming and Nebraska an area of low pressure was formed. Storms or atmospheric depressions move across any section where they are nourished by moisture, but during the warm months they may linger for weeks over some section where they do not gather enough moisture to give them motive energy. That is what seems to have happened in this case. A system of irrigation continued for years in that part of the country has now extended over millions of acres, affording enough evaporation to call the low pressure into existence, but not enough energy to set it in motion.

A low pressnre area is a sort of vacuum into which pour currents of air from all sides. The areas of lowpressure centering over the eastern Rocky mountain slope and stretching into the upper Missouri valley control the direction of the winds for the entire region between the Mississippi and the Rockies and from Montana to Texas, the general surface direction being toward the center of atmospheric depression. The last great heat wave held its position varying from Utah northeast to South Dakota. Consequently a vast volume of superheated air moved up from the torrid south, passing like a blight over the intermediate corn region. Such has been the intensity and duration of the resulting heat wave that it has absorbed from the earth such an amount of moisture as to leave not enough for plant life, which draws sufficient moisture from below the surface, ordinarily, to nourish it through weeks of great heat, long after the surface of the earth has been parched and burned.

I do not say positively that irrigation has brought to pass these long stationary areas of low pressure, with their destructive consequences, but I do say that it is a most significant fact that these depressions should form and linger in those very localities where man has artificially provided a supply of moisture tending to bring about just such conditions.

We may ask why areas of low pressure have not the same influence in other sections, and the answer would be that the warm air would be drawn toward these centers in whatever part of the country they may happen to form or move over. In other sections, however, in the lake regions, for instance, should they form there or pass over that section, they would draw sufficient moisture to give them an active movement and carry them to the eastward without much delay, and the heat of the country over which they traveled and to the south and east of their centers would be higher than the normal for the season, but of short duration, lasting only so long as the depression was passing. But in the irrigated lands the moisture to furnish energy to these depressions is not so great, being only sufficient to give them formation, while the surrounding country for hundreds of miles is covered with a belt of dry air which practically forms a wall of resistance through which these weak depressions cannot break. Thus they are confined through their own weakness for weeks at a time and finally drift off or dissipate. It is exceedingly rare that they are reinforced by storms crossing the Rocky mountains, as such disturbances are devoid of moisture, all the vapor having been condensed on the west side of the mountains by the air having been forced to such a height that the moisture would be condensed by the coolness of the elevation.

There is no doubt but that artificial irrigation has been the means of bringing into use land which for years had been an idle waste, but is it not of the utmost importance to estimate what further changes, possibly of the direct effect, may be wrought thereby in the development of heat waves and other atmospheric phenomena before we decide that the benefits derived from irrigation are greater than the evils which follow in its train?

A movement has been started in some cities in favor shoeing horses with rubber instead of iron. An argument in favor of the innovation says: "If the rubber shoe is what has been claimed for it, and there does not appear to be room for doubt on this head, there is no good reason why it should not keep pace with the rubber tire in popular favor. If the horse could talk he would certainly enter a strong plea in favor of the movement." It is claimed in Chicago, where the rubber shoe has been widely introduced, that the general condition of horses' feet has improved 30 per cent, and the danger from cracked hoofs, sprained tendons and rheumatism has decreased fully 50 per cent among the horses experimented with. As the kind master is kind to his horse this consideration alone should prove a strong argument in favor of the adoption of the rubber shoe. Humanity otherwise would be benefitted by the change.

The citizens of Lincoln county, Nev., are profiting largely already through the placing in circulation of the money used in construction work on the new railroad lines, and the county officials are already planning to pick up a nice plum for the county treasury. If everything moves off smoothly as expected, there will be 700 to 1,000 men working for the two roads next January. Then is when the poll tax collector intends to get in his work. The tax in Nevada is $3 and nobody has a chance to work it out. Never before has the county had such an opportunity. Between $3000 and $4000 will be available, and it will be all collected. The law provides that the amount can be collected from any employer of labor, and the railroads will have to pay the money and take it out of the wages.

When hogs sold for 7 per cwt. in Chicago Sept. 9th the highest notch was reached for the month since 1882, when $9.34 was paid for swine in that market. That figure in turn was the best paid in Chicago since along in war times, when $13 per cwt. was reached. In 1896 the September top price was but $3.35.

The locomotives on the Carson and Colorado are being changed to what is known in railroad parlance as "straight shots." The old stacks and bonnets will be replaced by stacks similar to those in use on the trunk lines. The work is being done at the Sacramento shops.—Hawthorne Bulletin.

Admiral Sampson has asked to be relieved from duty. His request will also relieve the American people.

Law Pointers for Sportsmen.

The opening of the shooting season on October 1st makes applicable a synopsis of the State game and fish laws, and the following is a safe guide for sportsmen to follow. Under United States law, it is made the duty of Forest Supervisors and Rangers to report all violation of the State and local game laws coming under their notice and to appear in the prosecution of offenders. It is to be hoped that this fact will put a stop to the unlawful and merciless winter deer hunting that has been in vogue, for it is admitted that Uncle Sam is a bad man to fool with.

Prior to the adoption of the present State statute many county ordinances were on record and are in force, except any regulations which may conflict in whole or in part with the statutes. Section 25, Subdivision 28, of the County Government Act, provides that Boards of Supervisors, in their respective counties, have jurisdiction and power to provide by ordinances, not in conflict with the general laws of the State, for the protection of fish and game, and *may shorten* the season for the taking or killing of fish and game within the dates fixed by the general State law, *but cannot lengthen* the same.

By decisions of the Supreme Court, violations of Sections 632 (pertaining to trout) 634 (concerning salmon, bass, etc.) 635 (as to explosives and polution of water), and 636 (relating to the use of nets, etc.) of the Penal Code are made triable in the Superior Court, and a Justice of the Peace has no trial jurisdiction except as a committing magistrate. The maximum penalty is not stated.

The open season, prohibitions, etc., are are as follows:

Quail, partridge, grouse, sagehen, curlew, ibis or rail—Oct. 1st to Feb. 1st.

Wild duck—Oct. 1st to Feb. 1st.

Doves—Aug. 1st to Feb. 1st.

Male deer—Aug. 1st to Oct. 1st.

Tree squirrel—Aug. 1st to Feb. 1st.

Unlawful to kill, sell or possess larks at any time.

Female deer, elk, antelope, spotted fawn or mountain sheep, killing prohibited.

Limit of one day's individual bag or kill, *or to have in one's possession* not more than 25 quail, partridge, snipe, curlew, or ibis, nor more than 50 doves or ducks, nor more than 20 rails. The courts have sustained the joker italicized, to the detriment of marketmen and to the bliss of the rich, privileged class behind the fancy guns.

Male deer, limit for killing or having in possession in any one open season not more than three.

Prohibited, running or trailing with dogs any deer during close season.

Prohibited, the sale of any deer pelt from which the evidence of sex has been removed.

Prohibited, netting or trapping of quail, partridge, grouse, wild duck, curlew or ibis.

Prohibited, trespassing on any enclosed or private grounds, which is private property, and when signs are displayed not less than three to the mile, prohibiting shooting thereon.

Unlawful to tear down signs on private property prohibiting hunting thereon.

Unlawful to destroy or have in possession the nest or eggs of any of the game birds mentioned.

Killing or trapping of birds in any public cemetery is a misdemeanor.

Prohibited at any time, the killing or having in possession Mongolian or English pheasants, or any bob white, Hungarian or Chinese quail or English partridge.

Sale prohibited of any quail, partridge, pheasant, grouse, sage hen, ibis, plover or any deer meat.

Prohibited, night hunting, and night hunting shall mean one half hour after sundown to one-half hour before sunrise.

Winding Timepieces.

"I have been doing a little figuring on time," remarked an erratic citizen yesterday, "and I have reached some rather interesting conclusions. I wanted to find out how much time man consumed in keeping tab on time, and I found that, if the whole world is considered in the computation, years would be crowded into a second of time.

"To illustrate what I mean, take a city where 100,000 watches are wound up every day. Now, it takes probably an average of 15 seconds to wind a watch. It would take, then, 1,500,000 seconds to wind 100,000 watches. This would mean 25,000 minutes or 530 hours and 10 minutes, or 25 days and 16 hours. I suppose there are in the city of New Orleans 100,000 watches and clocks to be wound up every day, so that nearly a month is spent in the city every day in winding watches and clocks.

"One man in a year's time would consume 5,475 seconds in winding his watch if he is prompt about it and is willing to give 15 seconds every day to this useful article. This would mean several hours during every year that he kept up the practice. Allowing 35 years as the average life, a man would spend 191,525 seconds, or 3,190 minutes and 41 seconds, or 530 hours and 10 minutes, or 22 days and 20 hours, in winding his watch."—New Orleans Times-Democrat.

Paying the Landlord.

The proprietor of one of the new apartment houses near Fifth avenue has paid a rather heavy penalty for having a cartoonist as one of his tenants. The artist wanted some changes made in the decoration of his apartment, and the proprietor declined to make them. The proprietor's features are pronounced, and he wears long, flowing side whiskers. His face, distorted to suit the cartoonist's fancy, has appeared nearly every week in one of the comic papers. Sometimes the proprietor figures as the villain and again as the countryman who is bunkoed every week in the pages of this publication. The cartoonist lets the whiskers grow from week to week; then, just as his victim imagines that they will grow so long that his friend will not recognize him, the artist trims the whiskers down again. The proprietor of the apartment house has concluded that the only way in which he can get even with the cartoonist is to put in a bill for services as model.—New York Sun.

LEGAL.

SHERIFF'S SALE.

BY VIRTUE OF AN EXECUTION, ISSUED out of the Superior Court of Los Angeles County, State of California, and to me directed and delivered, for a judgment rendered and entered in said Court, on the 27th day of July, 1901, in favor of J. S. Stotler and against Mineral Hill Gold Mining Company, a Corporation, I have levied on the following property, to wit:

One Six-Stamp Quartz Mill; Cyanide Plant; one 6400-foot Tramway, together with all the appurtenances and appliances thereof.

The "Mineral Hill" Mill-site; one Boarding House; one Bunk House; one Assay Office, and all improvements thereon.

The "Mineral Hill" Mining Claim.

The "Mineral Mound" Mining Claim.

The "Breakaway" Mining Claim; one Boarding House; one Bunk House; one Blacksmith Shop.

All situated in South Park Mining District, Inyo County, California.

Notice is hereby given that on SATURDAY, OCTOBER 12th, 1901, at 12 o'clock M. of of that day, in front of the Court House, in the County of Inyo, I will sell all the right, title and interest of said Mineral Hill Gold Mining Company, a Corporation, in and to the above described property, at public auction, for cash, lawful money of the United States in hand, to the highest and best bidder, to satisfy said execution and costs.

A. M. GIVEN, Sheriff.

Dated September 18th, 1901.

Special Master's Sale.

IN THE CIRCUIT COURT OF THE UNITED STATES, IN AND FOR THE NINTH CIRCUIT, SOUTHERN DISTRICT OF CALIFORNIA.

Northern Division.

WELLS, FARGO & COMPANY, a corporation, Complainant,

vs.

RATCLIFF CONSOLIDATED GOLD MINES, LTD., a corporation, EDWIN C. NICHOLS, JOHN DOE, RICHARD ROE and JAMES DOE, Respondents.

UNDER AND BY VIRTUE OF A DECREE of foreclosure and sale rendered in the Circuit Court of the United States in and for the Ninth Circuit, Southern District of California, Northern Division, on the 29th day of August, 1901, in the above entitled cause, wherein complainant, Wells, Fargo & Company obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of Eighteen Thousand Four Hundred Nineteen and 3-100 Dollars ($18419.03), and the cross-complainant, Edwin C. Nichols, obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of Eighty Thousand One Hundred Thirty-eight and 72-100 Dollars ($80,138.72), and the cross-complainant Vulcan Iron Works, impleaded under the name of John Doe, obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of One Thousand Four Hundred Ninety-five and 63-100 Dollars ($1495.63),

I am commanded, as Special Master in Chancery, to sell in one parcel the following described property, to-wit:

The following named mining claims, mill-sites, water rights and locations, situate in the County of Inyo, in the Southern District of California, and known and designated as the "Joker," "Texas," "Grover Cleveland," "John G. Carlisle," "Sunrise," "Kentucky," "Never Give Up," "Treasure Vault," "Big Brown," "Joker Extension," "W. G. Extension" and "Little Till" mining claims, and the "Cleveland" mill site and certain water rights known as the "Sale's water right," "Wingfield and Harrison water right," "Dover water right," "James Wingfield water right," "McNulty water right," which said mining claims, mill site and water rights are more particularly described in the notices of location thereof filed in the office of the County Recorder of said County of Inyo, including all buildings and improvements thereon; and more particularly, One (1) 20-stamp mill and building connected therewith and appurtenances thereto, and all machinery and appliances contained therein; One (1) air compressor plant and the building appurtenant thereto and all receivers, pipe lines, power, tools, machines and machinery to operate the same or appurtenant thereto; One (1) Cyanide plant and all tanks, pipe lines, pumps, zinc boxes, machines and machinery and appliances to operate the same and all the appurtenances to said plant; One (1) Aerial Tramway and all cables, buckets, structures, machines and machinery and all appurtenances to and of said tramway; all tools and implements of all kinds used or for use in and about said property; all pipe lines, appliances and appurtenances from said water rights; and ware house No. 1 and all stores and supplies therein; ware house No. 2 and all stores and supplies therein; Superintendent's residence and office and all furniture, fixtures and supplies therein contained; Assay office and laboratory building and all furniture and fixtures, tools, appliances, appurtenances and supplies therein; mill boarding house and all furniture, fixtures, appurtenances and supplies contained therein; mine boarding house and all furniture, fixtures, appurtenances and supplies contained therein; Mill foreman's dwelling house and bunk house and all furniture, appurtenances and contents thereof. All right in powder, fuse and caps contained in the powder magazine. All live stock, vehicles, harness, stables and equipments; all wood, cables and tents; all blacksmith shop buildings, tools and appurtenances connected therewith and appurtenant thereto, together with all and singular the hereditaments and appurtenances thereto belonging or in anywise appertaining.

PUBLIC NOTICE is hereby given that on

Wednesday, the 9th day of October, 1901,

at the hour of 12:00 o'clock noon of said day, at the front door of the Court House of the County of Inyo, State of California, in the town of Independence, County of Inyo, State of California, I will, in obedience to said decree of foreclosure and order of sale, sell in one parcel the above described property to the highest bidder for cash, gold coin of the United States, for the satisfaction of said judgments.

Dated, this 22d day of August, 1901.

HENRY B. STEWART, Special Master in Chancery.

Real Estate Transfers.

Recorded since last report:

Edward Brown to Benj. F. Scott—Lot No. 4 in Block 12, Given Addition to Big Pine; $10.

Philip Carpenter to E. D. Sanders—160 acres of land near Big Pine; $200.

Morton Anderson to Romulus Orcier—Interest in mining claims near Big Pine; $50.

F. A. Hyde & Co. to United States—480 acres in U. S. Reserve near Olancha; lieu lands.

Commercial travelers consider this country "good as any of 'em."

The annual "Good weather until Christmas" time has come.

County Surveyor Dixon is in town, abstracting realty records.

Mrs. Alice Hession, daughter and son, left during the week for an extended visit to Los Angeles.

Lester Shepherd, of George's Creek, has gone to San Francisco to enter Heald's Business College.

Mr. and Mrs. I. H. Mulholland have left Oakland for Tulare, from whence they expect to reach home in about ten days.

Until the quail are scared away violations of the ordinance relating to the discharge of firearms within the city limits may be expected.

One of our hunting parties the other day brought in the pelt of a brown bear, as evidence of having killed it. Circumstantial, anyway.

Mr. J. C. Irwin and daughter, Miss Nettie, who have been seriously ill for several weeks, are now happily on the road to complete recovery.

The Epworth League of Big Pine is arranging for a lecture course during the winter. Several able men have already accepted invitations and doubtless due announcements will follow.

The Reward mine management is engaged on a new 800-foot working tunnel. The contracting miners, Dodge & Saunders, have completed the first fifty feet and expect to go ahead with a 100-foot section right away.

The corps of regular and special reporters detailed by the editorial staff of this paper to do the District Fair at Bishop has failed to show up in time for to-day's 12 o'clock edition. There was a good time, especially at the big ball and entertainments, and that's all we know about it.

E. Robinson and daughter, Miss Luella, have gone to Los Angeles, where the latter will attend school.—INDEPENDENT, Sept. 27.

With the exception that it was Miss Stella instead of Luella and that they went to San Francisco instead of Los Angeles, the above item was correct. The only earthly show that a publisher has to find out whether his valuable sheet is read or not is to perpetrate a blunder.

The Board of Supervisors will meet in regular session next Monday. Claims against the county should be filed to-morrow. Aside from the possible award of a contract for painting the Court House, the annual selection of eligible jurymen will probably be the main business outside of routine work.

In these columns last week commendatory mention was made of the late fine special edition of the Pacific Coast Miner, incidentally referring to the fact that Inyo's isolation rendered it difficult if not impracticable for that paper to show up this region with text and illustration to the same extent and advantage as the balance of the mining counties. But yesterday Mr. Thos. D. Calkins of the Miner Publishing Company arrived in Independence, with a view of establishing the most friendly relations with all our mining interests. The Pacific Coast Miner is a sterling journal, and that such result will prove mutually advantageous goes without saying.

A Case of No Case.

The judicial investigation held on Tuesday in the cutting scrape between the Indians Andy Glenn and Little Pete resulted as might well have been anticipated. There were no witnesses to the affair except Indians, and at least one of them was so drunk at the time that he couldn't identify either the cuttee or the cuttor—the scalped or the scalper, so that the magistrate deemed it useless to commit the perpetrator for trial.

In the case of these particular Piutes it is doubtful if the truth could be hammered out of them with a pile driver. They should get a thoroughly effective notice to vamoose the country altogether and for all time.

Public Timber Privileges.

Any miner developing a claim, or any *bona fide* settler or entryman can procure permission to obtain timber or wood from the Government reserve for his own exclusive use, not exceeding $100 in value, by making proper application.

As we are informed by Forest Supervisor Price, such preliminary proceeding must be complied with, under the Act of June 4, 1897, and regulations by the Department of the Interior. The application for a permit sets forth all essential details as to intended use, for fuel or timber, etc., and further that—

"In the event of this application being granted, I will employ —— —— to cut, remove and saw the said timber; will give to the forest officer, in charge, due notice of the time when the said timber will be cut and removed, and will allow no timber to be cut and removed except under the supervision of the forest officer duly authorized and directed to superintend the cutting and removal thereof. I pledge that no more shall be cut than the amount allowed by proper authority, and that neither I nor my said agent will sell or dispose of any public or forest reserve timber to any other person; nor will I permit any such timber to be removed from my land or claim for any purpose; and will pile and safely dispose of all tops and lops and debris from the danger of fire."

The removal of down, dead timber and stumps for fuel would be beneficial to the Reserves, but a regular "Permit for Free Use of Timber" must be first obtained.

A Sad Affair.

Last Saturday morning two large and well-outfitted immigrant trains passed through town, going northward, with Bishop as their destination. One of them bore Mr. and Mrs August Kerchener, from Wilmington, Los Angeles county, with their seven children, the eldest not more than fifteen years of age. A short distance north of town Helmuth, a child fifteen months old, suddenly sprang from his mother's arms and falling to the road, a pittiless wheel crushed his poor head out of all semblance of humanity.

A lady driving past at the time immediately reported the facts in town, and a coroner's inquest was held; to the jurymen and all the scene was affecting enough. In the evening the little body was laid away in the Odd Fellows cemetery, Judge Davidson reading the service. In ministering to the stricken strangers and in the grewsome task of laying out the remains, Mrs. R. M. Houle performed a truly charitable, noble work.

After the sad incident the immigrants, on the following Monday, turned their trains to trail back over the deserts to their former home.

The Yacht Race.

[Special Dispatch, by the Longest Least Wire in the World.]

Columbia won the decision, on points, in the first round, according to the referee. Yesterday won the second go by two minutes.

Columbia, the Dandy Jim of the Ocean!

The absolute need of something better in the way of educational advantages has received much thought here, and during the last few weeks it has been especially discussed. No other plan appearing immediately available, it was decided to raise funds by subscription to employ a competent teacher and start a school, using the room now unoccupied in the public school building, such school to furnish high school instruction. An educational committee consisting of S. E. Vermilyea, N. J. Cooley, H. N. Gunter and Superintendent Hampton was appointed at a meeting held last Saturday. Yesterday the subscription list was circulated, and instead of raising $800 as hoped, by evening the splendid sum of $1550 had been pledged. After the declamation contest last evening the matter was brought up and in a short time the total was brought up to $2300; today i has become $2400. This means, we may well believe, a public high school under State laws before another year passes. —Register, Sept. 26.

The V. & T. railroad will shortly add to its equipment a new 75-ton 10-wheel locomotive. The present locomotives are 4-wheelers and weigh about 37 tons. The change in size is rendered necessary by the increase in freight between Reno and Mound House, caused by the discovery of the Bluestone and Tonopah mines. The load hauled by the locomotives of Saturday night's local was the heaviest that ever went over the V. & T.—Virginia Chronicle.

Japanese who apply for license to marry Caucasian women in this State are generally surprised to be informed that the Japanese are considered Mongolians. This is a little hard, but it will have to stand until an interested party gets a decision from the Supreme Court to the effect that a Jap is something else than a Mongolian. Inter-marriage betwen members of different races has not proven to be a desirable practice.

Equal opportunity is American doctrine. Upon equal rights to man and equal opportunity rests the glory of our free government. The menace of the trusts takes from man equal opportunity and places the privilege in the hands of the combined few. Under the growing power of trusts both opportunity and ambition, so essential to free government, are denied the citizens of our government.—Reno Journal.

Because a company of United States soldiers in one of the Philippine islands lately got badly defeated by an overwhelming force of fighting natives, certain papers would like to have the people believe that it was all on account of the assassination. The murder of a President is hard enough to bear without such rot as that.

President Roosevelt, it is claimed, will prove friendly to irrigation in the west.

THE MARTYRED PRESIDENT.

Grand Army Memorial Resolutions.

The following was adopted by Gen John A. Logan Post, No. 180, G. A. R., at the monthly meeting held in Bishop, Cal., September 21, 1901:

WHEREAS—Our comrade, William McKinley, the late loved and honored President of the United States, has been stricken down in death by the treacherous hand of a brutal, cowardly, anarchist assassin, while surrounded by his loving countrymen, to each of whom he was extending the hand of friendship, thus dealing a fearful blow to all of civilization and a sad affliction to the American people;

Therefore, Gen. John A. Logan Post, No. 180, Department of California and Nevada, believes that the principles of free speech and a free press should be held in such subjection that no organization tainted with the infamous and damnable tenets of anarchism or nihilism or a corrupt press that upholds or sanctions any such principles or beliefs shall be permitted to exist in this fair land of ours.

We hereby demand of our State and National lawmakers the speedy enactment of laws that will utterly and quickly crush anarchism and nihilism out of existence in the United States and make the utterence of such sentiments as prompt the assassination of men in public life high treason, punishable by an ignominious death.

We deeply deplore the calamity that has befallen our Nation, trusting the tragic death of President William McKinley may not be in vain but shall result in a great and lasting blessing to his native land, thus verifying the motto. "It is glorious to die for one's country."

To the bereaved and sorrowing widow we extend our sincere and heartfelt sympathy and condolence, and for comfort we commend her to rely upon Him who was the support of her loved and loving husband during his last hours of life.

In token of our love and respect for our departed comrade, William McKinley, the charter and colors of this Post shall be draped in mourning for the period of thirty days, this memorial shall be transcribed upon a page of our record book and a copy be transmitted to Mrs. William McKinley, at Canton, Ohio.

THEO. H. WOODWORTH,
T. C. HARNISS,
OWEN NEYLON,
Committee.

IN MEMORIAM.

To the Officers and Members of John A. Logan Post, No. 180, G. A. R., Department of California and Nevada, Bishop, Cal.:

COMRADES—Your Committee appointed to draft resolutions to the memory of our late comrade, S. A. Densmore, who died in Independence, Cal., August 31, 1901, respectfully submit the following:

WHEREAS, In view of the loss this Post has sustained in its membership by the transfer of our late comrade, S. A. Densmore, from our ranks to the department beyond the river of Death, and the still greater loss sustained by those who were nearest and dearest to him, and of his attachment to the principles of the G. A. R., it is but just that a record of his merits should be made; therefore, be it

Resolved, By Gen. John A. Logan Post, No. 180, G. A. R., of Bishop, Cal., that while we bow with humble submission to the inevitable Will, we do not the less mourn the loss of our late comrade who was so suddenly stricken down while in vigorous health and manhood.

Resolved, That in the demise of comrade S. A. Densmore our Order mourns the loss of an earnest and consistent member; the community of Independence, California, an upright and honorable citizen, the family a kind and loving husband and father, the Nation one of its defenders during the civil war.

Resolved, That we as a Post and as individual members do most sorely regret the circumstances that prevented our attendance and participation in the last sad rites paid to our late comrade.

Resolved, That while no words from us can soothe their grief, we deeply sympathize with the sorrowing family and relatives in the sad affliction they have to endure, and that we commend them to the Supreme Ruler of the Universe for comfort and consolation.

Resolved, That our charter shall be draped in mourning for thirty days; that a copy of these resolutions be presented to the family of our deceased comrade; that they be engrossed on a page in our record book, and that a copy be sent to the Inyo county press with a request for publication.

THEO. H. WOODWORTH,
A. O. COLLINS,
J. W. HANBY,
Committee.

Bishop, Cal., Sept. 21, 1901.

The assassin of President McKinley has been tried, found guilty and sentenced to death some time during the week beginning October 28. If he does not totally collapse and die before taking seat in an electric chair there may be forthcoming a confession of the whole damnable plot.

Just What Your Eyes Need.

I'll tell you after scientifically testing them. This service and advice free. If glasses are needed I select the best and most effective kind, and charge moderately for them. Will be in Independence shortly.

W. E. DOTY,
Graduate Optician.

DIED.

ANDERSON—At Big Pine, Inyo Co., Cal., September 28, 1901. Morton Anderson, a native of Denmark, aged 67 years.

Solano, Mono and Carson papers please copy.

Many old friends of the deceased in Suisun, Carson and Bodie, where Mr. Anderson was known and respected as an educated and thorough gentleman, will regret to read the above announcement. He had lately returned to Big Pine from San Francisco, where his physicians had assured him that the end was not far away.

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains on Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK.

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 2,100 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above. Round Trip Tickets for sale at Ticket Office, Reno. aug3-tf

Sick Women

Mrs. Valentine Tells How Lydia E. Pinkham's Vegetable Compound Cured Her.

Happiness will go out of your life forever, my sister, if you have any of the symptoms mentioned in Mrs. Valentine's letter, unless you act promptly. Procure **Lydia E. Pinkham's Vegetable Compound** at once. It is absolutely sure to help you. Then write for advice if there is anything about your case you do not understand.

You need not be afraid to tell the things you could not explain to the doctor—your letter will be seen only by women. All the persons who see private letters at Mrs. Pinkham's Laboratory, at Lynn, Mass., are women. All letters are confidential and advice absolutely free.

Here is the letter:—"It is with pleasure that I add my testimony to your list, hoping it may induce others to avail themselves of the benefit of your valuable remedy. Before taking **Lydia E. Pinkham's Vegetable Compound** I felt very badly, was terribly nervous, and tired, had sick headaches, no appetite, gnawing pain in stomach, pain in my back and right side, and so weak I could scarcely stand. I was not able to do anything. Had sharp pains all through my body. Before I had taken half a bottle of your medicine, I found myself improving. I continued its use until I had taken four bottles, and felt so well that I did not need to take any more. I am like a new person, and your medicine shall always have my praise."—Mrs. W. P. Valentine, 566 Ferry Avenue, Camden, N.J.

MRS. W. P. VALENTINE.

$5000 will be paid if this testimonial is not genuine. Lydia E. Pinkham Medicine Co.

Why the Mole Is Blind.

The creatures which dwelt in the darkness of the depths naturally lost their powers of vision after awhile. It is the same way with the mole, which is doubtless descended from progenitors which could see. Blindness in the mole is the result of a degeneration of the optic nerve, the consequence of which is that images formed in the eye itself are not transmitted to the animal's consciousness. Occasionally a mole can see a little out of one eye which has retained its communication with the brain.

It is not that the mole is born blind, but that it inherits a tendency to atrophy of the visual organs just as people derive from their parents an inclination to consumption or other diseases. Some day in the future there may be no such thing as a mole that is not entirely and hopelessly blind.

Heads Much Alike.

Most expert craniologists insist that it is extremely difficult to determine sex from the skull, but admit there are a few distinctions which taken together indicate sex. Perhaps the most marked distinction is the prominence of the bony projection over the nose. The skull in man is thicker and stronger, and the mastoid processes beneath the ear are larger. Broca is authority for the opinion that if the skull rests on the mastoid processes it is almost certainly a man's. In woman the top of the head appears flatter, while in man the curve from before backward is more smooth and even. Greek sculptors always recognize this.—Health Culture.

A Kick From Mexico.

Tourists come here and shout to waiters, hotel clerks, shopkeepers, etc., believing that if you only yell forth your English it instantly becomes comprehensible. And a common error in breeding and one not confined to tourist foreigners is to make unpleasant remarks about men, women and things in a tone of voice which conveys at once to the natives that something disagreeable is being said. So we acquire not without reason the reputation of being muy groseros, or very rude, and too often we are.—Mexican Herald.

In Days of Old.

"The old idea," said the lecturer, "was an eye for an eye, a tooth for a tooth."

"Yes," concluded one of his hearers, "and there were no painless dentists in those days either."—Detroit Free Press.

There are lots of people who will not take a dare to do anything except a dare to go to work.—Atchison Globe.

The Noise Habit.

The New Yorker contracts in time what may be called the noise habit. Noise with him becomes a dissipation. His nervous system demands it. This is illustrated by the sensations he experiences when he goes into the woods or mountains after a continuous stay in the city for many months. His first feeling is one of loneliness; something seems to have suddenly gone out of his life. Every tree seems to say, "Why have you been so hot and noisy, my little sir?" His sensations are somewhat akin to those of a drunkard who has been under alcoholic stimulation for a long time and suddenly has his drink taken from him. His whole nervous system feels the lack of the irritation and stimulation of the city noise, to which it has become accustomed. The stillness actually appals and depresses him.

The streets of New York are deep, narrow channels, and they are growing constantly deeper as the buildings increase in height. These large reflecting surfaces on three sides of him make the condition of the man in the street like that of the workman who suffers from reflected noise while he hammers rivets on the inside of a boiler.—Munsey's Magazine.

Four and Its Multiple of Ten.

The number four was anciently esteemed the most perfect of all, being the arithmetical mean between one and seven. Omah, the second caliph, said, "Four things come not back—the spoken word, the sped arrow, the past life, the neglected opportunity." In nature there are four seasons, and the four points of the compass.

Forty, a multiple of four by ten, is one of the sacred numbers. The probation of our first parents in the garden of Eden is supposed to have been 40 years. The rain fell at the deluge 40 days and nights, and the water remained on the earth 40 days. The days of embalming the dead were 40. Solomon's temple was 40 cubits long. In it were ten lavers, each four cubits long and containing 40 baths.

Moses was 40 years old when he fled into the land of Midian, where he dwelt 40 years. He was on Mount Sinai 40 days and 40 nights. The Israelites wandered in the wilderness 40 years. The Saviour fasted 40 days and nights before entering upon public life. The same time elapsed between the resurrection and the ascension.

Didn't Teach Him That Trick.

"That's a werry knowing animal o' yours," said a cockney gentleman to the keeper of an elephant.

"Very," was the cool rejoinder.

"He performs strange tricks and hantics, does he?" inquired the cockney, eying the animal through his glass.

"Surprisin!" retorted the keeper. "We've learned him to put money in that box you see up there. Try him with half a crown."

The cockney handed the elephant half a crown, and, sure enough, he took it in his trunk and placed it in a box high up out of reach.

"Well, that is very hextraordinary—hastonishing, truly!" said the green one, opening his eyes. "Now let's see him take it out and 'and it back."

"We never learned him that trick," retorted the keeper and then turned away to stir up the monkeys and punch the hyenas.—London Tit-Bits.

The Deserving One.

Hoyt, with a playwright friend, was once witnessing the production of a play—not his own—says the New York Clipper. The leading man was well known to be a poor "study," and this night was on very unfamiliar terms with his part. The voice of the prompter was continuously in evidence, though this was overlooked, for the actor was a great favorite.

Just before the end of the act Hoyt went out, but returned a moment later just as the curtain went down on deafening applause.

"Who are they calling for?" he asked of his friend, who answered by naming the leading man, whom, to spare his feelings, we will call X.

"——! (This stands for a little swear word.) I don't see what they want X for. I should think they would call for the prompter."

Peasant Costumes In Ireland.

A certain number of peasants in the wilder and remoter districts of Ireland still wear something like a national costume. About Lough Mask plenty of the lasses are to be seen in picturesque red petticoats that artists loved to bring into their sketches of Irish life. A sprinkling of the old high hats may be seen. The older fishermen wear them, but the younger school shun such antiquated headgear, as the English peasant of today does the smock frock.—London Express.

The Mutual Life Insurance Company of New York,

RICHARD A. McCURDY, President,

Did more business in 1900 than during any previous year. It easily maintants its position as "the largest, strongest, most progressive life insurance company in the World."

Income in 1900	$60,582,802.31
Assets Dec. 31, 1900	$325,753,152.51
Insurance and Annuities	$1,141,497,888.02

The history of the Company has been an unbroken record of progress. Its excess of returns to policy-holders has been almost six times as much as that of the next largest company and nearly ten times as much as that of the third in rank.

Total of Assets and policy payments	$866,232,963
Total premiums received	$779,134,420

Excess of Assets and payments to policy-holders over total premiums received since formation of Company **$87,098,543**

The assets of The Mutual Life are clean and well invested. The Company refuses to take risks in countries where climatic conditions are at all dangerous, and it does not write insurance on subjects who are in any respect below standard.

Experienced agents can find no better company for which to work. It has room for workers who are not rebaters. Address:

San Francisco, Cal.

TRICKS OF MEMORY.

Notable Examples of Forgetfulness that Are Supposed to Be True.

The first man to start a school for the training of memory was a Greek, Simonides, who read one of his poetic compositions to a large audience and so fascinated them that when he bowed and withdrew from the building they sat spellbound. The roof caved in and killed them all, mangling them so that the bodies were unrecognizable, but Simonides came to the rescue of the despairing relatives and said he could remember where each person in the audience sat and who he was. As there was no one to dispute his decisions his identification was satisfactory, and he profited by the enthusiasm to start a memory school.

A young woman of no education fell ill in a small German town. She could neither read nor write, yet she raved in Latin, Greek and Hebrew, and the simple villagers thought she was possessed of the devil. Investigation proved that at the age of 9 she had been taken by a charitable old Protestant pastor. It was his custom for years to walk up and down a passage of the house into which the kitchen opened and read to himself in a loud voice out of his books. These books were ransacked by the physician in charge of the curious case, and who had made inquiries into the sick girl's past life, and in them were found the identical Greek and Latin passages which the girl in her delirium had repeated.

There is an authentic case of a brilliant young woman, happily married, who had a long illness, the result of which was that when she recovered she had lost every recollection of her life from the day of her marriage, inclusive of the ceremony. The rest of her life up to that point she remembered clearly. At first she pushed her husband and her child from her in alarm, but her parents and friends have convinced her she is married and has a son. She believes their word of necessity, though she has never recovered her memory of that one year which is lost to her.

DR. MAX NORDAU

Now Appears as a Critic of Industrial Consolidations.

Dr. Max Nordau, who has lately turned his attention to the consolidation of large companies of capitalists, is one of the most skillful and learned physicians of Europe. His very widespread fame is due, however, not to his scientific ability, but rather to his brilliance as an author. In 1883 he shocked and delighted two continents with his rarely analytical book, "Conventional Lies of Society." In 1886 he published his "Paradoxes," and in 1893 the work by which he is best known, "Degeneration." In this remarkably original book Dr. Nordau attempts to show on purely psycho-physiological grounds that all modern tendencies are toward degeneration. He fortifies his position by examinations into art, literature and life, and claims that degeneracy is seen in all mental and moral phenomena. Dr. Nordau is descended from a well-known Jewish family of Budapest. He began writing to the newspapers on many topics even while he was a lad at school. He is 52 years old.

DR. NORDAU.

Must Do Their Work Well.

The courts are taking cognizance of the competency or incompetency of professional men. A short time ago a New York tribunal held that a physician was liable for unskillful or negligent treatment of a patient, and now the Court of Appeals of that State has rendered a decision holding a corporation liable for unskillful dental work. This corporation, according to the complaint, represented that it carried on the practice of dentistry in connection with its other departments. The plaintiff, a woman, having undergone treatment, sued for alleged resultant injury and received a verdict.

Apparently the defense of the corporation was that the dental business was not, in fact, carried on by it, but was owned by the dentist. But the court held that the company, having having held itself out as carrying on a dental department, and the plaintiff having been ignorant of the fact that the company was not the real owner of the dental department, the corporation was estopped from making such a denial. For, under the circumstances, the court said that the plaintiff had a right to rely not only on the presumption that the company would employ a skillful dentist as its servant, but also on the fact that if that servant, the dentist, whether skillful or not, was guilty of any malpractice, she had a responsible party to answer therefor in damages.

New Vatican Rooms.

The Vatican, the largest palace in the world, will soon receive another addition to its bulk, which will bring up the number of its rooms to 12,000. The Pope has decided to erect three new buildings. One, containing 800 rooms, will be used to house the pilgrims coming to Rome, while the other two, which will be much smaller, will be added to the Vatican Museum. In the last mentioned building will be placed all the artistic offerings that Leo XIII. has received during his pontificate.

Arsenic Eaters.

Styria, a duchy having a population of about 1,500,000, and lying south of Gratz, in the mountainous portion of the great German Confederation, is noted for its arsenic eaters. Arsenic eaters abound in every city, village and neighborhood, and in thousands of cases every adult in a family uses it almost the same as sugar, consuming about 5½ grains in the 24 hours.

Not a Climatic Distinction.

"A Virginia man died at the poker table the other night."

"Nothing wonderful about that. Lots of Nevada and Arizona men have done the same thing."—Cleveland Plain Dealer.

If you can't afford an alarm clock for every bedroom in the house, let in a fly or two.

TRAPPING A PROFESSOR BY WIRE

The Way in Which Some College Men Got Even With an Exacting Instructor.

Among some intensely amusing college scrapes told by "A Graduate," in the September Ladies' Home Journal, is the story of a certain professor, not much liked by his pupils, who was to be married. The lady lived in Cleveland, and the students that loved (?) him were not, of course, invited. But they determined that in some way he should hear from them. And he did. On the day appointed the professor took the train at 10 a. m. due to arrive at Cleveland at 12:30 a. m. About eleven o'clock Jim Townsend rushed to the telegraph office and sent off this dispatch:

"Chief of Police, Cleveland, Ohio. Man coming on train No. 6, tall, well dressed, frock coat, silk hat, side whiskers. Escaped lunatic. Hold! Shrewd, therefore beware! Strange case. Will say name Finalli. Mistake. Thinks he is Professor in a college. Delusion. Escort to home of friends at No.—Euclid Avenue."

This message reached its destination long before train No. 6 reached Cleveland, so that when Professor Finalli alighted it was to walk straight into the custody of three detectives. They would listen to no words of reason, but escorted him out to the house on Euclid Avenue, the home of his intended bride.

A Mint Julep Tragedy.

A northern man stopped at the home of an Alabama planter of the old school and was cordially invited to "Light, sah, and be welcome."

He "lit" and was forthwith invited to take a toddy, in accord with the Alabama rules of hospitality.

"Why," he said, "I saw a nice bed of mint back there. Suppose I get some of it and make a mint julep instead of a toddy."

"A what, sah?" said the planter.

"A mint julep. Haven't you ever tried them?"

"No, sah, nevah; but I'm willing, sah."

They did try the fascinating beverage, not once, but many times, and the northern man went away next day with reluctance.

Two years later his business took him there again. At the gate he was met by the old colored butler, on whose hat, as he doffed it, was seen a band of crape.

"Where's your master, sir?" he inquired of the old darky.

"He's dead, sah; died yestiddy."

"Dead! I'm shocked. What was the cause?"

"Why, sah, 'bout two years ago one o' dem Yankees cum down heah and showed ole marse how to drink weeds in his red likker, and he never stopped twell he died fum it."—St. Louis Post-Dispatch.

Cheap Meals In London.

"Speaking of cheap restaurants," said a gentleman who has just returned from a visit to London to a Washington Star writer, "reminds me of a dining saloon in the Whitechapel district of London where a relishing and fairly substantial meal may be had for a halfpenny, or 1 cent in our money. This cheap repast is not served up in the shape of a cut from a joint and two vegetables. It is a big brown pie, very juicy and very hot. The absence of beefsteak is evident when you cut the pie, but you find inside a liberal sprinkling of sheep's liver, onions and turnips and a plentiful supply of gravy. For a halfpenny extra two slices of bread and a cup of tea are supplied. Between the hours of 12 and 2 the poor and hungry from all parts of the east end of the city flock to the dining room. Most of the patrons are shoeblacks, penny toy men, costermongers and now and then young clerks whose salaries will not permit them to indulge in a more costly dinner."

Japan is the largest consumer of rice in the world, the average being 300 pounds a person a year. The Americans use but four pounds per capita.

It has been estimated that from 90,000 to 100,000 deer feed in the forests of Scotland and that 4,000 stags are killed annually.

Our Nation's Wealth.

Gold and silver are poured abundantly into the lap of the nation, but our material wealth and strength is rather in iron, the most useful of all metals, just as the wealth of a human being lies in a useful stomach. If you have overworked yours until it is disabled, try Hostetter's Stomach Bitters. It will relieve the clogged bowels, improve the appetite and cure constipation, dyspepsia, biliousness, liver and kidney disease.

Merchant (to new boy)—Has the bookkeeper told you what to do in the afternoon? Youth—Yes, sir; I am to wake him up when I see you coming.

Fryer's Abietene Cough Balsam guaranteed for Croup.

Adams' Sarsaparilla Pills cure sick headaches, constipation, biliousness, dyspepsia, purify the blood. 10c, 25c. Druggists.

YOU KNOW WHAT YOU ARE TAKING When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

Dr. H. Lebrun, sent to the Pacific Coast on a scientific mission by the Belgian Government, has favored the Van der Naillen Engineering School of San Francisco by a visit, and, on leaving, expressed the opinion that in all his travels he had seldom found an institution which prepared so practically and thoroughly its graduates for immediate success in life.

Piso Cure cannot be too highly spoken of as a cough Cure.—J. W. O'Brien, 322 Third Ave., N., Minneapolis, Minn., Jan. 6, 1900.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for **FREE $2** trial bottle and treatise. Dr. R. H. Kline, Ltd., 931 Arch St., Philadelphia, Pa

She—I love this excessively hot weather! Don't you, Mr. Boerham? He—No! I can't stand it. I shall go away if it continues! She—I do hope it will!

WHEN writing to advertisers please mention this paper.

PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists. CONSUMPTION 25 CTS.

SUFFERED THREE YEARS. CATARRH OF STOMACH.

Miss Evelyn Morse writes from 651 Adams street, Minneapolis, Minn., as follows:

"I suffered for nearly three years with catarrh of the stomach which no medicine seemed to relieve, until a friend advised me to try Peruna. Although skeptical, I tried it, and found it helped me within the first week. I kept taking it for three months, and am pleased to say that it cured me entirely, and I have had no symptoms of its return. I am only too glad to recommend it."—Evelyn Morse.

Miss Evelyn Morse.

Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Price 75c. per bottle. Sold by all druggists. Testimonials free.

Hall's Family Pills are the best.

Trees Older Than the Pyramids.

A wonder of longevity is the so called dragon's blood tree of Tenerife. Rosin obtained from this tree has been found in sepulchers, where it had been used for embalming the dead. Trees of this species are now standing which are estimated as being older than the Egyptian pyramids.

Never praise a woman's cake unless you are prepared to eat every slice on the plate.—Atchison Globe.

The path of glory leads but to the grave, but it is the most pleasant route.—Portland Oregonian.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

SOFT, GLOSSY HAIR.

It Can Only Be Had Where There Is No Dandruff.

Any man or woman who wants soft glossy hair must be free of dandruff, which causes falling hair. Since it has become known that dandruff is a germ disease, the old hair preparations that were mostly scalp irritants, have been abandoned, and the public, barbers and doctors included, have taken to using Newbro's Herpicide, the only hair preparation that kills the dandruff germ. E. Dodd, Dickinson, N. D., says: "Herpicide not only cleanses the scalp from dandruff and prevents the hair's falling out, but promotes a new growth. Herpicide keeps my hair very glossy."

Fryer's Abietene Cough Balsam saves Doctor Bills

For pimples, sallow complexion, impure blood and poor digestion use Adams' Sarsaparilla Pills. They improve complexion and cure constipation. 10c, 25c. Druggists.

The Best Prescription for Malaria

Chills and Fever is a bottle of Grove's Tasteless Chill Tonic. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c

For Consumption try Fryer's Abietene Cough Balsam.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

Scrofula

Few are entirely free from it.

It may develop so slowly as to cause little if any disturbance during the whole period of childhood.

It may then produce irregularity of the stomach and bowels, dyspepsia, catarrh, and marked tendency to consumption before manifesting itself in much cutaneous eruption or glandular swelling.

It is best to be sure that you are quite free from it, and for its complete eradication you can rely on

EXACT COPY OF WRAPPER.

CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of Chas. H. Fletcher and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhœa and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

GENUINE **CASTORIA** ALWAYS
Bears the Signature of
Chas. H. Fletcher.

The Kind You Have Always Bought
In Use For Over 30 Years.
THE CENTAUR COMPANY, 77 MURRAY STREET, NEW YORK CITY.

You can always smell a "dead one."
He has a costive-looking face.
His breath knocks you down.
He drags his feet.
Listeners to his talk turn their heads the other way.
His breath poisons God's pure air.
He ought to keep clean inside;

—that means sweet breath, quick brain, swift moving feet. You can't feel well and act well with your bowels clogged, sending poison all through your body. Clean them out gently but thoroughly and keep them clean with CASCARETS Candy Cathartic, and you will find that all bowel and liver ills and the nasty symptoms that go with them are quickly and permanently

CURED BY **Cascarets** LIVER TONIC
BEST FOR THE BOWELS

10c. 25c. 50c.
ALL DRUGGISTS

NEVER SOLD IN BULK.

CURE all bowel troubles, appendicitis, biliousness, bad breath, bad blood, wind on the stomach, bloated bowels, foul mouth, headache, indigestion, pimples, pains after eating, liver trouble, sallow complexion and dizziness. When your bowels don't move regularly you are getting sick. Constipation kills more people than all other diseases together. It is a starter for the chronic ailments and long years of suffering that come afterwards. No matter what ails you, start taking CASCARETS to-day, for you will never get well and be well all the time until you put your bowels right. Take our advice; start with CASCARETS to-day, under an absolute guarantee to cure or money refunded. 465

GUARANTEED TO CURE: Five years ago the first box of CASCARETS was sold. Now it is over six million boxes a year, greater than any similar medicine in the world. This is absolute proof of great merit, and our best testimonial. We have faith and will sell CASCARETS absolutely guaranteed to cure or money refunded. Go buy today, two 50c boxes, give them a fair, honest trial, as per simple directions, and if you are not satisfied, after using one 50c box, return the unused 50c box and the empty box to us by mail, or the druggist from whom you purchased it, and get your money back for both boxes. Take our advice—no matter what ails you—start today. Health will quickly follow and you will bless the day you first started the use of CASCARETS. Book free by mail. Address: STERLING REMEDY CO., NEW YORK or CHICAGO.

THE LIVING MUSE.

Horace calls no more on me,
Homer in the dust-heap lies;
I have found my Odyssey
In the lightness of her glee,
In the laughter of her eyes.

Ovid's page is thumbed no more,
E'en Catullus has no choice!
There is endless, precious lore,
Such as I never knew before,
In the music of her voice.

Breath of hyssop steeped in wine,
Breath of violets and furze,
Wild-wood roses, Grecian myrrhs,
All these perfumes do combine
In that maiden breath of hers.

Nay, I look not at the skies,
Nor the sun that hillward slips,
For the day lives or it dies,
In the laughter of her eyes,
In the music of her lips.
—Bookman.

MAY.

He was looking at May's portrait—a lovely little miniature—when the housemaid brought the packet to him. The girl entered timidly, with a furtive glance at her master, for whom her heart was bleeding.

No sign of tears—either past or present—was visible in the young man's eyes. They were hard and bright. Hard, also, was his face, and the clenched lips like adamant.

He took the thick envelope, glanced at the clerkly writing, and at the back, upon which was stamped in blue letters, "W. Robinson & Co." Then he flung it on the table, and as the servant left the room, the sound of harsh laughter broke upon her ears. She fled to the kitchen, and with scared face whispered that she thought poor Mr. Ord must be going mad.

He had written a few days before to William Robinson for those patterns that he might choose the materials for his wedding suit. May was so particular about what he wore. He used to be a little careless about his dress once. Then, in his endeavor to gain May's approbation, he had overdone it in the opposite direction, sporting collars of absurd height, and impossible ties, enduring like a martyr the pinch of patent leather shoes a size too small for him, and getting himself a little chaffed by appearing in suits which were unmistakably in advance of the fashion, May, with gentle tact, had changed all this.

He had written for the patterns from Robinson's a few weeks before the important suit should be needed, as he wanted to have May's opinion with regard to the materials. He consulted her about everything. He had no sisters, and until the last year—when the death of an uncle and the inheritance of a fortune had made him his own master—he had lived a solitary life in a remote country town with the relation by whose sudden death he was enriched.

After that laugh of harshness which had so startled his servant, Laurence Ord went back to the study of May's portrait. A sob of anguish broke in a groan from Ord's pale lips. He had tried to realize that those dancing eyes were closed forever.

The idea of May—May, the merriest little person in the world—lying cold and silent was too much for the young man who last had seen her having a wild game with a kitten on the deck of a friend's yacht.

He had dreaded that little cruise more than he could say. He had all but asked her not to go, but from this he had refrained, deeming it mere selfishness.

"You don't mind me going, Laurie, do you?" she asked, when the trip had been first suggested, and with a little pleading look in her eyes which was irresistible, especially as he had not yet the absolute right to give or withhold permission. "I'll only be gone three weeks, and then—if you still have a mind to—you may take me and keep me forever. A large order, Laurie! Shall you want me for so long, do you think?"

He had gone to see her off on board the Orchid, and she had stopped in the middle of one of her airy whirls with the kitten and a piece of scarlet ribbon. "Mind you have the patterns ready by the time I come back!"

"The yacht Orchid, which was wrecked last night on the dangerous reef outside Alwyn Bay, is the property of a Mr. Griffiths of London. All on board were saved except the unfortunate lady whose body was washed ashore early this morning. It has been identified as that of Miss May Carden."

This was the paragraph which had caught the eye of Laurence Ord as he had run over his morning paper at breakfast. Afterwards he had come upon the first and longer account, but this was evidently a little paragraph inserted when further information had been received.

His senses had at first been blunted by the shock. Now they were awakened to full consciousness of the immeasurable pain. He laid the miniature down, and began to walk about the room. He moved things here and there. He wound the clock—then his nerveless fingers dropped it with a crash. He let it lie where it had fallen.

He began mechanically to settle the things on the table, to fold up the newspapers, and open his neglected letters. He was fighting his pain. The letters were read without his being a whit the wiser as to their contents. The packet of patterns was the only thing that remained.

With another of those pitiful laughs he ripped open the envelope. The laugh changed into an indescribable cry. There were no patterns in the envelope. Instead there were three thick sheets of notepaper, each of which had "Walter Robinson & Son, Solicitors, Alwyn Bay," printed upon it. The writing was a penciled scrawl—a dear, familiar scrawl.

Laurence read it on his knees, sobbing out his thanks to God. Three sentences and the signature will sufficiently explain:

"I was brought ashore half-drowned. * * * Mr. Robinson, a lawyer, has kindly given us shelter. * * * Mr. Griffiths is addressing this. * * * Your loving May."—San Francisco Argonaut.

FIVE TIMES PRESIDENT OF THE CHICAGO BOARD OF TRADE

William T. Baker

Forty years ago last March W. T. Baker joined the Chicago Board of Trade, and ever since has lived the strenuous life of an active member of that association. He has done other things as well. He succeeded Lyman J. Gage as president of the World's Columbian Exposition after having been one of its directors for a year and also chairman of the committee on foreign exhibits. He was elected for a second term as president of the fair, but illness compelled his resignation and Mr. Higinbotham succeeded him. He was also vice-president of the Civic Federation. On 'Change his interests have so invariably been on the side of higher prices that there is a legend around the board to the effect that the only property that ever fell after he bought it was the water in Snoqualmie Falls, in Washington. Mr. Baker has been five times elected president of the Board of Trade, serving in 1890, 1891, 1895, 1896 and 1897, the only man who ever held the office three successive years. He could have had it a fourth year had he consented.

HUMAN FINGER PRINTS.

There Are Possible Drawbacks to Their Value in Identification.

The constancy of human finger prints has chiefly been discussed in connection with the identification of criminals. Assuming that the evidence of finger prints is to be admissible in criminal proceedings, it will be not only necessary to prove that in the case of the same man the finger prints remain unaltered, but that no two persons have identical finger prints. Where is the evidence of this?

There are propably 1,500,000,000 men and women on the earth. Can we suppose that no two of these have identical finger prints? Nor indeed is this all. We may be comparing the finger prints of a living man with those of one who has been dead for years past, and the doctrine of heredity might lead us to expect to find similar finger prints in the case of parents and children and of different children of the same parents. It is, at all events, certain that if this finger print system were once introduced into our courts of justice there would be any amount of wrangling as to whether they were identical or only similar—experts contradicting each other and involving the whole subject in confusion.

Moreover, professional criminals would probably soon find some mode of altering their finger prints. No doubt if the person who committed a crime—a murder, for example—has left the imprint of his fingers on anything it may prove an important clew, but the same thing may be said of the imprint of his boots or shoes. But a clew is one thing and a proof is another thing.

Let me point out another difficulty. In a country where there are a large number of criminals whose finger prints are collected, the number of these will soon be very large. How long would it take to examine this collection in order to find out whether any of them corresponded accurately with the finger prints of the man who is now accused? The task would, I think, be a hopeless one.

That finger prints may be important in the detection of crime whenever the criminal has left the print of his fingers behind him I do not dispute, but without much stronger evidence than we now possess that no two persons have undistinguishable finger prints such evidence ought never to be permitted to outweigh what appeared to be a tolerably satisfactory alibi.—Knowledge.

The Plethoric Picnic Pie.

That the joyous picnic season does not bring peace and happiness to all alike is clearly shown by a composition written on the subject by a girl in a New York high school:

"May parties will soon be ripe, and the June walk season will follow hard upon. The difference between a May party and a June walk is a simple matter of chronology. Each has its queen of brief authority and its chaperon of absolute sway. Each has also its hamper, which is as deadly an enemy to the Manhattan populace as the frying-pan to the Kansas farm hand. I took an inventory of one of these hampers last year, and as I was a member of the physiology class at the time, it startled me out of a session's growth.

"When the hamper was opened the chaperon drew forth one bag of sandwiches and one pie; one bottle of pickles, one pie; one sponge cake, one pie; one roast chicken, one pie; one bottle of lemon juice, one pie; one bag of assorted cookies, one pie; one dozen doughnuts, one pie; one package of biscuits and one pie. This was all, except that there were a few extra pies at the bottom, for the purpose, I suppose, of forestalling famine.

"The chaperon wondered after luncheon why the girls and boys didn't enter into their play with as much zest as they did when they first arrived at the park. I didn't. I was studying natural history at the time, and only a few days before a lucid explanation had been given why the boa constrictor takes a month's nap after dining on far more digestible food than anything I saw in Central Park that day."

Temptation.

In our carelessness we too often tempt other people, sometimes without knowing it. Sir Edward Malet writes in "Shifting Scenes" that he had gone to a hotel at Milan, and eager to see the sights, sallied forth, leaving his portmanteau yawning, his dressing case ajar, and money on the table.

I thought of nothing save that I was once more in Italy. Still I locked my door, and took the key with me.

When I came back, an aged and shriveled housemaid followed me into my room. She was wringing her hands.

"Ah, mio signore!" cried she, going up to the dressing table and opening a little drawer. "Is this yours?"

In the drawer lay ten or a dozen gold pieces.

"Yes," I said, "they are mine."

"Ah, signore, how could you do it? How could you leave this money about? It was all lying on the table."

"Why, I locked my door. I knew it was safe."

"No," she cried, "it was not safe! It was cruel to put such temptation in my way!" She sank upon a chair and burst into tears. "Think of me, signore. I am very poor. I have six children to keep and a husband who can do no work. The money would make me rich, and you leave it on the table, the gold pieces all loose to dazzle my eyes and to put the devil into my heart. Through your thoughtlessness I might go to jail, my children might starve, my husband die. Ah, signore mio, never do it again! Think of the poor. Be merciful to us. Do not put temptation in our way."

City and Country.

New York now leads all the other States in the predominence of its city over its country population. Of every 100 inhabitants of the Empire State, 77 live in cities and towns. The percentage of the population living in cities and towns for the whole country is only 47.

Turkish Babies.

The Turkish mother loads her child with amulets as soon as it is born, and a small bit of mud steeped in hot water, prepared by previous charms, is stuck on its forehead.

An Endless Task.

It has been estimated that it will require eighty-five men working every day until 1947 to unearth the entire ruins of Pompeii.

THE STRANGER ON THE BLOCK.

How She Showed the Spirit of True Neighborliness.

True neighborliness is lacking in city life. The essence of it is wanting in that woman who calls on the newcomer in the block whose child is taken for its airing by an English nurse in a uniform of black gown, white cuffs, collar and cap, and whose door is opened by a man in livery, but who leaves uncalled upon the modest lady who so far forgets herself as to have her marble steps cleaned by a small colored girl, with her hair done up in pigtails.

True neighborliness makes no such invidious distinctions. It doesn't depend upon servants at all nor upon the presence of marble statues in drawing-room windows, and therefore it is not to be found in the mercenary city. Its real home is in the rural town, where the one curtain stretcher on a street is looked upon as public property and is just as often to be found in the home of Mrs. Brown as it is in that of Mrs. Smith, though the latter, simply because it was paid for with her money, sometimes selfishly tries to delude herself into believing it belongs to her.

A woman visiting in Baltimore tells this story to illustrate the feeling that exists between neighbors in her native town in a country of Western Maryland: The woman is looked upon as an authority in most matters by those who surround her, and so the other morning, when the maid awakened her at 7:30 o'clock to tell her that a young person wished to see her in the library, the woman jumped up hastily and donned the things she could get into quickest, wondering meanwhile whether Mrs. Allen's baby had another spasm or it was merely an ambassador from Mrs. Fuller seeking to borrow the ice-cream freezer for the day.

If it were the latter she determined that she was just going to nerve herself to refuse it, for the last time Mrs. Fuller had borrowed the freezer she had sent it home one Sunday with the handle so broken that the whole thing was useless, and with a note saying that she was sorry she had been unfortunate enough to break it, but that she hoped its owner could have it repaired.

It was not an emissary from Mrs. Fuller, however. It was an entirely strange individual who faced the woman when she finally reached her library.

"Good morning," said the stranger politely. "You don't know me, do you? Well, I'm Mrs. Cleve. We've just moved in this block and I ran in this morning to ask you if you could suggest a way for me to have a lawn dress made. I noticed you had on a pretty one when you passed the house last evening, so I concluded you had good ideas. Do you mind advising me, or perhaps you would lend me your frock to copy."

Now this was neighborliness, the very essence of that quality, indeed. It was of the sort that waits not for introduction and stays not for formality. But alas! it can never be injected into city life. It is incidental to living near to nature's heart, and bricks and mortar frighten it out of existence. Had this request been made of a city woman how indignantly would she have spurned it, but the woman who comes from the rural town admits sadly that ten minutes later her new organdie was being carried home by the stranger in the block in triumph.—Baltimore News.

ROBBERY SEEN IN A DREAM.

Owner of Stolen Articles Recognizes One of the Robbers.

Spending the summer in the country some twenty miles from her city residence, a lady dreamed that the latter was robbed, she herself being a witness of the robbery. In her dream she saw two men, one of whom limped, in the act of rummaging some trunks in the hall. A candlestick stuck by means of its own wax on the newel post illuminated the scene with a dim light. After finishing their work with the trunks the men went upstairs to a closet, from which they removed curtains and hangings stored for the summer months.

The dreamer observed that they overlooked her most valuable curtains, which had been placed well back on upper shelves. Suddenly she seemed to be transported to her birthplace at Auburn, N. Y., where she especially noted the bronze figure of an Indian which surmounts the prison edifice.

At breakfast the next morning she related her vivid dream to those present, five of whom are now living and vouch for the fact. Subsequently it was found that the city house had been entered and robbed. On the newel post were the marks of the candle. The curtains had all been taken but the best set, which were found where the dreamer had seen them.

Suspicion was directed to a painter who had been at work on the house, who was lame, and who disappeared immediately after the robbery. Investigation of this man's character showed that he had served a term in the Auburn penitentiary.—Health Culture.

GROWTH OF THE EARS.

It Is Asserted that It Never Stops Until Death.

The systematic examination of more than 40,000 pairs of human ears in England and France has resulted in some interesting conclusions. For one thing, it is ascertained that the ear continues to grow in the later decades of life; in fact, it appears never to stop growing until death. If one will take the trouble to look around in any assemblage of people, as at church, he will discover that the old folks have ears considerably larger than those of the middle-aged. A woman who has small, shell-like ears at 20 years of age will be very apt to possess medium-sized ears at 40 years, and large ears at 60.

Why ears should go on growing all one's life, any more than noses, is a mystery. There are a good many other points about them that are instructive, their shapes being markedly persistent through heredity. An ear will be handed down, so to speak, from father to son for generation after generation with comparatively little modification. Some authorities on criminology assert that criminals are very apt to possess a peculiar kind of ear, which is recognizable by an expert in such matters.

There is probably nobody in the world who has a pair of ears perfectly matched; in most people the two differ perceptibly not only in shape, but also in size. Frequently they are not placed precisely alike on the head. The age of a person may be judged with great accuracy by the ears, which after youth is past assume an increasing harshness of contour. A pretty woman whose first youth has departed may not show the fact in other ways, but these female features will surely tell the story of the flight of time. Then there is the little wrinkle that comes just in front of each ear during the thirties—a fatal and ineradicable sign.

Near the top of each ear, just within the down-turned edge and slightly toward the back will be found, if one feels for it, a small lump of cartilage. This is a remnant of what was originally the tip of the ear, when, ever so long ago, that organ in our remote ancestors had a point on it. Most of the apes to-day have pointed ears, but in human beings the upper edge of the organ has, in the course of ages, been folded over so as to cover the real tip.—Philadelphia Saturday Post.

DREYFUS CASE IN TATTOO.

Scenes from the Trial Illustrated Upon a French Coachman's Body.

At least one person in Paris will never, as long as he lives, forget the incidents of the Dreyfus case, as he is a walking pictorial history of that cause celebre.

Some time ago he was in one of the punishment companies in Africa, and an artistic comrade killed time by tattooing him all over his body and legs with no less than 120 illustrations of prominent scenes in the case, including portraits of the leading personages connected with it and various allegorical and emblematic devices as well. Black, blue, red and green colors have been employed, and the work has been executed with much skill. One of the surgeons of his regiment offered him 400 francs for his skin, explaining that he could remove the surface without pain or risk and that a speedy recovery would follow. The soldier, however, preferred to keep his hide and the sketches tattooed on it, and therefore declined the offer.

So, at least, he avers, and the wonderful success of the performance, which took about twenty months in the execution, is calculated to confirm the idea that the proposal may really have been made. What may be styled the two "pieces de resistance" are to be found on the back and on the portion of the body on the other side, which afforded the most space for the flights of the artist's genius. On the former the terrible ceremony of degradation at the Ecole Militaire is graphically depicted. Three months were devoted to it, and it is surmounted by a number of allegorical designs, with hosts of figures personating goddesses, among whom may be seen one representing France, pointing out to the ill-fated captain the distant Ile du Diable.

The other ambitious production gives the spectacle of the court-martial by which Dreyfus was condemned. Above it, on the left breast, a dagger pierces a heart, from which blood is flowing, and on the other side is beheld a serpent in the act of strangling a man. The arms are chiefly dedicated to counterfeit presentments of the generals whose names were so much before the public—Mercier, Billot, Zurlinden, De Boisdeffre, Gonse and so on—and also to a portrait of the late President Felix Faure. Innumerable flags and other patriotic emblems garnish the thighs and legs, and there are other sketches as well.

Why She Quit the 'Phone.

The young woman employed as a stenographer had a beau named Will, to whom she talked some twenty-five times a day. The lawyer who labored under the impression that he was paying for the stenographer's time was not pleased that Maggie should drop her work and rush frantically to the telephone every time the bell rang and stand there for fifteen minutes debating whether or not Will ought to have told Clara that secret which he knew well enough was none of Clara's business. One day the lawyer left his office, and, going to another telephone in the building, called up his own office. Of course Maggie rushed frantically to the 'phone and answered.

"Hello," said the lawyer in a muffled voice. "This is a lineman testing the wire. Kindly stand one foot in front of the receiver and say hello."

Maggie obeyed.

"Thank you. Now stand two feet to one side and say hello." It was done.

"Thank you. Now stand on your head and say hello."

Maggie seems to be somewhat backward in answering the telephone now.—Boston Record.

An Impossible Proposition.

Harold—You shouldn't wait for something to turn up, old chap; you should pitch right in and turn it up yourself.

Rupert—But it's my rich uncle's toes, old chap, that I'm waiting for.—Judge.

When a man is asked to do something for his parents, he suddenly realizes what a burden he is carrying in caring for his wife.

WOMAN'S REALM

INFLUENCE ON YOUNG MEN.

Here is a part of a young girl's life of which the large majority think very little. To amuse and entertain each other seems the chief end for which young men and women come together, and neither sex seems regardful of what may result from what they say or do, so long as the laugh is a merry one; the young girl feels that she is admired, the young man is gratified by evident satisfaction in his society.

The setting one's self up as a sort of reformer and making all the young men whom you know feel as if they were under a microscope which will disclose all their defects, will not aid you or them. The right step to take first is to set up a noble standard for yourself, and then demonstrate its charm by your own attraction.

One way in which a pleasant girl friend can help a man's life is by the character of her conversation. What one wants to accomplish is to speak freely and pleasantly about things which are delightful to talk about, to avoid gossip and evil speaking of others, to use clean, pure English, without slang, and to lead the conversation into impersonal channels.

She should know enough of current events to speak understandingly about the things that we all ought to know, and which all young men like to discuss—the things which stir the nation's heart—the events which rouse the attention of the world—the books which excite public attention—the beautiful things of the earth which are about you—the good deeds of good men and women who are helping the world along—to check any unkind tale-bearing or insinuation, or especially any criticism of girls you know. A man goes away refreshed from a visit which has made him think and talk of such things, and especially if he has had a sweet, bright young girl to talk to.

The world our young men have to work in is a hard, rough place, and they have no time to think quickly over what lies outside of the confines of their day's duty. To find that their girl companions have always some new, interesting thing, sincerely and simply good, to talk about, is a great source of enjoyment and a big step upward.

A young girl in whose society young men feel that they are sure to receive some inspiration to improve themselves is surely "good for something," which helps the progress of the world.—Mrs. Clement Farley, in Ledger Monthly.

Only Woman Colonel.

Mamie Gertrule Morris, of Chattanooga, Tenn., is the only woman Colonel in the United States. At the reunion of the Georgia Society of Chattanooga she rode her horse in uniform beside Gen. Stephen D. Lee, and she was also the "Military's Queen" at the Chattanooga Carnival, where she rode in a chariot of red and white roses drawn by four handsome black horses. She is Lieutenant Colonel, and aide to the Governor of Georgia, and special aide to Gen. Stephen D. Lee.

MISS MORRIS.

Miss Morris is the charming Southern authoress whom Gov. Allan D. Candler, of Georgia, recently honored by giving her a commission as an honorary member of his staff.

Caring for the Teeth.

Without good teeth there cannot be good mastication. Without thorough mastication there cannot be perfect digestion, and poor health results. Hence the paramount importance of sound teeth. Clean teeth do not decay. The importance of a sound first set of teeth is as great to the child as a sound second set is to the adult. Children should be taught to use the toothbrush early. Food left on the teeth ferments, and the acid formed produces decay. Decay leads in time to pain and the total destruction of the tooth. The substance of the following rules should therefore be impressed constantly upon all children:

1. The teeth should be cleansed at least once daily.
2. The best time to clean the teeth is after the last meal.
3. A small toothbrush with stiff bristles should be used, brushing up and down and across and inside and outside and in between the teeth.
4. A simple tooth powder or a little soap and some precipitated chalk taken up on the brush may be used if the teeth are dirty or stained.
5. It is a good practice to rinse the mouth out after every meal.
6. All rough usage of the teeth, such as cracking nuts, biting thread, etc., should be avoided, but the proper use of the teeth in chewing is good for them.

When decay occurs it should be attended to long before any pain results. It is stopping of a small cavity that is of the greatest service.—Motherhood.

Most Extravagant of Women.

The Empress Josephine was allowed at the beginning of her reign $72,000 a year for her toilet, and later this was increased to $90,000. But there was never a year during the time that she did not far over-reach her allowance and oblige the Emperor to come to her relief. According to the estimate Mason has made, Josephine spent on an average $220,000 yearly on her toilet during her reign. It is only by going over her wardrobe article by article and noting the cost and number of each piece that one can realize how a woman could spend this amount. Take the simple item of her hose—which were almost always white silk, often richly embroidered or in openwork. She kept 150 or more pairs on hand, and they cost from $4 to $8 a pair. She employed two hairdressers—one for every day at $1,200 a year; the other for great occasions, at $2,000 a year; and she paid them each from $1,000 to $2,000 a year for furnishings. It was the same for all the smaller items of her toilet.

Cookery Corner

Watermelons or muskmelons that are not very sweet may be utilized in a salad with mayonnaise or a French dressing in which lemon juice is used in place of vinegar.

Spanish sweet peppers and onions added to beef and potato hash give variety to the dish. Serve on slices of toast, with a poached egg on top of each.

Buy good coffee and learn to make good coffee. One cup of steaming hot, strong, golden coffee with cream will do more to put your guests in good humor for a day than the most elaborate breakfast with poor coffee.

The lacquered brass knobs and trimmings used on furniture are best cleaned with a soft cloth in wet alcohol. All unlacquered brasses should be first washed in warm soapsuds and then rubbed with salt and vinegar applied with a flannel cloth.

Summer squash at the best is so watery that it is better to steam than to boil it. If young and tender wash and cut it into quarters without skinning or removing the seeds. When it is done rub it through a colander or sieve and season with butter, salt and pepper.

Most of the odor of roasting lamb and much of the strong flavor of mutton may be avoided by asking the butcher to remove every particle of outside fat, as well as the transparent tissue covering the shoulder or leg. It is this that absorbs the flavor from the wool and gives the taste so disagreeable to most people. All first-class butchers will do this if asked when dressing the meat.

Co-Education.

The young men of Wesleyan University have never taken kindly to the coeducational graft, says the Boston Transcript, but the climax of cubbishness seems to have been reached Friday afternoon, when the seniors voted that the young women of the class be request not to take seats on the platform at the class day exercises. At the same meeting the class day committee was instructed to request the faculty to make the graduation exercises for the women distinct from those of the men. We can hardly imagine anything more absurdly malapert. Doubtless in a year or two, after they have stepped out of their peck measures and take half-bushel views of themselves, as Dr. Holmes used to say, they will be profoundly and wholesomely ashamed of their present attitude.

Health and Beauty.

Hardwood floors and rugs are better than carpet on sleeping floors.

Women should take five minutes a day from work and lie flat on the back, all muscles relaxed, with eyes closed. This will be found a wonderful preserver of health, beauty and strength.

A tendency to stoop and round shoulders may be overcome by keeping the eye in walking on some object higher than one's head, a tall man's hat if in the city streets, or some point on a tree or building.

The bath is a semireligious observance during torrid weather. Those who must bathe in a thimble of water, so to speak, should spend a long time in rubbing the body gently with a coarse towel afterward.

Pimples often annoy during a visit at a fashionable resort. Mixed, greasy, unwholesome food is entirely to blame. Take care of your diet and live largely upon fruits, beef, boiled or roasted, green vegetables and salads. The rest let go.

Novelties in Hats.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

Issued Every Friday

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, OCTOBER 11.....1901

The long sustained strike at San Francisco among the workers more immediately related to the commerce of the water front and mercantile business of that city has come to an end, and all sympathetic and collateral strikes involved cease with the settlement of the main difficulty. The strike has been a most unfortunate thing, not only for the business of the metropolis, but it has seriously operated to the disadvantage of business in the interior. The cost of the difficulty to the commerce and industries of the State has not been even estimated, but it must amount to millions of dollars, and it has involved, besides, a great amount of human suffering, and a deal of personal strife and wounding. Gov. Gage has successfully brought about peace without calling out the militia.

It is now two years since England began war on the Boers in South Africa, and indications are that the end is a long way off yet. Recently the British troops have met with severe reverses, and the English people are beginning to view with consternation the havoc that is being wrought to the treasury and to their men. It is now estimated that there are only from 10,000 to 12,000 Boers under arms, but is taking over 150,000 British troops to keep them from winning back their country.

Equal opportunity is American doctrine. Upon equal rights to man and equal opportunity rests the glory of our free government. The menace of the trusts takes from man equal opportunity and places the privilege in the hands of the combined few. Under the growing power of trusts both opportunity and ambition, so essential to free government, are denied the citizens of our government.—Reno Journal.

Another chapter has been written in the history of the great transcontinental roads. E. H. Harriman has become President of the Southern Pacific system. Mr. Harriman is a thoroughgoing railroad man from n business standpoint and will no doubt carry out the extensive plans for the improvement of the railroad recently inaugurated. These plans contemplate the expenditure of over ten million dollars in the State of Nevada alone.—Reno Journal.

Japanese who apply for license to marry Caucasian women in this State are generally surprised to be informed that the Japanese are considered Mongolians. This is a little hard, but it will have to stand until an interested party gets a decision from the Supreme Court to the effect that a Jap is something else than a Mongolian. Inter-marriage betwen members of different races has not proven to be a desirable practice.

Captain De La Mar, with his original instincts, has another surprise for the mining world. He has planned to ship from the Bully Hill smelter a lot of metal ingots of pure copper and gold worth $1 per pound, to the Atlantic seaboard. The entire shipment will fill 100 cars, which are to be run in sections labeled with banners and swarming with armed guards. It is estimated that the shipment will be worth about $2,000,000.

The small farm does more for the substantial development of the community and for the material prosperity of a State than any other factor. A forty acre farm well managed is far better than 400 poorly managed. There will be a happier era for Owens Valley when a hundred or more of the big ranches are chopped into 40's for the support of a vastly increased population.

The Pacific Coast Oil Co., an ally of the Standard Oil Co., will this month begin laying an oil pipe line 250 miles from Bakersfield to Point Richmond, on San Francisco bay. A thousand men will be employed in its construction. The work is estimated to cost $3,000,000. There will be ten pumping stations along the line.

All Americans are applauding the little Columbia craft again, as having satisfactorily demonstrated that the Yankees still have the best boat and the best crew. Looks like foreign yachtmen have another fifty years' job ahead of them trying to lift the cup. Their sportsman-like pluck and pertinacity is commendable at all events.

The Chinese exclusion act will come before the next Congress. It will be the most important legislation affecting California that will be considered, and nothing should be left undone to impress upon our representatives that we are in earnest in demanding an extension of the present or a much more stringent law.

The chairman of the executive board of the American Smelting Co. has stated that experiments made by the company show that beyond any question crude petrolum is the preferable fuel for lead smelting and that it has passed the experimental stage of investigation.

The Navy Department is not making much out of the Schley investigation. The Government witnesses are giving strong evidence in favor of the man who destroyed the Spanish fleet at Santiago.

From their beginning to the close of the fiscal year 1900 the gold coinage of the United States was more than $2,000,000,000.

DWELLERS IN FLATS.

A NEW YORK REAL ESTATE AGENT ON THEIR CHARACTERISTICS.

Peculiar Lines Which, According to His Experience, People of Different Nationalities Take In Causing Trouble to the Owners.

The first question put by the renting agent was, "What nationality, please?" and the woman in the blue hat replied by asking, "Why do you want to know?"

"I meant no offense," said the agent. "I only thought that by finding out your nationality I could refer you at once to certain buildings on my list which would be apt to please you." The woman in the blue hat had half a notion to get angry.

"I don't see what my nationality has to do with finding a suitable flat," she said.

"It has a good deal to do with it," said the agent. "Now, I can see straight off that you are an American, born and bred. This is a delicate question that you have plunged me into, but since I am in it I mean to flounder around a little while longer and tell you a few facts pertaining to the merits and demerits of different nationalities considered in the light of flathouse tenants.

"First of all, I want to speak from the standpoint of prompt payment. If my success in business depended upon each tenant paying his rent exactly when it was due, I would try to fill all my houses with Scotchmen. Never have I lost a penny on a Scot, and seldom have I had to wait.

"I am not making the rash assertion that it is impossible for a Scotchman to be dishonest while everybody else is trying his best to cheat me out of my very eyeteeth. The point I wish to make is that personally I have never suffered loss at the hands of a Scot. But they give trouble in other ways. They are fearfully quarrelsome and raise so many rows with the other tenants through the dumb waiter shaft that it keeps the janitor busy straightening out domestic snarls. In all my buildings where Scotchmen reside I select a janitor with a view to his even disposition and diplomatic gifts. It doesn't matter so much about his ability for scrubbing and keeping the furnace going. Utilitarian accomplishments are a secondary consideration so long as he is endowed with the blessed qualities of a peacemaker.

"Taken all in all, the most peaceable people I get in my houses hail from Sweden. You never hear a peep out of a Swede. He doesn't bother his neighbors and he doesn't bother me unless the provocation is extreme. As a rule, he is good pay too. The only fault I have to find with him is his fondness for moving. A lease is a dead letter in his eye, and he has no more compunction about moving without a day's notice than he has about going to bed when he is sleepy."

The woman in the blue hat asked what were the chief characteristics of Americans as tenants.

"Their supreme selfishness," said the agent. "They have not a spark of consideration for a landlord. They want the earth. They never get through asking for improvements. They are not content to get the walls tinted and the woodwork painted and the plumbing fixed once or twice a year. They want new decorations every month, and all the trimmings must be first class too. American tenants pay big prices for their flats, but there isn't really so much profit in catering to them as to other nationalities, for the simple reason that I have to pay out nearly all my income in trying to keep up the building in the style they demand. On the other hand, the people who ask for the least are the Italians and the French. They take most any old thing I feel like giving them, the French meekly providing their own decorations and the Italians going without.

"I like German tenants pretty well, too, but they are terribly hard on flats. I never could understand how they manage to inflict so much damage on walls and floors. Judging by the looks of an apartment just vacated by a large German family, one would think that their star piece of furniture was a battering ram.

"The czar's former subjects also have an abnormally developed bump of destructiveness, although they run to glass instead of plastering. I have one house down town that is occupied by ten Russian families, and if they were not compelled to repair their own damages it would keep me poor putting in new windows and buying new gas globes.

"I also rent to colored people. I have three houses full of them at present, and I must say that I have never had better tenants. But when you come down to facts, all my tenants are nice people, only I thought it might not be amiss while on the subject of nationality to mention a few of the peculiarities of each."—New York Sun.

Homemade Stoves.

In many parts of Spain the stove in general use is made from an empty petroleum oil can by cutting a hole near the bottom on one of the sides to make a draft, the can being lined with gypsum to the pleasure of the constructor, giving the fire space accordingly. The stove thus made, primitive as it is in its appearance, is effective in purpose and costs the equivalent of but a few cents of our money.

Peterboro, in New Hampshire, established the first free public library in the United States in 1833, and as early as 1849 a general law authorizing taxation for library purposes was passed.

One of the most destructive earthquakes in the world's history was that which occurred in Tokyo in the year 1703, when 190,000 people were killed.

A Successful Case.

First Lawyer—I just concluded a very successful case.

Second Lawyer—Your client won, eh?

First Lawyer—Oh, no, but I got my fees!—Ohio State Journal.

Every decade brings shorter hours to those who merely work, but for those who would succeed there is no time table.—Saturday Evening Post.

Adam de la Hale, a troubadour, wrote the world's first comic opera in 1240 A. D.

WOMEN AND DREAMS.

Superstition That Is Rife Even Among the Educated Fair Sex.

It doesn't seem possible that in this enlightened age superstition could be rife among the educated, but there are nevertheless a number of young women who converse fluently, if not eloquently, in three languages, and who read Spencer and Browning and Emerson, but who place a dreambook with their Bible on the table beside the bed and consult it in the morning the first thing.

With a credulity worthy of a negro mammy, if their sleep has been visited with unusual visitors they seize this volume as soon as their eyes are fairly open and look for an explanation. If misfortune is foretold by it, the seeker after knowledge assumes a bravado she is far from feeling. "I don't care," she says to herself, by way of bolstering up her courage. "I am not superstitious, anyway, and I don't believe in such arrant nonsense." But she's nervous just the same for days until her troubles have driven this mythical one out of her mind.

There's one young woman known to the writer who never dreams of a young child without shivering and shaking for days after in fear of some dreadful thing happening to her. She has not consulted a dreambook on the subject, and so she doesn't know how infants and bad luck became connected in her mind, but nevertheless, after she has had a visit of this sort while sleeping, she says prayers of unusual length and then makes up her mind to be patient under afflictions sore.

She is an intelligent woman, mind you, but she doesn't attempt to explain the terror that besets her at this particular dream. She doesn't call herself superstitious—of course no woman does, not even the one who wouldn't walk under a ladder—but her friends do and make light of her until she exposes some fetich of theirs, when the subject is carefully avoided afterward. —Baltimore American.

THE CONQUEST OF KOREA.

Japanese Legend of Emperor Chuai and His Valiant Wife.

Seventeen centuries ago the Japanese Emperor Chuai was playing his lute in the presence of his wife and prime minister. Whether on account of the music or from some other cause, the empress became inspired with a divine afflatus and began to utter the thoughts put into her mind by the deity. "There is a land to the westward," she exclaimed, "and in that land is abundance of treasure, gold and silver, dazzling to look upon. This land I will now bestow upon you."

The emperor pushed away his lute. "If you go up to a high place and look toward the west," said he, "there is no land to be seen, but only the great waters. They are lying spirits who have spoken to you."

Then the good god was filled with anger, and again he moved the empress to prophesy. "You are not fit," she said, "to rule this empire. Go the one road!"

But the prime minister trembled when he heard these words and said to his master: "I am troubled, my heavenly sovereign, by this terrible message. Continue, I pray, to play the august lute."

The Emperor Chuai commenced to play softly. Gradually the sound died away; all was still. They held a light to his face and saw that he was dead. But the empress put herself at the head of her fleet, invaded the land of gold and silver with her warriors and soon made the three kingdoms of Korea tributary to Japan.

These things happened, we are told, in the year 201 A. D., and the story of the valiant empress is as familiar to a Japanese as is that of Boadicea to ourselves.—Nineteenth Century.

The Slowness of Starvation.

During a prolonged fast the loss of weight is unusually rapid at first and decreases as the time goes on. Death ensues when a certain percentage of the loss has been reached, and this percentage varies according to the original weight. Fat animals may lose half their weight, thinner ones perhaps two-fifths. A man or woman of rather spare build weighing 143 pounds might, therefore, lose about 55 pounds before succumbing. Children die after a fast of from three to five days, during which they have lost a quarter of their weight. Healthy adults, however, have fasted 50 days when water has been taken. A German physician reports the case of a woman aged 47 years who fasted for 43 days, taking water freely. She lost 44 pounds out of 143 pounds and died from exhaustion.

An Idea of Mars.

"As for me," said M. Flammarion, speaking of the inhabitants of Mars in The National Magazine, "I rather envy them—a land where it is always beautiful, where there are neither tempests nor cyclones, where the years are twice as long as ours, where the kilogram is of 376 grams and where, therefore, men and women who here weigh 70 kilos there weigh only 26, and where, in a word, everything is lighter, more delicate and more refined."

And in another place he goes further, pointing out that if the Martians wished to communicate with us they would have doubtless made the effort many times in the past and probably long ago abandoned it, deciding it a hopeless business to attempt communication with a planet so stupid.

A Talkative Mute.

"She is so garrulous," said the first deaf mute, speaking of a friend who was similarly affected.

"Is that so?"

"Yes. Why, do you know, when no one is around for her to talk to, she makes her right hand talk to her left." —Baltimore American.

Going by Contraries.

"When a lady says 'No,' she means 'Yes,'" observed the philosopher of the boarding house, "and when her papa throws you down the front steps and swears at you until you have disappeared in the gloom there seems to be something contrary about him too."—Baltimore American.

A Real Need.

"Why, oh, why," wailed the woman, picking up the watch at her feet and holding it to her ear, "doesn't somebody invent a watch that you can drop without its stopping?"—New York Sun.

The Lazy, Stupid Shag.

"The shag is the laziest and most stupid form of life to be found anywhere on the globe. It is an aquatic fowl, with big, clumsy looking beak and with a form something like the dodo, now extinct," said a western man. "I have spent much time in watching this fowl, which is found in some of the shallow lakes, and the chief point of interest to me was the startling stupidity displayed. They generally squat on stumps or logs in the lake and watch for the smaller fish that play around the surface of the water. They are fairly clever in catching what they want, and they throw out their bill with considerable precision when they gig for game. But they never get to eat what they catch until they have fed at least one and maybe more than one member of another kind of water fowl.

"Whenever a shag begins to catch fish, a long legged, long necked water hen will take a place immediately behind him. When the shag lands a fish, the water hen simply reaches over and gets it. Without any show of resentment and without turning around, the shag will continue its watch for fish, and this is kept up until the water hen has finished a meal, and then, if no other enterprising member of the same tribe comes along, the shag is permitted to enjoy the product of its own sleepy efforts.

"I have on one occasion seen one shag feed as many as three water hens before eating a single fish. It is certainly a singular display of stupidity, and after having watched the performance a number of times I am convinced that the shag is actually too dull to even know that the water hen stands behind him to steal the fish out of his mouth."—New Orleans Times-Democrat.

English Robbers.

Speaking of the early Plantagenet period, Mr. Henry, in his "History of Great Britain," remarks that the number of robbers was so great that the judges could not prevail upon the juries to find any of them guilty.

Even under the most rigorous administration of Edward III a numerous band of them assailed the town of Boston in 1275 at the time of the fair, set it on fire and carried off an immense booty in money and goods. Their leader, one Robert Chamberlain, a gentleman of great power and wealth, was taken, tried and executed, but he could not be prevailed upon to discover any of his accomplices. As the other robbers of this period were very numerous, so some of them were very cruel, and the character which one of their chiefs were embroidered upon his coat in letters of silver might be applied to many others—"I am Captain Warner, commander of a troop of robbers, an enemy to God, without pity and without remorse." (Henry's "History of Great Britain," book 4, chapter 7.)—Gentleman's Magazine.

Benton.

When Thomas Hart Benton, the noted Missourian, wrote his famous work, "Thirty Years In the United States Senate," which every one praises and no one reads, his publishers, D. Appleton & Co., wrote to him asking how large a first edition should be printed. His reply was:

"Sir, they can ascertain from the last census how many persons there are in the United States who can read, sir." And that was the only suggestion he would ever condescend to make.

Benton was massive in body and muscular. No man in public life was his equal in physical strength, endurance and courage. In reference to a quarrel in the senate he once said: "I never quarrel, sir. I sometimes fight, sir, and when Benton fights, sir, there is always a funeral, sir."

Benton was sturdily devoted to the Union. He broke with many friends in consequence. He bore the cognomen "Old Bullion" because of his support of bimetallism.

Tarantulas Are Enemies.

Tarantulas are considered deadly foes to each other and are seldom found in company. When imprisoned together, there is a fight, one succumbs and is eaten by the victor. Nature has done a service in making the tarantula so hideous and formidable looking an object. Indeed, it is owing to this repulsiveness that no greater number of persons are stung. The sight of the great, hairy spider crawling near by will cause a cold, creeping sensation down the back of almost any one.

A Victim's Argument.

"You have no nerve at all," said the disgusted dentist to the patient who was making a frightful fuss.

"Now listen to that," returned the patient warmly—"blaming me for lack of nerve when you told me not five minutes ago that you'd extracted most of it and intended to kill what was left."—Chicago Post.

A Day of Rest.

How thankful we should be for one day's rest in seven. All we have to do on the Sabbath is—split the wood, light the fire, dress the children, feed the mule, read the paper, figure up how much we've lost during the past week and then go cheerfully to meeting.—Atlanta Constitution.

Sleeping Car Ethics.

It seems that there is an unwritten code of sleeping car ethics which has its fine distinctions. The International says: "The seasoned traveler enters the Pullman as if it were a room in a club with which he is familiar, but which he has not visited for some time. He stows away his belongings, according to his habit, puts on his traveling cap and a pair of light shoes or slippers and overgaiters, gets out his newspapers and book and, not forgetting his smoking outfit, is ready to be comfortable. Be it remembered that if slippers be donned they must always be accompanied by overgaiters, for without these latter the slippered foot is not permissible under the unwritten law of sleeping car travel."

When California Was Unknown.

In an old geography printed in 1815 appears the following: "California is a wild and almost unknown land. Throughout the year it is covered with dense fogs, as damp as unhealthful. In the interior are volcanoes and vast plains of shifting snows, which sometimes shoot columns to great heights. This would seem nearly incredible were it not for the well authenticated accounts of travelers."

LEGAL.

SHERIFF'S SALE.

BY VIRTUE OF AN EXECUTION, ISSUED out of the Superior Court of Los Angeles County, State of California, and to me directed and delivered, for a judgment rendered and entered in said Court, on the 27th day of July, 1901, in favor of J. S. Stotler and against Mineral Hill Gold Mining Company, a Corporation, I have levied on the following property, to wit:

One Six-Stamp Quartz Mill; Cyanide Plant; one 6400-foot Tramway, together with all the appurtenances and appliances thereof.

The "Mineral Hill" Mill-site; one Boarding House; one Bunk House; one Assay Office, and all improvements thereon.

The "Mineral Hill" Mining Claim.

The "Mineral Mound" Mining Claim.

The "Breakaway" Mining Claim; one Boarding House; one Bunk House; one Blacksmith Shop.

All situated in South Park Mining District, Inyo County, California.

Notice is hereby given that on SATURDAY, OCTOBER 12th, 1901, at 12 o'clock M. of of that day, in front of the Court House, in the County of Inyo, I will sell all the right, title and interest of said Mineral Hill Gold Mining Company, a Corporation, in and to the above described property, at public auction, for cash, lawful money of the United States in hand, to the highest and best bidder, to satisfy said execution and costs.

A. M GIVEN, Sheriff.

Dated September 18th, 1901.

Special Master's Sale.

IN THE CIRCUIT COURT OF THE UNITED STATES, IN AND FOR THE NINTH CIRCUIT, SOUTHERN DISTRICT OF CALIFORNIA.

Northern Division.

WELLS, FARGO & COMPANY, a corporation, Complainant,

vs.

RATCLIFF CONSOLIDATED GOLD MINES, LTD., a corporation, EDWIN C. NICHOLS, JOHN DOE, RICHARD ROE and JAMES DOE, Respondents.

UNDER AND BY VIRTUE OF A DECREE of foreclosure and sale rendered in the Circuit Court of the United States in and for the Ninth Circuit, Southern District of California, Northern Division, on the 20th day of August, 1901, in the above entitled cause, wherein complainant, Wells, Fargo & Company obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of Eighteen Thousand Four Hundred Nineteen and 3-100 Dollars ($18419.03), and the cross-complainant, Edwin C. Nichols obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of Eighty Thousand One Hundred Thirty-eight and 72-100 Dollars ($80,138.72), and the cross-complainant Vulcan Iron Works, impleaded under the name of John Doe, obtained judgment and decree of foreclosure and sale against Ratcliff Consolidated Gold Mines, Ltd., a corporation, for the sum of One Thousand Four Hundred Ninety-five and 63-100 Dollars ($1495.63),

I am commanded, as Special Master in Chancery, to sell in one parcel the following described property, to-wit;

The following named mining claims, mill-sites, water rights and locations, situate in the County of Inyo, in the Southern District of California, and known and designated as the "Joker," "Texas," "Grover Cleveland," "John G. Carlisle," "Sunrise," "Kentucky," "Never Give Up," "Treasure Vault," "Big Brown," "Joker Extension," "W. G. Extension" and "Little Till" mining claims, and the "Cleveland" mill site and certain water rights known as the "sale's water right," "Wingfield and Harrison water right," "Dover water right," "James Wingfield water right," "McNulty water right," which said mining claims, mill site and water rights are more particularly described in the notices of location thereof filed in the office of the County Recorder of said County of Inyo, including all buildings and improvements thereon; and more particularly, One (1) 20 stamp mill and building connected therewith and appurtenant thereto, and all machinery and appliances contained therein; One (1) air compressor plant and the building appurtenant thereto and all receivers, pipe lines, power, tools, machines and machinery to operate the same or appurtenant thereto; One (1) Cyanide plant and all tanks, pipe lines, pumps, zinc boxes, machines and machinery and appliances to operate the same and all the appurtenances to said plant; One (1) Aerial Tramway and all cables, buckets, structures, machines and machinery and all appurtenances to and of said tramway; all tools and implements of all kinds used or for use in and about said property; all pipe lines, appliances and appurtenances from said water rights; and ware house No. 1 and all stores and supplies therein; ware house No. 2 and all stores and supplies therein; Superintendent's residence and office and all furniture, fixtures and supplies therein contained; Assay office and laboratory building and all furniture and fixtures, tools, appliances, appurtenances and supplies therein; mill boarding house and all furniture, fixtures, appurtenances and supplies contained therein; mine boarding house and all furniture, fixtures, appurtenances and supplies contained therein; Mill foreman's dwelling house and bunk house and all furniture, appurtenances and contents thereof. All right in powder, fuse and caps contained in the powder magazine. All live stock, vehicles, harness, stables and equipments; all wood, cables and tents; all blacksmith shop buildings, tools and appurtenances connected therewith and appurtenant thereto, together with all and singular the hereditaments and appurtenances thereto belonging or in any wise appertaining

PUBLIC NOTICE is hereby given that on

Wednesday, the 9th day of October, 1901,

at the hour of 12:00 o'clock noon of said day, at the front door of the Court House of the County of Inyo, State of California, in the town of Independence, County of Inyo, State of California, I will, in obedience to said decree of foreclosure and order of sale, sell in one parcel the above described property to the highest bidder for cash, gold coin of the United States, for the satisfaction of said indebtedness.

Dated, this 22d day of August, 1901.

HENRY B. STEWART, Special Master in Chancery.

JOHN J. MCLEAN,
Observer.

*Record beginning March 6th 1898.

Louis Joseph, the Big Pine merchant, is in town,

Lester Shepherd left for Bakersfield on Monday's stage.

Records of realty transfers "continued til our next."

John Jenkins and wife, of Keeler, are registered among new arrivals.

Mr. and Mrs. White Smith, of Bishop, were among visitors of the present week.

O. I. Mairs is in San Francisco as a delegate to the Masonic Grand Lodge of California.

C. H. Cram, mining operator in Old Coso, loaded his team with supplies at Independence.

Messrs. Reynolds & Bastian are baling hay at the rate of $2.25 per ton. Address them at Citrus.

Dr. Doty, occulist, is in town, located at the office building next south of the Court House.

Lost—a bunch of keys. Finder will receive suitable reward upon return of same to Independence Hotel.

Mrs Jas. A. McKenzie accompanies her husband at Independence this week, during the Supervisors' session.

I. H. Mulholland and family and Charley Mulholland got here yesterday, after an absence of nearly a year.

Wm. T. Grant, mountaineer and miner of ye olden time dropped into Independence yesterday from the Sierra summits.

Mrs. Mary Mulholland will arrive on to-morrow's stage from a visit of several months with her daughter, Mrs. Mack, at Los Angeles.

Edward Walker, of Olancha, arrived from that point yesterday. He intimates that the inhabitants of that prospective Oilopolis are all serene as usual.

Mrs. S. A. Densmore has gone to Southern California to spend the winter. Her health has been poor for same time and she hopes to be benefitted by the change.

Ore shipments from the Green Monster mine, Willis & Roeper lesses, will continue in car load lots.. Returns from the first lot were satisfactory enough to warrant continued operations.

The Sheriff's office will receive the completed assessment roll next week, when the usual cards of notification will be prepared by the Tax Collector and forwarded to everybody concerned.

Wm. Jenkins, who has been developing and working the Guadalupe mine in Reveridge District, is on a business visit to Independence. Some mining intelligence gleaned from him necessarily goes over to next issue.

Forest Supervisor Price has received an appointment as Deputy Fish and Game Commissioner. Under California law this gives him ample power to make arrests for violations of the game laws—a prerogative that he is very like to exercise.

The well-known Symmes orchard this year has a grand yield of the finest Winter apples that have shown up in this section for a long time. There are of the best varieties and absolutely from fruit worms or disease of any kind. See advertisement by Frank Lawrence.

A lawsuit in Carson, reported by the News, began by John P. Jones against the Evans Williams estate, brings to light the fact that Senator Jones paid the freight at Cerro Gordo. In the purchase and revival of the Union mines, from September, 1889, to 1893, it cost him $28,645.65. The Nevada Senator's experience in the Stoddard mine in Idaho, with Sam Jones and Evan Williams as partners, was gained at an outlay of $30,318.50.

At noon, Wednesday last, all the property of the Ratcliff Gold Mines was sold, through chancery or bankrupt proceedings, to satisfy three several judgments aggregating about $115,000. The sale was conducted by Henry B. Stewart, Special Master in Chancery, under foreclosure decree by the United States Circuit Court. Judge Jas. A. Gibson of Los Angeles, presumably representing the principal judgment creditors. E. C. Nichols and Wells, Fargo & Co., bid in the property at $96,500. All this is preliminary to acquirement of the mines and plant by a new company, which we believe is being organized by Mr. W. W. Godsmark, a mining operator who represents Mr. Nichols and other capitalists of Michigan. What the future has in store for this really great property remains to be seen.

BOARD OF SUPERVISORS.

The Board of Supervisors convened last Monday and have transacted the following business:

Present: Supervisors T. C. Boland, J. A. McKenzie and Chairman James Jones.

Minutes of Tuesday, September 17th were read and approved.

The following bills were examined and allowed on various funds as follows:

T. C. Harkness	$ 6 60
Flour Johnnie	3 00
D. A. Bradshaw	3 00
Henry Levy	85 70
J. E. Laird	12 00
A. V. Davidso	26 26
Indep. Water Co	13 00
A. W. Eibeshutz	57 05
Ben H. Yandell	4 50
L. Wood	50
W. A. Chalfant	132 52
A. M. Given	16 76
Inyo Mer. Co.	19 50
John Symmes	9 00
John Keegan	7 50
Wm. D. Dehy	26 65
O. I. Mairs	11 00
A V Davidson	22 55
A Carlisle & Co	92 25
C W Robinson	8 50
Ed Schober	107 35
T H Woodworth	16 50
Nathan Rhine	9 50
J E Meroney	21 30
Mrs M Lewis	5 60
R T Boyd	6 00
Will L Smith	1 00
Inyo Mer Co	13 95
Thos Hughes	2 50
W P Yaney	3 10
Geo Hall	10 00
J D Blair	130 00
Mrs M Lewis	162 50
L Wood	1 00
Nathan Rhine	10 25
Thos Boland	48 90

The bill of Jesus Coronado for the care of an indigent person for the sum of $9 was rejected.

The clerk was instructed to order one copy of Hennings County Government.

Tuesday, Oct. 8th.

Present: Supervisors Boland, Cooley, McKenzie, Yaney and chairman Jones. Minutes of previous day meeting was read and approved.

The reports of Justices T. H. Woodworth and A. V. Davidson were read and approved.

The report of the matron of the hospital was examined and approved.

The bill of J. D. Lewis for the burial of an indigent person for the sum of $15 was rejected.

In accordance with a request of the California Miners' Association asking that the Board appoint five delegates to the convention of said Association to be held in San Francisco on the 21st of October, the following persons were appointed: Tracy N. Stebbins, J. J. Gunn, A. M. Squire, W. H. Uhlmeyer and A. W. Eibeshutz.

The new County Plats were examined by the board.

A proposition to refund the County Bonds at a lower rate of interest was brought before the Board and discussed.

Wednesday.

T. C. Boland, N. J. Cooley and W. P. Yaney, committee appointed to visit the County Hospital, presented the following report:

"We found sixteen patients, 15 male and one female. The wards are kept in a neat and comfortable condition and the inmates are well cared for."

Mrs. Mary Ann Green appeared before the board and gave notice that she desired to be released from Ed. Elder's liquor bond. The clerk was instructed to notify Elder to file an additional bond.

J. D. Lewis was authorized to make certain repairs at the Court House, for the sum of $37.

Thursday.

The new county plats were examined and rejected, on account of not having been finished to the satisfaction of the Board.

The action rejecting the county plats was reconsidered. County Surveyor appeared and stated that he would make changes and corrections required by the Board by Saturday evening, and he was given until said time in which to complete the same.

In the matter of painting the court house, bids on file were opened and read as follows:

Lewis & Naylor	$480 00
Kerzell & Gerchell	486 00
J. N. Reynolds	246 70

Contract awarded to lowest bidder, upon filing proper bond.

Adjourned until this morning.

Thos. D. Calkins is meeting with gratifying success in his work of preparing a general illustrated and written review of Inyo county for the Pacific Coast Miner. From here he will on Monday next go to the lower part of the county and later on return to the Big Pine and Bishop section. Mr. Calkins has secured for illustrations of the number some magnificent views of Independence, the surrounding valley and both mountain ranges, showing a distance of thirty miles along their rugged crests. In addition to these a great many pictures of local personages, etc., will add interest to the review and perhaps lead people in some portions of this State and other places to become at least a trifle more familiar with Inyo county.

Millinery.

Ladies are invited to call and see the fine line of trimmed millinery, Paris pattern hats, at the residence of Mrs. W. T. Bunney, Independence, Oct. 19 to Oct. 31. Will also have a line of samples of the Chas. Stevens goods, for which orders will be taken.

MRS. H. H. MCDONALD.

If any one doubts the richness of our mines should read the footings of the smelter returns for the past 30 days. Over $100,000 was received from the smelter for the past month. The amount would have been $175,000 if the smelter could have handled the ore.—Tonopah Bonanza.

Belated, But Got Here.

W. H. Doddridge, of San Diego, and S. Breckenridge, of Santa Paula, are registered in one of our principal hotels. They came up on the last train from Keeler and perhaps the conductor was somewhat surprised when he failed to land two passengers at Citrus. Mr. Doddridge had been here before and of course knew where he wanted to get. So informing his fellow passenger, they dropped off at—the Reward. Appearances, however, didn't exactly accord with recollection, and it seemed to him as though the station buildings must have met with a fire. After trodding ties for five miles, coming northward, they found the familiar station that they really wanted. On finally reaching the county seat, and being invited to take something, Mr. Doddridge declined on the ground that he had already taken a walk. He is the United States Deputy Revenue Collector for this Distrfct. Mr. Breckeridge is the gentleman who will to-morrow bid in, at the Sheriff's sale, the Mineral Hill mines and mill in Sonth Park District.

Dr. W. E. Doty, the eye specialist, will stop at different points down the valley, and expects to return here next spring. His work here has won warm commendations from his patients. We thoroughly believe that Dr. Doty understands his profession, and that those who need attention in his line will save themselves future expense and trouble by consulting him. This is not a paid ad. but The Register's voluntary opinion.—Bishop Register.

FROM A FIRE OF APPLE WOOD.

Through wind swept sheets of driven rain
The ancient orchard shows forlorn,
Like brave old soldiery half slain,
With gaps to tell the losses borne,

And fragments of the fallen trees
Burn on the hearth before me bright;
The fire their captive spirit frees;
Musing, I watch it take its flight.

How swift the flames of gold and blue
Up from the glowing logs aspire!
There yellow bird and bluebird flew
And oriole, each with wings of fire.

Now in the hearth light, on the trees,
Stirs something they and I have heard.
Ah, is it not the summer breeze
Come back to us with sun and bird?

Poor summers, born again—to die!
Quickly as they have come they go.
See, where the ashes smoldering lie,
The orchard floor is white with snow.

—M. A. DeWolfe Howe in Atlantic.

CARDLAND.

The Games That Were Played In the Eighteenth Century.

After the advent of the house of Hanover the favorite games at court were "quadrille," an improvement of "ombre," and "commerce." The gains and losses of the kings and queens were, as a rule, restricted to 100 guineas, but on Twelfth Night it was customary for thousands to change hands. On one occasion Lady Cowper, a lady in waiting, refused for the sake of her children to take part in the game, as none sat down to the table with less than £200.

About the year 1740 a rage for "whisk," or whist, set in, but at first it was considered too wise a game for ladies to join in. Hume, the historian, never went to bed without his whist, and even the great Johnson regretted that he had not learned to play cards. In 1742 "Horry" Walpole finds it absolutely necessary to learn "whisk," "having waited in vain for its being left off." We find him in another letter threatening to build an altar to "Pam" to commemorate the escape of his charming Duchess of Grafton, who, it appears, had been playing cards in Rome when she ought to have been at a cardinal's reception, where the floor fell in and all the monsignores were precipitated into the cellar!

Cards were so very much in evidence in his time that even invitations were frequently issued and notes written upon the backs of playing cards, which on that account were usually plain, without any design. The chevalier's famous order to retreat at Culloden was written on the back of the nine of hearts.

A fresh attempt was made in 1739 to remedy the state of gambling in England by passing an act which provided that "any person keeping a house or other place to game in forfeits £200, half to the prosecutor and half to the poor of the parish," whereupon two ladies of title, Mordington and Cassells, who keep open houses for gambling, claimed their privilege of peerage in order to intimidate the peace officers from doing their duty and suppressing the public gaming houses by them.—Longman's Magazine.

TO LAKE TAHOE.

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains o Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leav promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the mo ning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,100 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug1-tf

"For eight years I suffered with inflammation of the womb and bladder, profuse and painful menstruation, and at times it seemed as though I should die. I doctored most of the time, but seemed to fail every time. A short time ago I began to take LYDIA E. PINKHAM'S VEGETABLE COMPOUND, and thanks to it, to-day I am a well woman."—MRS. L. L. TOWNE, Littleton, N. H.

Mrs. Towne, like many other suffering women, was a victim of theory. Her physician did his best. He had battled with her case steadily and could do no more. If Mrs. Towne had asked advice of Mrs. Pinkham seven or eight years earlier, she would have had just so many more years of happiness and comfort and health.

It is not reasonable to expect that any living person can advise for female troubles as safely as Mrs. Pinkham, whose experience is without parallel in the world. This should appeal to the common sense of any woman, especially when nearly every newspaper in this country is printing in almost every issue the letter of some woman who has been cured by Mrs. Pinkham when doctors had given her up. Don't wait for the doctor to give you up to the surgical knife, or tell you that you cannot live. Get your advice where you are certain to have the benefit of the widest experience. Write to Mrs. Pinkham, at Lynn, Mass., and rely on her. No charge is made for advice.

There is no female complaint, however simple or however serious, that **Lydia E. Pinkham's Vegetable Compound** will not help; of this there is monumental evidence in its thirty years' record of constant success. When you ask for this medicine at the druggist's, be sure you get what you ask for and nothing else. The medicine that cures is

Lydia E. Pinkham's Vegetable Compound.

$5000 REWARD We have deposited with the National City Bank, of Lynn, $5,000, which will be paid to any person who can find that the above testimonial letter is not genuine, or was published before obtaining the writer's special permission. LYDIA E. PINKHAM MEDICINE CO.

ANECDOTES OF JOACHIM.

His Kindness as a Teacher and His Modesty as a Boy.

"Talent will out," as the schoolboy says, and Joachim asserted his musical gifts almost as a baby. When only 5 years old, he was asked by his mother what he would like as a toy to play with. They were at the time wandering through a German village where a fair was being held. His answer was, "A violin," and nothing would make him alter his mind, so, of course, it was bought for him. Unfortunately, this violin, a very childish affair, is no more in existence, though a picture of it still remains. Joseph's eldest brother, Friedrich Joachim, who was 20 years his senior, had the little boy's portrait painted when the latter was 7 years old, immediately after his first appearance in public at Budapest.

It represents the juvenile fiddler with his first violin under his arm. This portrait is not only interesting as the first which exists of the great violinist, but also as a painting, for it is the work of Marastony, renowned in Hungary as the first teacher of Munkaczy. The portrait is in the possession of Miss Eugenie Joachim, who inherited it from her father. Miss Joachim is the niece of Dr. Joachim, and he is very proud of her. He admires her musical talent and is delighted to find her the first teacher of German songs in London today.

When a boy of 12 years old, the serious bent showed itself in the violinist's character. Nothing gave him more pleasure than to have good books read aloud to him. He loved Schiller's ballads, "Der Taucher," "Die Burgschaft," "Das Lied von der Glocke," etc., and out of the last named the passage, "Wenn sich das strenge mit dem milden paart da gibt es einen guten klang" is strangely applicable to Joachim's own character. As a teacher he is strict, yet always ready to help his pupils in every possible way. Consequently he is loved and adored by them all. This was shown by the tremendous assembly of old students who gathered from all parts of the world on the occasion of his 50 years jubilee as a player, which occurred a couple of years ago at Berlin. A young lady once sang to Dr. Joachim terribly out of tune and rhythm. He corrected her in his usual charming and considerate manner, and she forthwith exclaimed:

"Oh, Dr. Joachim, I will buy a metronome and study with it." He smiled, but answered kindly:

"My dear young lady, you need not go to any expense about it, for rhythm and time in the art of music have to come from the heart, not from a machine."

When in Leipzig, as a boy of 14, he was living in Mendelssohn's house and often used to visit Schumann. One evening, when the three musicians were sitting in the garden, the stars were shining brightly. Young Joachim was next to Schumann, who, as a rule, was very solemn. Suddenly Schumann looked at Joachim, gazing at the stars in raptures, and said:

"I wonder whether there are people living up there, and whether they know that on this earth there is a little boy who plays the violin very beautifully and gives many of us great pleasure. Are they shining down in gratitude on that little boy, I wonder?"

Joachim, modest from his earliest childhood as he is now, looked delighted, but only murmured:

"Oh, how I should like to give them pleasure up there too!"

Hardly.

George Moore, the novelist, once had a play accepted at the Odeon in Paris. The news of his good fortune came to him in London, and he at once repaired to the French capital and in early morning presented himself at the manager's office. The manager was engaged on the stage rehearsing an adaptation of "Othello," and the doorkeeper failed to recognize the gifted author of "Esther Waters" and "The Celibates" and simply asked him his business with the manager.

"Tell him," said Mr. Moore, in his best Erse-French, "I am an English author whose play he has accepted."

The doorkeeper went to the manager and said, "There is an English gentleman at the door who says that you are to produce his play and wants to see you."

"Bien," said the manager. "Show him in. M. Shakespeare without doubt."

Millions In It.

"I say, I've got a scheme," said the inventive genius, "that will make me independently rich if I succeed in perfecting it."

"What is it?" asked his friend.

"It has been estimated," continued the i. g., "that one ordinary female house fly will lay 20,000 eggs in a season."

"Yes," answered the friend, "but what's the scheme?"

"I propose," replied the genius, "to graft the house fly on the barnyard hen."

HER CHOICE.

If fate should bid us choose a road
'Twixt easy path and by-way,
When, bowed 'neath life's relentless load,
We toil along the highway;
Should choice 'twixt path of promise gay
And steeper climb be given,
Oh, I would choose the crooked way
That you might tread the even!

If life were as a garden green,
Where roses bloomed unbidden,
With many a stealthy thorn unseen,
Beneath the blossoms hidden;
If, lingering ere the close of day,
We'd make our choice of posies,
Oh, I would pluck the thorns away
That you might wear the roses!

And life is changed with changeful lot
Of mingled joy and grieving;
We learn that love endureth not
Since hope is all deceiving.
But be our future what it may,
Mid all the work or leisure,
I still will smooth the cares away,
While you enjoy the pleasure!
—Kathleen Haydn Green in London Mail.

HE WAS CALLED "OLD HORSE."

A Quaint Character of the War Between the States.

"Old Horse" was the nickname of a quaint character of the civil war, a robust, self reliant six footer from a farm in central Ohio, who joined Company C in April, 1861, and remained with it to the end. He was responsible for his own nickname, says the Chicago Inter Ocean. In Company C's first skirmish the boys were greatly excited, but they blundered by squads into a pretty square fight. In relating his experience afterward each man was inclined to take at least a charitable view of his conduct, all except our hero. He said bluntly:

"This old horse was scared. Why, boys, I had no more sense than Tom Lofland's bull. That bull, you know, broke a leg trying to jump a staked and double ridered fence when there was a gate open not three yards away.

"When the rebs began to shoot, I was as crazy as a wagon horse that had walked into a bumblebees' nest. I didn't care what broke, so I got away. But after a whirl or two round an old tree I pulled straight in the breeching, by gum, and came down to work with a tight rein on myself. That's the way this old horse is going to drive hereafter."

After that he was always called Old Horse.

On the first day of the battle at Stone River Old Horse was with a part of Company C that was carried away by a stampede through the lines of another Federal division. When the other part of the company, which had stood fast in spite of the stampede, came up with the flag, Old Horse said:

"I was like a thief caught in a smokehouse with a ham under each arm. I have no remarks to make, no excuses to offer. When the stampede struck me, I thought the world had come to an end, and I ran like a steer. I had lots of company, and the longer I ran the more I felt like running. But I've had all the running I want for one day, and I'm ready to do my share of the fighting."

And he did it.

Almost at the close of the fierce battle of that day and when the brigade was in hot pursuit of the retreating enemy they came up suddenly on a battery that pounded them with shot and shell at short range. They dropped down in a muddy cornfield, knowing by the groans of the wounded that in the gathering darkness the Confederate gunners were getting their range.

Most of the men were greatly excited. Old Horse, however, seemed to be interested in the shooting. He called attention to the fact that the gunners were throwing fuse shells so as to have them drop right down in the Union ranks, and he declared that any man who said you couldn't see a cannon ball in the air was a liar.

Just then a shell with a short fuse came down between Old Horse's shoulder and that of the man next to him. On the instant Old Horse caught up a handful of mud, clapped it on the sputtering fuse and said quietly, "Boys, ten to one she don't bust!" And she didn't.

If this had occurred overseas and long ago—in Wellington's day, for example—Old Horse might have been a hero for school readers. As it was, he was simply one of many brave, resourceful, frank, droll Americans who did their duty in hard times.

Sisterly Sympathy.

Gwendolen—How late you are, dear! What have you been doing all the afternoon?

Maud—Helping the Grigsbys at their "at home" and making myself generally fascinating and agreeable.

Gwendolen—Poor thing! What a hard day's work for you!—Punch.

A Close Call.

"Don't you talk to your husband over the phone?"

"Never. When I have anything of importance to say to my husband, I want to get near him."—Cleveland Plain Dealer.

Men are a good deal like horses; it is always the "old reliable family horse" that knocks everything to smash and runs away.—Atchison Globe.

OFF TO THE COUNTRY.

Some Little Ones Who Really Preferred the City.

From stifling city streets to green fields and whispering woods is a change one cannot imagine other than welcome, especially to a child. Indeed, it is a great thing for the happy hundreds of poor children who are now enabled every season to enjoy the blessed country week, or even a country day.

Yet sometimes the hostesses of these city children, at the very time they gather from their careless chatter how much is lacking in their lives, learn also of unexpected compensations. There is so much for the poor in the daily drama of the streets, the intimate neighborliness of the crowded tenement!

"It's so awful quiet here," wailed one little girl, on a rainy day, "and I can't bear them frogs at night! Nobody told me the country was going to be sad."

Another child, sickly and pining from bad food and worse air, was yet so homesick in a charming seaside cottage that it had been almost decided to send her home, when the mistress bethought her to take the child into her own room at night. Even then she wanted her cot pulled so close to the lady's bed that the two touched, but that concession permitted, she became contented, and soon flourished like a flower.

She admitted that she "just couldn't stand the lonesomeness" of being by herself at night, although she was neither frightened nor nervous. At home, she explained, there were three beds in the room with three children apiece in two of them, and four in the third—and she missed the company.

Still another child, picnicking for the day in the wild grounds of a beautiful villa, fell into confidential chat with her hostess before leaving. She had never seen so lovely a place, and she had had a splendid time.

"But," she asked, wonderingly, "do you really like to live here all summer? Just trees—and trees—and trees—and no folks?"

"I don't like fields without any paths in 'em and fences without any gates," sniffed a little boy with a scraped knee, disgustedly; but he was happily unique in his opinion, "I say, gimme parks!"

Beautiful our parks may be and loved deservedly of the children; but it is hard not to feel that a child has lost one of its natural rights that does not at some time have the "real country" to run wild in, grow brown in, and learn to love.—Youth's Companion.

HOW FLIES ARE MULTIPLIED.

Single Season Means Millions of Descendants to One Family.

Flies multiply at a prodigious rate. Given a temperature sufficiently high to hatch the eggs, their numbers are only limited by the amount of food available for them.

Linnaeus is credited with the saying that three meat flies, by reason of their rapid multiplication, would consume a dead horse quicker than would a lion, and the fact that certain diptera having some outward resemblance to the honey bee lay their eggs in the dead carcasses of animals probably led Samson and Virgil to make erroneous statements with regard to the genesis of honey and the manufacture of bees. The breeding of "gentles" for ground bait is an industry the practicers of which could probably give much information as to the nicety of choice exercised by flies in selecting material for feeding and egg-laying.

According to Packard, the house fly female lays about 120 eggs, and the cycle of changes from egg to fly is completed in less than three weeks. It seems probable that a female fly might have some 25,000,000 descendants in the course of a hot summer. Other varieties of flies multiply, I believe, still more rapidly.

As flies multiply upon and in organic refuse of every kind, it is obvious that the sooner such refuse is placed where it cannot serve for the feeding and hatching of flies the more likely is the plague of flies to be lessened. The most commonly available method for the bestowal of organic refuse is burial. The egg-laying of flies in dead carcasses commences at the very instant of death, or even before death in the case of enfeebled animals.—The Lancet.

A Diplomat's Tribute to Lincoln.

Like a beacon burning through all the nights is the memory of Abraham Lincoln's personality.

"Of all the great men I have known," says Sir Edward Malet, the English diplomatist, in his just published volume of reminiscences, "President Lincoln is one who has left upon me the impression of a sterling son of God. Straightforward, unflinching, not loving the work he had to do, but facing it with a bold and true heart; mild whenever he had a chance; stern as iron when the public weal required it, following a bee-line to the goal which duty set before him. I can still feel the grip of his massive hand and the searching look of his kindly eye."

Reasonable Grounds for Divorce.

The following allegation in a bill for divorce against a wife was held by the Supreme Court of Washington not to state any legal ground for divorce: "She was quarrelsome, vicious in disposition, murderous in threats against the plaintiff and his parents, hysterical and ungovernable in temper, crazy in her actions, and by her causeless and unprovoked boisterousness, screaming, hallooing and other wild conduct, by day and night, an intolerable nuisance to all her neighbors."

Britain's Symbol of Civilization.

Foreigners sneer at the Englishman who dresses for dinner on board a steamer or in a hotel; yet they might as well laugh at the Briton's respect for and pride in the Union Jack, says a writer in an English magazine. The clean white shirt at 8 o'clock is equally a sign and symbol of Anglo-Saxon civilization.

Ingenious Convicts.

With a piece of string and a little sand and grease some Hindoo convicts recently sawed through an iron bar two inches in diameter in five hours and escaped from jail.

You are lucky if you can pick two good cantaloupes in succession.

A KNOT AND A STRING.

An Absentminded Man and an Equally Absentminded Woman.

They were seated very near one another on a sofa and had got past the stage of small talk, seeming content to beam at each other, saying no word. The weather was very warm indeed, and the man reached in his pocket for his handkerchief in order to wipe his brow.

As he pulled the handkerchief out the girl noticed that it had a large knot tied in one of its corners.

"You absentminded man!" she said suddenly. "What is the meaning of that knot in your handkerchief?"

He flushed hotly. "I don't think I ought to tell you," said he. "It might be fatal."

"You foolish thing, Charlie! I don't care if you did forget to bring me that picture you promised me last time you were here. Confess, sir. 'Twere better for you."

"No," he replied. "It wasn't for the picture. I forgot to tie the knot in for that. It was something else."

"I insist on knowing," said she. "Was it something about that Miss—oh, what's her name?"

"You know Lucile Edgerton's name very well. It was not with reference to Miss Edgerton nor to Miss Heightley either."

"Well, what was it, then, stupid? You probably have forgotten what your memory knot is about. Now, haven't you?"

"No, I haven't."

"Well?"

"Confound it, Gladys, I don't want to tell."

"Charles Henry Guelph, proceed."

"Well, well— Oh, darn it, it was to remind me to propose to you tonight!"

"And you forgot?" she said, with a twinkle in her eyes and a suspicion of a dimple.

"No-o-o," he faltered. "Oh, no." Just then he caught sight of a bit of tiny ribbon on her first finger—delicate blue ribbon. "What is that ribbon on your finger?" said he, with no special sequence.

"Stupid, that was to remind me to accept you, dear."

The only sequel to this is the explanation that the man had not brought home a bundle of important papers from the office and that the girl had forgotten to order the fruit for breakfast; but, still, these were mere details.—New York Commercial Advertiser.

CURED BY PERUNA

Of Nervous Prostration.

J. A. SIMPSON,
[Sec'y B'd of Education, San Francisco.]

Hon. J. A. Simpson, Secretary of the Board of Education of San Francisco, Cal., writes:

"I have found Peruna an ideal tonic. Some months ago I suffered with neurasthenia (systemic catarrh), caused by too close application to office work. My system seemed worn out and I felt far from well. I found Peruna benefited me very much. It built up the entire system and made me feel like a new man. I believe it is well worthy the high praise bestowed upon it."—J. A. Simpson.

"Summer Catarrh," a book written by Dr. Hartman, President of The Hartman Sanitarium, on the subject of the nervous disturbances peculiar to summer, sent free to any address by The Peruna Medicine Co., Columbus, O.

Adams' Sarsaparilla Pills cure sick headaches, constipation, biliousness, dyspepsia, purify the blood. 10c, 25c. Druggists.

Stops the Cough and Works Off the Cold.
Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

A man doesn't know how many people he is acquainted with until he walks up the street with a black eye.—Atchison Globe.

Won a Pass.

An excellent story is told of a certain prominent railway director who is equally renowned for his ability to make or take a joke, says the London Standard. An employee whose home is in the country applied to him for a pass to visit his family.

"You are in the employ of the company?" inquired the gentleman alluded to.

"Yes."

"You receive your pay regularly?"

"Yes."

"Well, now, supposing you were working for a farmer instead of the company, would you expect your employer to take out his horses every Saturday night and carry you home?"

This seemed a poser, but it wasn't.

"No," said the man promptly. "I would not expect that, but if the farmer had his horses out and was going my way I should call him a very mean fellow if he would not let me ride."

The employee came out three minutes after with a pass good for 12 months.

Difficult Digestion

That is dyspepsia.

It makes life miserable.

Its sufferers eat not because they *want to*, —but simply because they *must*.

They know they are irritable and fretful; but they cannot be otherwise.

They complain of a bad taste in the mouth, a tenderness at the pit of the stomach, an uneasy feeling of puffy fulness, headache, heartburn and what not.

The effectual remedy, proved by permanent cures of thousands of severe cases, is

Hood's Sarsaparilla

HOOD'S PILLS are the best cathartic.

The Best Prescription for Malaria Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

A DOUBTING THOMAS.

Had His Falling Hair Stopped, and Dandruff Cured, Without Faith.

H. B. Fletcher, Butte, Mont., Oct. 20, 1899, says: "Like many other people, I have been troubled for years with dandruff, and within the last few months my hair came out so badly that I was compelled to have what I had left clipped very close. A friend recommended Newbro's Herpicide. I confess that I doubted his story; but I gave Herpicide a trial; now my hair is as thick as ever, and entirely free from dandruff." "Destroy the cause, you remove the effect." At druggists, $1.00. Herpicide is a delightful hair dressing for regular use.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for FREE $2 trial bottle and treatise. Dr. R. H. Kline, Ltd., 931 Arch St., Philadelphia, Pa.

Mem. for Good Health.

Today drink some "Castlewood" Bourbon or Rye Whisky. Highest grade Kentucky goods. Cartan, McCarthy & Co., sole distributers, San Francisco.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

YOU KNOW WHAT YOU ARE TAKING when you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

I do not believe Piso's Cure for Consumption has an equal for coughs and colds.—JOHN F. BOYER, Trinity Springs, Ind., Feb 15, 1900.

The Trinket Worm.

Among the novelties in nature is a small worm, called the trinket worm, characterized by this peculiarity, which gives rise to its name:

On the leaves of a wild vine, called the trinket vine, is found a small worm, which looks at first like a small piece of white thread and is almost motionless. If the leaf be taken off and placed under a glass case in the room, this little thread will, in the short space of 24 hours, grow into a good sized caterpillar, beautifully colored and studded with golden spots.

When matured, it will climb up the glass, fasten one of its extremities to the glass roof, and, leaving the other hanging in the air, will curl itself into a variety of forms, presenting exquisite patterns for gold trinkets, such as earrings, brooches and clasps, changing from time to time in great variety, whence its name is derived.

Three a Day.

Tourist In Ireland (to rural postman)—How many mails have you here in the day?

"Three—breakfast, dinner and tay."—London Fun.

Misgivings.

"That was a very lucid document you prepared," said the friend.

"Yes," answered the statesman dubiously. "I made it so lucid that I am afraid the public will fail to regard it as able and profound."—Washington Star.

Loyalty to His Employer.

That young man who consented to have a portion of his blood let out to save his employer, set a remarkable example of heroism. The incident shows what power there is in good blood. There is only one natural way to get good blood, and that is from the stomach. If the stomach needs assistance, try Hostetter's Stomach Bitters. This wonderful medicine cures dyspepsia, indigestion, constipation, and makes rich red blood.

To Be Envied.—"He seems to be a well-balanced young man." "Oh, yes; his bank account is beyond dispute."

TO CURE A COLD IN ONE DAY
Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c

For pimples, sallow complexion, impure blood and poor digestion use Adams' Sarsaparilla Pills. They improve complexion and cure constipation. 10c, 25c. Druggists.

DEAFNESS CANNOT BE CURED
by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and it when is entirely closed deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that can not be cured by Hall's Catarrh Cure. Send for circulars, free.

F. J. CHENEY & CO., Toledo, O.
Sold by Druggists, 75c.

BEST FOR THE BOWELS

Cascarets

CANDY CATHARTIC

10¢ 25¢ 50¢
ALL DRUGGISTS.

CANDY CATHARTIC — Cascarets taste good. Eat them like candy. They remove any bad taste in the mouth, leaving the breath sweet and perfumed. It is a pleasure to take them, and they are liked especially by children.

SWEETEN THE STOMACH — sweeten the stomach by cleansing the mouth, throat and food channel. That means, they stop undigested food from souring in the stomach, prevent gas forming in the bowels, and kill disease germs of any kind that breed and feed in the entire system.

PURELY VEGETABLE — are purely vegetable and contain no mercurial or other mineral poison. They consist of the latest discoveries in medicine, and form a combination of remedies unequaled to make the blood pure and rich and make clean skin and beautiful complexion.

LIVER TONIC — tone the stomach and bowels and stir up the lazy liver. They do not merely soften the stools and cause their discharge, but strengthen the bowels and put them into lively, healthy condition, making their action natural.

MILD BUT SURE — never grip nor gripe. They act quietly, positively and never cause any kind of uncomfortable feeling. Take a regularly they make the liver act regularly and naturally as it should. They keep the sewerage of the body properly moving and keep the system clean.

BOON FOR MOTHERS — increase the flow of milk in nursing mothers. If the mother eats a tablet, it makes her milk mildly purgative and has a mild but certain effect on the baby. In this way they are the only safe laxative for the nursing infant.

CURE CONSTIPATION — taken patiently, persistently, will cure any form of constipation, no matter how old or how often other remedies have failed. They are absolutely guaranteed to cure any case, or purchase money will be cheerfully refunded.

NEVER SOLD IN BULK — cost 10c, 25c, 50c a box. Samples sent free for the asking. We publish no testimonials but sell Cascarets on their merit under absolute guarantee to cure. Buy and try a box to-day, or write us for free samples and booklet.

Address STERLING REMEDY CO., CHICAGO or NEW YORK. 479

$100 REWARD will be paid to any reader of this paper who will report to us any attempt of substitution, or sale of "something just as good" when Cascarets are called for, and furnish evidence upon which we can convict. All correspondence confidential.

THE WIND IN THE CHIMNEY.

Over the chimney the night wind sang
And chanted a melody no one knew;
And the woman stopped, as her babe she tossed,
And thought of the one she had long since lost,
And said, as her teardrops back she forced,
"I hate the wind in the chimney."

Over the chimney the night wind sang
And chanted a melody on one knew;
And the children said as they closer drew,
"'Tis some witch that is cleaving the black night through—
And we fear the wind in the chimney."

Over the chimney the night wind sang
And chanted a melody no one knew;
And the man, as he sat on his hearth below,
Said to himself, "It will surely snow,
And fuel is dear and wages low,
And I'll stop the leak in the chimney."

Over the chimney the night wind sang
And chanted a melody no one knew;
But the poet listened and smiled, for he
Was man and woman and child, all three,
And he said, "It is God's own harmony,
This wind that sings in the chimney."

—Bret Harte.

Misdemeanors of Lady Gertrude.

THE poor tutor was left alone with her, and though it was in the days when men fought hard battles even against their own kinsmen, if they so thought it was for the right, his heart throbbed just as a tutor's heart might throb to-day, with the difference that he had not learned to count its beats, as our enamored youth 200 years wiser have learned to do, in a self-controlled manner eminently conducive to the steadying of that obstreperous organ.

What mattered the great insurrection, the cruelties of Judge Jeffries and a fugitive patron, with a price upon his head, when love had sought a shelter in his heart and she to whom he had built a shrine was just as far away from him as the width of the table?

Of what consequence that she was the Lady Gertrude, the daughter of a noble conspirator and he but a tutor without land or wealth! So he continued his story, looking at his book as if he were reading therefrom:

"And the poor man loved the rich lady and he dared not tell her of his love lest she schould scorn him."

"Then surely he was fearful at a nothing, which methinks means he was a coward. Master Humphrey."

"A coward, if 'twere cowardly to fear the anger of this lady——"

"Why should he expect such anger?"

"He had naught to offer her but his love."

"Love were wealth enough! But I am tired of our story. 'Tis not so good as you are wont to tell, Master Humphrey, and 'tis our last lesson," she added, very gently.

"You will not miss the lessons?"

"No, not my lessons, only the stories—I have loved some of them!"

And she moved restlessly in her seat, as if she would say more, yet could not find words.

"But surely my father should be here even now," she murmured at last.

The poor tutor turned pale. "You will go with him to Holland?" he said.

"It would be too great a risk to accompany him, but I follow to-morrow if all succeeds as we have planned. Ah, if they should take him! They have killed the duke. Why are they not satisfied? Poor Monmouth!"

"They will not take him!"

"Now at the last moment I am terrified lest things should not go well. Look at the time! He may be here at any moment. Indeed, he should be here now!"

The Lady Gertrude rose hastily and stood—tall even as the young tutor by her side—with a look of eager impatience on her fair face.

"Not yet time, I think," said he. "To cross the marshes on foot needs indeed an hour."

So they stood irresolute, each with hearts for one another and thoughts for the absent fugitive.

"There are learned men, in Holland, I am told," stammered the young man, irrelevantly.

"It is so rumored; yet not more than that there would still be room for another, I am sure, Master Humphrey!"

Which pretty speech nigh overpowered the equanimity of Master Humphrey and threw him into a discourteous silence like enough to pique his noble pupil, who, indeed, felt she had made too bold and had lacked in modesty, since he would vouchsafe no answer.

"Continue your story, sir," she said, with marked coldness. "I have no mind for lessons just now."

"There is no more to tell, my lady," he said.

"Then 'tis a poor story."

"'Twas about a poor man."

"With a poor spirit!"

"Nay, do not challenge him, for he hath an idea 'twere better to be poor spirited than false hearted."

"Why should he be either?"

"Were it not a mean thing to harass an unprotected lady and false to betray the trust of her noble parent, his patron, when he was absent risking life for his country?"

"To harass her would be wrong, sir; to betray a trust a worse wrong; yet I cannot see that, if he loved the lady well, he would be doing either of these things."

"Madam, were I your humble tutor, the poor man, would you still so reason?"

"Were you that man, Master Humphrey, I could but be sorry for the lady."

"'Tis a fair answer; I crave your pardon! Shall we continue the translation?"

"Were you the man, in truth, I should be sorry for the lady to have so inconsistent a lover."

"Inconsistent, madam?"

"Who will make love whenever he may find a ready listener, though in covert language that saves him from a declaration. Pray, Master Humphrey, if it be as you desire, that you are this man, convey my sympathies to the lady!"

Now the tutor rose in wrath, and would have gone his way, for without doubt his mistress was making sport of him, but the sound of faint footsteps from behind the paneled wall arrested his attention, and he stood still, considering whether 'twere best to go or stay.

"It is my father!" cried the girl, aware that he alone knew the secret passage.

Then Master Humphrey saw a look of joyful relief rise to her pretty face, and he remembered how brave she had been, how good and noble and fair she was, and how miserable a worm was he; and so lifted his head in the pride of humiliation, as humble-minded folks are wont to do, in such a manner that the Lady Gertrude found him as beautiful and arrogant as a king, for all his shabby clothes and slight stature.

"I may not see you again; he will cross to-day—I to-morrow," she said, in sudden haste.

"God be with you!" answered the tutor, and he bowed low.

* * * * *

The fugitive noble stood in the shadow of the open paneling, and the Lady Gertrude, full of apprehension that he should stay too long, strained an ear to catch any ominous sounds from without and drank in eagerly the detailed plans he slowly explained of his own escape to Holland, and her journey thither on the morrow by another route.

When he ended there was a little silence between them, as with those whose hearts are too full to speak. It was speedily broken, however, by a loud ringing of the great bell, which reverberated from the deserted courtyard below through the house. The girl hastened to the casement window and looked quickly out.

"There are armed men," she said; "they have traced you here."

"Wary hounds," he murmured, with a look of grim humor—"to the hole, but not within. Twenty minutes and I shall be beyond the most cunning ferret's scent. God be with you, little daughter! Keep them dallying here a while. Remember to-morrow at Ballam bridge by nightfall!"

The panel fell back, and Lady Gertrude sat down to her books and made much pretense of mumbling to herself as the old doorkeeper, scare-stricken and panting, tumbled into the room with an officer of the king's service on his heels. "Soldiers," said he.

"And, good Oliver, what is their will?" said she, not deigning to raise her eyes from her book.

"No harm to so fair a hostess!" exclaimed the intruder.

Whereupon the Lady Gertrude slowly lifted her pretty head and scanned the uncomely countenance and fat proportions of the officer with much deliberation.

"Should fairness diminish harm, sir, 'twere a pity there were not more of the quality among his majesty's servants."

"A truce, fair one, to the war of words. I am here to crave your hospitality while waiting for the presence of one who, I am informed, purposes to visit his daughter between the time of noon and midnight. You start! 'Tis now hardly noon. We demand to know, in the king's name, at what precise hour that interview is to take place."

"Sir!"

"'Twere well, madam, to save that pretty head; for those who wilfully harbor the treacherous Monmouth's followers can receive no clemency from his most gracious majesty, King James. Their life is forfeit, man or woman."

"Sir," said Lady Gertrude, after some moments of seeming fearful deliberation, "I await my lord, my father, here within one hour from now, and may God curse you for a coward!"

The fat soldier grinned. The lady's bady was loud enough, but her bite was indeed most easily averted with a threatening whip, as was the way with women; so he sat his broad person down and did all that which he thought would beguile so pretty a shrew from her fretful humor.

Full three-quarters of an hour thus passed, when news was brought by a breathless soldier that the Earl of W—— had boarded a frigate not fifteen minutes since, and—as was related in all seriousness—had doffed his hat in acknowledgement of the fiery salute from shore.

Whereupon the fat colonel got up in a fearful rage and kicked and swore, as only a gentleman soldier knows well how to do, and snarled aloud that nothing should save the cunning jade from the lively fate of Mistress Gaunt, who, indeed, was burned to death for a lesser misdemeanor.

But the Lady Gertrude lifted up her proud head and said:

"Even so, I shall deem my father's life most cheaply bought, sir."

And she walked out between the file of armed men, who indeed were sorry for so brave a fair creature, taken thus roughly a prisoner.

* * * * *

The poor tutor sat over his books in the upper room of a small dwelling-house and wrestled with his thoughts till he knew not which was conscience and which the devil most plaguing him; for the Lady Gertrude had said that love was wealth, yet his rooms betrayed no signs thereof.

He had a little piece of land not very far away, from which he acquired a small income; yet withal these things could in no wise be counted riches.

Indeed, no, thought he, when hurried footsteps upon the stair became confused with his wandering fancies, and ere he had time to weigh the matter Lady Gertrude stood before him.

And then something of a sweet shyness came over her, so that all in a great hurry she set to explaining how she had been taken prisoner by the irate colonel, and how indeed she had escaped through the help of a cousin among the officers, who, she avowed, had once cared greatly for her.

Then the boy and girl, for they were not much else, looked into one another's eyes, as they had looked these many past days during the lessons he had been set down to teach her; and now there was no table between them, so that he knelt down and taking both her little white hands in his he covered them with humble kisses, the which the lady seemed to have no desire to resent.

"So, after all, Master Humphrey, you must needs take charge of your pupil still a little while longer. To-morrow at Ballam bridge at nightfall there will be those waiting to conduct me to Holland, where I think, sir, you told me, you had a mind to follow in search of further learning. Yet till then must I remain a prisoner here for fear of my very life," laughed she.

Now, hardly had she spoken than a clamor without sent the blood from his cheeks, and fear at last into the dauntless eyes of the Lady Gertrude.

"Quick! within," said he, and thrust open the door of the narrow chamber and closed it upon her. Then the steady tramp of men's feet echoed upon the winding stair.

"In the king's name," said a tall officer, as he entered the room, followed by several men-at-arms. There was a strange look in his eyes as he met the tutor's gaze, and he faltered in his speech, whilst repeating the common formula.

"There is no one here," answered the student, deliberately.

"It is necessary the place should be searched," replied the officer, "and I must warn you that if the prisoner found your life will be forfeited without trial, as a traitor harboring one in conspiracy against his majesty's crown."

"There is no one here," repeated the tutor.

"Search," said the officer. He had grown pale as the poor youth, who, with seeming indifference over his books and clung close to his chair as the men approached the little door, which opened suddenly from within as a beautiful youth in a velvet suit, with fine lace ruffs, and a mass of brown, curly hair, falling negligently about his shoulders, such as was then in fashion to affect, confronted the officer.

"What noisy matter is this?" said he, haughtily. "Is there no peace even for students, who, loyal to his majesty, claim but the quiet of their chambers to peruse the books which tell of mightier deeds than those of the eternal wars of a discontented people?"

Now a look of humor crept into the officer's eyes, as he bowed perhaps lower than was necessary to so young and haughty a youth.

"I am grieved to so disturb you, sir," said he. "We have been misinformed, for apparently the lady we seek is not here," and he turned upon his heel and departed with his men from the lowly roof of the poor tutor.

"Master Humphrey," said the beautiful youth—and his face was crimson even as the skies after the sun hath set—"you risked being hanged on high, Master Humphrey, for me." And there were tears in his eyes.

Then, indeed, did nearly all Master Humphrey's fortitude depart. "Lady, 'twere a paltry thing to risk," said he, and bowed his head as one ashamed, and within himself he thought:

"Now, indeed, I cannot woo her, for 'twould be the way of a coward to thus force advantage of a man's gratitude."

But the while he was pondering she stole up to him and he knew not how it happened, but he wooed her just the same.—Pall Mall Gazette.

How to Judge of Tobacco.

Color, burn and texture are the three things which the grower of tobacco has chiefly to consider. At present the trade calls for a light cinnamon-brown shade, which must be uniform, not mottled. The leaf when rolled on a cigar and smoked must leave a white or light gray ash, which does not flake off and fall into one's bosom or over his waistcoat, and it must not "coal"—i. e., have a black, charred ring just behind the ash on the burning cigar. This is sure to give a bad flavor and taste. The leaf also must burn freely, and when lighted hold firm for a reasonable time. It must have a soft, silvery texture, glossy surface and the elasticity of a piece of kid, so that it may be drawn smoothly and closely about the cigar. Flavor is not wanted in Connecticut tobacco, for if there be much of it it is sure to be bad. Perfect burn, color and texture can be got in the northern climate, but a delicate and agreeable flavor has not yet been obtained. Flavor is conditional upon soil and fertilizers. It is desirable, therefore, that the leaf be neutral, without taste, as far as may be. We get the flavor wholly in the Cuban filler. To obtain these qualities of leaf is the problem of the grower—a much more complicated one than meets the ordinary farmer.

The man who looks wise as an owl when giving others advice is apt to make a fool of himself by not using some of it.

There is an element of success in every man, but he seldom gets it in operation until some smart woman begins to tread on his heels.

REMARKABLE FEATS OF AN AUSTRALIAN BICYCLE RIDER.

CHARLES JONES' GREAT FEAT IN LONDON.

The star feature at the Pavilion in London this season is the extraordinary cycle performances of Charles Jones. There are men who do some daring acts on wheels on the stage nowadays on wire stretched at dizzy height. Among the performers is a one-legged man who can ride better and more gracefully than some of the most expert bicyclists, another who makes a turn while balancing half a dozen men, but the work of Charles Jones is marvelous. This rider uses a track which is built at an angle of sixty degrees and which is opposite the stage. To the uninitiated it seems impossible that any bicyclist could balance his wheel on this even for a few seconds. Mr. Jones' most remarkable feat consists of removing the upper portions of his clothing while coasting at full speed without using the handle bar. All the power used for the regulating of speed, the propulsion of his wheel and the maintenance of the rider's equipoise on the difficult track is concentrated in his lower limbs.

DAUGHTERS OF OUR PRESIDENTS

Mrs. Semple, Pride of the White House When Tyler Was President.

The recent death of a daughter of President Zachary Taylor raises the question of how many presidents' daughters are now living. In the Soldiers' Home at Washington is a charming and interesting woman, now an octogenarian, who once diffused an atmosphere of gayety and brightness throughout the executive mansion, lending something of her natural brightness and charming personality to such of the White House functions as she presided over, for in those days it was not at all the functions by any means that women were present. Indeed, excepting the dinners given the cabinet officers and the diplomatic corps, there was but one occasion during Mrs. Semple's residence at the White House when women were present at public dinners, and that was when the Prince de Joinville was entertained there. To the public dinners, which were given fortnightly, men alone were bidden, and when the President received he stood well out in the middle of the room, while the women

MRS. SEMPLE.

of his household stood modestly in the background.

It was owing to the semi-invalidism of President Tyler's wife that the duties of first lady of the land devolved upon Mrs. Semple, and none was better fitted to fulfill them than the gifted and beautiful daughter of President and Mrs. Tyler, who was for a time virtually the mistress of the executive mansion, one of the fairest and noblest it has ever known.

Mrs. Semple was a young matron then, Mr. Semple, who was paymaster in the United States navy, was absent much of the time. Mrs. Robert Tyler was a member of the presidential household, but was occupied with her young family, and Miss Elizabeth Tyler, who afterward married Mr. Waller, was then but a young girl. Many are the interesting reminiscences which Mrs. Semple can relate of the life at the White House sixty years ago.

The women wore low-necked gowns, short-waisted, and with scanty, clinging skirts, too short to conceal their dainty, high-heeled slippers. The hair was worn parted smoothly on the forehead, and a cluster of little curls almost hid the ears. Pretty faces and bright eyes were enhanced by the gay flowers and ribbons heaped in profusion on enormous leghorn bonnets, extending far over the face, and cushions of hair, or eiderdown, held the huge "leg of mutton" sleeves in shape. The men were resplendent in buff waistcoats, green coats, frilled shirt fronts and collars so high that they half concealed the cheeks and made the turning of the head a difficult task. It was during Tyler's administration that dancing was introduced at the White House, and owing to his daughter's grace and wit the functions at the executive mansion lost some of their prim stiffness.

Mrs. Semple was her father's constant companion, and her ambition was to be as good, rather than as clever, as her father. For all that her reign at the White House was one of intellect as well as beauty.

Another of President's Tyler's daughters is still living, Mrs. Margaret (or Pearl) Ellis, of Mecklenburg, Va., the only surviving daughter of his second marriage to Miss Julia Gardiner.

Mrs. Elizabeth Dandridge (Betty Taylor), daughter of President Taylor, lived in Winchester, Va., and has just passed away. Mrs. Nellie Grant Sartoris lives in Washington, as does Mrs. Stanley Brown, who was Mollie Garfield. A few years ago Miss Fanny Hayes, daughter of President Hayes, was married at Fremont, Ohio, to Ensign Harry Eaton Smith. Ellen Herndon Arthur resides in New York. Mrs. Mary Harrison McKee has her home at Saratoga Springs. Ruth, Esther and Marion Cleveland and the little 4-year-old girl of the late President Harrison represent the daughters of the ex-Presidents of the United States.

DIDN'T KNOW HE WAS RICH.

Wyoming Miner Who Died with Great Riches Almost Won.

Poor Jack Kurtz worked nineteen years to find the rich mines of copper and gold that bear his name, but died in poverty when within two feet of the long-sought wealth, says a New York World dispatch from Grand Encampment, Wyo., the scene of the story.

Kurtz was a blacksmith who made a scant living at his forge in Rawlins. One day, while wandering about, he found bits of copper ore thickly strewn over the mountain side. Investigation convinced him that a great vein of ore lay beneath the surface. The blacksmith closed his shop, and with pick and dynamite began to tunnel at the base of the mountain near Copper Creek.

This was nineteen years ago. Kurtz was in the prime of life, strong and enthusiastic. Doggedly he hewed his way through rock and quartz. His friends laughed at him. The years passed and with them came gray hair, a bent form and a hard and wrinkled skin. But hopes grew brighter, for every day the tunnel was forced a little further into the mountain.

Kurtz worked on heroically until the tunnel was 1,500 feet long. But the hard work and the exposure at last brought on a violent attack of pneumonia. Jack Kurtz died.

Kurtz had scarcely passed away when a party of Eastern capitalists sent trained men to examine the mountains near his tunnel. A wonderful discovery was made. Less than two feet of rock separated Kurtz's tunnel from a massive vein of copper and gold ore.

Two days' more work by the old miner would have revealed to him the promised find. Further examination brought to light the fact that Kurtz's tunnel paralleled the vein of ore for 200 feet. The old miner had worked for two years in a line parallel with the rich ore. Had he turned his pick to the left untold wealth would have been his.

MADE A NEW ATHLETIC RECORD.

Roy H. Albertson, of Chicago, who put the pole-vault mark of the Athletic League of North America at 11 feet, beating the record of 10 feet 5 inches, held by Harry Spear, of Cincinnati.

OLD CARS PUT TO USE.

PECULIAR TOWN JUST OUTSIDE SAN FRANCISCO.

Discarded Vehicles, Still Showing Their Old Colors and Inscriptions, Have Been Transformed Into Neat and Cosy Dwellings by Their Owners.

It was reserved for some original genius in San Francisco to discover a method for the utilization of ancient and out of date street cars.

An Italian immigrant in San Francisco solved the problem. He had purchased a lot of land, but had no money left with which to build a dwelling. Observing several of the old cars in store he bought one for $10 and had it transferred to his land, where, at small cost, he built a small addition to it and provided a very comfortable home for the family. The example was followed by others, and in various parts of San Francisco there may be found discarded street cars doing duty as dwellings, barns, wood and out houses that are not only substantial, but at the same time economical and highly picturesque.

There is a little settlement just outside the city where the large majority of the structures were once street cars. There are perhaps fifty of these car dwellings in the little settlement, many of them fitted out with considerable elegance and numerous conveniences. They are arranged upon a general plan affording their occupants the widest views, all fronting the sea. Streets intersect, at right angles, and plank walks are laid so as to give pedestrians access to their homes without wading through the deep sand. Few of these cars have been adorned with a coat of paint. The exteriors are generally intact, and the conspicuous signs denoting the route over which the cars once perambulated are not obliterated.

Little method is used in the adornment of these curious resorts. Many of them are covered with vines, most have galleries extending around the front and sides. The roofs of some are arranged as lookouts and awnings drop over the windows. There is considerable space for storage below the cars, while other cars acquire additional room by little extensions. In some instances one car is raised above another, and sometimes the cars are laid upon other buildings, thus giving an extra story. The platforms of the cars are often transformed into balconies and bay windows with the aid of the carpenter and glass fitter, and afford points of observation protected from the cold winds, besides giving extended views of the sea and land.

The arrangement of the interiors of these dwellings is highly ingenious, the necessities of the case requiring the utmost economy of space, the average sleeping car suggesting a model. Half a dozen persons have been at night accommodated with lodging in one of them. Ventilation is always assured.

While there are many families permanent residents of "Cartown," the larger number occupy the "vehicles" as others do the houseboat, giving opportunities for original methods of entertainment and diversion for themselves and friends. Cafined and restricted as these dwellings are, there is compensation in the fresh ocean breezes which here blow right from the sea, besides the enjoyment of a health-giving environment.—Scientific American.

THE MOUNTAIN LION.

Reminiscence of an Episode in the Sierra Madres.

I had a tamish episode with a mountain lion in the Sierra Madres four years ago. We had gone part of the way up Wilson's trail and were camping for a couple of weeks. There was a small two-roomed frame house with a gallery along the front, and at one end I put up my tent, in which two of us slept, while my daughter and little 5-year-old boy had cots in the living room of the house. The weather was very warm, and as the windows were covered (except one) with heavy iron netting she only closed the doors at night, while we slept with the tent flaps open.

I had been told that a pair of lions had recently been seen near there, but that didn't trouble any of us, says a writer in Forest and Stream. One day my daughter went down to the village to be gone until the following forenoon, leaving the little fellow to sleep in the house alone. Somehow that unguarded window was left open and I was awakened by a crash of falling tinware in the kitchen. I dashed into the house and all I could find was some tin plates and cups on the floor. I had no light except some matches, so couldn't see very well, but fearing the youngster might be frightened if he found himself alone I gathered him up and carried him into the tent, where I soon fell asleep.

Before long I heard another rattle-to-bang in the kitchen and made a rush, catching up my hunting knife, and that time I heard a soft thump as an animal of some kind jumped out of the window.

Procuring a light from a candle in the tent, I discovered, as before, tin things all over the floor and the leg of mutton gone from the kitchen, that had just been sent up. I at once surmised that a lion had been there, but in making his exit the first time he must almost have jumped over the baby. Fortunately, he preferred dead mutton to live kid, or there would have been serious trouble in the camp.

The next day when my daughter came back I told her of my visitor and she expressed some objection to sleeping in the shack by herself, but as I closed up the open window and told her the beast could get in no other way, she was at length satisfied. Besides, I didn't believe it would come back, and wasn't sure that it was a lion, anyhow.

Well, that night was dark as pitch, but I laid my rifle handy and would have stayed awake had it been possible to see. About midnight I heard a scream and rushed out, but a frightened girl was all I found. She said that she had been unable to sleep, and lay on her cot for hours.

All at once she heard the floor of the gallery creak, and some heavy, soft-footed animal walking up and down, occasionally giving a sniff; she lay still, hoping I was awake and would hear it, but when it presently reared up and, putting its paws on the wire netting, looked into the room her nerves gave way and she screamed. She had a good look at it, as its head was against the sky, and it was undoubtedly a mountain lion. I afterward made a pointer dog stand up on his hind legs under the window, but a person inside could not see her head over the window sill.

The next night I was resolved to get a shot. There was no moon, so we all moved into the house, and before turning in I fried a bit of bacon in order that the smell might float around the gallery up to the window, and hung what was left of the meat inside the netting. I then made a bed for myself on the floor, so I could see the head of any animal against the sky. Well, I did this for three nights, and thought it a good scheme, but—the cat didn't come back, and I lost the best part of a good story.

CARRIED TOO MUCH POSTAGE.

So Declared the Huffy Old Judge to His Clerk.

"The old judge was one of the kindliest of men," said an attorney of this city, according to the New Orleans Times-Democrat, speaking of a distinguished member of the local bar, "but his temper was as warm as his heart, and when momentarily exasperated he had a tongue like a razor. When I was studying law in his office we had a copying clerk who was known about the place as 'the late Peter Jones'—a sobriquet he acquired by being always behind time. He was a slow, abstracted, dreamy kind of fellow, with his mind generally a hundred miles from his business, and he was continually working the judge up to the point of explosion. One day a wire basket fell off the top of his desk and grazed his cheek, making a slight scratch several inches long. Being very busy at the moment, and wishing to protect the abrasion from the air until he could get some court plaster, he slapped on three postage stamps and went on with his work. A little later on he had some papers to take to the United States Court, and, forgetting all about his peculiar decoration, he put on his hat and sallied out. He must have created a sensation on the street, but, as usual, his mind was elsewhere, and when he returned in half an hour or so, he was still in blissful ignorance of his Mardi Gras aspect. The three stamps happened to all be of different colors, and looked like an Apache chief made up for a ghost dance. As he entered the office, the judge raised his head and fixed him with an astonished stare. Poor Jones quailed under his eye. 'Anything—er—wrong, sir?' he inquired, tremulously, when the silent scrutiny became unendurable. 'Yes, sir!' thundered the old gentleman; 'you are carrying too much postage for second-class matter.'"

BIGGEST GAME PRESERVE.

Several Nations Interested in a Vast Territory of Africa.

The largest game preserve in the world is the continent of Africa, or at least the greater portion of it—extending from the twentieth degree of north latitude down to the northern borders of Cape Colony and Natal. This great scheme was made possible by a treaty co-operation of England, Germany, France, Belgium, Portugal, Italy and Spain, by which it is provided that the hunting and destruction of vultures, secretary birds, owls, giraffes, gorillas, chimpanzees, mountain zebras, white-tailed gnus, elands and the little Liberian hippopotami are absolutely prohibited.

Similar protection is given the young of certain animals, including the elephant, rhinoceros, hippopotamus, antelope, gazelle, ibex and chevrotain, and to the adults of these species when accompanies by their young. Particular stress is laid on the protection of young elephants, and elephant tusks weighing less than twenty pounds will be confiscated. The eggs of the ostrich and many other birds are protected, but those of the crocodile, python and poisonous snakes are to be destroyed. Even lions, leopards, hyenas, harmful monkeys and large birds of prey may not be slaughtered at the hunter's will. Hunters are required to take out licenses, and the number of animals each may kill is limited. The use of nets and pitfalls is forbidden, nor may explosions be used for killing fish.

The main object of this vast protective enterprise is economic, to encourage the domestication of the elephant zebra and ostrich and to husband the trade in wild animal products, which was threatened by the rapacity of market hunters and so-called sportsmen.

His Advantage.

"I've got the best of the ould railway company for once in me loife."

"How is that, Pat?"

"I've got a return ticket to London, and" (in a whisper) "I ain't coming back."—London Tit-Bits.

Unless a man has an exceptionally good memory, he should not set himself up as a liar.

INDEPENDENCE, CAL.,

FRIDAY, OCTOBER 18.....1901

Tonopah Mining Company stock is in great demand here but stockholders will not let go. The stock is bound to take a big jump and remain at a high figure. One shaft is now down 150 feet on the Mispah and in seven feet of solid ore that will net $200 per ton, the rock requiring but very little assorting. Can this be beat anywhere in any of the mining states?—Tonopah Bonanza.

President Roosevelt has adopted a new policy in the appointment of federal judges in the South. Instead of hunting around for a third-class lawyer in Alabama who voted the Republican ticket, he has selected an ex-governor and a straight-laced Democrat for a judicial position. The mother of the president is a native of Georgia, and if he will give the south half of himself free play he will make a great chief executive.

Such has been the prosperity of the country during the past summer that the revenue reduction act, which was calculated by fiscal experts to reduce the revenues by $40,000,000 annually, will actually reduce them by less than $25 000,000. The surplus in the Treasury is piling up and Secretary Gage is kept busy devising means to get it into circulation again. It is an old saying that a surplus is better than a deficit, but all the same it has its drawbacks.

Sport rivaling in excitment that of a buffalo hunt was scheduled to take place in Washington and Iron counties and across the Utah line into Northern Arizona on Thursday, when the people of the Canaan district expected to set forth and exterminate as many desert horses as can be rounded up. The hunt is booked to start at Pipe Springs. Where it will end no one pretends to know. The mustangs, or desert horses, are so thick in the district lying between Hurricane Ridge and Kanab Wash and over the old Canaan range to Mount Turnbull that ranchers are complaining on many scores. The range is being eaten up, gentle horses are being run off and in many valuable animals are being shot by mistake by careless sportsmen firing on supposed desert horses. So the populace has decided that the mustang must go. Two years ago a similar decision was reached. During the progress of the hunt 300 horses were shot and left on the plain and 1500 were run down and dispatched, with the exception of 300 considered worth keeping. Predictions are freely made that this record will be broken this time. Prominent cattlemen and horsemen have the proposed drive in hand and are marshaling their forces for an epoch breaking round-up.

England furnishes a striking example of such abuse of the privilege of asylum as the American people have lately witnessed. That country, like the United States, has long been a land of refuge for political exiles and victims of oppression in other lands. The British government, like that of the United States, has always been averse to entering any coalition with European powers that might abridge the privilege of asylum. But England now finds that, like the United States, it has been warming a serpent in the protection and latitude given to European anarchists.

An anarchistic meeting was recently held in London to hear a lecture on the assassination of President McKinley. The report states that assassin Czolgosz was characterized as a "saint" and that mention of his name caused hearty applause. His act was called a "deed of heroism." The comment of the London Standard, appended to the report of the meeting, indicates that the English people are alive to the importance of putting a stop to the hatching of anarchy in British dominions. In allusion to a speech at the anarchists meeting the Standard says the speakers "went quite far enough to call for the notice of those whose duty it is to stop apologies for murder."

Both England and the United States will have to change their attitude in harboring European anarchists. Without any abatement in cordiality of welcome to the oppressed people of other nations, they must in self-defense take measures to extirpate the serpents of anarchy.

Again there is positive and perhaps authoritative statement that the Harriman syndicate will build a railway connecting Salt Lake and Los Angeles. Nothing has recently been heard relative to practical operations on this line, which began so vigorously a few months ago. This fact, in connection with the energetic work on the Clark road, led to the belief that the project of the Oregon short line had been abandoned. The statement alluded to, however, revives interest in the matter, and indicates that the stoppage of active operations was due to the legal question at issue with the opposing company. It is unquestionable that the Southern Pacific railway company had long contemplated a short cut between Los Angeles and Salt Lake. When the late Collis P. Huntington made his last visit to Los Angeles he explicitly stated that it was the purpose of his company to construct such a line. And he intimated that active work would begin whenever the general revival of prosperity seemed to warrant the undertaking. In anticipation of active work when the proper time came, complete surveys of the route with maps and all desirable data, were made ready for instant use. If the fresh assurance of Harriman's purpose is correct, there will be two railways connecting Los Angeles and Salt Lake in the near future. There has ceased to be any question about the Clark project, add its completion is now merely a question of time—the shortest time possible to do the work.

Death of A. R. Burnsides

The Bodie Miner gives the following account of the death of "Buck" Burnsides. "The funeral of the late A. R. Burnsides took place last Sunday afternoon at 2 o'clock. The local Masonic lodge, of which the deceased was a member, had charge of the obsequies, which were largely attended. A large number of men who knew Burnsides, and who felt the loss of a friend in his death, followed the remains to their last resting place, and it is safe to say that the entire town was bereaved at the death of one who appreciated exintence, was well liked and a friend of everybody. Little is known of the life of A. R. Burnsides previous to his coming to Bodie, but since his arrival here, more than twenty years ago, much good may be said of him. He came here as a miner and those who knew him best say he was a good miner and engineer. He meant harm to no man, was everybody's friend, and always possessed a good character. Deceased was a native of Missouri, aged 53 years. He was supposed to have relatives in Missouri but nothing is as yet known of them to anyone in Bodie."

Large Wheat Deal.

What is probably the largest wheat deal ever made in the State of Nevada was closed last Sunday when Capt. W. L. Cox, manager of the Reno Flour Mill Company, purchased from the Lovelock Land & Development Company its entire crop of about 30,000 bushels. The price paid was $16.50 per ton, which is the highest price paid for wheat in this section this year. The wheat will be shipped to Reno at once from Perth and Granite Point.—Argus.

The greatest activity prevails since the strike was called off. All sorts of wheels are turning at a high speed and grain, hay and other produce, not to speak of all kinds of merchandise, are moving as fast as possible to the places which have been waiting for them for many weeks. Every one seems to have become utterly weary of the strike and the conclusion seems to be that it has helped no one and has hurt many. It is probable that a repetition of the experience will not be soon invited. The weather holds fine and favors the flight of produce to shelter or to transportation, and every bright day happily lessens the changes of serious losses. Late fruits are also favored by what promises now to be a bright October.—Rural Press

NEW ADVERTISEMENTS.

Commissioner's Sale.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

A. W. EIBESHUTZ, Plaintiff, vs. E. M. DINEEN, Defendant.

SUPERIOR COURT. Order of Sale and Decree of Foreclosure.

UNDER AND BY VIRTUE OF AN ORDER of sale and decree of foreclosure issued out of the Superior Court of the County of Inyo State of California, on the 9th day of October, 1901, in the above-entitled action, wherein A. W. Eibeshutz, the above plaintiff, obtained a judgment and decree against E. M. Dineen, defendant, on the 7th day of October, 1901, which said decree was, on the 8th day of October, 1901 recorded in Judgment Book 2 of said Court, at page 167, I am appointed Commissioner and commanded to sell:

All the right, title and interest of the defendant E M. Dineen, consisting of an undivided one third interest in and to those certain mines and mining claims situate, lying and being in Wild Rose Mining District, County of Inyo, State of California commonly known and designated as the "Monarch," "Combination," "Monopoly" and "Kennedy" mines, the notices of location thereof being of record in the mining records of said Wild Rose Mining District, and in the office of the County Recorder of said Inyo County.

Notice is hereby given that on THURSDAY, the 14th day of NOVEMBER, 1901, at 2 o'clock P. M. of that day, in front of the Court House, in the town of Independence, I will in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy the plaintiff's judgment, with interest thereon and costs, to the highestand best bidder, for cash, in gold coin of the United States.

GEO. S. WOOD
Commissioner.

Dated October 14, 1901.

LEGAL.

DESERT LAND, FINAL PROOF.

UNITED STATES LAND OFFICE, INDEPENDENCE, CAL., Oct. 8, 1901.

NOTICE IS HEREBY GIVEN that Augusta F. Kispert, of Phebe, Inyo Co., California, has filed notice of intention to make proof on her desert-land claim No. 862, for the NE¼ of SE¼, Sec. 27, T. 14 S., R. 35 E., M. D. M., before the Register and Receiver at Independence, Cal., on TUESDAY, the 12th day of November, 1901.

She names the following witnesses to prove the complete irrigation and reclamation of said land: John Kispert, Augustus G. McGovern, Louis Thurnau, of Thebe, Inyo Co., Cal., and Ben. H. Yandell, of Independence, Cal.

S. W. AUSTIN, Register.

DESERT-LAND, FINAL PROOF.

UNITED STATES LAND OFFICE, INDEPENDENCE, CAL., Oct. 11, 1901.

NOTICE IS HEREBY GIVEN, that Lemuel Baxter, of Independence, Inyo Co., Cal., has filed notice of intention to make proof on his desert-land claim No. 844, for the S½ SE¼ sec. 23, SW¼ SW¼ sec. 24 and N½ NE¼ sec. 26, T. 13 S., R. 35 E., before Register and Receiver, at Independence, Cal., on SATURDAY, the 16th day of November, 1901.

He names the following witnesses to prove the complete irrigation of said land: Jarius D. Mairs, David Rogers, Harry Burt and Clifford Baxter, all of Independence, Cal.

FRUIT AND FLOWERS

HOW WE MARKET FRUIT.

Why Not Accommodate the Consumer?—A Hint From Foreigners.

A few weeks ago there came to my place two bright young men from Belgium, graduates from a university, who had been traveling over our states for six months visiting our transportation industries. They had money and leisure and intended to locate here, and they had decided that the fruit industry offered the greatest inducement of anything they had discovered in America. They criticised some of our methods. They said to me:

"One trouble is you place your stuff in the market at any place at all, whether it is overloaded or not, and then, too, you put it in a barrel. If I want to buy an apple, I buy two for 5 or three for 10 cents. I pay $10 a barrel at that rate, but I can buy the whole barrel at $1.75 to $2. But if you are staying at a hotel you don't have any room for that much. You force a family to buy a barrel, and the way they have of living in flats and all that sort of thing you have no place to put them unless they are put under the bed, and that is not a good place to put apples. And then if you buy a small quantity you pay an extravagant price."

It seems to me the one great business point in our fruit market today is the lack of putting the fruit up properly, that our peach package of five-eighth or one-half bushel is pretty large for family consumption, therefore they are dumped on the stands. A member of the family goes and buys a quart or two and thinks he has done his duty.

We curtail the consumption of our fruits when we put them in a basket so large that it has to be broken. We may also curtail it by using too small a basket. The question to be thought out and planned out is the largest possible limit we can sell our productions. I have spoken to you about the necessity of growing fine fruit. There is not going to be any room in a little while for the man who grows inferior fruit nor for the man who packs fruit dishonestly or carelessly, says J. H. Hale of Connecticut.

Changing the Color of Flowers.

A foreign investigator tells of using alum, hydrochloric acid and caustic potash to change the color of flowers. Watery extracts were made of various red, purple and lilac colored flowers and dilute solutions of the chemicals mentioned added. The alum changed the lilac to blue and the rose color to lilac. Hydrochloric acid changed the lilac and the light red to a copper red, and in some cases the lilac was changed to green or brown. Potash transformed the rose and lilac to green or yellow. Similar results were obtained when cut flowers were placed in solutions of the above or by watering with them plants grown in pots.

Convenient In the Orchard.

The fruit ladder shown in the illustration from Farm and Fireside can be made of any tough pole of the desired length and size. Before ripping the

A FRUIT LADDER.

pole bore holes for the rungs. A is a bolt to prevent splitting. In use B will fit any crotch of the tree, and C C will rest upon the ground and not upon one leg, like common ladders.

Greeley's Awful Writing.

It is interesting to recall the fact that Horace Greeley left behind him a very frank criticism of the legibility of his own chirography. Being up town in New York one day, and wishing to send a telegram and also to get shaved, he entered a hotel and sent his dispatch. Then, passing into the barber shop, he sat down in a chair and (according to custom) was soon sound asleep.

Meantime the telegram had created a decided sensation. Mr. Greeley having thrown it down hastily on the desk and neglected to translate it. Nobody, from the manager down, being able to supply a legible equivalent for the mysterious characters, a messenger was sent into the barber shop with the screed.

Waking with a start, and supposing that the boy had brought an answer to his dispatch, Mr. Greeley took the paper, scanned it for a moment, and then, with a look of deep disgust, piped out: "What blamed idiot wrote this?"

Diplomacy a Fine Art.

Diplomacy is a fine art, and in its successful practice much depends upon the observation of social conventions. Some of the most successful diplomats seem to spend most of their time at dinners and parties, apparently doing nothing but enjoying themselves, but in reality serving well their countries. In truth, the reputation of a country at a foreign court and ofttimes its welfare in important issues depend very largely upon the social abilities of its minister, for the man who is popular socially is very likely to drive a better international bargain than his unsociable brother. This is well understood at Washington, and the selection of a chief for one of our foreign embassies depends in no small part upon his social culture.—Edward Page Gaston in Woman's Home Companion.

Lessons In Love.

"I've noticed," said the observant girl, "that the big men are the most demonstrative in their lovemaking."

"Perhaps," remarked the wise girl; "but, after all, a girl should never judge a lover by his sighs."—Philadelphia Record.

SIZE AND QUALITY.

No Money In Common Horses For the American Farmer.

The American farmer cannot afford to raise a common horse or a small horse, says The National Stockman. The ranchman can raise small horses because they are the easiest to raise, the hardiest and stiffest, and because he can sell them cheap and still make money, but as a business proposition for him the small horse is behind the larger one too. He can and does raise and market a 15 hand horse, good shape and sound, for less than the grain it costs a farmer to raise one of the kind.

A farmer who does not expect to raise a bigger horse than that will nine times out of ten make money by keeping the service fee in his pocket and putting his feed into something else.

BLACK PERCHERON.

He can better afford to buy this kind than to raise them. No farmer can come out even on a common horse, a horse that is not a saddle horse, a driver, a carriage horse, an express horse or a draft horse.

Every man who breeds a mare should have long ago made up his mind as to what he has and what he ought to use to get a horse that will sell. If he has not the kind of a mare to produce a seller, he had better not breed. If he cannot find a stallion that will produce a seller, he had better not breed. Get size, no matter what class you breed, and as much quality as possible. Size and quality are a rare and costly combination, and it pays to go after them.

SHEEP HUSBANDRY

The provision of green feed for a stud flock is one of those matters that should always be in the mind of the flock owner, says Wool Markets and Sheep. For the well being and full development of the sheep a constant change as well as variety in food is required, and consequently there should always be provision for fodder crops. The late summer is a very important time in this respect, for during it many crops should be sown for the provision of both late autumn and winter keep. Dependence should never be placed upon any single variety, for if this fails little remains. Early white turnips may be got in. The value of a crop of this kind, both to the ram breeder and to the feeder for market, is hard to assess. Clover, Italian rye grass, sainfoin, vetches and rape may be made available. To follow white stone turnips a mixture of turnips and rape is recommended. Cabbage should never be forgotten. Always plant out whenever an opportunity occurs, for use can always be found for these. In fact, they are always valuable for all kinds of stock; also kale, which will afford a good change of food for the ewes and may be made available to fill up any bleak places there may be in the root crops patch.

The Sheep For Profit.

I choose sheep thick chested, big through the heart, with a round body and broad, straight back, says an Ohio grower. Choose the thick necked kind, where the neck sets on the shoulder broad and thick, and big, heavy quarters, with a straight, short leg. I do not care for small bone in a sheep. I do not care how large it is.

Exercise For the Ewe.

Want of proper exercise seems to result in both small and weak lambs. The size of the lamb is not of so much importance as are its vigor and activity. In fact, the small lambs are sometimes the most active. The ewe that has outdoor exercise every day is more likely to produce a more active and vigorous lamb that will take care of itself shortly after its arrival.

Docking Lambs.

Castration and docking should be done when lambs are between 2 and 3 weeks old. They do not feel it as much, heal up more quickly, and there is less danger of bleeding to death.—Wool Markets and Sheep.

Cowpeas as Cattle Food.

A correspondent of The Breeder's Gazette, writing from Kansas, says:

"I am feeding young breeding cattle for bone and muscle. My best feed crop is cowpeas. How should this be supplemented to get the best results?"

The inquiry was answered by W. A. Henry as follows:

Our correspondent does not say whether he means the seeds of the cowpea plant or the vines of the same made into hay. Both are rich in protein. If he is feeding the peas, they should be mixed with cornmeal and bran to lighten them up, as alone they are a heavy feed. A grain ration consisting of one-third cowpeas, one-third bran and one-third cornmeal should put bone and muscle on young cattle about as fast as any combination at the command of the feeder. If our correspondent means hay made from the cowpea vine, then he has a roughage rich in protein. This will take the place of clover hay. Let the ration, then, for the animals consist of oats, bran and corn for concentrates and cowpea vine hay and corn stover for roughage. A pound of the concentrates for each hundredweight of live animal daily should suffice. Give all the roughage required.

A Serious Complaint.

What made you leave your place wif dat gemman?" asked Miss Miami Brown. "Didn't he pay you right?"

"Yes," answered Mr. Erastus Pinkley. "He paid fus' rate, but his clothes was so out of style dat I was almost fohced to keep out of society."—Washington Star.

Waited For the Appropriation.

"Yes, he has cut loose the dogs of war."

"What was holding them back?"

"The sinews."—Cleveland Plain Dealer.

CARE OF SHEEP.

Why Some Growers Cannot Make Their Flocks Pay.

"I have young sheep that have swelling under their jaws. When first noticed, the skin hangs loose. It comes on through the day and is nearly gone in the morning. The swelling increases in this way until they die. Some swell only a little and then get well. One died last year. Some farmers lost nearly half their flocks three years ago from this disease. Their heads are swollen sometimes about six weeks before they die. Appetite good. Have been feeding mixed hay, timothy and clover and oats twice a day, a few potatoes and cut turnips once a day of late. This disease comes only in the spring of the year."

The above plaint is answered by C. H. Smead in The National Stockman as follows:

"My friend, a short answer to your question would be starvation. The cause of the swelling is general debility—nothing more, nothing less. The fact of its always being present in the springtime makes it clear that worms

COTSWOLD RAM.

do not cause the debility. What, then, can do it or, rather, does it? Simply lack of food or food, water and care. But you say you have fed mixed hay, timothy and clover and oats and a few potatoes and turnips of late. But you don't say how long you have fed this class of food, neither do you say how much oats per head.

"I mentioned care. That means more than food and shelter from storms. I have seen men who had good sheep shelter, fed nice mixed hay, furnished plenty of water and fed grain in plenty, but how was it done? The hay was fed on the ground or in a rack that the sheep jumped into the minute the hay was put in and soon put it in shape that it would not be eaten. The water trough had several inches of manure in the bottom. The feed trough where the grain was fed was half buried in manure, and the farm poultry had access to it and ate what the sheep left, the larger quantity. The sheep were run down in flesh and lambs came weak, no milk for them. Many died, both old and young.

"These men told the truth when they said they fed fine mixed hay, all the flock would eat, water always before them, and the troughs almost always had grain left in them until the hens got around. They had simply furnished the food and water in such shape that a fastidious animal like a sheep would starve rather than eat and drink filth. They became debilitated, dropsical swellings appeared under the jaw, and death usually closed the scene. My friend, I fear some of these things will hit your neighbors if they don't you. When sheep always have disease of the kind you speak of in springtime and no other, as you say, there is a call for better food, more food or a better manner of serving it to the flock. This is the truth, the whole truth and nothing but the truth, and the remedy is to regulate the conditions, so as to prevent. Drugs are of no account in these cases."

STOCK BARNS

The best is the cheapest in paints and painting, as well as in many other things, but it often happens that a farmer wants to improve the looks of his buildings while feeling that he cannot afford to pay out the necessary money for a good grade of paint. There are several substitutes which can be used that look well for a time and serve to protect the wood in a greater or less measure. The following is recommended by a practical man who has tried a variety of paints, whitewashes, calcimines, etc.:

Slack one peck fresh stone lime, and while the liquid is still warm add four ounces glue previously dissolved, one quart raw linseed oil and such color as is preferred, stirring it all well together. This is said to be very durable on stone, brick or wood and will not rub off. Whitewash or dry color put on with water is much more durable if varnished over with raw oil. Another cheap paint is made by mixing venetian red ground in oil with boiled linseed oil and adding five times the quantity of crude petroleum.

Dishearitening.

Even the clergyman, noble and inspiring as his vocation is, has now and then his bad moments.

"Oh, sir," said a poor woman to a Scotch minister, who was by no means a popular preacher, "well do I likes the day when you give us the sermon."

"Indeed!" said the minister, flushing with pleasure. "I wish there were more like you, my good woman. It is seldom I hear such words from any one."

"Maybe their hearing's stronger than mine, sir," said the woman promptly, "but when you preach I can always get a good seat."—Youth's Companion.

A Clock Run by Balls.

A clock owned in England is run by balls which fall into pockets on the right side of a wheel, which revolves and operates the works. The balls drop into a drawer when the wheel revolves far enough. The clock is "wound up" by placing the balls in a receptacle on top of the clock.—Jewelers' Circular-Weekly.

The first anthracite coal known to be such was discovered at Mauch Chunk, Pa., in 1791. The Lehigh Coal Mining company began business in the same year, making a commodity of the recent discovery.

The first European book that ever appeared in the Japanese language was a translation from the German of Heine's songs.

HOTELS.

BORN.

HANBY—At Bishop, Cal., Oct. 14, 1901, to Mr. and Mrs. Walter Hanby, a daughter.

MARRIED.

MEYSAN—HANCOCK—At Lone Pine Cal., Sept 15, 1901, by A. C. Harvey, J. P., Felix P. Meysan and Martha Ellen Hancock, both of Lone Pine.

DIED.

CHALFANT—At Bishop, Cal., Oct. 13, 1901, Agnes B, Chalfant, a native of California, Aged 21 years, 4 months and 4 days.

J. H. Bulpitt of Bishop spent a couple of days in town this week.

John Collins was down from Black Canyon one day this week.

Gustave Sanger and Will Sanger of Alvord were at Independence yesterday.

Mrs. Annie Steward of Big Pine was a visitor at Independence on Wednesday.

John McMurry came down from Big Pine last Tuesday, returning next day.

Attorney White Smith came down from Bishop Wednesday on legal business.

Arthur Mairs got in from Long Valley last evening and says the cattle will arrive to-day.

Gus. Hendrickson came in from Coso on Tuesday and registered at the Independence Hotel.

Pete McGann started for Los Angeles last Monday with a band of about thirty horses and mules.

Charley Robinson got back yesterday with his wife and boy. Mrs. Robinson spent the summer at San Diego.

John Kispert spent a couple of days in town this week. He and Billy Matnack are running a blacksmith shop at Big Pine.

Forest Supervisor Price went to Bishop to-day to look after some land business there. He expects to be back next Tuesday.

Billy Lynch, a well known character about Belleville and Benton for many years died at Sodaville on Tuesday of last week.

Dr. Woodin has several cases at Big Pine and is kept very busy. He left here Wednesday night at midnight to attend them.

Frank Lawrence is marketing the finest crop of winter apples ever raised in the country. They were grown on the Symmes ranch.

Louis Foucault, a woodpacker, was kicked in the abdomen by a mule at Big Pine on Thursday of last week and died on Saturday.

Tax-Collector Given is sending out his annual reminders of taxes due. The first installment becomes delinquent after November 25.

Blacksmith Fraser is the busiest man in town these days. He has been occupied all the week fitting up the big wagons of the Coso company.

Charley Summers was down from Bishop early in the week and bought about 200 head of beef cattle from Wm. Mitchell, Myers Bros., and others.

Forest Ranger Ivan Bunney got in yesterday from a trip to the Long Valley country. He says the various cattle men are now on the way out with their stock.

Mr. C. F. Cram left for Coso on Monday's stage. He was quite ill with stomach trouble for a couple of days but seemed to be entirely recovered before leaving.

O. I. Mairs arrived home Wednesday from San Francisco where he went to attend the Masonic Grand Lodge. He saw P. H. Mack there and states that Mr. Mack will be at Independence in a few days.

W. L. Hunter arrived home last Monday after an absence of nearly a year, most of the time being spent in San Francisco. While his health has very much improved he is still far from being recovered.

Will Russell of Davisville, Yolo County, arrived at Independence on Wednesday's train. Mr. Russell will spend several days here looking after his real estate interests and enjoying some good quail shooting.

P, P. Keough was at Independence yesterday on his way to Los Angeles accompanied by his three children. One of them, a boy of fourteen, has heart trouble and Mr. Keough will leave him in Southern California.

CANNOT RECOVER.

As we go to press the death of Mrs. J. C. Irwin may occur at any moment. The physician and nurses state that she has been in a dying condition since six o'clock last evening. Her sister, Mrs. Loomis, has been telegraphed for to Chicago and is on the way, being at Cheyenne this morning.

A Great Mine.

The Tonopah Bonanza of the 12th contains the following:

"The developments on the Mizpah ledge up to the present date demonstrate it to be a continuous ore chute about 1,000 feet long, and averaging about four feet in width- At no point along this 1000 feet does it produce anything less than what might be termed a high grade milling ore, while 50 per cent of the ledge so far as it is opened up, is composed of ores containing values in gold and silver of from $100 to $300 per ton. Along the course of this ledge and within the 1000 feet above mentioned, ten shafts have been sunk, all over 100 feet in depth, from which drifts have in many cases been run for some little distance. To a depth of 150 feet the ledge has been pretty well blocked out, and its value is no longer a matter of speculation.

Yesterday and to-day the people of Tonopah are flocking south five miles from this place to a reported rich discovery. The ledges are wide and the stringers very rich, assaying as high as $560 to the ton. The new find is on the same belt as Tonopah and Klondike. The croppings assay $25 in gold."

Doing Well.

Mr. G. L. Dean of Dean & Jones was at Independence Wednesday on his way back to Slate Range. For the last three years and a half Dean & Jones have been conducting successfully a mining property in the Slate Range, which they purchased from Carr & Haggin. They keep twenty stamps constantly dropping, and while little is said of their enterprise, they are quietly but constantly grinding rock. Mr. Dean purchased seven head of fine young horses ranging from 1300 to 1600 pounds from A. O. Collins. These he is taking down to put to work on his ore team. Mr. Jones has gone to Mono county to examine a mining property there.

Death Loves A Shining Mark.

With feelings of deep commiseration for the bereaved family we record the death of Agnes B. Chalfant. She was born at Independence 21 years ago and is remembered as a bright and amiable child. She possessed musical abilities of the highest order and her death was caused by too diligent endeavors to perfect herself in the art she loved. She spent considerable time at San Jose in study and since her return devoted herself to piano practice to such degree that her health was fatally impaired. This community tenders its heartfelt sympathy to the bereaved ones.

Real Estate Transfers.

Recorded since last report:

J. H. Bulpit to P. P. Keough—5 acres known as "Way Property", Bishop, $10.

J. H. Bulpit to P. P. Keough—120 acres in Sec. 21 Tp 6 S R 33 E $10.

J. H. Bulpit to P. P. Keough—About 12 acres in S W ¼ Sec 2 Tp 7 S R 32E $10.

R. Way et ux to J. H. Bulpitt—Way Place at Bishop $100,

R. Way et ux to J. H. Bulpitt—About 4 acres at Bishop $5.

E. L. Cross to F. L. Howard—Undone third interest in Buckeye mine South Park Dist. $500.

Railroad Extension.

LOS ANGELES, Oct. 10 — The "Express says: The Randsburg Railway is to be extenbed to Keeler. The latter is a terminal point of the Carson and Colorado Railroad built by D. O. Mills and transferred to the Southern Paific before the death of Collis P. Huntington.

Senator Chauncey M. Depew is at the head of the syndicate owning the Randsburg line, which is controlled by officials of the New York Central. Rights of way for the proposed extension are being secured.

Mr. J. Irving Crowell, a mining expert whose headquarters are at Los Angeles, has been at Independence for several days past. Mr. Crowell's mission is to make a thorough examination into the mining situation of this region with a view of ascertaining the probable output of ores and influx of supplies from a railroad standpoint. Mr. Crowell is in the employ of the people who propose extending the Randsburg road and naturally a great deal depends upon his report. He has already spent some time in the southern end of the county.

Rob't Doyle Esq., the main owner of the Mammoth mining properties at Mammoth, arrived from Chicago Thursday night. On Friday he was driven by A. Farrington to Crater and from there he will continue on to the Mammoth mine for the purpose of viewing the properties and making calculations for starting the mine next spring.—Miner-Index.

Wm. E. Cox Esq., an Eastern attorney in the employ of the new owners of the Eastside canal, is at Independence. Mr. Cox is very reticent concerning the plans of his Company, but there is a chance that some steps may be taken toward the settlement of the large tract of land under the Eastside Canal.

Twenty-one head of horses brought down from Inyo county by R. W. Scott were sold at auction at the Alameda track last Tuesday and averaged $75.56 per head. They were a very fair lot of horses and the prices obtained were satisfactory—Breeder & Sportsman.

The young folks around town gathered at B. Rhine's new residence last Saturday and spent the evening in dancing. At midnight a cold supper was served at the Inyo Mercantile Co.'s lunch rooms to which ample justice was done.

BOARD OF SUPERVISORS.

FRIDAY, Oct. 11, 1901.

Board met pursuant to adjournment, all members present.

Bond of J. N. Reynolds on contract to paint Court house was examined and approved.

The application of C. N. Rose for rebate of taxes was laid over till next regular meeting.

The monthly and quarterly reports of the treasurer and the quarterly report of the auditor were examined and approved

The treasurer and auditor were instructed to transfer $100 from the general road fund to the fund of road district No. 5.

The petition of bee-keepers for the appointment of an apiary inspector was rejected on account of not being drawn in accordance with the law governing such petitions.

The following claims were examined and allowed:

SATURDAY, Oct. 12, 1901.

Board met pursuant to adjournment, all the members present.

The auditor was instructed to draw a warrant on the general expense fund in favor of N. J. Cooly for the sum of $30 to pay for the maintenance of Ethel White in the Children's Home at San Francisco, where she now is, for the term of six months.

Ed. Elder's additional bond for a liquor license was examined and approved and Mrs. Mary Ann Green was released as a surety on his original bond.

The new County plats were submitted to the assessor for his approval before further action by the Board.

On motion, Rob't Love, S. E. Vermilyea, J. W. McMurry, T. C. Boland and P. H. Mack were appointed delegates to the "Convention to urge the extension of the Chinese Exclusion Act," to be held in San Francisco on the 21st of November, 1901.

The following bills were examined and allowed:

I. P. Yaney, Gen. Exp. fund	$25 00
Leece & Watterson, sundry funds	10 30
Salary fund:	
T. C. Boland	66 00

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains o Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 3:25 p m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the mo ning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spen examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,10 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

MRS. FRANK CARTER,
3 Merrill Street, Amesbury, Mass.

This letter should carry Faith and Conviction to the Hearts of all Sick Women.

"I suffered with inflammation and falling of the womb and other disagreeable female weaknesses. I had bad spells every two weeks that would last from eight to ten days and would have to go to bed. I also had headache and backache most of the time and such bearing down pains I could hardly walk across the room at times. I doctored nearly all the time for about two years and seemed to grow worse all the time until last September I was obliged to take my bed, and the doctors thought an operation was the only thing that would help me, but this I refused to have done.

"Then a friend advised me to try the Pinkham medicine, which I did, and after using the first bottle I began to improve. I took in all five bottles of Lydia E. Pinkham's Blood Purifier, four boxes of Lydia E. Pinkham's Dry Form Compound, three boxes of Liver Pills and used three packages of Sanative Wash, and I am as well now as I ever was. I am more than thankful every day for my cure." — MRS. FRANK CARTER, 3 Merrill St., Amesbury, Mass.

$5000 *will be paid if this testimonial is not genuine.*
Lydia E. Pinkham Medicine Co.

An Ant For a Pet.

One of the queerest little pets ever seen is the tame ant belonging to a well known scientist. This man keeps tribes of ants in nests which he has made himself and feeds them with honey or sugar through a tube that connects with the nests. One day he saw that one of the ants kept coming into the tube to eat up the honey in the glass bulb at the end. When he took out the cork that closed the bulb, the insect came to look for the food, and he offered it some honey on the point of a needle, says the New York Tribune.

The ant shrank back at first, then drew nearer, feeling about with its antennæ, until it reached the needle. Soon it learned to take the honey off its keeper's finger, although ants are among the most timid of living things, and a new odor or the least movement outside their nests usually drives these little insects away.

This ant is now so tame that it quits the bulb as soon as the cork is removed and goes to find the honey on the scientist's finger. When its meal is over, it does not try to hurry away, but waits till its master lifts it on a bristle and carries it back to its nest.

Consolation and Comfort.

Who is it that does not wish to be out in the open air or alive in some field of sport, whether it be with the bat, rod or gun; whether we go coasting over the hills and vales on the wheel or sailing over rough waves or into serene coves, it is all sport, and the springing muscles seem to need it. It is bound to happen that some misbap will occur. Thus it is that we have sprains in abundance. Light sprains, sprains that cripple, sprains that give great pain, sprains that rob us of sleep, but sportsmen of all kinds have come to know that there is nothing better than the old reliable St. Jacobs Oil. Have it with you for use; you may rely on its cure of the worst sprain and restoration to the comforts of life.

WHAT CAUSES DANDRUFF.

Greatest European Authority on Skin Diseases Says It's a Germ.

The old idea was that dandruff is scales of skin thrown off, through a feverish condition of the scalp. Prof. Unna, Hamburg, Germany, European authority on skin diseases, says dandruff is a germ disease. The germ burrows under the scalp, throwing up little scales of cuticle, and sapping the vitality of the hair at the root. The only hair preparation that kills dandruff germs is Newbro's Herpicide. "Destroy the cause, you remove the effect." Not only cures dandruff, but stops falling hair and causes a luxuriant growth. Delightful hair dressing.

Adams' Sarsaparilla Pills cure sick headaches, constipation, biliousness, dyspepsia, purify the blood. 10c, 25c. Druggists.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

Stock Market Tips.

Does it ever occur to those who follow journalistic tips on the stock market that they are written by men who find it worth their while to follow an arduous and moderately remunerated profession and that therefore the tipster obviously cannot trust to his tips for a livelihood?

Is it conceivable that any one whose judgment of the movements of securities was sufficiently trustworthy to make even the majority of his shots bullseyes would waste his time by compiling paragraphs for newspapers? Would he not rather spend half an hour or so in the morning at the end of a telephone instructing his broker to buy and sell and devote the rest of his day to the graceful consumption of the boundless fortune that his knowledge and acumen would, ex hypothesi, inevitably provide?

And tips from stockbrokers come under the same suspicion, for it is not reasonable to suppose that one who really had tips worth following in his possession would utilize them as baits for clients who reward his efforts with a beggarly half crown per cent.—Cornhill.

Nuts as Food.

Nuts contain a large amount of nourishment, and owing to their oily nature digest easily. Eaten with salt they are palatable. Either as a dessert course or salted and used as a relish their value is the same. They are not expensive, for from the peanut through the imported varieties they can be bought in bulk at small cost.

The peanut has many good qualities to recommend it, and from its low estate is coming to the front as an important item in dietetics. It is supposed to cure insomnia if eaten just before retiring. Salted, they are much cheaper than almonds. The small hickory nut, at a few cents a quart, can be used on the most economical table. The English walnut makes a very good salad blanched and used with celery. Filberts, almonds and Brazil nuts are more expensive, but as only a few are needed at a time the cost is not great.—Woman's Home Companion.

Religion Losing Ground.

The country is becoming agitated over the statement that religion is losing ground. This results in countless discussions until the agitation runs its course, and still religion flourishes. It is only useless things that deteriorate. The finest recommendation of Hostetter's Stomach Bitters, the great stomach strengthener, lies in the fact that it has lived for fifty years in spite of hundreds of imitations, and is renowned for its cure of dyspepsia, indigestion, biliousness, nervousness and malaria, fever and ague.

If you can't say anything good of a man you can at least have the courtesy to sit around and and hear other people say bad things.

What are Humors?

They are vitiated or morbid fluids coursing the veins and affecting the tissues. They are commonly due to defective digestion but are sometimes inherited.

How do they manifest themselves?

In many forms of cutaneous eruption, salt rheum or eczema, pimples and boils, and in weakness, languor, general debility.

How are they expelled? By

Hood's Sarsaparilla

which also builds up the system that has suffered from them.

It is the best medicine for all humors.

Sure of a Visit.

As a rule, said a prison warden, a man is in a despondent mood during his first week's imprisonment. There are exceptions, however, as this incident will show.

One Saturday about dinner time I was suddenly accosted by one of the new arrivals who had served the first week of his sentence.

"I say," he remarked, "has a lady been asking for me at the gate?"

I told him that if he had been wanted the governor would have sent for him.

"Oh, very well. Keep cool," he said. "This is the first time for ten years I've put in a full week's work, and the old woman is sure to be at the gate for my wages."

And with a grin the cheerful one passed on.—London Answers.

A Little Too Faithful.

A thief in Paris, being chased by the police, threw away during his flight the purse he had stolen and was in a fair way, after being taken to the police station, of being allowed to go free for lack of sufficient evidence to hold him when his faithful dog, which he had trained to fetch and carry, trotted into the station, wagging its tail, with the missing purse in its mouth.—Paris Journal.

The Gentleman's Psalm.

A reader of the Scriptures emphasizes the Fifteenth Psalm as the gentleman's psalm because it describes as among the many who are entitled to be considered as gentlemen "one who leadeth an incorrupt life, speaketh truth from his heart, doeth no evil to his neighbor, is lowly in his own eyes, keepeth his word even if it be to his own hindrance."

Poisoned by Absorption

POISON OAK, POISON IVY, BARBER'S ITCH, LEAD AND BRASS POISONING, ETC.

Through the pores of the skin many poisons are absorbed into the blood, deranging the circulation and affecting the constitution as quickly and seriously as those generated within the system. Just under the skin are innumerable hair-like blood vessels, and connecting these with the skin are millions of small tubes or glands, through which the poison is conveyed to the blood system. During the spring and summer, while the skin is most active and the pores well open, we are much more liable to be affected by Poison Oak and Ivy and other dangerous plants. Workers in brass, copper, lead and zinc have their health impaired and the blood supply poisoned through the absorption of fine particles of these metals and the acids used in polishing and cleaning them. Inhaling the fumes of lead give painters that pallid, waxy appearance of the skin. Barber's Itch is another disease that reaches the blood through the skin, and is a most obstinate one when it becomes firmly fixed in the system. After the poison has reached the blood and been disseminated throughout the system it is too late to resort to local applications. In many cases the blood is affected simultaneously with the appearance of the rash or eruption on the skin, and all efforts should be directed to the purification and building up of the blood. Ugly eruptions and sores will continue to break out in spite of salves, washes, soaps or other external treatment.

S. S. S. is especially recommended for poisons of this character. So completely does it destroy the effects of the Oak and Ivy that there is no possibility of its reappearance, and it is equally as efficacious in brass or lead poisoning or Barber's Itch; building up and purifying the blood and driving out of the circulation impurities of every kind, and removing every blemish, sore or eruption from the skin. There is no substitute for S. S. S.; it is the only purely vegetable blood purifier known, and the safest and best in all constitutional or blood diseases.

Our Medical Consultation Department.—If you desire any special information or advice about your case, write our physicians, explaining your condition, and they will carefully consider what you have to say and you will receive a prompt reply. Our physicians have made a study of blood and skin diseases, and you can have the benefit of their experience and skill without any cost to you whatever. Don't hesitate to write fully about yourself, as nothing you say goes beyond our office. We have a very interesting book on Blood and Skin Diseases, which we will be glad to mail free.

SSS

THE SWIFT SPECIFIC COMPANY, ATLANTA, GA.

FINE COUNTRY HOME.

W. K. VANDERBILT'S "IDLE HOUR" ON LONG ISLAND.

A Palatial Structure in the English Style on Great South Bay—Some of the Rooms and Their Decorations—Preparing the Grounds.

W. K. Vanderbilt's new country house, Idle Hour, the ground for which was broken last October, is practically completed, only a few minor touches being now lacking.

The new mansion, of which P. H. Hunt has been the architect, is built of alternate tiers of brick and limestone, trimmed with marble, and supported by immense iron and steel beams. To prevent a repetition of the fire which two years ago destroyed the old Idle Hour, while Mr. and Mrs. Vanderbilt were spending their honeymoon there, as little wood as possible has been used in the construction of the new house.

The new Idle Hour has, besides the basement, three floors. The ground plan is L-shaped, with a frontage on Great River of 180 feet, the wing measuring a hundred feet. In the angle of the building is a court containing conservatories, fountains and stone and marble basins. The other two sides of the court are formed by covered cloisters leading to an elliptical palm garden, built wholly of ornamental steel and glass.

The house is massive in appearance and resembles the typical substantial English manor. There are two entrances on the front, each guarded by two crouching lions in stone. The main entrance opens into a spacious hall lined with pillars, each bearing brackets holding torches for lights. The parlor is in the extreme south of the house, and is finished in white and gold and carpeted in fawn-colored Brussels. The dining-room has a ceiling of heavily quartered paneled oak, hand-carved, and a huge fireplace of variegated marble.

In an alcove above it is a statue of Diana. The chandelier hangs by an immense deer's foot, from which branch out three horns bearing lights. The dining-room table is a low, massive, antique, mahogany piece, supported by hand-carved tiger legs. The chairs are old-fashioned, with high wooden backs. In this room there are also five smaller tables and chairs to match. The side walls of the dining-room represent, in stucco work, studies of Green and Roman types. The library and salon are small rooms.

In the banquet room is a large pipe organ, which may be played by hand or steam. The walls of this room are covered with green tapestry, with a top border of hand-painted arboreal designs. The feature of the reception room is a granite mantelpiece, whose finely chiseled vines and grape clusters are said to have taken five sculptors six months to complete. The table in the billiard room is inlaid with mother of pearl, as are also the cues. On the third floor is a handball court.

Mr. Vanderbilt's suite and the eighteen guest chambers are on the second floor. Each guest chamber has a connecting bath room. The third floor is exclusively for servants, with the exception of a large number of cedar chests for storage. In the basement are the wine cellars, kitchen, pantries, silver safe, men servants' quarters and servants' dining-room. There is a broad terrace before the house, with marble and granite steps leading down into the river. A few feet out from the base of the terrace steps is moored a great floating landing stage.

A steam dredge has been at work for months dredging gravel from the bottom of Great River, which is being used to form a solid bed for the several miles of roads upon the Idle Hour estate. The newly constructed canal, which separates the mansion from the farm section of the estate, has beautifully sodded banks, and is spanned at the many road crossings by pretty bridges. The estate will have one of the finest henneries in the world, including an elaborate incubating department.—New York Sun.

A PRIMEVAL TRIBE.

Queer Race of Indians Recently Discovered in Northwest Mexico.

Carl Lumholtz, the noted explorer, has recently returned from an expedition into the wilds of Northwest Mexico, bringing back a wonderful collection of ceremonial objects, which have just been placed on exhibition on the first floor of the new west wing of the Museum of Natural History.

This material is the work of the Huichol Indians. The area of this race is difficult of access, as they occupy a deep ravine in the Sierra Madre del Norte range, in the State of Jalisco. They are hemmed in by huge mountain walls 8,000 to 10,000 feet in height. Here they have been able to defy all invasion from the outside world, and have expelled the missionaries who came to teach them. No churches or priests are allowed in their country, and they are living in the same grade of culture as when Cortez first put foot on Mexican soil.

Having preserved their ancient customs and beliefs unaffected by white contact, they are more than ordinarily interesting to ethnologists. For the first time their products have now been brought to civilization, and their mythology reported on.

The Huichol number about 4,000. They dress in garments of their own manufacture, decorated with elaborate and artistic designs. The most interesting industry of the people is weaving. The women make belts, sashes and pouches of cotton and wool. The ribbons and sashes are ornamented with odd and beautiful figures, all of which have a symbolic meaning. Dr. Lumholtz's collections among this tribe not only cover the whole range of their industries, but illustrate in a most exhaustive manner the beliefs and ceremonials of the people.

Their country is comparatively arid and their food supply depends largely upon the regularity of the rainfall. For this reason most of their ceremonies are intended to propitiate the gods of rain, and all the objects they use in their ceremonial worship are covered with symbols indicating rain. Most of their gods have control over clouds and rain. In each village there is a large temple around which stand a number of small houses sacred to various deities. In these are deposited the offerings made by the people.

Woven shields are sacrificed for good luck. These bear designs of the symbols of the deity to whom they are offered. On others are shown the animals sacrificed to the deity and a pictorial representation of the object of the prayer. A man who prays for the health of his wife will make an offering on which the figure of a woman is represented weaving or painting. When he prays for the welfare of his herds figures of cattle or sheep are represented on his offering, while a woman who prays for skill in any kind of handiwork sacrifices a sample of it.

A symbol of prayer is attached to an arrow. The arrow is frequently stuck into the thatched roof of the temple, and is supposed to take a course toward the deity, carrying the wishes of the supplicant. In the temples are also found chairs in which the god is supposed to sit. Symbols of prayer are often attached to the seats, where they will at once attract the attention of the deity.—New York Herald.

PAN-AMERICAN PEOPLE.

Englishman's Description of Men and Women He Saw at Buffalo.

Two things will probably impress every observant foreigner who comes here. One is the external refinement of the American women whom he will meet (all or nearly all of them, as he would say, provincial). A large proportion are pretty, a few are beautiful, and nine-tenths of them are well dressed without being overdressed. The next thing which will strike the stranger is the surprising sturdiness of the men, their air of alertness, their self-reliance, and also their lamentable lack of polish. We are apt to imagine that all Americans are of the strenuous, wan, excitable, nerve-worn type so commonly met with in Europe. But, as they say, "there are others," millions of others, scattered about the far West and the great middle West, who are not only singularly wide-awake, but also healthy. These, and not the Wall street speculators, or the grasping and "chin-bearded" farmers, are the men who are building up this country, earning the fortunes which go into the pockets of the multi-millionaires, and threatening Europe with the most formidable of trade rivalries. Taken in the mass, they seem poorly educated—far more poorly than the women. Their manners, to a sensitive Frenchman or a cultured Englishman, are the reverse of prepossessing. They are raw, they are ungraceful, they are often awkward. But they are good-tempered, without affectation, and in most practical matters they are unmistakably intelligent.

Women and men alike, whether they be well or ill dressed, poor or prosperous, talk too loudly and in shrill or rasping tones, eloquent of the disdain with which all evidently regard the privacy so dear to English folk. If you were to address any one of them in the conventional phraseology of London "society" it is "dollars to doughnuts" that the answer you would get would be a quick and rather irritating "What's that?" (equivalent to our "Beg pardon?"), or an even more exasperating nasal, long-drawn-out, and wondering "How?" In the eyes of the women there is a rude curiosity, but no speculation. In the eyes of the men there are self-concentration, eagerness and the suggestion of that scheming turn which, in exceptional instances, produce great organizers like Mr. Carnegie, and in the multitude makes business "hustlers."—Buffalo Letter to London Chronicle.

A Boy's Art Critique.

Wise men say there is nothing really new in this world, and perhaps the boy who passed the following criticism upon the drawing abilities of his big sister was an unconscious plagiarist; but, anyway, his verdict amused the sister so much that she tells it occasionally, though the joke is on herself. The young woman has a fondness for executing those works of art which consist in the representation of dead game birds hanging by their heels from a nail on a board, fish on a platter ready for the cook, and fruit grouped on a table around a wine glass. These gems she turned off at the rate of about four a year, and presented them to her friends for their dining-room walls. She had just completed a twin pair for a bride. One represented a mess of lobsters in a nest of salad; the other a basket of peaches, with down on them like plush. She was so pleased with both that she asked her brother if he did not think they were just splendid. It was evident that the youthful critic liked one and not the other. After looking at them a minute or two he said:

"Sis, you're a peach on lobsters, but you're a lobster on peaches."

Surely a Gentleman.

In far-off years Sir Walter Scott visited the first Lord Plunkett, who was then Lord Chancellor of Ireland, and was taken to see the ruins of the Seven Churches of Glendalough, one of the sights of Ireland.

One of the most romantic spots is St. Kevin's Bed, a cave which requires a scramble over the rocks to enter. Sir Walter, in spite of his lameness, penetrated the "shrine," an old peasant woman lending him a willing hand.

On the return the Lord Chancellor asked her if she knew how great a man she had assisted, adding, "He is Sir Walter Scott, the illustrious poet."

"Begorra, your honor," the old woman replied, "be's no poet! He's a gintleman born an' bred—for hasn't he left in me hand a piece of silver?"

Truly, there is more than one way of knowing a man by his works.—Youth's Companion.

The Modern Prize Fight.

"Mr. Fitz-Jeffries," said the reporter, "a cable message from Paris says the champion heavyweight of France wants to fight you."

"Well, if he does," replied the great pugilist, "he'll have to do it in English. I'll be hanged if I'll learn his language."—Philadelphia Press.

CRITICAL PERIODS

In Woman's Life Are Made Dangerous by Pelvic Catarrh.

Mrs. Mathilde Richter.

Mrs. Mathilde Richter, Doniphan, Neb., says:

"I suffered from catarrh for many years, but since I have been taking Pe-ru-na I feel strong and well. I would advise all people to try Pe-ru-na. As I used Pe-ru-na and Man-a-lin while I was passing through the change of life, I am positively convinced your beneficial remedies have relieved me from all my ills."

Pe-ru-na has raised more women from beds of sickness and set them to work again than any other remedy. Pelvic catarrh is the bane of womankind. Pe-ru-na is the bane of catarrh in all forms and stages. Mrs. Col. Hamilton, Columbus, O., says: "I recommend Pe-ru-na to women, believing it to be especially beneficial to them."

Send for a free book written by Dr. Hartman, entitled "Health and Beauty." Address Dr. Hartman, Columbus, O.

How the Fuss Started.

"That hand me down suit you're wearing," remarked Rivers, "reminds me of an unripe watermelon."

"Why?" asked Brooks.

"Because it's so different. One isn't cut to fit, and the other isn't fit to cut."

It was then that Brooks blazed away at him.—Pick-Me-Up.

Hamlin's Soliloquy.

Hamlin (standing before the tattooed man in the dime museum)—Heavens, how that fellow must suffer if he ever gets the jimjams!—Smart Set.

Easy Come, Easy Go.

The man who creeps along bent over, with his spinal column feeling in a condition to snap like a pipestem at any minute, would readily give a great deal to get out of his dilemma, and yet this is only the commonest form by which lumbago seizes on and twists out of shape the muscles of the back. This is commonly known as backache, a crick in the back, but by whatever name it may be known, and however bad it may be, 10 minutes' vigorous rubbing with St. Jacobs Oil on the afflicted part will drive out the trouble and completely restore. It is a thing so easily caught, it may be wondered at why there is not more of it, but because it is so easily cured by St. Jacobs Oil may be the very reason that we hear so little of it.

For pimples, sallow complexion, impure blood and poor digestion use Adams' Sarsaparilla Pills. They improve complexion and cure constipation. 10c, 25c. Druggists.

DEAFNESS CANNOT BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and it when is entirely closed deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that can not be cured by Hall's Catarrh Cure. Send for circulars, free.

CURE SICK HEADACHE.

Called Lorillard's Bluff.

Heavy bettor as he was, Pierre Lorillard once met his match when he ran up against gray bearded James E. Kelly, who introduced bookmaking into this country. It was nearly a generation ago and at Jerome park. Kelly was laying 2½ to 1 against one of Lorillard's horses in a big stake event. The news went to Mr. Lorillard, seated on his coach on the clubhouse lawn.

"I'll just take a little of the conceit out of that sawed off Irishman," said Lorillard to Wright Sanford, Newbold Morris, John Hunter and a few other congenial spirits. They started for the ring together.

"I'll lay $10,000 on my horse at that price, Kelly," said Mr. Lorillard in his princely fashion, expecting to see Kelly wilt and refuse to take the wager.

"Certainly, Mr. Lorillard." Then turning to his sheet writer, Kelly said: "$25,000 against $10,000, Pierre Lorillard." Quickly he turned to the tobacco magnate with a polite "Much obliged to you, Mr. Lorillard; very much obliged. Would you or your friends care to bet another $10,000 at the same odds? Should be delighted to accommodate you."

"What a nerve!" was all Mr. Lorillard could say as he turned on his heel and walked away.

Jimmy Kelly won the bet, for Lorillard's horse was beaten.—New York Times.

They Weren't Fed.

"Some years ago," said a San Francisco man, "a globe trotting Englishman came into the city by the Golden Gate, and it fell to my lot to entertain him. So one night I took him to dine at the far famed Cliff House. It was a beautiful moonlight night, and from where we sat upon the porch we looked out upon the broad bosom of the Pacific ocean. The moon's light made a path across the waters, and in its center the Seal rocks lay like a black patch. The Englishman inquired what they were and upon my informing him said: 'Bah Jove, are those the Seal rocks of which I have heard? I'd very much like to see the seals. I say, my man,' turning to the waiter, 'caun't I see the seals? Don't you feed them at night?'

"'Oh, yessir,' replied the waiter, who was of Hibernian descent, without blinking an eye. 'At 9 o'clock we always gives them their ham and eggs, sir.'

"The Englishman accepted this surprising piece of information without turning a hair and announced that he would surely be on hand at the time mentioned. He was; but, needless to say, the waiter was not."

THE TRAINED NURSE

An Occupation Which Attracts Many Refined Girls.

Many girls of education and refinement are turning to the profession of trained nurse as a means of livelihood. It is a serious occupation and a responsible one, for the word of an experienced nurse carries great weight in matters relating to her profession. It is this fact that prompted an interesting interview with Miss Kathryn Nash, of North and Plattsburg avenues, Burlington, Vt., published in the News of that city. To a reporter she said:

"I had been caring for a patient steadily for nine months without rest and was run down and tired. I had very little appetite and sometimes I would skip one or two meals and not feel it at all. While visiting in Boston, an abscess formed back of my ear. I had no strength and, although I was always drowsy, sleep did not seem to refresh me. After I came home I had seven abscesses on my back, near the waist line, and was unable to sit up much for three or four months. The doctors who treated me said I had blood-poisoning from which I would never recover."

"That must have been very discouraging," said the reporter.

"It was. It took all the ambition out of me for awhile. But one day, when I was feeling particularly despondent, a friend advised me to try Dr. Williams' Pink Pills for Pale People. She was taking them with benefit and thought they might also help me. I bought some at once and before I had used one box of the pills I found I was gaining strentgth. My appetite and digestion improved and I felt rested after sleeping, instead of being tired as I was formerly. I soon became entirely well and able to resume my duties."

"Then you believe the Pink Pills cured you?"

"I am certain they did and I intend to keep Dr. Williams' Pink Pills for Pale People by me all the time so that I can take them if needed. I recommend them to my patients as well as to everyone who is suffering from any complaint brought on by derangement of the blood or nerves."

Dr. Williams' Pink Pills for Pale People are sold by all dealers or will be sent postpaid on receipt of price, 50 cents a box; six boxes, $2.50, by addressing Dr. Williams Medicine Co., Schenectady, N. Y.

WOMAN AND HOME.

TWO CHICAGO YOUNG WOMEN AND THEIR UNIQUE PLACES.

The Older Girls Dropping Out—The Girl In the Store—Discipline of Children—Happiness In Married Life—The Bride's Cake.

In the active out of door conduct of one of the large teaming businesses of Chicago and in the indoor management of one of the largest city and suburban express businesses of the city two Chicago girls have unique places in the business world.

For as Miss Barbara Hess of West Sixteenth street is the head of the Joseph Hess teaming business, so is Miss Maude Hastings of Wentworth avenue the manager of the down town office of the Hastings Express company. Forty teams, 125 horses and nearly 50 men are under the supervision of Miss Hess, while 132 wagons, 250 horses and more than 200 men and boys are looked after by Miss Hastings.

Of the two young women Miss Hess has the more "strenuous" life. She has fewer mental worries, but in all weathers and all circumstances her buggy, always

MISS MAUDE ADELAIDE HASTINGS.

hitched, stands in the shadow of the old Market street station, and from her dark little office, 200 feet away, she may have to hurry, jump into her rig and send the impatient Sam bowling down the street as if a 4-11 alarm had just struck and she were a member of a woman's fire brigade.

Miss Hastings leads a quieter life, but every moment of it is given to the details of business. In this, however, she still has time to leave a sharp impress of femininity on the whole office. A bunch of flowers, a glove, a veil, the neatness of the office and the disposition of books and papers on the desks, all show a woman's presence.

She is tall, of firm figure and with a striking head of auburn hair. She was born in Englewood in 1877, passed through the public school and, being of an active disposition, asked for a place in her father's office. From this position she has grown to managerial charge of the down town office of the company.

Every detail of the business is at her fingers' ends. With so many wagons and men in so many sections of the city the nicest judgment is required in timing deliveries, in making rates and in expediting business generally. All these details have been mastered by Miss Hastings, and the whole office looks to her for direction.

It is Miss Hastings' opinion that she has accomplished nothing extraordinary for a young woman. As she sizes up the duties of her position all that she needs to do is to be down to work promptly on time, to be quick at figures, to remember faces over the counter and voices over the telephone, to keep in mind just where and when each wagon in service should be at any emergency and at all times to be ready with tact, judgment and common sense in the transaction of business.

The Older Girls Dropping Out.

"I never see you anywhere nowadays," some one remarked to an attractive young woman. "Do you never go anywhere now? You used to be the gayest of the gay. Why have you given it all up?"

"Because I am neither fish, fowl nor good red herring," she laughed. "I have no place in society. I ought to be married and have my own establishment, and I have not. You see, it is this way with girls whose people do not entertain much: The first year they come out they are feted and made much of and have a beautiful time. The next year or two their glory pales a little, but they still feel it is their prerogative to go about and have a good time. Then comes a period of toleration, which also lasts a year or two. This brings a girl to her fifth or sixth winter. If she comes out at 18, she will be about 24 or 25—still young enough to enjoy life, one would think, but society has had enough of her. She feels it herself very keenly. Her invitations grow fewer in number, her partners fall off, her father no longer pays for her ball dresses with alacrity, her mother's attention is absorbed by her younger sisters, who must now be considered, and she feels that her day as a social butterfly is practically over.

"'I wonder that those old girls try to hang on,' I heard a callow youth remark at the last dance I went to. 'Mrs. X. has roped me in to dance the cotillon with one of them. I should think they ought to know enough to stay at home, with all the other girls coming on needing partners.' Fortunately I was not the 'old girl' he had to dance with, but it was one of my contemporaries, and I quite agreed with him. I think there is something undignified in keeping up the same old routine year after year, still anxious to get partners for the cotillon and supper at every dance and feeling all the time that the game is not worth the candle.

"For married women it is different. They have their assured place, and if they enjoy that sort of thing there is no reason why they should not attend every function, but it is becoming more and more the fashion for young women of my age who are unmarried to drop general society. By that I do not mean social life. We go to dinners, theater parties and once in awhile to some particularly smart ball; we have our warm friends and intelligent interests, but we decline to be society hacks, and I think we are right. Don't you?"

In Boston this habit of older girls "dropping out" is even more of a recognized thing. The women at the dances of the smart set there are nearly all debutantes and married women; the girls of several seasons are conspicuous by their absence. —New York Tribune.

The Girl In the Store.

No class of women is so much criticised and misunderstood as those who stand behind counters. It seems little is known about their real life and character, although it comprises some of the largest and most interesting bodies of the working women of today.

Like in all callings of life we find those among them who are not qualified for the business which they have so unfortunately chosen, but this cannot be said of the successful clerk. Like in every business so here—to be successful a good moral character is necessary, and the largest number of women in stores are intelligent and of a good moral character; indeed, the highest type of womanhood is found among them.

A girl who is a successful clerk, and there are many who are, is generally dignified, polite, observant and a good judge of human nature, as these are some of the most essential requirements. She is also a woman of tact, and her perceptive and conversational powers are well developed because of her contact with all classes and conditions of people. Notice the easy and graceful manner of women in stores—they move about with little or no embarrassment.

True, we meet with those who are ill mannered and even ofttimes rude, but this cannot be said of the majority, and in speaking of any class the majority should be taken into consideration.

No occupation in life is more trying and taxes the patience so much as standing behind the counter. The clerk is expected to be a walking fashion plate and dry goods journal. Many buyers are incapable of thinking for themselves, and the clerks must do all the thinking for them. In many cases they must study the peculiar style of beauty of their customers and know just what is best adapted to it, as to color, trimmings and materials, and they are also expected to know the exact amount required, notwithstanding the fact that they know nothing about the style in which the gown is to be made.

Many shoppers think a clerk should never grow tired, that it is entirely out of place for her, and she must under no consideration grow impatient or discourteous no matter how discourteous the one may be upon whom she is waiting.

There is often more discourtesy before the counter than there is behind the counter, and the lady is as often found behind the counter as before, and no doubt those who have so much cause to complain about the women behind the counter are not gifted with an overshare of courtesy themselves.—Elizabeth Voltz in Pittsburg Press.

Discipline of Children.

How many mothers, I wonder, realize the true significance of their play and fondling of the nurslings. It is hard to realize "how the mannikin feels his way, blind and wailing and alone, into the light of day." At first his little body is to him the world, his first sensation hunger and taste his first gateway of knowledge. The pleasure of feeding is his first emotion. Have you ever thought why he puts everything into his mouth as soon as he is old enough to grasp? Simply because the habit of knowing things through his mouth and tongue is his oldest habit and the one most frequently exercised, hence the strongest avenue to convey impressions to his soul.

After taste hearing seems to be the next sense developed, for nurse or mother has rocked and sung, and the rhythm and sound have distracted the mind wholly from tasting. Then comes the bright light, which by sharp contrast with darkness awakens the nerves of sight, and after awhile the little one responds to playful touches here and there.

The mother must exercise all these senses consciously in her play. Taste will take care of itself, but after feeding and sleep there should be occasionally bright objects brought into relation with the eyes, not too near nor too bright, nor must the impression be too prolonged. Let him hear pleasing sounds, music or singing, with repetitions and pauses, for the intermittent, rhythmic or otherwise is most impressive.

Pleasing sounds are better than the confusing noises sometimes used to attract and distract the "fussy" baby. Always play with the little hands and feet with accompaniment of the old nursery rhymes and melodies, as "Pat-a-Cake" and "This Little Pig," and the "mother play and nursery songs."

Froebel received all his best suggestions from the peasant mothers with their rural and folk songs, which unconsciously developed while they soothed. These methods he tried to free from all that was prejudicial and unwise, and we can do no better than apply his results to our own nurseries. The baby who receives intelligent but not officious attention in a playful way is apt to be a brighter baby than the "good" baby that will lie for hours quiet and attracted only by chance impressions so long as he is not hungry. Too much excitation, however, is to be avoided by the overzealous.—Boston Globe.

Happiness In Married Life.

Happiness in married life is to be gained just as enduring happiness in any other phase of existence on earth is to be found—by the use of the old fashioned virtues of unselfishness, consideration for others, politeness and kindness, all based on love and capped by common sense.

Like the old recipe for cooking the hare which begins, "First catch your hare," a happy marriage for a woman begins with "First select a man;" not an ideal made seraph, not an ossified brain, not a mere animal, but a man capable of loving and appreciating a woman's love.

Of course he will be more or less selfish. That is the way parents rear their sons to be. It is your task to bear with this selfishness at first until you can tactfully teach him how beautiful is thoughtfulness for others, and in a very sweet but very dignified way show him that you expect the same treatment you give, says Ella Wheeler Wilcox in the St. Louis Globe-Democrat.

In the meantime you must recollect that a husband can always, at every approach, be the Prince Charming to anchor the enchanted princess with his first kiss if he is skilled enough in love's arts and refined enough to wish to keep the interesting role.

And in all love's ways man is much given to following woman's lead.

If you have no independent income of your own, have an understanding in your honeymoon with regard to money matters. Ask for an allowance to be set apart for your use, in order that no humiliating and indelicate discussions need ever occur between you on this subject. Then study to be economical and thrifty, and wise in your use of your allowance.

Love, sense and patience—those are the three important elements necessary to happiness in marriage.

The Bride's Cake.

The bride's cake is exclusively the bride's. Whatever the amount of cake previously stored in boxes for the guests to carry away as they pass out, there is always an especially decorated cake among the "goodies" served to the guests. It is intended frequently that the bride herself shall cut the cake in the presence of the guests, especially her maids, who expect to find in it a gold ring or some other article foretelling the marrying within a year of the finder. A bride lately took high handed hold of tradition and substituted a heart for the ring of our forefathers' superstition.

Some persons account for the bride's cake by saying that it originally was a sample of what she could do in the way of fanciful housekeeping; her wedding cake was her chef d'œuvre. Whatever it may have been, the confectioner takes the hazard now, and the dear girl is relieved of any possible last minute dissatisfaction with her accomplishments. One New York maker of cakes, whose pastry has long been famous, shipped an ornamented bride's cake with distinguished success 6,000 miles to Libreville, Gaboon, west Africa, says the Montreal Star.

Pastry ornaments of bride's cake often are uncolored. The rage for gold in every possible form is expressed in cake by the occasional use of a wreath of gold fruit and flowers, which remains intact after the cake is cut.

Boxes covered with silk and satin are among luxurious possibilities, but most are merely decorated with one or both monograms.

Do Our Girls Need Chaperons?

Just so long as a girl can cast responsibility on her mother, her school or her chaperon she will do so. When her thoughtless actions bring unpleasant results, she does not blame herself. Some one should have told her. Some one should have forbidden her. It is the business of the powers that be to look after her, and if she falls upon evil days the fault is theirs.

But suppose she has no chaperon and is obliged to think out her own course of action. When she does imprudent things and is uncomfortable in consequence, she must blame just herself. After she has spent some bad half hours in fruitless regretting she chooses her paths with more care.

Every time a girl decides for herself what is best for her to do or not to do she is stronger. This holds even if she does the wrong thing. Our mistakes teach us much. It is well for her to make small mistakes which do not count for much. By these she will learn to avoid later errors which count a great deal.—Florence Reid Myrick in Woman's Home Companion.

Old Maids and Old Bachelors.

There is an old saying that a woman is no older than she looks and a man no older than he feels, and the age at which bachelors and old maids become old depends very much upon themselves, though, as a matter of fact, people bring upon themselves the appellation of "old bachelor" or "old maid."

The man or woman who possesses a well regulated mind, a kind, pleasant disposition, sympathy with the suffering of others and fortitude to support pain is never referred to as an "old bachelor" or "old maid."

A selfish, unpleasant mannered, self absorbed, easily irritated man is "a miserable old bachelor." The term "old maid" is frequently given to the harsh voiced woman who imitates man in dress and bearing, one who interferes with everybory, causes trouble and does her best to make life miserable for everybody she comes in contact with.

Pay Parents Back.

I know of a family in which the girls are in possession of account books bearing witness to the expenditure of every cent they have cost their parents. This money they are paying back by degrees because they consider it a debt of honor. It would be a beautiful scheme to bring up every child to recognize the obligation he or she is under to parents—the financial obligation, I mean, for the other can never be wiped out. The money would mean little luxuries which, perhaps, were denied the parents in the early days of their married life and would scarcely be missed from the purse of a young and ardent worker without incumbrances. This plan would work well with the one of putting in the bank a sum of money at the birth of each child and allowing it to remain until majority is reached.—Betty Bradeen in Boston Traveler.

For Tired Feet.

Tired feet will be much relieved if the following little hints are carried out: Bathe them every night in warm water, washing them well with carbolic toilet soap and a loofah and using a brush to the nails. In the morning repeat the bathing and add to the water a teaspoonful of liquid ammonia or toilet vinegar. Do this again after coming in from a walk, when the feet feel very tired. Let them soak in the water for about ten minutes; then dry them and powder them.

Some of the costly things in the sultan's treasure house at Constantinople are children's cradles of pure gold inlaid with precious stones, divans covered with cloth of gold embroidered with pearls, suits of mail thickly incrusted with big emeralds and diamonds and other relics of former Ottoman splendor.

When washing clothing with the use of one of the cleansing soaps which are to be rubbed in before the real washing, the articles should stand for not more than half an hour. Some people soap them overnight, but this is not good with a soap, especially a yellow soap.

The first teapot made in England is still in existence and shows the London hallmark, 1697. Most of the early teapots seen in England were melon shaped and fitted with feet. Such a one is worth $125. Tea caddies a century or more old are also valuable possessions.

If hair which is to be curled be rolled up for a few minutes in papers or patent kid curlers while the fair damsel owning the locks is dressing, a prettier, fluffier effect will result than could be obtained from a hot iron or longer curling.

CHILDREN'S COLUMN.

The Boy's Knife.

All boys have knives in their pockets, but some of them are so dull they are not of much use either to their owners or to their owners' neighbors. A boy without a knife, as I know from experience, is very miserable and in a poor way to get all the enjoyment out of life. Of course girls do not use knives so much as boys do, but they frequently have to borrow of their brothers or their friends when they want to sharpen pencils or cut their jumping ropes or gather pussy willows. Do not think I would urge selfishness upon my readers, but persons who borrow knives are often very careless with them, losing them or keeping them much longer than they need.

What I want to tell you is the very simple thing of how to keep a pocketknife sharp. With a little trouble and patience a knife can be sharpened and kept in good order, but it is surprising how few boys know how to do this. In the first place, if the edge of the blade is badly nicked, or if the sides curve out, it should be ground on a grindstone until the nicks all disappear. Be sure to put plenty of water on the stone, so that the heat arising from the friction will not take out the "temper" of the steel. Hold the blade firmly so that the stone will grind from the top of the blade nearly to the edge. When the grinding is done, the sides of the blade should curve in. The blade may then be said to be "hollow ground." If the stone is allowed to grind to the edge, the blade will become too thin and will "nick" easily.

Now place the blade in a flat position on a whetstone and grind with a circular motion. Treat both sides in this way till a slight fringe appears on the edge. If the knife does not need grinding, it can be "whet up" in the same way, with the exception of bearing a little more strongly near the cutting edge when rubbing across the stone. Either water or fine oil may be used on the stone, which should be kept clean. Last of all, rub the blade carefully on a strop or piece of soft, smooth leather, which will remove the fine fringe on the edge and will polish the blade. In following these directions you can put an edge on your knife that will require you to be careful of your fingers. —Chicago Record.

Changed Their Minds.

Tom and Bob—So you're the new boy in school, eh? Well, see here; we just dropped in to give you a—

Quiet tip that we'll back you if any of the fellows should try to fight you.—Young People's Magazine.

How Did Jim Know?

For several years my early morning walk lay through the first block of West Fifty-seventh street, where I used regularly to meet a milkman delivering milk. He would take from his wagon a rack containing several bottles and go from house to house, while his old gray horse walked sedately on alone.

One morning as I was passing the pair midway the block the man said to his horse:

"Go on, Jim, and turn at No. 7."

I watched with interest. Jim did go on until exactly opposite No. 7. Then he carefully turned and walked back to his master, or shall I say comrade? Yet some people think that the lower animals cannot reason.—Our Animal Friends.

Margie and the Diamonds.

A very bright 4-year-old had been told in the kindergarten of the beauty and value of diamonds, but none in her family had any to show her. She was told that Mrs. Taylor, an elderly and amiable friend, had some diamonds which she could see. Margie had gone to Mrs. Taylor and asked to be shown her diamonds. Quite a handsome ring was put in her hand for inspection, and she studied it intently for a few minutes, turning it in all lights. Then, looking up earnestly in Mrs. Taylor's face, she asked, "Which is the diamond, the brass or the glass?"

The Flowers With Wings.

Such a lot of yellow buttercups all in a meadow grew
So many, many years ago, when all the world was new,
And you'd thought they'd be the happiest things with nothing else to do
But be cuddled up by Father Sun and fed by Mother Dew,

But I hate to say it wasn't so, for when the birds would fly
High up among the mighty trees that towered to the sky
They would watch them with such envy and lament and mope and sigh:
"Oh, dear, just see them skim along! Oh, why can't you and I?"

Now, the fairy of the flowers once was passing by that way
To nurse a little primrose that was sickly, so they say,
And she heard them all bewailing to a blackbird on a spray,
"Oh, won't you let us have your wings a little while today?"

So the kindly fairy listened, and they told her all their woe,
And she summoned all the fairy knights whose wings were white as snow,
And begged and borrowed every one—they've several pairs, you know—
And put them on the buttercups, the poor things pleaded so.

Oh, high they flew, and low they flew; the old sun blinked his eye;
The breezes came a-chasing them, all laughing with surprise,
And ever since that day when first they fluttered 'neath the skies
We've had the buttercups with wings and called them butterflies.

—New Orleans Picayune.

ISLAND IN THE JACK POT.

It Is Now a Part of Minneapolis and Is Worth Many Fortunes.

At one of the most interesting games of poker ever played in Minneapolis Nicollet island was put in the jack pot by a man who thought he understood the game, but found there were others who understood it better. In 1846 Pierre Bottineau took up a claim on the spot where St. Paul now stands. A year later he traded it for a horse and cow, which he drove away into the wilderness, never dreaming that the land he had almost given away would in a few years be the site of a great city. For a smal sum he purchased a large portion of what is now the business part of Minneapolis and put up a log cabin in a little mound in the center of Nicollet island.

Half a dozen of the old settlers, Bottineau among them, had a little poker club. One evening the stakes kept growing larger and larger until every jack pot contained a small fortune. Mr. Bottineau had been losing heavily, but at last he was dealt a hand upon which he hoped to regain his losses and win something besides. He was given four queens and, drawing one card, secured an ace, leaving four kings as the only hand by which he could be beaten. He thought he saw one of the players discard a king, and he considered his hand invincible and played it accordingly. Soon all but Bottineau and the man opposite him dropped their cards and retired to watch the game. The table was heaped with money and the personal belongings of the two men.

The flickering light of the candle shone dimly on the flushed faces as they watched each other warily out of the corners of their eyes. All of Bottineau's possessions lay on the table, and it was his bet. He looked at his hand carefully and then said that all he had left was Nicollet island, which he would bet against $200. The bet was called, and Bottineau laid down his four queens with a smile of triumph. Amid a dead silence his opponent laid on the table, face up, four kings and a tray. It was so still you could have heard them breathe. Then Bottineau called for writing materials and made out a deed to the island. From that day he never touched a card or countenanced gambling in any form.

After drifting around the country he went to Red Lake Falls and took up a claim and remained there until the time of his death. He was employed as a guide and scout and was one of the principal members of the Sibley expedition. He knew every foot of the northwest country, having traversed it ever since he was 10 years old, when he guided Lord Selkirk's colonists from old Fort Garry. When he died, the last of the old time Canadian voyagers and guides, who were such an important factor in the upbuilding of the northwest, passed away.—Albany Telegram.

"The Beggar's Opera."

Gay's "Beggar's Opera" may be considered a comedy. It is very witty and very wicked. It makes a jest of crime and at the same time tends to set men against men. Probably it was altogether written by Gay, though it is above his average. But Gay was a follower of Swift and Pope, and the influence of Swift appears to be discernible in it. So, perhaps, the play was in some measure the work of that strange author, though not actually written by him. Pope says that the play was Gay's own writing, but acknowledges that he and Swift gave now and then a correction or a word or two of advice. This interference may or may not have had a great effect on the character of the whole play. One does not know. Fielding's "Jonathan Wild" must have been suggested by "The Beggar's Opera." Peachum is like Jonathan Wild, and there are other similarities. Gay may be easily credited with the whole authorship without the aid of his powerful friends of the inferior sequel, "Polly."—Notes and Queries.

Rough on William.

The following dramatic criticism appeared recently in a Norwegian paper: "The traveling theatrical company at present visiting this town gave one night a representation of a play styled 'The Merry Wives of Windsor,' by a person called Shakespeare. The play is said to be a comedy, but is terribly monotonous in its effect, especially the first two acts. An uncouth and besotted cavalier, who flirts and spoons with a bevy of demimondaines, but who becomes a victim to their absurd intrigues—such is the sum total of the plot. We can only say that such a play is poor fare to invite an educated public to. It was a relief when the curtain dropped, and we had an opportunity of listening to a selection of humorous songs."

Why He Wanted It Kept Quiet.

One of the officers in a certain regiment is much disliked by his men. One evening as he was returning home he slipped into some deep water. A private in his regiment, however, happened to see him and after some trouble succeeded in pulling him out. The officer was very profuse in his thanks and asked his rescuer the best way he could reward him.

"The best way you can reward me," said the soldier, "is to say nothing about it."

"Why, my dear fellow," said the astonished officer, "why do you wish me to say nothing about it?"

"Because if the other fellows knew I'd pulled you out they'd chuck me in!"—London Answers.

Facts In the Case.

"Here's a good paragraph," said Singleton as he glanced over his paper. "It says that every time a woman sees her neighbor with a new bonnet she wants one like it."

"Huh!" rejoined Wederly. "I'll bet some old bachelor wrote that. A married man would have said that every time a woman sees her neighbor with a new bonnet she wants one a little bit better."—Chicago News.

Not Going to Quarrel.

"Why," inquired the New York girl, "do Philadelphia people never eat snails?"

"Oh," answered the Philadelphia girl, with the air of one who had heard something like it before, "I presume it is because snails are so hard to catch."—Washington Star.

They Go Fast.

"Instead of seven league boots worn by giants in the old fairy stories they ought to have used boys' shoes."

"For what reason?"

"Because they go so fast."

In Peru it was once the custom for domestic servants to have two of their upper front teeth extracted. Their absence indicated their servitude.

IN AN OLD ALMANAC.

SOME CURIOUS FACTS CULLED FROM A PUBLICATION OF 1835.

A Dramatic Incident In the House of Representatives—Anecdotes of Washington—Old Time Postage Rates—Men Who Rose to Fame.

Among the finds in a recent rummage through a secondhand bookseller's stock was a copy of the "American Almanac and Repository of Useful Knowledge For the Year 1835," the contents of which were, its publisher assured its readers, "of permanent and indeed of increasing value." Certain it is that they are of interest now, although in a way hardly expected by the industrious compiler.

First, of course, come those astronomical calculations and predictions which furnished the excuse for almanacs then, as now. To these is annexed an extended account of the meteoric shower of Nov. 13, 1833. The almanac records that some of the fire balls on this occasion were so bright as to be visible after the sun had arisen, and a Dr. Smith of North Carolina is quoted as declaring that he saw one "larger than the full moon rising."

Furthermore, the account continues, "at Poland, O., a luminous body was distinctly visible in the northeast for more than an hour. It was very brilliant, in the form of a pruning fork, and apparently 20 feet long and 18 inches broad. It gradually settled toward the horizon, until it disappeared. At Niagara Falls a large, luminous body, shaped like a square table, was seen nearly in the zenith, remaining for some time almost stationary, emitting large streams of light."

Passing to the department of "useful knowledge" it is recorded in the "Chronicle of Events" that on July 8, 1834, the weather was extremely hot and "eight persons (and on the 9th 11 persons) died in the city of New York in consequence of drinking cold water."

A dramatic incident is also set down as having occurred at the capitol at Washington Feb. 11. On the preceding day Thomas Tyler Bouldin, M. C., from Virginia, had been censured by a colleague for omitting to call the attention of the house to the death of his immediate predecessor, John Randolph. On the 11th he had risen to reply when he was "seized with a paralysis, sank down into a chair and died immediately."

The rates of postage in 1835 would somewhat startle our postmaster general's present patrons. For a single letter composed of one piece of paper the schedule was as follows:

	Cents.
For any distance not exceeding 30 miles	6
Over 30 and not exceeding 80 miles	10
Over 80 and not exceeding 150 miles	12½
Over 150 and not exceeding 400 miles	18¾
Over 400 miles	25

A letter composed of two pieces of paper was charged with double these rates; of three pieces with triple, and of four pieces with quadruple. One or more pieces mailed as a letter and weighing one ounce were charged with quadruple postage and at the same rate should the weight be greater.

As an encouragement to sobriety and righteous living the almanac gives Dr. Franklin's moral code and Mr. Jefferson's ten rules of life. A brief essay on the "Punctuality of General Washington" is added. The latter recounts that when Washington "assigned to meet congress at noon he never failed to be passing the door of the hall while the clock was striking 12. Whether his guests were present or not he always dined at 4. Not infrequently new members of congress who were invited to dine with him delayed until dinner was half over, and he would then remark: 'Gentlemen, we are punctual here. My cook never asks whether the company has arrived, but whether the hour has.'

"Captain Pease, the father of the stage establishment in the United States, had a beautiful pair of horses which he wished to dispose of to the general, whom he knew to be an excellent judge of horses. The general appointed 5 o'clock in the morning to examine them. But the captain did not arrive with the horses until 5:15, when he was told by the groom that the general was there at 5, and then fulfilling other engagements. Pease, much mortified, was obliged to wait a week for another opportunity, merely for delaying the first quarter of an hour."

It is interesting to go through the roster of the national and state governments and note what men were holding office in 1834 whose names still live in American history. Andrew Jackson was president and Martin Van Buren vice president. The cabinet, headed by John Forsyth of Georgia, secretary of state, included six members counting the postmaster general, who, the almanac says, "has for the most part not been considered a member."

Among the senators the most famous now were Daniel Webster of Massachusetts, John C. Calhoun of South Carolina, Henry Clay of Kentucky and Thomas H. Benton of Missouri.

John Bell of Tennessee was speaker of the house, and among the representatives from Massachusetts were John Quincy Adams, who had already been president and had been defeated for re-election by the then occupant of the White House; Rufus Choate, the great lawyer, soon to succeed Webster in the senate, and Edward Everett, just beginning the career which was to include governor of his native state, minister to England, president of Harvard college, secretary of state and United States senator.

New York sent Millard Fillmore, later elected vice president, and by President Taylor's death to become the chief executive. From Virginia came Henry A. Wise, under whose administration as governor of that state John Brown, 15 years later, paid the penalty for his heroic fanaticism. David Crockett, to whom the coons came down from the tree tops, was a member from Tennessee. He had only a few more years of life, as he was fated to be killed at the Alamo in 1836. James K. Polk, also a future president, was one of Crockett's colleagues. Polk was elected speaker in the next congress after the one whose membership is given in the almanac.

In 1834, also, John Marshall was still chief justice of the United States supreme court. He died July 6 of the following year. Few of the governors of the states then are remembered now. Exceptions are William L. Marcy of New York and Robert Y. Hayne of South Carolina. Hayne's famous debate with Webster had taken place four years earlier.—New York Mail and Express.

MEXICAN MERRYMAKERS.

How Laborers on a Plantation Celebrate Its Saint's Day.

The time honored custom of celebrating the saint's day, after some of which nearly all the large haciendas in Mexico are named, was witnessed on a recent Sunday at one of the principal ranches in the valley.

This custom was started by the Spaniards as a religious rite and still retains a great deal of the same sentiment, although it is looked forward to by most as a genuine merrymaking. The extent of the celebration depends upon the number of families living in the hacienda and the liberality of the owner, who generally gives a certain sum to one of the leading employees, leaving the matter in his hands to arrange for the greatest amount of enjoyment to his fellow workmen. A strict account is kept of the way this money is spent, so there is no dissatisfaction among the others, although the workman enjoying the distinction of being chosen to manage the feast is generally a leading star in the proceedings.

In the celebration of Sunday the ranch-house had been beautifully decorated with flowers and evergreens, with Chinese lanterns hung in rows along the portals. While work was more than usually well attended to the day before, one could notice an undercurrent of excitement prevailing in the colony of some sixty odd hands, and by 8 o'clock Saturday everything was ready for the short vesper dance which is usually held on the night before the saint's day celebration proper. If the music procured for the occasion is good enough, the people of the house generally enjoy a little dance themselves, while all the peons gather in front of the main building and are left entirely to their own devices to make the most of the occasion.

However, this was only the preliminary for the next day. At 8:30 in the morning mass was heard in the chapel of the place. At this mass not only the working people and the people of the house attended, but also many from the neighboring haciendas. Particular prayers were said for the success of the haciendas, and altogether a very impressive service was held. Everything went as usual during the day, but at night the entertainment was given over entirely to the workpeople. Tables had been placed on the lawn in front of the house on which were immense stacks of candy and fruit, free pulque from the ranch had been procured in quantities, and the major domo had to have several assistants to help him deliver these things, of which the people, old and young, are so fond. System had to be employed in distributing the fruit and candy. As they passed in front of the tables those appointed as waiters gave to all as much as they could conveniently eat in a day or so. Attempts are always made to work the waiters as many times as possible, and it was amusing to watch the little fellows especially dodge through the crowd and start in again, marching up as seriously and innocently as could be with their little shirts bursting with what they had already stored away inside.

The dancing began about 9 o'clock and lasted until 11, being carried on with vigor the whole of the time by old and young. It doesn't make much difference on these occasions who or what the partners are so long as they are nimble on their feet and have good staying powers. If a girl or woman be not available, men and boys dance with each other, the primary object being not to waste the music.

Perfect order, good feeling and politeness prevailed, and after the night was over the people were ready to go home feeling better for their recreation and resolved to deserve by their work another fiesta of a like kind when the time comes round.—Mexican Herald.

Curious Chinese Twins.

Curious Chinese twins are now being exhibited in Europe. Like the famous Siamese twins, they are joined together at the lower part of the chest.

These twins are boys, and they were born in China a few years ago. They are of normal intelligence, and each weighs 13 kilograms. Four years ago they had smallpox, the infection passing in 24 hours from one to the other. One day whisky was given to one of them, and yet it was the other one who first began to show signs of intoxication. They go to sleep about the same time, but it is possible to awaken one without arousing the other. They can walk and run with ease, and when they lie down they very quickly find a comfortable position.

M. Chapot-Prevost, a scientist, who has given much attention to monstrosities of this kind and who successfully performed an operation some time ago on two girls who were similarly joined, recently examined these twins and concluded that the ligament uniting them could be severed without much, if any, risk. He therefore suggested that this be done, but those in charge of the twins said it was impossible, as it was the will of the Chinese god Khango that the boys should be born thus, and his will must be respected.

Her Home.

Some years ago, when a part of the Japanese imperial palace was burned at Tokyo, the empress was forced to flee to one of the old Daimio houses near by. It was not at all comfortable, and, as the story goes, her majesty, appreciating that her subjects would be much concerned at her living in such a mean place, sat down and wrote them a little poem in which she denied that she had changed her residence. The poem, which was in the best Japanese language, stated that "her majesty's home had always been in the hearts of the people and that neither the flames nor the cold could ever drive her from that dear abode."

One That Didn't Count.

Harris—I saw Bulger just now. He said he was so glad that he was out of debt at last.

Farren—Out of debt! Why, he owes me $15.

Harris—He probably meant that he was out of debts that he had got to pay. —Boston Transcript.

Suggesting a Substitute.

"Have you any shirt waists for men?" asked the customer.

"No, sir," said the affable salesman, "but we've got some corsets we're selling mighty cheap today; second aisle to the right."—Chicago Tribune.

A Suburban News Center.

"Is it quiet out in the country where you are, Simpson?"

"Quiet? Why, when I get home at night our cow comes around and sits down by the porch to hear what I have to tell."—Chicago Herald.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

Issued Every Friday

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, OCTOBER 25 1901

The execution of assassin Czolgolz has been set for next week.

President Roosevelt says he will select only the best men for appointment, irrespective of cliques or pull, a sentiment to which all good citizens will respond a hearty "amen!"

It is announced from Washington that another and more vigorous effort will be made in Congress this winter to establish a Department of Commerce, and it would be worth while for the West to put in her demand for a Department of Mines at the same time.

Johann Most, the anarchist, was sentenced to to one year in the penitentiary in the Court of Special Sessions, New York, for publishing in his paper, the Freiheit, an alleged seditious article on the day following the shooting of the late President McKinley.

The Chinese exclusion act expires in May, 1902. Before that date a new law must be enacted or we shall again see California flooded with Coolies. This would be a calamity that eastern ignorance should not be permitted to inflict on this coast. A campaign of agitation and education is needed east of the Sierras.

Where, in a game of poker. money is tained by one player from another through a trick or through fraud, the Supreme Court of Washington, in the case of State vs. Skilbrick, holds the party so obtaining the money is guilty of robbery. In other words the Supreme Court of Washington will take cognizance of cheating at cards, and will punish the person conducting a fraudulent game.

President Roosevelt has decided that it is about time to appoint the best men in the south to federal offices and the announcement of this policy is said to have given great offence to Mark Hanna. Mark threatens to resign as chairman of the national Republican committee, but the chances are he will keep his temper and his job until the ship subsidy bill is safe.

While an the subject of irrigation, let us refer to a Helena, Montana, dispatch of October 11th, which tells about the opening of a canal owned and to be operated by the State to irrigate some 33,000 acres of fine land. The price is fixed at the cost of the canal system, and settlers are allowed to purchase one hundred and sixty acres at six per cent interest to be paid in ten annual payments. The State is building the canal system and will own and operate it in perpetuity for the sole benefit of the occupants of the land and without profit to any one, making the enterprise entirely co-operative in its nature. This is the first irrigating canal on the American continent to be built and operated by a State government and undoutedly marks an epoch in irrigation progress.

In regard to the sugar controversy now being waged in the daily press the following extract from a letter from Willett & Gray, sugar statisticians of New York, will be of interest: "The total consumption of sugar in the United States last year was 2,219,847 tons * * this year should be 2,360,585 tons. Of this quantity 1,000,000 tons in round figures will come from American sources * * all being free of duty, leaving 1,360,585 tons to come from other sources and upon which duty is paid. The average duty assessed is $36 per ton, or a total of $48,981,060. The price of all the sugar consumed, however, being enhanced to the extent of the duty of $36 per ton, or a total of $84,981,060, it is evident that $36,000,000 additional is paid by the people in order to provide the government with $49,000,000 for revenue, of which the government is not now in need. If the duty is taken off Cuba sugar the benefit of $85,000,000 goes to the people. On October 8th the quotation for Cuba centrifugal sugar, 96 test, free on board Cuba, was 1.96c. per pound, duty on the same amounts to 1.685c.—equivalent to 86 per cent. advalorum."

The annual report of the U. S. Geological Survey on the mineral resources of the United States shows some interesting facts, among others that the general prosperity of the country is affected by the condition of the country's basic industry; that when miners prosper the country prospers, and that when the mining industry languishes there are "hard times" all over the country. The two panic years of 1893, add 1894 are shown by the received U. S. Geological Survey report to have been years when there was a decline in the value of mineral products, and coincident with the increase in the country's mineral production in 1895 came increased wealth, work and general prosperity. The report shows that every year since 1891 there has been an increase in the annual gold output of the country, and that despite the fact that silver is about eliminated from politics it is by no means eliminated from the precious metal output, the production for the last fiscal year being within 283,457 ounces of the great 60,000,000-ounce of 1893. The report deals with big figures, showing that the value of the mineral products of the country in 1900 was considerably over one thousand million of dollars; and in this furnishes an unanswerable argument for the creation of a cabinet department, a bureau of mines and mining. Nothing has done more for the nation than the mining industry. Nothing has had less aid from the nation than the mining industry.

Ballarat Holds The Schoolma'am.

The southern metropolis is awaking to the fact that Owens Valley can't be beat when it comes to the raising of alfalfa and pretty girls. Here is what the L. A. Times says of a young school ma'am from Georges Creek:

From the forbidding desert a good story blows in. The temperature out there must be up for the story is a warm 'un. It happened away out in Ballarat, a mining camp nearly three hundred miles northeast of Los Angeles on the west side of the Panamint and thirty miles west of Desth Valley. The population of Ballarat consists almost entirely of men. There are a few women, of course, but their lords are with them. It is a swift conclusion, therefore, that the unmated are lonesome. When the stage from Randsburg or the one from Darwin pulls up at the postoffice and a dainty foot appears on the step, followed by a skirt, and then the blushing face of a maiden fair is revealed, the town goes wild. On such an occasion Mary's or Susie's health is drunk in generous and frequent potions of the "pizen" straight. If the young lady sojourns in the breezy town of Ballarat for a few days she will have a proposal from every man in town.

About two weeks ago the Darwin stage stopped at the office in Ballarat, and a blushing young woman alighted. She was the new schaolma'am. The town went wild and the time-honored custom relative to "health" and "good-luck" was renewed. She was sufficiently charming, however, to deserve enthusiasm. Up in the Owens Valley country, whence she came, they raise long, thick timothy, red-top, alfalfa and, in fact, almost everything, but chiefly good looking women. This was to be her "first school". She was therefore a little bit shy. The miners liked that and swore that "she was a nugget". A few days before school opened the startling fact was discovered that Ballarat had only one child of school age. To begin school five children must be enrolled. The miners turned pale. Men who could and had looked into the muzzle of a loaded six-shooter without flinching trembled. But they are a sagacious lot, and they did hard thinking on this particular subject and finally hit upon a scheme. As a result of their deliberations a man was sent out early last Saturday morning, two days before school began, on the swiftest cayuse that could be got in those parts. He was going to see Panamint Tom. Panamint Tom is an Indian who has a record—a bad one—and a wigwam full of papooses, and they are bad ones. But that has nothing to do with the story. Panamint Tom lives about twenty-five miles from Ballarat, away over in Anvil Canyon. It's a hard way to his place over steep trails and along hot stretches of "dry lake", but the man with a mission found him at last. He sat in front of his open wigwam, trying to make peace with his stately squaw, Pocahontas Tom. The smoking pipe was in his mouth. Around him was a picturesque group of papooses, dusky maidens and ambitious but undeveloped bucks. The "man with a mission" reined his foaming cayuse and made his proposition. It was that Panamint Tom might spare four of his progeny for a day that they might attend school.

"Huh," grunted Tom.

Panamint Tom is many generations from Chingachcook, but he has the old flavor in the Indian grunt. Panamint Tom gave the weighty matter due deliberation. Panamint Tom is crafty. His face said: "How can I let my precious papooses go, even for a day?" In his heart he said, "Heap big luck, me make the pale face pungle up some dough."

That's the way it finally happened. Panamint Tom got a "V", bore four weeping papooses from their hold on the poles of the wigwam, begged a "chaw" of tobacco from the pale-face, ordered Pocahontas to fetch a pair of burros, and wrapping his blanket about him, disappeared. When the cavalcade reached Ballarat on Sunday morning there was a large exhibition of joy. The schoolma'am blushed, turned pale and wept. The boys emptied several barrels of 'wet goods." The torch of education was not to be snuffed out. Monday, the opening day of school, passed by beautifully. Five ohildren, four reds and a white, were in their seats. The school was saved! Next day there was only one pupil. The four red ones had departed. They had gone over the mountains to the bosom of Pocahontas. But school still kept, for it is only on the opening day that there must be five pupils. After that one is enough. The pretty girl from Owens Valley, where the timothy, red-top and alfalfa grow so thickly, has a year's work ahead of her at $75 a month, and Ballarat wiil bask in the sunlight of her smiles. The lonely camp on the desolate waste is happy, and Panamint Tom grunts contentedly as his memory reverts to the easy "fiver" and the good things it bought him. And school "keeps."

"	November 23, 1901
"	December 21, 1901

P. H. MACK, W. M.

ENGLISH SPARROWS.

Dates at Which These Birds Were Imported Into This Country.

I have been asked several times lately at what date the common English sparrows were imported into the United States and by whom.

It seems that the first attempt was made in 1858 by a private citizen of Portland, Me. In the fall of that year he liberated six sparrows, and they immediately made themselves at home in his garden and outbuildings. For a few years these birds and their descendants were seen in and about the town in small squads. These birds multiplied until in the winter of 1871 a flock of them appeared in every nearby town, thus showing their tendency to spread over adjoining territory.

About 1869 12 birds were imported and liberated near Madison square, New York city, and this was repeated for several seasons.

In 1864 the commissioners of New York liberated 14 birds in Central park. About this time numerous persons returning from abroad brought a few birds home and set them at liberty in and about Jersey City.

The craze for importing these birds spread, and in 1868 the city government of Boston imported a great number. But the birds had not been carefully handled, and they did not thrive, and others were brought over. The birds which survived from these various importations were carefully fed and looked after by the city government.

In 1869 a thousand were imported and liberated in the city of Philadelphia, and soon the birds spread over all adjacent territory.

About this time the Smithsonian institution became interested in bringing these birds to this country, so they imported 300, but most of them died. In 1871 the same institution brought over another lot, and they were successfully cared for.

From this it is seen that the birds have started from a number of points and were not one or two importations to New York, as is usually supposed.—Washington Post.

STOVES.

Owing to the mildness of the climate in Portugal heating stoves are rarely used in that country.

Heating and cooking stoves are both used by the upper classes in Greece, but the lower classes still live without using either.

Very few heating and cooking stoves are used in Paraguay. All the houses have brick stoves built in them, so that iron stoves have little or no sale.

Stoves made of tiling are in general use in Austria. They are said to be superior to iron stoves on account of the great economy of fuel possible by their use.

There is in the Mediterranean countries a widespread prejudice against all artificial heat, and consequently not more than one house in six is ever heated during the winter time.

Iron cooking stoves are almost an unknown luxury among the people of South America and the West Indies. They still cook in open fireplaces and by other primitive methods.

The cooking stove, as it is known in the United States, does very little service in France. A few are in use in the country, but in most farmhouses the cooking is done in a large open fireplace. In the cities a furnace is built in the small kitchen.

The fig is the favorite fruit among animals, and horses, cows, hogs, sheep and goats will eat this fruit as readily as man. The elephant considers it a dainty, while all the fowls greedily devour figs.

Athletes are short lived, and giants seldom live out the allotted time of threescore years and ten. They expend too much vitality.

LEGAL.

Commissioner's Sale.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

A. W. EIBESHUTZ, Plaintiff, vs. E. M. DINEEN, Defendant.

SUPERIOR COURT. Order of Sale and Decree of Foreclosure.

UNDER AND BY VIRTUE OF AN ORDER of sale and decree of foreclosure issued out of the Superior Court of the County of Inyo State of California, on the 9th day of October, 1901, in the above-entitled action, wherein A. W. Eibeshutz, the above plaintiff, obtained a judgment and decree against E. M. Dineen, defendant, on the 7th day of October, 1901, which said decree was, on the 8th day of October, 1901 recorded in Judgment Book 2 of said Court, at page 167, I am appointed Commissioner and commanded to sell:

All the right, title and interest of the defendant E. M. Dineen, consisting of an undivided one third interest in and to those certain mines and mining claims situate, lying and being in Wild Rose Mining District, County of Inyo, State of California commonly known and designated as the "Monarch," "Combination," "Monopoly" and "Kennedy" mines, the notices of location thereof being of record in the mining records of said Wild Rose Mining District, and in the office of the County Recorder of said Inyo County.

Notice is hereby given that on THURSDAY, the 14th day of NOVEMBER, 1901, at 2 o'clock p m of that day, in front of the Court House, in the town of Independence, I will in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy the plaintiff's judgment, with interest thereon and costs, to the highestand best bidder, for cash, in gold coin of the United States.

GEO. S. WOOD
Commissioner.

Dated October 14, 1901.

DESERT LAND, FINAL PROOF.

UNITED STATES LAND OFFICE,
INDEPENDENCE, CAL., Oct. 8, 1901.

NOTICE IS HEREBY GIVEN that Augusta F. Kispert, of Phebe, Inyo Co., California, has filed notice of intention to make proof on her desert-land claim No. 862, for the NE¼ of SE¼, Sec. 27, T. 14 S., R. 35 E., M. D. M., before the Register and Receiver at Independence, Cal., on TUESDAY, the 12th day of November, 1901.

She names the following witnesses to prove the complete irrigation and reclamation of said land: John Kispert, Augustus G. McGovern, Louis Tharnau, of Thebe, Inyo Co., Cal., and Ben. H. Yandell, of Independence, Cal.

S. W. AUSTIN, Register.

DESERT-LAND, FINAL PROOF.

UNITED STATES LAND OFFICE,
INDEPENDENCE, CAL., Oct. 11, 1901.

NOTICE IS HEREBY GIVEN, that Lemuel Baxter, of Independence, Inyo Co., Cal., has filed notice of intention to make proof on his desert-land claim No. 844, for the S½ SE¼, Sec. 23, SW¼ SW¼ Sec. 24 and N½ NE¼ Sec. 26, T. 13 S., R. 35 E., before Register and Receiver, at Independence, Cal., on SATURDAY, the 16th day of November, 1901.

He names the following witnesses to prove the complete irrigation of said land: Jarius D. Mairs, David Rogers, Harry Burt and Clifford Baxter, all of Independence, Cal.

S. W. AUSTIN,
Register.

THE YOUNG GAMBLER.

He Had an Even Chance, but Fate Was Against Him.

I remember one handsome young fellow whom I used to meet occasionally on the staircase who captured my youthful fancy. I met him only at midday, as he did not rise till late, and this fact, with a certain scrupulous elegance and neatness in his dress, ought to have made me suspect that he was a gambler. In my inexperience it only invested him with a certain romantic mystery.

One morning as I was going out to my very early breakfast at a cheap Italian cafe on Long wharf I was surprised to find him also descending the staircase. He was scrupulously dressed even at that early hour, but I was struck by the fact that he was all in black, and his slight figure, buttoned to the throat in a tightly fitting frock coat, gave, I fancied, a singular melancholy to his pale southern face.

Nevertheless he greeted me with more than his usual serene cordiality, and I remembered that he looked up with a half puzzled, half amused expression at the rosy morning sky as he walked a few steps with me down the deserted street. I could not help saying that I was astonished to see him up so early, and he admitted that it was a break in his usual habits, but added, with a smiling significance I afterward remembered, that it was "an even chance if he did it again."

As we neared the street corner a man in a buggy drove up impatiently. In spite of the driver's evident haste my handsome acquaintance got in leisurely and, lifting his glossy hat to me with a pleasant smile, was driven away. I have a very lasting recollection of his face and figure as the buggy disappeared down the empty street. I never saw him again. It was not until a week later that I knew that an hour after he left me that morning he was lying dead in a little hollow behind the Mission Dolores, shot through the heart in a duel for which he had arisen so early.—Bret Harte's "Under the Redwoods."

HOUSEHOLD HINTS.

Cover sandwiches that are not to be served at once with a damp napkin and bowl.

To clean a kitchen table rub the greasy stains with lemon juice, and they will speedily disappear.

Whiting mixed with alcohol is excellent for cleaning silver and will give a much more brilliant polish than if water is used.

A small flat paint brush has a value in cleaning the corners of the window sash. Hot, sharp vinegar will clean off paint spatters, and turpentine will remove putty.

The small stiff vegetable brushes that are so convenient in cleaning potatoes, etc., are useful in housecleaning time for scrubbing the moldings and corners of the woodwork.

Loosely twisted knitting silk is better for darning woolen underwear than wool, which is apt to shrink. If the threads of the darn are left loose, after washing it will have about the same appearance as the original texture.

If articles of decidedly strong flavor have been chopped in a wooden bowl, sometimes washing will not be sufficient to entirely remove taste and odor. In that case fill the bowl with warm borax water and let stand half an hour; then rinse in cold water and put in the sun.

The Widow Was Comforted.

"There is no accounting for the construction which some people will put upon certain passages of Scripture," remarked a clergyman. "I remember the story of one clergyman who went to call on a woman whose husband had recently died. He had expected, quite naturally, to find her heartbroken with the burden of her sorrow and was greatly surprised when she greeted him with a very happy smile and ushered him into the parlor.

"'Well—er—sister,' he said at length, 'you have my warmest sympathy.'

"'Thank you, doctor,' replied the widow casually. 'I did feel very badly—very badly indeed. But I came across a verse of Scripture which comforted me very much indeed.'

"'And what was the verse, sister?' inquired the clergyman.

"'I don't remember just where to find it,' replied the widow, 'but it was made up of only four words—four helpful words—'Why need I care?'"—Brooklyn Citizen.

Jay Gould's First Trade.

Two boys who became distinguished in widely different ways were Jay Gould, the multimillionaire, and John Burroughs, the naturalist. They attended together the humble school in Roxbury, N. Y. John loved books, and Jason was fond of making trades. Young Gould had some books which his school fellow wanted very much to own. The more Burroughs thought about the coveted books and more diligently he strove to save up his pennies. Finally he had 80 cents hoarded. Taking his wealth to Gould he found that thrifty young gentleman quite willing to do business. The books were traded off for the money—mostly big copper pennies—and both boys were made happy. Mr. Burroughs never regretted his end of the bargain.—Success.

A Proper Apology.

"How many cranks live in this street besides yourself?"

"That's an insult, sir!"

"Oh, well, I apologize. How many cranks live in this street including yourself?"—Baltimore World.

Are There None?

"Johnnie, give me an example of a combination of meaningless phrases."

"Yes'm. A burglar proof safe stood in a fireproof block."—Cleveland Plain Dealer.

Immediately Suspicious.

"Why did you terminate your interview with that professional politician so abruptly?" asked the confidential man.

"He made me suspicious at the outset," said Senator Sorghum. "I don't care how much prevarication my assistants use toward other people, but I want them to be frank and honest with me. The first thing that man did was to tell me a falsehood. He said he was working from disinterested motives and didn't want money."—Washington Star.

HAYSTACK MOTH.

Most Common In Clover—Neat and Tidy Premises Discourage It.

Pyralis costalis, a species of caterpillar occasionally found in large numbers in haystacks, more commonly attacks clover, and therefore the parent is frequently called the clover hay moth. The parent is a beautiful little reddish brown or purplish moth with yellow markings on both wings, which are fringed with the same color, and on this account the moth is sometimes called the "gold fringe."

Great damage may be done when the caterpillars are present in numbers in a hay stack or mow, as they may spoil the lower layers, and occasionally the damage is so great as to render the hay

GOLD FRINGE MOTH AND CATERPILLAR.
[Pyralis costalis—1, 2, larva; 3, cocoon; 4, pupa; 5, 6, moth; 7, larva within the web.]

worthless. Moths from caterpillars passing the winter appear in June or July, possibly earlier.

It is probable that the insect may either be carried to the stacks with the clover or the moths may lay eggs on the hay after stacking. Giving this account of the insect, Country Gentleman recommends the following preventive measures:

Clean up and burn all the rubbish about mows and places where hay is stacked before the new crop is cut, thus destroying material attractive to the insect. Ventilation under stacks keeps the hay drier and is of value because the insects thrive best in the presence of some moisture. Salt in the lower layers has been recommended and certainly will do no harm.

Athletic Appetites.

"The actual amount of good roast beef that a table of athletes will consume," writes Walter Camp in The Century, "is something appalling to the uninitiated. Three members of a Yale football team once went to Cambridge to watch a match between Harvard and some other team. These three men stopped at a hotel for their luncheon. Among other things the spokesman of the party ordered three portions of cold roast beef. 'But, sir,' said the waiter, 'two portions will be a great plenty for all three of you.' The giant of the party looked up blandly at the servant and said, 'You bring the three portions and then watch us eat it.'

"When the writer was captain of the team, long before the days of special method in management, the eleven were to play at Cambridge and, leaving New Haven the afternoon of the day preceding the match, went to a Boston hotel for dinner and the night. Most of the men were readily collected at one or two large tables, but a certain rusher, being late, had seated himself at a table in a distant part of the dining room, and he was told by the manager to order his own dinner. That boy's dinner, and it is needless to say that it was without wine, came to the extraordinary total of $13.85! He was quite able to play the next day, however."

The Joke on the Snake Charmer.

Rear Admiral Robley D. Evans when a young officer was on the Indian station in the man-of-war Delaware. With several others he set up a bungalow on shore. He tells in "A Sailor's Log," published by the Appletons, what happened to a snake charmer that came along:

"The unfortunate thought came to one of our men that it would be a good idea to get the Mohammedan drunk to see what he would do. So he prepared a dose for him that was very effective. He poured a good stiff drink of brandy into a beer glass and then filled it with gin instead of water. The charmer took kindly to the drink and in a short time rolled out of his chair on to the floor very drunk and was soon fast asleep.

"The bag of snakes had not been thought of up to this time, but it also fell, and the inhabitants quickly spread over the floor. In the meantime five American officers took to the table and, drawing their feet up, carefully remained there until the snake charmer slept off his dose. He snored quietly while the snakes crawled over and around him, but it was a long time before he finally came to himself, secured his pets and took them away. We did not repeat that experiment."

Difficult to Treat.

"Well, what is the matter with your husband?" the physician asked as he laid down his repair kit and removed his gloves.

"Imaginary insomnia," replied Mrs. Fosdick.

"Imaginary insomnia?" repeated the physician inquiringly.

"That's what it is. He thinks he doesn't sleep at night, but he gets lots more sleep than I do."—Detroit Free Press.

A Philosopher.

Wife—There's a burglar down cellar, Henry.

Husband—Well, my dear, we ought to be thankful that we are up stairs.

Wife—But he'll come up here.

Husband—Then we'll go down cellar, my dear. Surely a ten room house ought to be big enough to hold three people without crowding.—Detroit Free Press.

Misplaced Ability.

The young collegian snapped his watch lid down with a sigh of relief. "Preached 47 minutes," he announced to his neighbor. "We ought to get a man with wind like that on our track team."—Exchange.

DIED.

IRWIN—At Independence, Cal., October 18, 1901, Lucretia R. Irwin, aged 39 yrs., 6 mos. and 16 days.

Ask Bert. who is cleaning his cuspidors now.

S. E. Vermilyea Esq. has been in town since last Tuesday.

Mrs. Fannie Baker is visiting with relatives at Independence.

J. W. Callaway is hauling ore from Lead Canyon to Alvord.

Henry Giles is reported to be on his way back from England.

Regular meeting of Inyo Lodge No. 221, F. & A. M., to-morrow night.

Robert Doyle Esq. and Dr. G. P. Doyle were down from Bishop early in the week.

A. M. Squires of the Mazourka Canyon Tunnel Co. leaves this evening for Los Angeles by stage.

Walter Hanby visited Bishop last Sunday. The announcement in last week's "Births" accounts for it.

Fred Burckhardt was up from Lone Pine last Tuesday. He says that Mrs. Burckhardt is improving rapidly.

A. Soderling, an old time resident of Bodie, has been adjudged insane and sent to the State insane asylum at Napa.

George St. Clair went back to work at the Black Eagle mine yesterday. He has been on the sick list for the past few weeks.

J. J. Gunn came in from Minnietta and Jas. McDonald from Darwin to attend the funeral of the late Mrs. J. C. Irwin.

J. W. Berry of Lindsay, Tulare county, went south on to-day's stage. Mr. Berry has two hundred horses on pasture at Blackrock.

J. S. Stotler, a merchant of Ballarat, arrived at Independence Tuesday morning. He has had some good quail shooting while here.

W. L. Hunter is very ill indeed, so much so as to be in a critical condition. He suffers constantly from hemorrhages at the nose.

The two Stull brothers and Ernest Blake at Big Pine are ill with typhoid fever. Dr. Woodin has been attending them and reports them out of danger.

J. C. Miller is erecting a handsome cottage at Big Pine. Jake has been suffering from erysipelas for the past two weeks, but the doctor reports him on the mend.

Elsewhere will be found an announcement by the "William Penn Canal Co." offering to sell water rights. This is the property commonly known as the "Eastside Canal."

Dr. Woodin reports that Maggie Campbell and a child of W. G. Dixon's at Big Pine, are threatened with typhoid. He also reports that Mrs. Callow is suffering with a severe appetite.

Wm. Rowan of Bishop passed through town yesterday with twenty head of young horses, en route for Los Angeles. They are all drafts and are an exceptionally good looking lot.

Harry Floyd got back a few days ago from a visit to his mother at London. He was eight days on the water, seven days crossing the continent and nine day from Visalia through the mountains on horseback.

Mrs. Laura Loomis, sister-in-law of J. C. Irwin, arrived at Independence last Sunday evening, coming from Hawthorne by special train. She expects to leave to-morrow morning for her home at El Paso, Texas, accompanied by Miss Nettie Irwin.

Charley Houle was in from the Black Eagle mine yesterday. He says that a new vein of high grade ore has been uncovered just south of the main shaft. Sinking is in progress upon it and when this has reached a depth of one hundred feet a cross-cut will be run to the main shaft.

John Clarke came down from Bishop last Saturday, returning next day. Mr. Clarke informs us that he intends putting in a thoroughly equipped stage line between Candelaria and Tonopah The line operating between Sodaville and the latter place takes two days to make the trip of sixty miles. Mr. Clarke proposes to put on plenty of good stock and go through in one day. He expects to have the line in operation by November 1st. Any one familiar with Mr. Clarke's business methods knows that he will inaugurate a thorough, first-class service.

AT REST.

Last Friday at 8:40 p. m. Mrs. Lucretia R. Irwin died at her home at Independence of spinal meningitis. She had been ill for about six weeks and for a week before her death it was realized that her condition was very critical Despite the most constant medical effort and careful nursing, she gradually became weaker, until the end, when, surrounded by grief-stricken relatives and friends, she dropped to her last long sleep as gently as a child.

The deceased was born at Petaluma, California, on May 2, 1862, and came to Inyo county with her parents when a small child, locating at Georges Creek.

Her mother died when "Lou", as the deceased was known to her intimate friends, was but twelve years old. For a time she went below to school, and then, until her marriage with J. C. Irwin, on Jan. 31, 1883, she lived with her father, C. M. Joslyn, at Georges Creek. Since the date of her marriage her home has been at Independence. On January 10, 1884, her daughter, Nettie Irwin was born, and is her only child. She died in the house, which eighteen years ago she entered as a bride. There never was a home, be it palace or cottage, which bore more plainly the stamp of the character and personality of the wife and mother who reigned so wisely within its walls. Her garden contained a thousand blossoms, planted and tenderly cared for by her own hands. "I love my flowers," she was wont to say, "because I can make my friends happy with the gift of them." Most truly might the words of holy writ be applied to her:

"She looketh well to the ways of her household, and eateth not the bread of idleness. Her children rise up and call her blessed; her husband also and he praiseth her."

Her house was felt by all who entered its hospitable doors to be in the loftiest sense of the word a home.

But Lou Irwin did not permit her home duties to absorb all her time and mind as many an admirable housekeeper will. Where shall we find a woman of larger heart, broader mind or more public spirit—a woman who endeavored to keep abreast of the great world, so far removed from our little community, a woman of such wide charity and strict integrity?

Her death illness was brought on by her devoted care at the bedside of her sick daughter, who was stricken with typhoid fever. To no one else would she leave the administering of the medicine and nourishment to the sick girl. It was after two weeks of this terrible physical and mental strain that nature rebelled, and for ignoring so utterly the laws of health demanded no less than the anxious mother's life. Miss Nettie Irwin's life has been spared, and she is slowly but surely convalescing.

Mrs. Laura Loomis of El Paso, a sister of Mrs. Irwin, had hastened to Independence, on hearing of her critical condition. She arrived too late, although a special train brought her down from Hawthorne Sunday. The funeral, which had been postponed until her arrival, took place Tuesday morning. Friends from all parts of the county were in attendance, all business houses in town were closed, and the faces of men and women alike betrayed how deeply all felt the taking away in her very prime of this our townswoman and our friend. With deft fingers her friends had woven the love and sorrow of their hearts into appropriate floral tributes, which in their glorious autumn tints, entwined with evergreen, were a symbol of the rich and glowing life of the departed one. The following acted as pall-bearers: J. J. Gunn, James McDonald, J. E. Shepherd, J. S. Gorman, S. A. Fraser, O. I. Mairs, B. Rhine and I. H. Mulholland. At the cemetery Judge Davidson spoke as follows:

"Once more we are assembled around an open grave in this the silent city of the dead. We come here to deposit the remains of one who was respected and admired by all who knew her. But that inevitable hour which, far-off or near at hand, comes to us all, came to her. The master called and she responded. The loving husband, the beloved daughter, the affectionate sister, all are left to mourn.

"But why weep? There is no death;
What seems so is transition.
This life of mortal breath
Is but a suburb of life elysian,
Whose portals we call death.
So when grown weary with the care and strife
And loved ones find in sleep the peace they crave,
We should not weep but learn to count this life
But a prelude to the one beyond the grave."

The hymn "Eventide" was followed by the reading of the burial service. The choir then sang "Thy Will Be Done" and the heart-broken husband and sister, and sorrowing friends left her

"Beautiful in her holy peace as one
Who stands at evening when the work is done,
Glorified in the setting of the sun!
Her memory makes our common landscape seem
Fairer than any of which painters dream,
Lights the brown hills and shines in every stream."

Held For Trial.

On Friday last John Shepherd filed a complaint in Justice Davidson's court charging two young men named Maxwell and Hunter with stealing two mules. They were arrested Saturday and admitted to bail. The hearing was set for Monday and postponed until Wednesday. The prosecution examined John Shepherd and his sons, Ed ond Arthur. The defense submitted no testimony. The examination was concluded yesterday, and Judge Davidson took the matter under advisement until 10 o'clock this morning, when he announced his decision, holding them for trial in the Superior Court. A search warrant was issued the 21st and a hearing being had on that this morning, the animals were delivered into the custody of John Shepherd

SUPERIOR COURT.

Hon. Walter A. Lamar, Judge.

Pursuant to the order of Walter A. Lamar, Judge of said Court, duly made and entered on Saturday, October 19, 1901, the names of the following persons were drawn from the trial jury box to serve as trial jurors for the October term of Court and the Sheriff was directed to summon said persons to be and appear before said Court on Tuesday, November 12, 1901, to wit:

Nap. L. Baker	J. D. Mairs
J. E. Dunlap	S. J. Newlon
N. M. Dodge	John C. Anton
Fred M. Crocker	T. J. McComas
Chas. Houle	Fred Albers
Chas. A. Winter	Louis Thurnau
Jno. S. McQueen	W. A. Sanger
F. R. Smith	A. E. Fitzgerald
Chas. Walter	J. N. Reynolds
D. W. Pitman	W. J. Perry
J. R. Shipley	F. K. Andrews
Jas. H. Connor	W. P. McMurry
S. G. McMurry	J. F. Sanders
J. H. Bulpitt	Henry Gerkens
L. H. J. Ehlen	Fred Strohmeyer
J. W. Lacey	J. H. Coe
Thos. Williams	W. H. Evans
Geo. Hall	J. W. Clark
O. F. Dearborn	J. A. Boyd
June H. Smith	Thos Hughes

A Correction.

BISHOP, Cal., Oct. 21, 1901.

EDITOR INDEPENDENT:—Your kind notice of the death of Miss Agnes Chalfant states that since her return from San Jose she devoted herself to piano practice to such degree that her health was fatally impaired. The truth is that during much of the time specified her practice was entirely abandoned and was very limited during the remaing time prior to her illness. I am aware of the prevalent contrary impression which caused you to be misinformed and fully accounts for the unintended error. Ordinarily this would be of too little consequence to memtion; but in view of the sad circumstances attending her return; as a matter of justice to the departed, and the living as well, I feel assured that this correction will be given space in your columns.

W. A. CHALFANT.

News Notes.

The Mojave Tomahawk is responsible for the following:

John Strohmeyer got "loaded" with beer the last time he was in Mojave—carrying about forty barrels to Inyo county points—and started on his return trip home. Between Indian Wells and Coyote Holes his axle broke and he had to come back for repairs.

Dick Williams and wife came in Sunday from a few weeks of camping in Inyo county. The family have returned to their home leaving Dick to the mercy of the Mojave boys.

An automobile line between Mojave and Keeler is not only a possibility but a probability, and we hope it may soon be a certainty.

Real Estate Transfers.

Recorded since last report:

James M. Pockman to D. L. McLean—20 acres oil land near Olancha, $1.00

E. L. Cross to Peter Samuelson—An undivided ½ interest in Buckeye mine near Ballarat, $500.

Maymie B. Clarke to T. C. Harness—An undivided ½ interest in Clarke Hotel in Bishop, $25,

J. G. Birchim and wife to Henry Jackson—10 acres of land in Round Valley, $10.

David E. Hunter to Rose Grandson—Lot in East Bishop, $10.

J. G. Birchim and wife to Louis Pauly—120 acres of land in Round Valley, $10.

$50 Reward.

Strayed or stolen—On or about the night of October 7, 1901, from my ranch on Georges Creek, Independence District, about 18 head of cattle marked with a crop and underbit on both ears and are branded thus)T(or thus)T(To any person who will give me the necessary information which will lead to the recovery of said cattle, or the prosecution of the thieves, I will pay a reward of fifty dollars. Or to any person who will inform me of the whereabouts of said cattle I will pay the sum of fifty dollars and ask no questions. Repent and do so no more.

JOHN K. TURNER.
Lone Pine, Cal.

Millinery.

Ladies are invited to call and see the fine line of trimmed millinery, Paris pattern hats, at the residence of Mrs. W. T. Bunney, Independence, Oct. 19 to Oct. 31. Will also have a line of samples of the Chas. Stevens goods, for which orders will be taken.

MRS. H. H. MCDONALD.

There seems quite a good prospect of the Randsburg railroad being extended to Owens Valley in Inyo by way of Ballarat and the Panamint mines. Some parties outside the owners of the road, acting in connection with them, have been examining the country lately with a view of finding out what the probable freight traffic would be tributary to such extension and report a very favorable outlook.—Randsburg Miner.

NEW ADVERTISEMENTS.

Sale of Water Rights.

NOTICE IS HEREBY GIVEN TO LAND owners under the canals of the William Penn Colonian Association that water rights will be sold until November first at $7.50 per acre.

Those owning such water rights will be charged 1-22000 part per acre for the actual expense of maintaining the canals and water rights of the company. On November first the rate will be advanced to $10 per acre. Terms. one third cash, one third in nine and one-third in eighteen months; deferred payments bearing 7 per cent. interest.

Land may be exchanged for water rights.

WORKING IN PUBLIC.

Show Window Artisans Can Command Good Remuneration.

A Broadway shoe manufacturer was asked what method of advertising he found most profitable.

"Placing my men near the window," he said, "so they can work in view of the public. I don't know of anything that catches the attention of the passer-by more quickly than the sight of a demonstrator sitting close to the window running a machine for dear life.

"Manufacturers of all kinds of goods have adopted this plan. Waistmakers put their most skilled workers on exhibition to show how the finest garments are cut and sewed. Cigar manufacturers take the public into their confidence and let them see the process of rolling as performed by the cleverest hands. Men who deal in mechanical contrivances have found that it pays to have at least one machine set up near a window so the crowd outside may observe the intricacy of its parts and the rapidity of its action. Jewelers have stationed their most expert lapidaries within view of the street that possible customers may see how precious stones are cut and polished and set.

"It isn't everybody who can work in public. It takes a person with good strong nerves and concentration of thought to do difficult work in a show window. I have men in my employ who are excellent workers, but they get flustered when subjected to unusual surveillance and ruin everything they put their hands to. I have tried some of them as window operators, but they can't get used to it.

"A man who can run a machine at full tilt or paint a picture or fry pancakes or iron a shirt in the full gaze of the public eye and not lose his head is an artist and worth several dollars more a week to his employer than the more modest individual. And he gets it too."—New York Sun.

MEN'S VIEW OF WOMEN.

Earth has nothing more tender than a pious woman's heart.—Luther.

Remember, woman is most perfect when most womanly.—Gladstone.

Lovely woman that caused our cares can every care beguile.—Beresford.

He that would have fine guests let him have a fine woman.—Ben Jonson.

A woman's strength is most potent when robed in gentleness.—Lamartine.

Disguise our bondage as we will, 'tis woman, woman, rules us still.—Moore.

Oil and water, woman and a secret, are hostile properties.—Bulwer Lytton.

Women need not look at those dear to them to know their moods.—Howells.

Kindness in woman, not their beauteous looks, shall win my love.—Shakespeare.

Raptured man quits each dozing sage, O woman, for thy lovelier page!—Moore.

He is a fool who thinks by force or skill to turn the current of a woman's will.—Samuel Tuke.

The most beautiful object in the world, it will be allowed, is a beautiful woman.—Macaulay.

If the heart of a man is depressed with cares, the mist is dispelled when a woman appears.—Gay.

Death Gulch.

A ravine in the northeast corner of Yellowstone National park, in Wyoming, is known by those living near by as Death gulch. Grewsome as is the name, it is exceedingly appropriate. It is a V shaped trench cut in the mountainside and begins about 250 feet above Cache creek. Apparently it forms a natural shelter for the beasts of the forest, as food, water and shelter are there, but entrance to the gulch means death to any animal, for the poisonous vapors that rise out of the ravine are more deadly than the bullets of the huntsmen.

For ages this death trap in the Rocky mountains has probably been luring the inhabitants of the forest to their doom. With the rains of spring the bones of the dead of the preceding year are carried down to the creek and the gulch cleared for the death harvest of the summer and winter.

The geologists say that the lavas which fill the ancient basin of the park at this place rest upon the flanks of mountains formed of fragmentary volcanic ejects. Gaseous emanations are given out in great volume. These come, the scientists say, from deposits of altered and crystalline travertine mixed with pools in the creek. Above these deposits the creek cuts into a bank of sulphur. In the bottom of the gully is a small stream sour with sulphuric acid.

No wonder the poor animals seeking shelter in the gulch meet death there.

A Curious Trap.

A curious labyrinth in which elephants are captured alive is to be seen near Ayuthia, formerly the capital of Siam. The labyrinth is formed of a double row of immense tree trunks set firmly in the ground, the space between them gradually narrowing.

Where it begins, at the edge of the forest, the opening of the labyrinth is more than a mile wide, but as it approaches Ayuthia it becomes so narrow that the elephants cannot turn around.

Suspecting no danger the wild elephant enters the broad opening at the forest end, lured on by a tame elephant. The gradual narrowing of the boundaries is not observed until the elephant finds himself in close quarters.

Having reached the end of the labyrinth, the tame elephant is allowed to pass through a gate, while men lying in wait slip shackles over the feet of the captives. The sport is a dangerous one, for the enraged elephants sometimes crush the hunters under their feet.

Apple Pie Order.

To feel in apple pie order is a phrase which dates back to Puritan times—to a certain Hepzibah Merton. It seems that every Saturday she was accustomed to bake two or three dozen apple pies, which were to last her family through the coming week. These she placed carefully on her pantry shelves, labeled for each day of the week, so that Tuesday's pies might not be confused with Thursday's nor those presumably large or intended for washing and sweeping days eaten when household labors were lighter. Aunt Hepzibah's "apple pie order" was known throughout the entire settlement and originated the well known saying.

$1,000 REWARD

For Evidence of Fraud in Testimonials Advertising Dr. Williams' Pink Pills for Pale People.

It is sometimes thought that some concerns, in order to make people believe that the article in which they deal is a good one, manufacture themselves the testimonials which they use in their advertisements. The Dr. Williams Medicine Co., manufacturers of Dr. Williams' Pink Pills for Pale People, however, have always held that the publication of a fictitious or even a misleading testimonial is not only bad morally but is bad advertsiing. Consequently the greatest care has always been taken in selecting testimonials for their advertising. Every case is not only carefully investigated but in most instances it is sworn to in legal form and the affidavit placed on file. That no doubt may be in the minds of the public, the company offers one thousand dollars ($1,000) for evidence of fraud, on its part, in the publication of any of the testimonials used in making known the merits of Dr. Williams' Pink Pills for Pale People. In view of this, the following remarkable case, published in the Democrat and Sentinel, Lewiston, Pa., is given without further comment.

Mr. Frank A. Means, a well known farmer of Reedsville, Mifflin County, Pa., writes:

"I had the grip and as a result my nerves broke down. I lost the entire use of the lower half of my body. For a whole year I lay in bed perfectly helpless, with no power in either limb, and the feeling gone so that I couldn't feel a pin run into my legs at all. I couldn't turn over in bed without help. Six doctors gave me up and said it was only a question of a few weeks with me, as nothing more could be done. Then a friend sent me a pamphlet containing statements of two men who had been afflicted something like me and who had been cured by the use of Dr. Williams' Pink Pills. I began taking them at once and although my improvement was slow it was certain. Now I can walk most of the time without a cane and everybody around here thinks it is a miracle that I can get about as I do. Your pills have certainly been a God-send to me."

Signed, F. A. MEANS.

Susbcribed and sworn to before me this 17th day of April, 1901.

Albert S. Gibboney,
Notary Public.

At all druggists, or direct from Dr. Williams Medicine Company, Schenectady, N. Y., fifty cents per box; six boxes for two dollars and fifty cents.

POPULAR SCIENCE.

Mercury's year is only 88 days, that of Venus 225 days and of Mars 687 days.

Cumulus, or thunder clouds, rarely rise over two miles. Seven miles is the outside height for any cloud.

The edge of the moon is so broken by peaks, ridges and valleys that the length of totality during a solar eclipse is affected by them.

The sun's heat raises from the earth 37,000,000 tons of water a minute. To do the same work artificially a cube of coal 200 miles deep, wide and high would have to be burned every second.

The archaic, wasteful "beehive" oven process of making charcoal has been superseded in many parts of Germany by modern methods which save all the ammonia, gas, tar and other products of the wood.

A human body contains some of the small things of nature. The blood, for example, is a colorless liquid in which little red globules are floating. Every drop of it contains about a million of the globules, and they are susceptible of division into smaller globules still.

Making the Blind See.

Success in desperate cases by conservative treatment is the lesson often repeated and yet never quite sufficiently learned by any physician or surgeon. The infinite ingenuity behind the healing processes, the never renounced struggle toward normality, is an ever renewed source of wonder. All that is needed to elicit it is confidence in it, delay in doing anything radical, watchfulness to follow up the hints to action as they begin to show themselves.

We know of a living and happy patient who ten years ago had albuminuric retinitis from long existing Bright's disease despite what all the textbooks say as to "two years" in such cases. "Don't do the irrevocable thing until forced to do it" is the warning that has saved many organs and lives. Above all, never proceed with surgery ("the despair of medicine") until physiologic and medical methods have been exhausted.

The Wiener Klinischer Wochenschrift tells of the success of Herr Heller, director of an asylum for the blind, in educating the remnant of visual power retained by a "blind" child. There was only perception of light in a narrowed field left, but this by education was made to yield such indications to the eager mind that after 14 months of endeavor the boy has very useful vision, can distinguish colors and forms and even can read.

There are possibly thousands of blind people who have renounced vision instead of cultivating it to a degree that would render the blind types useless.—American Medicine.

Alphabetical Abuse.

The prosecuting attorney in a lawsuit had waxed especially indignant at the defendant, whom he characterized as an "abandoned, baneful, cynical, diabolic, execrable, felonious, greedy, hateful, irresponsible, jaundiced, knavish, lazy, meddlesome, noxious, outrageous and profligate rowdy."

"The learned counsel on the other side," said the attorney for the defendant when he rose to reply, "should have put his adjectives in a hat and shaken them up a little before using. You must have noticed, gentlemen of the jury, that they were in regular alphabetical order. This shows that he selected them from a dictionary, beginning with 'a.' He stopped at 'p,' but in his manner of reproducing them he has given us the 'cue' as to how he got them."

This turned the laugh against the other lawyer, and he lost the case.

HOW THE LEGS GROW.

The Shocks of Exercise Lengthen Them and Keep Them Even.

As a fact, says the author, our lower limbs are not usually both of exactly the same length, though they are so for all practical purposes. The left is usually the longer, though the gait is not notably influenced by this fact. At birth the lower limbs are shorter than the upper, and their movements are rather of the prehensile type. "We are not born leggy like the foal or kangaroo, but we gradually achieve lagginess." The bones increase in length, not so much by interstitial deposit as by addition to their ends—that is, by progressive ossification of the layer of cartilage which intervenes between the end of the shaft and the epiphysis. Ossification goes on till the component parts of the bone are all united by bony matter, and thus the stature of the individual is determined.

If from inflammation or injury an epiphysis be damaged, one limb may be shorter than the other, or inflammatory stimulation may even induce an increased length in the bone affected. The skeletons of tortoises, not being subjected to sudden jars, have no epiphyses at the ends of the long bones, whereas in the leaping frog the extremities of the humerus and femur long remain as separate epiphyses. The continuous concussions to which the ends of the bones of the lower limbs are exposed when a vigorous child is excited by its own natural spirit to run about are doubtless of great value in assisting the growth in length of the lower limbs, which soon lose their infantile character and become adapted for running and walking. By exposing the lower limbs to the same influences and resistances during their entire growth we manage to maintain them of the same length, and gentle jars upon the epiphyses at the joints may be considered favorable to growth.—New York Medical Record.

A BIG WEDDING FEE.

The Generous Uses to Which Henry Ward Beecher Put It.

In his "Eccentricities of Genius" Major Pond says that often while traveling Henry Ward Beecher improved his time by having what he called "a general housecleaning" of his pockets, which would get loaded up with letters and papers until they could hold no more, when he would clear them out and destroy such papers as were worthless.

On one occasion Beecher happened to put his hand in the watch pocket of his pantaloons and found there a little envelope which he opened. When he saw its contents, he called Major Pond to sit beside him and remarked: "You remember the evening I married C. P. Huntington. I was so much interested in the subject that I forgot he handed me a little envelope as he went out of the door. I put it in the watch pocket of my pantaloons and never thought of it again until just now, and here it is, four $1,000 bills. Now," he said, "don't tell any one about it, and we will have a good time and make some happiness with this money. We will just consider that we found it."

And so in a day or two Mr. Beecher went with Major Pond to look at a cargo of fine oriental rugs, many of which he purchased and sent to different friends, and afterward he spent what remained of the money for coin silver lamps, unmounted gems and various pieces of bric-a-brac, all of which he gave away until he had used up the entire $4,000 "in making happiness among those whom he loved."

After Mr. Beecher's death the major related to Mr. Huntington the incident of this discovery of the four $1,000 bills, and the railway magnate observed: "I should never have given them to him. It was all wrong. I made a mistake. Money never did him any good."

The Questions of Clarence.

"Well, Clarence, what is it?" asked the boy's papa.

"I didn't say anything, papa," replied Clarence.

"I know you didn't, but it is fully five minutes since you asked a question, and I know from experience that another is due about this time."

"Well, papa, what are all those big United States flags made of?" asked the boy.

"Some of them are made of silk, Clarence, but by far the greater number are made of bunting."

"And, papa?"

"Well, Clarence?"

"Are the little flags made of baby bunting?"—Pittsburg Commercial-Gazette.

Give Everybody a Chance.

Emerson's dictum that we should treat every one as if he were all he ought to be is an excellent rule to practice in daily life. It is human nature to rise to the level that is expected of it. It is not necessary to waste time upon uncongenial people unless you are bound to them by strong family ties, but it is important that all with whom you come in contact be studied, with the desire on your part to give credit for all that is good in them and that nothing in their outward circumstances or appearance be allowed to prejudice you against them.—Ada C. Sweet in Woman's Home Companion.

Wise Too Late.

Fond Mother—Tommy, you don't seem very well.

Tommy—No, maw, I ain't. I wisht I had let sister eat that third piece uv pie.—Ohio State Journal.

A Heartfelt Loss.

Casey—So poor Cassidy is dead? Sure, everybody will miss him!

Flannigan—They will! He was the only mon in the war-rd thot everybody could lick!—Puck.

Value of a Man's Life.

The Supreme Courts have decided that the life of the average man is worth just what he is able to earn. A man's earnings depend to a great extent upon his physical health. The stomach is the measure of health and strength. Every man may be bright and active if his digestion is normal. If it is not, Hostetter's Stomach Bitters will make it so. Try it for dyspepsia, indigestion, constipation, biliousness, flatulency, liver or kidney troubles.

Would Be Draconian.—"Who was it who said he'd rather make the songs than the laws of the country?" "I don't know, but I'd rather make the laws for the people who make the songs nowadays."

YOU KNOW WHAT YOU ARE TAKING

When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c

Catarrh of the Stomach

Rabbi David Klein, 526 E. Main street, Columbus, O., writes the following to Dr. Hartman in regard to Peruna: "It affords me great pleasure to testify to the curative merits of your medicine. Peruna is a well-tried and widely used remedy. Especially as a specific for catarrh of the stomach it cannot be excelled. Peruna will do all that is claimed for it."

Rabbi David Klein.

People afflicted with catarrh of the stomach complain of lassitude, all-tired-out feelings, their blood becomes thin, nervous system deranged, food seems to do them no good, continuous and increasing weakness. Peruna is a specific for catarrh of the stomach. Peruna corrects the impaired digestion, makes rich blood and steady nerves.

"Summer Catarrh" sent free by The Peruna Meidcine Co., Columbus, O.

For pimples, sallow complexion, impure blood and poor digestion use Adams' Sarsaparilla Pills. They improve complexion and cure constipation. 10c, 25c. Druggists.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

Some Queer Verdicts.

What is "a reasonable state of intoxication" apparently just missed precise definition by a coroner's jury in Mississippi which stated in its verdict that "we, the jury, find that deceased came to his death by a stroke of an east bound train, No. 204, on I. C. Railroad, at Fentress, Miss., in Choctaw county, he being in a reasonable state of intoxication."

A somewhat similar indefiniteness of legal conclusion mars a verdict of a neighboring Georgia jury to the effect that "we, the jury, find the defendant almost guilty."

Equally as uncertain and ambiguous as these statements by laymen is the opinion in an early Maryland case which "acknowledges the corn" by saying that an occurrence referred to took place "at a former sitting when the court was full."

Too Liberal.

Wife—Here's an advertisement in the paper that you'd better look into. It says a man is wanted, and he won't be worked to death, and he'll get paid enough to live on.

Husband—Says he won't be worked to death, eh?

Wife—Yes; and they promise pay enough to live on.

Husband—Some catch about that!—Pick-Me-Up.

A Gate Covered With Shoes.

The principal gateway at Allahabad is thickly studded with horseshoes of every size and make. There are hundreds of them nailed all over the great gates, doubtless the offering of many a wayfarer who has long since finished his earthly pilgrimage. The sacred gates of Somnath, in the fort of Agra, are similarly adorned.

CONSTIPATED

OLD AGE

Means misery on the eve of life. Nine out of ten old people are constipated because the muscles of their intestines have become weak, worn out and flabby. Constipation is the curse of old age, causes bile and acid poisons to remain in the blood, making the skin yellow and wrinkled, the eyes bleary and causing the "bones to ache." Keep the bowels strong, healthy and regular and old age loses all its terrors and weaknesses. No reason why grandpa and grandma shouldn't have bright eyes, and clear, ruddy skin and feel lively and active, if they will only keep their bowels open and vigorous with *CASCARETS CANDY CATHARTIC*, the greatest bowel tonic ever heard of. Try them to-day—a 50c box—a whole month's treatment—and find that the tortures of constipated old age are

PREVENTED BY

Cascarets

LIVER TONIC

BEST FOR THE BOWELS

10c. 25c. 50c.

ALL DRUGGISTS.

NEVER SOLD IN BULK.

CURE all bowel troubles, appendicitis, biliousness, bad breath, bad blood, wind on the stomach, bloated bowels, foul mouth, headache, indigestion, pimples, pains after eating, liver trouble, sallow complexion and dizziness. When your bowels don't move regularly you are getting sick. Constipation kills more people than all other diseases together. It is a starter for the chronic ailments and long years of suffering that come afterwards. No matter what ails you, start taking CASCARETS to-day, for you will never get well and be well all the time until you put your bowels right. Take our advice, start with CASCARETS to-day, under an absolute guarantee to cure or money refunded. 448

GUARANTEED TO CURE: Five years ago the first box of CASCARETS was sold. Now it is over six million boxes a year, greater than any similar medicine in the world. This is absolute proof of great merit, and our best testimonial. We have faith and will sell CASCARETS absolutely guaranteed to cure or money refunded. Go buy today, two 50c boxes, give them a fair, honest trial, as per simple directions, and if you are not satisfied, after using one 50c box, return the unused 50c box and the empty box to us by mail, or the druggist from whom you purchased it, and get your money back for both boxes. Take our advice—no matter what ails you—start today. Health will quickly follow and you will bless the day you first started the use of CASCARETS. Book free by mail. FROM POORHOUSE TO PALACE

BY MARY J. HOLMES

CHAPTER I.

"What makes you keep that big blue sunbonnet drawn so closely over your face? Are you afraid of having it seen?"

The person addressed was a pale, sickly looking child about nine years of age, who on the deck of the vessel Windermere, was gazing intently toward the distant shore of old England, fast receding from view. Near her a fine-looking boy of fourteen was standing, trying in vain to gain a look at the features shaded by the gingham bonnet.

At the sound of his voice the little girl started, and without turning her head, replied, "Nobody wants to see me, I am so ugly and disagreeable."

"Ugly, are you?" repeated the boy, lifting her up and looking her fully in the face. "Well, you are not very handsome, that's a fact, but I wouldn't be sullen about it. Ugly people are always smart, and perhaps you are. Anyway, I like little girls, so just let me sit here and get acquainted."

Mary Howard was certainly not very handsome. Her features, though tolerably regular, were small and thin, her complexion sallow, and her eyes, though bright and expressive, seemed too large for her face. She had frequently been told that she was homely, and often when alone had wept, and wondered why she, too, was not handsome like her sister Ella, on whose cheek the softest rose was blooming, while her rich brown hair fell in wavy masses about her white neck and shoulders. But if Ella was more beautiful than Mary, there was far less in her character to admire. She knew that she was pretty, and this made her proud and selfish, expecting attention from all, and growing sullen if it was withheld.

Mrs. Howard, the mother of these children, had incurred the displeasure of her father, a wealthy Englishman, by marrying her music teacher. Humbly at her father's feet she had knelt and sued for pardon, but the old man was inexorable and turned her from his house. Late in life he had married a youthful widow, who, after the lapse of a few years died, leaving three little girls, Sarah, Ella and Jane, two of them his own, and one a stepdaughter and a child of his wife's first marriage. As a last request Mrs. Temple had asked that her baby Jane should be given to the care of her sister, Mrs. Morris, who was on the eve of embarking for America. Sarah, too, was adopted by her father's brother, and thus Mr. Temple was left alone with his eldest daughter, Ella. Occasionally he heard from Jane, but time and distance gradually weakened the tie of parental affection, which wound itself more closely around Ella; and now, when she, too, left him, and worse than all, married a poor music teacher, the old man's wrath knew no bounds.

"But we'll see," said he—"we'll see how they get on. I'll use all my influence against the dog, and when Miss Ella's right cold and hungry she'll be glad to come back and leave him."

But he was mistaken, for though right cold and hungry Ella oftentimes was, she only clung the closer to her husband, happy to share his fortune, whatever it might be. Two years after her marriage, hearing that her father was dangerously ill, she went to him, but the forgiveness she so ardently desired was never gained, for the old man's reason was gone. Faithfully she watched until the end, and then when she heard read his will and knew that his property was all bequeathed to her sister in America, she brushed the tears from her long eyelashes and went back to her humble home prepared to meet the worst.

In course of time three children, Frank, Mary and Ella, were added to their number, and though their presence brought sunshine and gladness, it brought also an increase of toil and care. Year after year Mr. Howard struggled on, while each day rumors reached him of the plenty to be had in the land beyond the sea; and at last, when hope seemed dying out, he resolved to try his fortune in the far-famed home of the weary emigrant. The necessary preparations for their voyage were made as soon as possible, and when the Windermere left the harbor of Liverpool they stood upon her deck, waving a last adieu to the few kind friends who on shore were bidding them godspeed.

Among the passengers was George Moreland, whose parents had died some months before, leaving him and a large fortune to the guardianship of his uncle, a wealthy merchant residing in Boston. This uncle, Mr. Selden, had written for his nephew to join him in America, and it was for this purpose that George had taken passage in the Windermere. He was a frank, generous-hearted boy, and a favorite with all who knew him. He was a passionate admirer of beauty, and the moment the Howards came on board and he caught sight of Ella, he felt irresistibly attracted toward her. Mary, whose sensitive nature shrank from the observation of strangers, eluded all his efforts to look under her bonnet. This aroused his curiosity, and when he followed her addressed to her the remark with which we commenced this chapter. At last, gently smoothing back her hair, which was really bright and glossy, he said, "Who told you that you were so ugly looking?" The tears started to Mary's eyes, and her chin quivered, as she replied, "Father says so, Ella says so, and everybody says so but mother and Franky."

"Everybody doesn't always tell the truth," said George, wishing to administer as much comfort as possible. "You've got pretty blue eyes, nice brown hair, and your forehead, too, is broad and high; now if you hadn't such a muddy complexion, bony cheeks, little nose, big ears and awful teeth, you wouldn't be such a fright!"

George propensity to tease had come upon him, and in enumerating the defects in Mary's face he purposely magnified them; but he regretted it, when he saw the effect his words produced. Hiding her face in her hands, Mary burst into a passionate fit of weeping, then snatching the bonnet from George's lap, she threw it on her head and was hurrying away when George caught her and pulling her back, said, "Forgive me, Mary. I could not help plaguing you a little, but I'll try and not do it again."

For a time George kept this resolution, but he could not conceal the preference which he felt for Ella, whose doll-like face and childish ways were far more in keeping with his taste than Mary's old look. Whenever he noticed her at all, he spoke kindly to her; but she knew there was a great difference between his treatment of her and Ella, and ofttimes, when saying her evening prayer, she prayed that George Moreland might love her a little, just a little.

Two weeks had passed since the last vestige of land had disappeared from view, and then George was taken dangerously ill with fever. Mrs. Howard herself visited him frequently, but she commanded her children to keep away, lest they, too, should take the disease. For a day or two Mary obeyed her mother, and then curiosity led her near George's berth. For several minutes she lingered, and was about turning away when a low moan fell on her ear and arrested her footsteps. Her mother's commands were forgotten, and in a moment she stood by George's bedside. Tenderly she smoothed his tumbled pillow, moistened his parched lips and bathed his feverish brow, and when an hour afterward, the physician entered, he found his patient calmly sleeping, with one hand clasped in that of Mary.

"Mary! Mary Howard!" said the physician, "this is no place for you," and he endeavored to lead her away.

This aroused George, who begged so hard for her to remain that the physician went in quest of Mrs. Howard, who rather unwillingly consented, and Mary was duly installed as nurse. Perfectly delighted with her new vocation, she would sit for hours by her charge. She possessed a very sweet, clear voice; and frequently, when all other means had failed to quiet him, she would bend her face near his, and taking his hands in hers, would sing to him some simple song of home, until lulled by the soft music he would fall away to sleep. Such unwearied kindness was not without its effect upon George, and one day when Mary as usual was sitting near him, he called her to his side, and taking her face between his hands, kissed her forehead and lips, saying, "What can I ever do to pay my little nurse for her kindness?"

Mary hesitated a moment, and then replied, "Love me as well as you do Ella!"

"As well as I do Ella!" he repeated; "I love you a great deal better. She has not been to see me once. What is the reason?"

Frank, who a moment before had stolen to Mary's side, answered, saying, "Someone told Ella that if she should have the fever, her curls would all drop off; and so she won't come near you!"

Just then Mrs. Howard appeared, and this time she was accompanied by Ella, who clung closely to her mother's skirts. George did not as usual caress her, but he asked her mockingly, "if her hair had commenced coming out!" while Ella only answered by grasping at her long curls, as if to reassure herself of their safety.

In a few days George was able to go on deck, and though he still petted and played with Ella, he never again slighted Mary. At last, after many weary days, there came the joyful news that land was in sight; and next morning Boston, with its numerous domes and spires, was before them. Toward noon a pleasant looking, middle-aged man came on board, inquiring for George Moreland, and announcing himself as Mr. Selden. George immediately stepped forward, and after greeting his uncle, introduced Mr. and Mrs. Howard, speaking at the same time of their kindness to him during his illness. All was now confusion, but in the hurry and bustle of going ashore George did not forget Mary. Taking her aside he threw round her neck a small golden chain, to which was attached a locket containing a miniature likeness of himself painted a year before.

"Keep it," said he, "to remember me by, or if you get tired of it, give it to Ella for a plaything."

"I wish I had one for you," said Mary, and George replied, "Never mind, I can remember your looks without a likeness." Then bidding adieu to Mr. and Mrs. Howard, Frank and Ella, he sprang into his uncle's carriage and was rapidly driven away. Mary looked after him as long as the heads of the white horses were in sight, and then taking Frank's hand, followed her parents to the hotel, where for a few days they had determined to stop while Mrs. Howard made inquiries for her sister.

Meantime from the windows of a large, handsome building a little girl looked out, impatiently waiting her father's return, wondering why he was gone so long and if she should like her cousin George.

In the center of the room the dinner table was standing, and Ida Selden had twice changed the location of her cousin's plate, once placing it at her side, and lastly putting it directly in front, so she could have a fair view of his face.

"Why don't they come?" she had said for the twentieth time, when the sound of carriage wheels in the yard below made her start up, and, running downstairs, she was soon shaking the hands of her cousin, whom she decided to be handsome. Placing her arm affectionately around him, she led him into the parlor, saying: "I am so glad that you have come to live with me and be my brother. We'll have real nice times, but perhaps you dislike little girls. Did you ever see one that you loved?"

"Yes, two," was the answer. "My cousin Ida and one other."

"Oh, who is she?" asked Ida. "Tell me about her. How does she look? Is she pretty?"

George told her of Mary, who had watched so kindly over him during the weary days of his illness.

"I know I should like her," Ida said. "They are poor, you say, and Mr. Howard is a music teacher. Monsieur Dupres has just left me, and who knows but papa can get Mr. Howard to fill his place."

When the subject was referred to her father he said that he had liked the appearance of Mr. Howard, and would, if possible, find him on the morrow and engage his services. The next morning the sky was dark with angry clouds, from which the rain was steadily falling. All thoughts of Mr. Howard were given up for that day, and as every moment of Mr. Selden's time was employed for several successive ones, it was nearly a week after George's arrival before any inquiries were made for the family. The hotel at which they had stopped was then found, but Mr. Selden was told that the persons whom he was seeking had left the day before for one of the inland towns, though which one he could not ascertain.

CHAPTER II.

It was the afternoon for the regular meeting of the Ladies' Sewing Society in the little village of Chicopee, and at the usual hour groups of ladies were seen wending their way toward the stately mansion of Mrs. Campbell, the wealthiest and proudest lady in town. The spacious sitting room, the music room adjoining, and the wide, cool hall beyond were thrown open to all, and by three o'clock they were nearly filled.

At first there was almost perfect silence, broken only by a whisper or undertone, but gradually the hum of voices increased, until at last there was a great deal more talking than working. Then for a time there was again silence while Mrs. Johnson, president of the society, told of the extreme destitution in which she had that morning found a poor English family who had moved into the village two or three years before. They had managed to earn a comfortable living until the husband and father suddenly died, since which time the wife's health had been very rapidly failing, and she was no longer able to work, but was wholly dependent for subsistence upon the exertions of her oldest child, Frank, and the charity of the villagers. The day before the sewing society Frank had been taken seriously ill with what threatened to be scarlet fever.

The sick woman in whom Mrs. Johnson was so much interested was Mrs. Howard. All inquiries for her sisters had been fruitless. Since we last saw them a sickly baby had been added to their number. With motherly care little Mary each day washed and dressed it, and then hour after hour carried it in her arms, trying to still its feeble moans, which fell so sadly on the ear of her invalid mother.

It was a small, low building which they inhabited, containing but one room and a bedroom, which they had ceased to occupy, for one by one each article of furniture had been sold, until at last Mrs. Howard lay upon a rude lounge, which Frank had made from some rough boards. Until midnight the little fellow toiled, and then when his work was done crept softly to the cupboard, where lay one slice of bread, the only article of food which the house contained. Long and wistfully he looked at it, thinking how good it would taste; but one glance at the pale faces near decided him. "They need it more than I," said he, and turning resolutely away, he prayed that he "might sleep pretty soon and forget how hungry he was."

One morning when he attempted to rise he felt oppressed with a languor he had never experienced, and turning on his trundle-bed and adjusting his blue cotton jacket, his only pillow, he again slept so soundly that Mary was obliged to call him twice ere she aroused him.

That night he came home wild with delight—"he had earned a whole dollar, and he knew how he could earn another half-dollar to-morrow. Oh, I wish it would come quick," said he, as he related his success to his mother.

But, alas! the morrow found him burning with fever, and when he attempted to stand he found it impossible to do so. A case of scarlet fever had appeared in the village, and it soon became evident that the disease had fastened upon Frank. The morning following the sewing society Ella Campbell and several other children showed symptoms of the same disease, and in the season of general sickness which followed few were left to care for the poor widow. Daily little Frank grew worse. The dollar he had earned was gone, the basket of provisions Mrs. Johnson had sent was gone, and when for milk baby Alice cried, there was none to give her.

(To be continued.)

Down a Mountain Slope.

The descent from the easiest pass across the Blue Ridge mountains thereabouts, known as Snicker's gap, to the Shenandoah river, is long and steady. At regular intervals a little elevation of solid earth, also known as a brake, has been banked up across the road to keep it from being washed away by the heavy rains. A ferry, propelled by the river current, carries the stage coach across the Shenandoah, which flows at the foot of the mountain.

One day the coach, well loaded with passengers and their baggage, had attained a fair speed when an accident to the harness occurred. The driver could not turn the vehicle up against the high banks on either side without upsetting it and perhaps maiming its occupants. There was nothing to do but to "keep the horses on their feet and guide them."

Every time he reached one of the mounds across the road he had to exercise the greatest skill in steering over it squarely, but by coolness and presence of mind he brought his load safely, although at a tremendous speed, down the mountain. From long experience he knew where it was possible to drive into the river without getting beyond his depth, and, as he boldly plunged his team into the stream an effective brake upon its speed began to operate. It soon came to a standstill and the terror-stricken passengers drew a long breath once more. Rowboats came out after them, the harness and brakes were repaired and the journey resumed.

The poet Campbell found that "Coming events cast their shadows before" and "'Tis distance lends enchantment to the view."

NEVER FORGET FACES

NATIVES OF PHILIPPINES MAKE GOOD DETECTIVES.

Never Fails to Pick Out a Man Who Does Him an Injury, Although Among a Hundred with the Same Facial Characteristics.

A United States soldier, who has just returned from the Philippines, tells some interesting stories of Filipinos. He says the ordinary Filipino is the best detective on earth; that our Hawkshaws, England's Scotland Yard experts and Paris Vidocqs are mere amateurs compared to him. They never forget a face.

"The natives had been guilty of so many mean little tricks that a man in our regiment resolved to get even with a fellow who had made himself especially obnoxious by his lying and deceit. The soldier got hold of a bright, new penny, which he gave an extra polish to and passed it on the dishonest native for a $5 gold piece.

"Of course, discovery of the fraud followed when the victim went to headquarters to have his money changed, and he made a terrific roar. He was more indignant than he would have been had the soldier slain his wife and children. The government policy is to court the good will of the natives, so the soldiers were lined up and the injured dealer in decayed fruit was told to pick out the guilty man, which he did without the slightest hesitation, in spite of the fact that the soldiers were all dressed exactly alike and many were of the same size and build, and had the same facial characteristics.

"Singular about that—they do their bookkeeping in their head and can tell strangers like a Chinese laundryman. They never failed to pick out the soldiers who had wronged them, and the statement of one of them outweighed a soldier's word.

"This caused the soldiers to abandon the methods that they had adopted to get even with the wily swindlers. For a while the soldiers, or rather some of them, worked off Confederate money on the natives, but this graft met with a similar fate.

"The natives are great gamblers. They will risk every cent they have on cock fighting, which is one of the principal amusements. Their favorite game with cards is monte, a game played with forty cards. Their two favorite cards are the seven spot and the cabayo, which has a horse on it and corresponds to our jack. A native will bet more on this card than on a king. In spreading civilization we introduced the royal game of craps and the natives took to it. But they are still a little wary and will not stake more than a dime on the turn of the dice.

"We called the natives by all kinds of pet names and they resented only one, "nigger." It makes a native fighting made to call him a nigger, and they loathe a negro as they would a reptile. The natives were all delighted when bicycles were brought over. I was on the island of Panay when the wheel was introduced. Bicycles have been the rage on the island of Luzon for a long time, and no other pleasure vehicle can be seen. But they are just introducing them at Panay, and we had free circuses watching the natives learn to ride. However, they soon mastered the art, and you could not get a bicycle unless you applied three days in advance. Those fellows would work for 40 cents a day and then spend it all on bicycle riding at the rate of 30 cents an hour.

"The natives are very fond of jewelry. A Filipino woman will work for three months for a ring or other gimcrack that pleases her. Some of the women are beautiful, but they are the Spaniards or half-breeds. In the island of Luzon the soldiers could not work up flirtations with the ladies. Those magazine stories having for their theme the love of a Filipino girl for some thoughtless soldier are all products of romantic imgaination. If a Filipino girl in Luzon allowed a soldier to make love to her her father would likely kill her."

A RATTLESNAKE'S JOURNEY.

Arrives in Denver on a Union Pacific Railroad Train.

A rattlesnake nearly four feet long, bruised and dazed and chilled, but still alive, rode into Denver over the Union Pacific this morning upon the sand board in the middle of the rear truck of baggage car No. 1,091.

Car Inspector T. J. Soden was making his usual rounds, carelessly whistling a bit of a tune. He came to No. 1,091 and cast keen glances at her running gear, here and there tapping a steel bar or adjusting a valve. All was well. He passed to the rear truck and stopped short. He rubbed his eyes with the back of his hand. The morning was damp and misty and he had risen early. Perhaps he was a bit sleepy, he thought. He looked again with eyes widely opened.

There upon the low sandboard which stretches across the car from side to side beneath the middle of the truck, was a rattler, feeble and hurt, but coiled for defense.

Inspector Soden watched it silently for a moment, and then, as if to reassure himself, tossed a bit of gravel at the strange passenger. Instantly it straightened its tired body and shook its tail defiantly. There was no sound of rattles, however. They had been shattered and lost on the trip.

The trainmen gathered round and expressed their opinions about the manner in which the rattler attained his position on the sandboard. Nearly all of them are confident that the snake was lying on the ties and the train swept over it. The suction of the flying cars whirled it up, and by chance it lodged on the sandboard. There it lay during the remainder of the trip, greatly enraged and frightened.

Examination of the board and those parts of the truck close to it revealed tiny drops of greenish-yellow venom. The snake, in terror of its unusual enemies, had struck about it in every direction many times during its wild, disagreeable ride.

Its poison was sprinkled upon the steel and wood so plentifully that its fangs must have been exhausted on reaching Denver. Its bite would probably have been harmless when it rolled into the depot. Its body was painfully bruised in several places and covered with dust.

Its weakness was apparent, for with difficulty could it hold itself erect for several minutes at a time. Then it would relapse.

A friend of Inspector Soden took the rattler home, promising to take care of it, and the trainmen have named it "Union Pacific."—Denver Post.

QUEER STORIES

An ordinary piano contains a mile of wire string.

With the aid of a microphone you can hear a fly walk.

The largest enclosure of deer is said to be the royal park in Copenhagen, 4,200 acres.

An ostrich which was lately dissected in London had in its stomach a small prayer book.

The rock of Gibraltar has four huge reservoirs, capable of holding five million gallons of water.

New South Wales has fifteen thousand miles of wire netting as a fence protection against rabbits.

Palms never live more than 250 years. Ivy has been known to live 450, chestnut 860, oak 1,600 and yew 2,880 years.

Taking into consideration the number of ships that are on seas and navigable waters of the world it is estimated that about 1,700,000 of the world's population are constantly afloat.

A philosophical statistician calculates that in the year 2000 there will be 1,700,000,000 people who speak English, and that the other European languages will be spoken by only 500,000,000 people.

Only one person in fifteen has perfect eyes, the large percentage of defectiveness prevailing among fair-haired people. Short sight is more common in town than among country folk, and of all people the Germans have a larger proportion of short-sighted persons.

The tea used in the household of the Chinese Emperor is raised in a private garden surrounded by a high wall. At the time of harvesting the pickers must wear gloves, must bathe three times a day, and must abstain from eating fish, lest their breath should taint the aroma of the tea.

At Essex Conn., the other day a wampum belt owned by a descendant of Herman Garrett, who was appointed Governor over the Pequots in 1655, was sold for $320. The relic is composed of a string of shells formed into a belt two and one-half inches wide and thirty-three inches long.

The chafing dish is among the most ancient adjuncts to the culinary department of all nations. It was in great demand at the grand feasts given by the wealthy citizens in ancient Rome. Some of these dishes have recently been found among the ruins of Pompeii. They are of exquisite workmanship.

The number of eggs laid by birds appear to be related to the abundance or rarity of the species. The wild pigeon, laying but two eggs, is infinitely more abundant than certain hawks laying two or three times as many. The robin, laying four or five eggs, is far more numerous than the house wren or chickadee, which lays from six to nine.

AN INDIANA GIRL IN PARIS.

Miss Ethel Gowdy, the clever daughter of Colonel "Jack" Gowdy, United States Consul General in Paris, is receiving a great deal of attention. She defended American girls from the onslaught of M. Edouard Beaute, the lecturer, who said they were too pushing, walked in advance of their mothers, led them in conversation and were physically too strong for womanliness. Miss Gowdy is also being looked to by the intellectual of Paris to establish a literary and artistic salon when that of Mme. Adam ceases to exist.

MISS ETHEL GOWDY.

Every boy whose father sells candies must wish that his mother sold them instead.

FOR AND ABOUT WOMEN

WHEN FITTING UP THE HOME.

MAKE rooms restful. That is the rule that guides house furnishers and decorators. The woman who is refitting her rooms or furnishing for the first time should apply this test to the scheme she contemplates. Let her ask herself: "Will it be restful?" and if she can answer in the affirmative she may go ahead confidently.

To be restful it must be harmonious. If the majority of the furnishings are dull, then all should be dull to keep the effect what it should be. To get the right effect, it is a good deal better to go slowly about the collection of household goods.

After all, it is, often enough, ingenuity rather than a full purse that is needed in converting an ugly room into an attractive one. Take the example of an inartistic mantel which confronted one woman in a new abode. It was altogether too narrow to look well as it was, and no amount of draping or decorating could disguise that fact. Therefore she hunted out a carpenter, who made two sets of very inexpensive book shelves. These were painted the required color and put in place, one at either end of the undesirable little mantel, and every one who saw the result wondered she had never thought of just that way out of the difficulty.

The Girl's Allowance.

The question of an allowance for the daughter of the household is one that is constantly being discussed. It seems to be pretty generally accepted that it is a good idea, and teaches a girl the value and use of money. So it does, but it sometimes teaches her some other things that need a little guarding against. A girl with an allowance occasionally makes it an excuse for penuriousness on the one side and unhesitating begging on the other, that tend a little to character deterioration. While it is perfectly right and proper to give as an excuse for self-denial that one's allowance is exhausted, or will not admit of the proposed purchase, or pleasure trip, it is not right to say, as girls have been heard to do: "I'll go with you, but you must pay my carfare;" or, "I have only a dime to spare in the treat if you will let me come in on that," etc. I have heard a girl reply, in answer to a suggestion from a companion on a short railroad trip, that a parlor car should be taken, "Oh, if we do that, you will have to pay my way on it, my allowance is so nearly spent." Girls who would shrink from the idea of "sponging" under other circumstances, do not hesitate to take advantage of this allowance peg upon which to hang a good many small meannesses in money matters. When it comes to the mother's purse, the cribbing by any means and outright purloining, indeed, are not disguised. These are only little foxes, to be sure, girls, but they gnaw the vines of integrity and self-respect, and would better be choked off.—Harper's Bazar.

How many children have been terrified by stories of the "Bogy man," of "the wolf that will come and eat them," of "the policeman who will put them in the lockup," till their fear of the dark amounts to positive agony. Bedtime should be an hour inseparably associated with the prayer at the mother's knee, followed by a quiet talk, after which the little one settles down to a restful sleep. But instead how often does it happen that the child is tucked in bed with the admonition, "Now, go right to sleep, like a good boy, for if you don't there's a big dog over there in the corner that'll come and bite you!" Go to sleep! Sheer nervous terror keeps the child awake. How can he be expected to grow up anything but timid?—Woman's Home Companion.

In Lieu of the Hot-Water Bag.

Nothing proves better than good dry heat to quiet pain. Hot water bags and bottles are excellent, if perfectly tight. Hot sand bags also are good to place beside the body and limbs. A relay of hot plates, wrapped in woolen cloth, will do wonders in giving relief to a patient.

In any case of serious bowel trouble, it is well to follow up with relays of hot plates, lightweight earthen, or, better still, because of their lightness, are the tin plates such as are used by bakers, being always careful they are as hot as can be borne, but not too hot, and wrapped in cloth. This remedy will allay inflammation and pain to a wonderful degree. It is also excellent in rheumatism of the hip, knee or ankle. A frequent change of hot plates, well wrapped in woolen and placed beneath or over the suffering joint, as the patient lies in bed, will bring great relief.

To Keep Young.

The injunctions so frequently given in regard to relaxation of the body as a means of rest are invaluable and cannot be repeated too often. The relaxation of the muscles of the mind is no less necessary, however, and its necessity should be emphasized in every way. The small worries of the average life are almost innumerable and wrinkle the mind as they wrinkle brow and cheek. A charming woman over sixty, whose face is young and bright, was asked how she kept the lines and wrinkles away. Her answer was: "I began when a girl to put aside a hope hour every day, as far as possible. In that hour I thought of everything happy and hopeful in my life, and refused to think of the worries. I read hopeful poems. I looked at flowers and birds. I smoothed the wrinkles from my heart by remembering only joyous moments. I believe that to that habit I owe my faculty for seeing the bright side of things, and my comparative freedom from the lines traced by care. I have had troubles—many of them—but always could fill one hour in the day with hope!"

Powder-Puff Wisdom.

Dr. Casserode, Mme. Sarah Bernhardt's beauty doctor, says that while he recommends the use of face powders, no white ones should be bought, especially in countries where electric light is common.

The puff box in all cases should contain tinted powder; creamy white to suit the naturally fragile and delicate looking complexion, pink to tone in with a robust visage, and a slightly browned brand to glorify the olive cast of countenance.

Mme. Bernhard's beauty doctor also points out that all and every vestige of "make up," be it paint or powder, should be removed every night. No one should try complexion to breaking point; therefore, no one should sleep in the mask she wears by day. On the other hand, she should remove it very tenderly and carefully, recollecting the fact that the skin of the face is monumentally sensitive, and requires treatment that would befit a piece of rarest porcelain, rather than of the kind of a paving stone requires.

Wisconsin Artist.

Miss Helen F. Mears, of Oshkosh, Wis., who is to execute the statue of Frances E. Willard, to be placed in the national capitol, was born in that city and lived there until she was 18 years old. When she was 19 she spent a year in Chicago studying in the Art Institute, and was encouraged by Lorado Taft. Later she was in the studio of St. Gaudens, in New York, and then studied abroad under Puesch, Dampt, Charpentier and MacMonnies. She exhibited in the Paris Salon of 1897, and in 1898 visited Rome and Florence. Her studio is now in New York City, where her work has been carried on for the last three years.

HELEN F. MEARS.

The Collar.

A college girl is responsible for this novel idea for the benefit of the innumerable throng who wear turnover linen collars, and soft, wide pastel ribbon ties, and where should we expect to get new ideas if not from those who are indulging in the higher education! Cut a vertical slit in each side of the upstanding portion of the collar, just under the shadow of the overturned part. The ribbon ends are slipped through these cuts and the collar put on over the head and the whole thing in place in a "jiffy." I am told that this is a great saving of ribbon, time and temper, it being almost impossible to get the ribbon around the neck neatly, or, indeed, at all. This does not injure the collar for use with the regular string ties. Some of the girls, who care more for comfort than for collars, cut into the overturned edge, the voluminous bow of ribbon covering the extravagance.—Good Housekeeping.

Things to Remember.

The instep can be made higher and the ankle slender by rising upon the toes twenty times very slowly night and morning.

All rough usage of the teeth, such as cracking nuts, biting thread, etc., should be avoided, but the proper uses of the teeth in chewing is good for them.

It is well for women to understand that it is impossible to present perfectly groomed and dainty appearance with uncared-for hands, and a woman cannot take too good care of her finger nails, as they beautify or disfigure the hands in every case.

For Patent Leather.

Nice patent leather makes the neatest of footgear, but it requires care to keep it in order. There is no better dressing for it than a very little salad oil. Before wearing a new pair of patent leather boots it is expedient to well rub in a small quantity of salad oil and then polish with a soft cloth. This is to prevent the leather from cracking, as it sometimes does. Patent leather should never be dried by the fire, for heat has a way of causing the leather to harden and crack.

Towels of Bird's-Eye Linen.

The skin of the face needs tender treatment. The softest of sponges and the finest of towels should be used upon it. The small towels of bird's-eye linen are well to be kept on hand and used only for the face and frequently renewed. Anything used for the face should be clean as well as fine.

Manual laborers about the German ship yards average $4.32 a week.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, NOVEMBER 1 1901

Czolgosz was put to death by electricity at 7:12 a. m. last Monday. Nothing of sensational nature occurred.

The Sultan must pay the ransom for Miss Stone, says Uncle Sam, and the proposition is eminently just. If the "Sick Man" does not know enough to keep peace in his own dominions, let him pay the damage.

The Boer war has already cost Great Britain 18,000 lives, 75,000 disabled men, incalculable misery in homes and $700,000,000 in money. This is a terrifying commentary on a boast that in three months the war would be ended. The third year of the strife has begun and the Boers are as intrepid as ever.

The study of the water resources of the country and the work of stream measurement to ascertain conditions of flow, to which the United States Geological Survey has set itself, is a vast work; but the information thus collected will give a great impetus to development in many States. Our water resources touch the economic interests of the country at many points, but like our forest resources they are only just now beginning to be realized.

Some of the great legal lights of the country confess or profess their inability to devise any method for the suppression or regulation of trusts. While this may be a difficult problem how to cease to foster and encourage them seems to our wild and wooly western mind a very simple and uncomplicated matter. For instance, there is nothing in the federal constitution to prohibit the abolishment of the tariff tax, which enables the monopolies to sell at a profit their products abroad at ten percent rates less than is charged to home consumers.

The income tax in England has been in force for over one hundred years, but the people in the United States who have large incomes are possessed of so much influence it seems impossible to secure an effective income tax in this country. To speak plainly, the people of the United States who have large incomes have too much influence with the Supreme Court to allow such a righteous law to go into effect after its passage by the authorized representatives of the people. It was the best and most equitable revenue law that was ever enacted by an American Congress, and if left to the people would be ratified by a vote of ten to one. But the Supreme Court is the highest power in the land—always excepting the monied power, which is superlatively supreme in all matters relative to the interests of the favored few—and the unfavored many.

A new industry, which will be of vast importance to the State, and which is receiving the attention of the State Mineralogist, is the nitre deposits of which there is at present little knowledge concerning their extent or commercial value. Prof. Geo. E. Bailey has been instructed to give them a careful investigation and to incorporate in his report of the saline deposits all information which will be of value to those desiring to investigate that industry in this State. So far as known, in Inyo and San Bernardino counties the principal deposits are found and Prof. Bailey will spend the winter in the desert portion of these counties carrying on these investigations. A wide field and which promises great results is the Death Valley region. Much needed information concerning the salt industry in this State will be available as soon as Mr. Bailey completes his work.

The manner in which some of the organs receive the statement that President Roosevelt has cut loose from Mark Hanna and the joy they evince over the alleged position of the new President is somewhat painful in the calcium light of very recent history. One would imagine that the self-same organs have been saying all the time that Mr. Hanna is a very bad man. A dangerous man. A man that ought to have no voice in the counsels of the party. But indeed, they have been doing nothing of the kind. When Hanna was head and front of the organization the the organs that now rejoice at his seeming deposal were quoting his speeches, bowing and scraping before his image and taking orders from him as though he were a patron saint. The qurstion naturally arises if Mr. Hanna was a good man to guide the party a year ago is he any the worse now? If not why do the organs rejoice?

Anarchism declares against all government and in favor of absolute individual freedom to preach and do, and for a communism destructive of all personal property holding, of the marriage and the family relation, and of all present conventions of society. But the experience of mankind through ages advises government as a necessity to social order; advises the family as the root and basic stone of the state; advises government as the source and protector of liberty and the guard of human freedom. Savage tribes and the most developed communities equally decide, and have so held for ages, as the result of their experience, that some form of government, some order of authority, some form of codes are necessary and beneficent. This because the vicious must be restrained, the good encouraged and the weak defended against the aggressively strong; that joint endeavor may be promoted and organized for mutual assistance, defense and justified aggression; that justice may be done between men; the orderly protected against the criminal, and human ambition to deserve have due recognition

The Bride at Last Said "Obey."

In telling about "Some People I Have Married" in Ladies' Home Journal the Rev. D. M. Steele says: "Being an Episcopalian, I always use the formal printed service of the prayer book. In this the greatest stickler is 'obey.' One day a couple came to me, bringing as witnesses the parents of both bride and groom. Everything proceeded smoothly to the point 'love, honor and obey,' when the bride refused to say the last. I repeated it and waited. Again she refused, and I shut up my book.

"Then there was a scene. They talked it over, and the more seriously they argued and discussed the more stubbornly she refused. The parents became angry, the groom excited and the bride hysterical. To humor her, he joined in the request to have me leave it out. But I liked the fellow and decided that a little sternness from me in the present might be a favor to him in the future. So I told them I had no authority to change it and would not do so. I tried to show the foolishness of her objection, but it was no use.

"Finally I said to him: 'Well, this household must have a head somewhere. I will leave it out for her if you will say it.' Then it was his time to refuse, which he did. He gathered up his hat and started for the door, when, presto change, she sprang after him, led him back by the hand, looked meekly up at him and said it."

Artful.

"Shrewd fellow, that Bliggins," said one young man. "He's a natural diplomat."

"How did you find it out?"

"I asked him to lend me a dollar."

"And he got away from it?"

"No. He said he hadn't a dollar, but he'd lend me five. I might forget about $1. But he could remind me of $5."—Washington Star.

Spanish beggars do not think it necessary to conceal their cigar when asking alms. Smoking is considered as necessary as breathing to every human being out of the cradle.

Formalin Treatment For Grain.

Hot water treatment for oat smuts must be done just right, and all farmers do not have the facilities. Formalin is easier to use, one pound to 50 gallons of water. This is either sprinkled on with a watering pot, one gallon to a bushel of oats, or the oats are dipped in the solution. In each case they should stand two hours before being dried out, says an exchange.

LEGAL.

Commissioner's Sale.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

A. W. EIBESHUTZ, Plaintiff, vs. E. M. DINEEN, Defendant.

SUPERIOR COURT. Order of Sale and Decree of Foreclosure.

UNDER AND BY VIRTUE OF AN ORDER of sale and decree of foreclosure issued out of the Superior Court of the County of Inyo State of California, on the 9th day of October, 1901, in the above-entitled action, wherein A. W. Eibeshutz, the above plaintiff, obtained a judgment and decree against E. M. Dineen, defendant, on the 7th day of October, 1901, which said decree was, on the 8th day of October, 1901 recorded in Judgment Book 2 of said Court, at page 167, I am appointed Commissioner and commanded to sell:

All the right, title and interest of the defendant E M. Dineen, consisting of an undivided one third interest in and to those certain mines and mining claims situate, lying and being in Wild Rose Mining District, County of Inyo, State of California commonly known and designated as the "Monarch," "Combination," "Monopoly" and "Kennedy" mines, the notices of location thereof being of record in the mining records of said Wild Rose Mining District, and in the office of the County Recorder of said Inyo County.

Notice is hereby given that on THURSDAY, the 14th day of NOVEMBER, 1901, at 2 o'clock p m of that day, in front of the Court House, in the town of Independence, I will in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy the plaintiff's judgment, with interest thereon and costs, to the highestand best bidder, for cash, in gold coin o f the United States.

GEO. S. WOOD
Commissioner.

Dated October 14, 1901.

DESERT LAND, FINAL PROOF.

UNITED STATES LAND OFFICE, INDEPENDENCE, CAL., Oct. 8, 1901.

NOTICE IS HEREBY GIVEN that Augusta F. Kispert, of Phebe, Inyo Co., California, has filed notice of intention to make proof on her desert-land claim No. 862, for the NE¼ of SE¼, Sec. 27, T. 14 S., R. 35 E., M. D. M., before the Register and Receiver at Independence, Cal., on TUESDAY, the 12th day of November, 1901.

She names the following wit esses to prove the complete irrigation and reclamation of said land: John Kispert, Augustus G. McGovern, Louis Thurman, of Thebe, Inyo Co., Cal., and Ben. H. Yandell, of Independence, Cal.

S. W. AUSTIN, Register.

DESERT-LAND, FINAL PROOF.

THE HORSE IN BATTLE.

Even When Mortally Wounded He Will Try to Remain Standing.

A veteran cavalry horse partakes of the hopes and fears of battle just the same as his rider. As the column swings into line and waits the horse grows nervous over the waiting. If the wait is spun out, he will tremble and sweat and grow apprehensive. If he has been six months in service, he knows every bugle call. As the call comes to advance, the rider can feel him working at the bit with his tongue to get it between his teeth. As he moves out, he will either seek to get on faster than he should or bolt. He cannot bolt, however. The lines will carry him forward, and after a minute he will grip, lay back his ears, and one can feel his sudden resolve to brave the worst and have done with it as soon as possible.

A man seldom cries out when hit in the turmoil of battle. It is the same with a horse. Five troopers out of six, when struck with a bullet, are out of their saddles within a minute. If hit in the breast or shoulder, up go their hands, and they get a heavy fall; if in the leg or foot or arm, they fall forward and roll off.

Even with a foot cut off by a jagged piece of shell a horse will not drop. It is only when shot through the head or heart that he comes down. He may be fatally wounded, but hobbles out of the fight to right or left and stands, with drooping head, until the loss of blood brings him down.

The horse that loses his rider and is unwounded himself will continue to run with his set of fours until some movement throws him out. Then he goes galloping here and there, neighing with fear and alarm, but he will not leave the field. In his racing about he may get among the dead and wounded, but he will dodge them, if possible, and in any case leap over them. When he has come upon three or four other riderless steeds, they fall in and keep together as if for mutual protection, and the "rally" of the bugle may bring the whole of them into ranks in a body.—Public Opinion.

PLAINT OF A MILLIONAIRE.

Not Fun In Life For a Man Who Has Acquired Enormous Wealth.

What is the smallest income on which a man may live in New York? was the question I asked today of a noted banker, whose income cannot be less than $100,000 a year. "Well," he replied, "my household expenses alone amount to $25,000 a year, and I do not see how I possibly could live on less than that." Then a reminiscent smile began to cross his countenance, and, heaving a little sigh, he said: "But the happiest time of my life was when my wife and I and two children lived here on $2,500 a year. After all, happiness doesn't depend on the amount of a man's income

"I was quite intimate with William H. Vanderbilt when he was considered the richest man in the country. I met him one day in Fifth avenue and said to him that he ought to be the happiest man in the world. 'I am not,' the great millionaire replied. 'My health is shattered, and all the money I possess cannot restore it. I cannot even drive one of my fine horses. It is painful for me to sit down. My only possible exercise is for me to walk down the avenue. I receive threatening letters daily, and my nerves are so unstrung that I am constantly afraid that some assassin will waylay me. I am overrun with people who want to get money. I am the most wretched man in New York, and I tell you that after a person has accumulated enough to secure him against poverty and gratify his reasonable wants every dollar in addition is a burden and weighs him down.'"—Philadelphia Ledger.

Romance of Siam's Great Peaks.

Siam's greatest mountain range is the Sam Roi Yawt, or the 300 peaks. A quaint legend which explains their origin is set forth by the Siamese geologists as follows:

"It appears that one Mong Lai and his wife once inhabited the neighborhood (they were giants), and each promised their daughter in marriage, unknown to the other, to a different suitor. At last the day of the nuptials arrived, and Chao Lai and the Lord of Mleang Chin (China) both arrived to claim the bride. When the horrified father found how matters stood—having a regard for the value of a promise, which is not too common in the east—he cut his daugher in half so that neither suitor should be disappointed.

"Chao Lai in the meantime, on finding that he had a rival, committed suicide, and the peak of Chao Lai is the remains of his body. The unfortunate bride is to be found in the islands off Sam Roi Yawt, the peaks of which are the remains of the gifts which were to be made to the holy man who was to solemnize the wedding, while Kaw Chang and Kaw King, on the east side of the gulf, are the elephant and buffalo cart in which the presents were brought."

A Promising Pink Rose.

Queen of Edgely rose, or Pink Beauty, as it is sometimes called, is a pink sport of American Beauty. At recent shows it has received special men-

QUEEN OF EDGELY ROSE.

tion, and, according to Gardening, which illustrates it, fashionable women in particular have expressed themselves as delighted with the color of this rose.

Prolonging the Currant Season.

Cover a few currant bushes with muslin or burlap before the fruit ripens, and you can eat currants in August. Use hellebore rather than paris green for the last brood of currant worms and apply it as soon as the worms appear.

FARM AND GARDEN

PLAN OF A HOGHOUSE.

Some Points of a House In General Use In Maryland.

The plan of a hoghouse in use at the Maryland station is given by Director Patterson in a recent bulletin with the following explanations:

Most of the plans for hoghouses recorded in literature on this subject refer to those made farther north or west where the climate is more severe than in this latitude. This is due, no doubt, to two causes—first, that the hoghouse of the south has seldom materialized, at least to such a point as to be worthy of being dignified as a house or much less described, for it generally consists

HOGHOUSE (FRONT VIEW).

of a brushy marsh for summer and a square made of a few old fence rails with some pine brush or corn fodder thrown over the top for winter.

The hoghouse of the north may suit that latitude, but no doubt could be improved upon for that section, and it certainly has many objections for the south, generally the greatest objection being the cost. There is one point that is commonly lost sight of in hog growing, and that is that he is an animal to which the sunshine is just as essential as it is to the corn plant. Neither pork nor corn can be successfully produced without plenty of sunshine. In the north this sunshine in winter will have to be brought into the pen through glass. In this latitude and farther south, under normal conditions, it is only necessary to face the pen to the south, allow the sun's rays to reach the back of the pen on the beds and give good shelter and protection from north and west winds.

The accompanying view, floor plan and end elevation give almost a complete idea of the pen in use here which has met with very general favor. It may be well, however, to enumerate a few special points in the construction.

First.—It is faced to the south to permit the rays of the sun to shine upon the beds of the pigs at the extreme rear end of the pen in the winter season and also to give shade in that portion in summer.

Second.—Lattice construction between the pens at the ends and rear admits of a free circulation of air in warm weather.

Third.—The location of the manure pit in the center and below the level of the sleeping and feeding floors with all drainage toward it aids in maintaining a proper sanitary condition.

Fourth.—Ease with which manure can be removed.

Fifth.—Swinging gates close the pigs into their beds while the manure is being loaded.

Sixth.—Swinging fronts to the pens permit the food to be easily placed in

FLOOR PLAN AND END ELEVATION.

the trough and evenly distributed so that the pigs have an equal chance at feeding time.

Seventh.—The manure pit is concreted, which enables the saving of all liquid manure excrements, which with the pig amounts to 51 per cent of all the manure value.

Eighth.—Ease of changing pigs from pen to pen.

Ninth.—Feed bins are placed in front of each pen, which facilitates feeding and enables keeping different feeds for each pen if desired.

Clocks With "Wheels."

"Clocks are certainly queer things," said the man who was tinkering at the hall clock in a suburban house the other day. "They get cranky spells just like people. Sometimes they really act as though they were bewitched. A friend of mine had a little clock that had behaved itself and kept good time for years. One day it took a notion to lay off for awhile, and they couldn't get it started again. My friend's wife was cleaning the room several days afterward, and she took the clock and laid it down flat on its back on a chair. It started to go at once and ticked away at a great rate, but as soon as she placed it on end it stopped again. Well, they set it, and for a time it acted all right as long as it remained on its back. But it soon got cranky again and refused to go. The other day, just for fun, they turned it upside down, and, would you believe it, that crazy clock started off again. Now it only runs when it is standing on its head, and they are wondering what new foolishness it will develop next."—Boston Record.

One Thing and Another

I consider corn fodder better feed for stock than pasture, especially when the pasture is run down, as so many are in the western states. I prefer to cut, for feed, corn that was planted late and that has rather small ears. This makes a splendid feed for all kind of stock, says a Prairie Farmer correspondent.

July is the critical month for corn, and The Kansas Farmer says that a more favorable month than it has been in the Kansas corn belt can scarcely be imagined.

The Jockey's Bogy.

"The bogy of a jockey's life is 'taking on flesh,'" says Ainslee's. "He dreads this as a beauty dreads to lose her charms, and his whole thought from the age of 16 to 25 is to avoid the catastrophe. This is the pernicious feature of the life and distinguishes it as a healthful sport from boxing or from football, in which the physical being is developed according to the laws of nature and is not outraged or balked. In order to reduce his weight nine pounds Monk Overton once remained in a Turkish bath from 10 p. m. one day until 2 p. m. the next, with no nourishment except a cup of tea and some toast.

"Again, Mike Bergen, mounted on a favorite, rode such a poor race that the stewards came to the paddock to investigate and punish him for fraudulent riding. They forgave the performance, however, when they found him collapsed and unable to speak. Knowing that he had to ride at a certain weight, Bergen had spent 48 hours in a Turkish bath, eating nothing whatever. When he reached the track, he was so weak that a stimulant was necessary. The one drink of whisky he took so demoralized his faculties that he could scarcely keep his seat in the saddle.

"Such a violation of physical development at the age when a boy should be most rapidly maturing makes it difficult for a jockey ever to become robust. Moreover, the mere riding of a race is a terrible drain on the nerve force of a jockey. A boy may lose a pound of weight in a hard race."

Did Not Speak With Knowledge.

On a clear and beautiful Sunday morning in a parish not far from Milwaukee a priest was pleased to note the presence at service of an unusually large number of the male members of his congregation, and, since he had been informed of considerable trouble in his flock, he considered it an opportune time to give those present a friendly, yet pointed, sermon on forbearance. He charged the men, particularly the married men, to be ever kind, courteous and considerate to women, to overlook all opportunities for trouble, to be good to them and solicitous of their welfare, and finished with a masterly peroration relating to connubial decency on the part of husbands.

Shortly after he met an old and respected member of the church and said:

"Michael, I was glad to see you at church Sunday. And how did you like the sermon?"

"Well, father," the old man answered, "the language was beautchiful, and the delivery was foine; but, be jabbers, father, if you was only married about three months you'd tell a different story!"—Milwaukee Sentinel.

Resented the Allegation.

Two men zigzagged unsteadily down Long street the other morning shortly after midnight. It was a case of "united we stand, divided we fall." Each of course was trying to steer the other safely home. At length No. 1 came up against a pole and held fast. No. 2 tried in vain to pull him forward. Then No. 1 became impatient at the other's obstinacy and spoke very frankly:

"Shay, you're—hic—you're a shump—thash what you are! I've seen worse men 'n—hic—you in jail!"

This was more than No. 2 could stand. He felt that his honor as a gentleman had been sullied, and, bracing himself stiffly, he replied, with spirit:

"If you shay you've—hic—seen worse men 'n me in jail, why—hic—you're a liar, thash what you are!"—Ohio State Journal.

Don't Believe All You Hear.

A man in a railway carriage was snoring so loudly that his fellow passengers decided to awake him. One particularly sensitive old gentleman shook up the sleeper with a start.

"What's the matter?" he exclaimed.

"Why, your snoring is annoying every one in the carriage," said the old gentleman testily.

"How do you know I'm snoring?"

"Why, we can't help but hear it."

"Well, don't believe all you hear," replied the culprit and went to sleep again.—London Standard.

A Winning Touch.

"Darling!"

The strong, manly voice was low and intense as the handsome face bent over the fair, bowed head by the fire.

"Darling," he went on eagerly, "there are others here observing us. I must see you a moment alone."

For an instant the listener was quiet, and not a curl stirred on the lofty brow. Then the blue eyes were raised to the beseeching dark ones.

"Yes, what is it?" was the low reply.

"I—well"—

A slight red flush mantled the neck and cheeks of the speaker, in striking contrast to the cool, calm dignity displayed in every movement of the half reclining figure in the big plush chair.

"The fact is," he went on, mustering up courage, the first embarrassment giving place to a little more self confidence, "I have come to ask you something I never expected would pass my lips, especially after the last sum I borrowed from you. Darling, will you lend me $10?"

Jack Darling laid aside his paper.

"Of course, old man," he cried heartily. "Let's first get a drink." And the two passed out of the clubroom together.—San Francisco News Letter.

A Last Resource.

A lady was recently reading to her young son the story of a little fellow whose father was taken ill and died, after which he set himself diligently to work to assist in supporting himself and his mother. When she had finished the story, she said:

"Now, Tommy, if pa were to die, wouldn't you work to keep mamma?"

"Why, no," said the little chap, not relishing the idea of work. "What for? Ain't we got a good house to live in?"

"Oh, yes, my dear," said the mother, "but we can't eat the house, you know."

"Well, ain't we got plenty of things in the pantry?" continued the young hopeful.

"Certainly, dear," replied the mother, "but they would not last long, and what then?"

"Well, ma," said the young incorrigible after thinking a moment, "ain't there enough to last till you get another husband?"

Ma gave it up.—London Answers.

JOHN J. MCLEAN,
Observer.

*Record beginning March 6th 1898.

Geo. Thorpe was over from Mazourka to-day.

Register Austin of the local land office is on the sick list.

Henry Giles is at Los Angeles on his way home from England.

E. H. Edwards, the Lone Pine merchant, is visiting in town to-day.

Jerry Mairs has finished his job of putting in the winter supply of wood at the Court House.

The late storm was general all over Southern California. At Los Angeles 1.76 inches fell.

Painter Reynolds with Paul Mairs as first assistant, is busy at work on his Court House contract.

J. J. Valentine, President of Wells, Fargo & Co., is expected to die at any time of heart trouble.

Mrs. P. Laberge of Lone Pine has been visiting with her sister, Mrs. Willis, at Independence this week.

Local sports report that shooting is good. Quail are plentiful, and some fine bags of duck are reported.

S. A. Fraser is repairing a leak in the Water Campany's main on Edward street near the Court House.

J. R. Moffatt is having his residence newly painted. It adds a great deal to what is already a neat home.

Public Administrator I. P. Yaney came down from Bishop on Wednesday and is spending a few days in town.

Geo. Montgomery will leave shortly for Panamint Valley to look after the assessment work on various mining claims in that region.

Eldred & Co., leasers of the Bunker Hill mine, have closed work for the season. We hear that their operations have proved very successful.

Mrs. A. S. Nibecker and family left for Los Angeles to-day to join Mr. Nibecker, who is in business there. They are traveling by private conveyance.

Robt. O'Neal Esq., came down from Bishop Wednesday, returning yesterday morning. He attended to some probate business in the Superior Court.

Charley Summers shipped a train load of cattle from Citrus to San Francisco this week. He says they were the best range beef ever shipped out of the County

Allie McGee got down from Long Valley last Saturday with the Rickey cattle. He says the feed is better this year than he ever saw it before, and the cattle are looking fine.

The spirit of mischief was abroad last night, the excuse being "Hallow E'en". We are glad to note that while many pranks were played, there was nothing malicious perpetrated.

Three shifts of men are kept constantly at work in the long tunnel being run by the Mazourka Canyon Company. They are now in 2700 feet. The men all speak highly of Mr. Squires' treatment of them.

Forest Supervisor Price leaves this afternoon by stage for his home at Oakland, where he will spend the winter. Mr. Price is a pains-taking conscientious officer and has made many friends during his stay here.

Wm. McMillen Esq. of Virginia City, Nevada, was in town several days this week. Mr. McMillen is Inspector of United States Land Offices. Needless to say, he found everything in first-class condition in the local office.

P. H. Mack Esq. arrived at Independence Wednesday evening and leaves this afternoon for Los Angeles, going south by stage. Since leaving here a month ago he visited his aged parents at Boston taking his son Harry with him.

The Independence Water Company has procured from San Francisco a sheet iron perforated screen 5x8 feet, which they will put in place at the water works head-gate. This will effectually stop all leaves and other debris from flowing into the water mains.

For the accommodation of the Inyo Development Company at Keeler, several of the C. and C flat cars were sent to Sacramento and there equipped with oil tanks and three of them went through to Mound House on last evening's local.—Carson News.

The Montezuma new reduction works have been steamed up and found to be in perfect shape for operations. A carload of coal was to be received at the mine last Monday. A run will be made from ore on the dumps before prosecuting further work on the mine.

COMPLETE THE WORK.

The trail from Big Meadows to Kings River Canyon has been put in first-class condition and the most beautiful section of the Sierras is easily accessible from San Joaquin Valley points. There is a good wagon road to Big Meadows by way of Millwood and Camp Badger. The new trail was built by Forest Ranger Ellis and the following is taken from the report upon it by J. S. McPhaill to the Visalia Board of Trade:

"From Horse Corral meadows to the hotel in Kings River Canyon is a distance of nine miles, and on this trail is some of the most difficult work performed by Mr. Ellis. Perhaps two miles east of the meadows is a high rocky point which the trail skirts on its west and north sides. Several times the writer has passed over this with fear and trembling. Portions of the trail were exceedingly crooked and passed over boulders and a jagged declivity and not six inches of foot space between you and it. With bridle in hand you picked your way, your horse floundering after you. Now all this is changed. The rocks have been blasted out, the trail straightened and widened and the grade corrected where practicable. Persons who have passed over this route will remember the descent from Summit meadows into the canyon. In five miles you approached the center of the earth by 3,000 feet and felt like you didn't care much if you went the rest of the way. The difference in altitudes is still the same, but a new trail has been made which makes the journey a comparatively easy matter. Just where the descent begins the new trail turns to the left skirting Lookout Point on the east and by passing down a series of ridges reaches the canyon on a very fair grade. Nearly all of this had to be graded with pick and shovel and a good portion of it is through granite. The grade is good and uniform except in two or three places where a slight detour was made necessary on account of the expense.

"We passed over the trail from Horse Corral meadows to the canyon in two and a half hours and spent the night camped near the hotel. The next morning we started on the return journey and had a practical demonstration of the superiority of the new trail to the summit. Over the old trail it required three hours to reach the summit. We passed over the new one in two hours and traveled leisurely.

"Mr. Ellis has made some seventeen miles of new trail, eight or nine miles of which required grading. All logs and other obstructions have been removed from the entire route. Sign-boards have been placed at all necessary points so that anyone can travel without a guide. Trees are blazed at frequent intervals."

Now that so much has been accomplished the good work should be completed next year by constructing a good trail over the mountains through Kearsarge pass. The citizens of Independence subscribed money last spring for repairing the old wagon road to Onion Valley. From this point to Kings River, a distance of about 20 miles, the trail in many places is in bad condition. Three noticeable places are the "steps" near the summit, the descent to Bubbs creek, and the Kings river hill. It is part of the duties of the Forest Rangers to build trails, and there is no better field for their labors than on the Kearsarge trail. Now that so much has been accomplished by Mr. Ellis the attention of the proper authorities should be called to the work necessary to be done on this end.

Acknowledgment.

For the reason that I cannot reach them all to thank them personally, I take this means of expressing my sincere appreciation of the kindly ministration of many friends during my late bereavement. One and all, I thank you.

J. C. IRWIN.

School Report.

Following is the report of the Primary Department of the Lone Pine public school for the month ending October 25:

No. boys enrolled, 16; No. girls enrolled, 14; total, 30.

Percentage of attendance, 92.17.

Roll of honor: Fred Spear, Johnnie Anton, Fernando Romero, Blanche Sevedra, Chrissie Silvia.

MAYTIE S. JOHNSON, Teacher.

Another Shipment Ready.

Willis and Roeper will ship twenty-three tons of ore from the Green Monster mine to-morrow. This ore is better assorted than the last shipment and will run higher. A large body of shipping ore has been struck in the main tunnel at a point where there is about 400 feet of backs. An ore chute will soon be in place which will make a material difference in the cost of handling as no packing will then be necessary.

Good Work Done.

About half way between Lone Pine and Cottonwood the wagon road crosses a deep gully at right angles and a very steep pitch results, making a hard pull for loaded teams. A grade could be made up the grade at slight expense and it should be done. Some good work has been done between Lone Pine and Olancha this fall in the way of getting stones out of the road. With the above needed improvement the road will be in as good condition as it could be put.

It is not generally known but Los Angeoes sets the price on honey for the United States. About a third of the honey produced in the United States cames from Southern California. The reports are telegraphed daily on the market price of honey to the New York markets,

We have ordered a complete stock of stationery and all orders for printing will receive prompt attention. Letterheads, envelopes, bill-heads, note-heads, etc, printed in an up-to-date manner.

A shipment of thirteen tons of Churchill county honey was recently made at Spokane, Washington. It brought ten and one-half cents per pound.

SUPERIOR COURT.

Hon. Walter A. Lamar, Judge.

FRIDAY, October 18, 1901.

In the matter of the estate of Samuel Hall, deceased—Philip P. Keough appointed admintrator.

WEDNESDAY, October 30, 1901.

In the matter of the estate of Louis Foucault, deceased—I. P. Yaney appointed administrator.

Real Estate Transfers.

Recorded since last report:

John Baxter and E. Robinson to S. A. Fraser—Fractional Lots 2, 4, 6, 8, 10, 12, Blk. 17 in Independence, $10.

Thos. W. Hill and John H. Coe to John E. Nolan—"Montezuma Mine", "Montezuma No. 3 Mine", "New Montezuma" mine, also water right and mill-site, $8500.

Blanche May Behlow to A. A. Cashbaugh estate—160 acres of land near Bishop, $1,000.

R. C. Spear to E. H. Edwards— Lots 1, 3, and part of lot 4 in Blk. 17 in Lone Pine, $750.

Water Supply Certain.

This Valley was better supplied with water during the last season than during any for many years, and the prospects for next year are much better than last. By the fall of 1900 all the old snow had disappeared from the Sierras and the mountains were thoroughly dried out. This fall there was considerable old snow left and in consequence the canyons and water courses were kept soaked. About a month ago there was a light fall and during the present week snow has piled up in the canyons to a considerable depth. This will pack into solid ice and will be the source of the late water supply next summer. The river is running now nearly bank full, which is very unusual at this time of year.

$50 Reward.

Strayed or stolen—On or about the night of October 7, 1901, from my ranch on Georges Creek, Independence District, about 18 head of cattle marked with a crop and underbit on both ears and are branded thus)T[or thus)T(To any person who will give me the necessary information which will lead to the recovery of said cattle, or the prosecution of the thieves, I will pay a reward of fifty dollars. Or to any person who will inform me of the whereabouts of said cattle I will pay the sum of fifty dollars and ask no questions. Repent and do so no more.

JOHN R. TURNER.
Lone Pine, Cal.

New Time Card.

The Southern Pacific made a change in its time card about November first which will give great satisfaction to the traveling public from Reno. The San Francisco train which formerly left Reno at 12:30 a. m. will leave at 9 p. m. and arrive in San Francisco at 5:30 in the in the morning. To all travelers going straight through to the city a delay of three hours and a half in Reno will be avoided and the same time in San Francisco gained.

Millinery.

Ladies are invited to call and see the fine line of trimmed millinery, Paris pattern hats, at the residence of Mrs. W. T. Bunney, Independence, Oct. 19 to Oct. 31. Will also have a line of samples of the Chas. Stevens goods, for which orders will be taken.

MRS. H. H. MCDONALD.

H. D. Becker of Los Angeles has been tuning the pianos about town and has given great satisfaction. He comes with the best recommendations and will travel north through the Valley.

NEW ADVERTISEMENTS.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

W. E. Pedley, Plaintiff, vs. William Remsen, Peter A. Graff, Yellett D Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company a Corporation, Surprise Canyon Mill and Water Company a Corporation Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Chares Doe, John Roe, Richard Roe, Charl s Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

The People of the State of California send Greeting to William Remsen, Peter A. Graff, Yellett D Dechert, Nelson G Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company, a Corporation, Surprise Canyon Mill and Water Company a Corporation, Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

You are hereby required to appear in an action brought against you by the above-named plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein within ten days (exclusive of the day of service) after the service on you of this Summons—if served within said County; if served elsewhere within thirty days.

And you are hereby notified that if you fail to so appear and answer the Plaintiff will take judgment for any money or damages demanded in the Complaint, as arising upon contract, or will apply to the Courtfor any other relief demanded in the Complaint.

Witness my hand and the seal of said Superior Court of the County of Inyo, State of California, this 15th day of October, A. D. 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed;] In the Superior Court of the County of Inyo, State of Cal.

W. E. Pedley, Plaintiff vs. William Remsen, et als., Defendants.

Copy of Summons.

W. A. HARRIS, 508 Stimson Building, Los Angeles, Cal., and MACK & FORBES Independence, Cal., Attorneys for Plaintiff.

Sale of Water Rights.

NOTICE IS HEREBY GIVEN TO LAND owners under the canals of the William Penn Colonian Association that water rights will be sold until November first at $7.50 per acre.

Those owning such water rights will be charged 1-22000 part per acre for the actual expense of maintaining the canals and water rights of the company. On November first the rate will be advanced to $10 per acre. Terms. one third cash, one-third in nine and one-third in eighteen months; deferred payments bearing 7 per cent. interest.

Land may be exchanged for water rights.

TO LAKE TAHOE

A TRIP OF RARE ITEREST.

Passengers on west-bound overland trains o Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leav promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the mo ning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spen examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,10 feet) with their massive hoisting and pumping machinery. Returning, see Time Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

THERMOMETER TUBES.

Process of Their Manufacture at Jena, In Germany.

A most interesting account is given in The Idler of the wonderful state aided industry at Jena where glass and lenses are made for scientists. The industry has been built up by Professor Abbe and Dr. Schott, and has throughout been conducted by scientists whose efforts have made Jena famous among scientific men the world over. One of the most picturesque features of the Jena glassworks is the great corridor where the thermometer tubes are blown and drawn, says a correspondent.

We saw this glass in process of manufacture. A boy workman caught a bit of molten glass from the furnace on the end of a blowpipe. It was hardly larger than a walnut, but by twirling and blowing and molding it grew to the size of an orange, with the shape of an orange. More glass was then added, and there was more rolling and blowing, and when the proper stage was reached the blowpipe was passed quickly to the brawny master workman.

He, in his turn, added glass, blowing from time to time with cheeks outpuffed until it seemed as though they must burst, and then rolling the great ball of glass on his iron kneading board until it looked like a huge yellow gourd. Faster and faster he worked, keeping the ball always symmetrical and yet white hot. At length he lifted the glowing mass quickly in the air, and a second workman attached the blowpipe at the bottom. Then the two men ran in opposite directions, twirling the pipes and blowing lustily from time to time. From a thick, partly yellow globe the glass thinned out quickly as the men ran apart, until it became a dull red tube not larger than a man's little finger and nearly 300 feet long. Sometimes in drawing these tubes one of the blowers would not only run the length of the corridor, but far outside on the hill.

Wagner and the Player.

When Richard Wagner was conductor of the Royal Opera in Dresden, the orchestra of that institution, though one of the best in Germany, was far from being as good as it is now, and Wagner had a good deal of trouble in making it follow his intentions. Some years later, when he was living as an exile in Zurich, he undertook to train the local orchestra. After a few attempts he exclaimed, "Gentlemen, you have just given me a great pleasure; you have played exactly as badly as the Dresden orchestra."

The Zurich players laughed, and the idea that they might play better than the royal musicians in Dresden so fired their zeal that they actually succeeded in doing it.

An Incomplete House.

We run wild over the furnishings of a house; its furniture, carpets, hangings, pictures and music, and always forget or neglect the most important requisite. Something there should be always on the shelf to provide against sudden casualties or attacks of pain. Such come like a thief in the night; a sprain, strain, sudden backache, toothache or neuralgic attack. There is nothing easier to get than a bottle of St. Jacobs Oil, and nothing surer to cure quickly any form of pain. The house is incomplete without it. Complete it with a good supply.

DANDRUFF WON'T WASH OUT.

The Germ That Causes It Has to Be Destroyed to Cure Dandruff.

Many a woman spends an hour twice a week scouring her scalp, thinking scrubbing off the scurf will cure the dandruff. Two hours a week, at the age of 40 years, she has pent 260 days of 12 hours each, or two-thirds of a year of her life, in that vain hope; vain, because you can't cure dandruff without killing the dandruff germ, and the only hair preparation on earth that will do that is Newbro's "Herpicide"—also a delightful hair dressing, and thorough antiseptic against all contagion from use of others' hair brushes. It is also a delightful hair dressing.

ARAB OF THE DESERT.

HE IS A FASCINATING FIGURE UNDER THE PALMS.

Some Live in Houses Made of Sun-Dried Red Bricks, While the Bedouins Live in Tents, Which Are Camel-Cloths Stretched Over Boughs.

One of the most fascinating figures to be met with, especially if you meet him at home, is the Arab of to-day.

The oases are little islands of beauty set in a sea of sand, consisting of a multitude of palm trees growing where there is sufficient water, for the Arabs say that the palm "stands with its feet in the water and its head in the fires of Heaven." Without the palm the desert, indeed, would be "uninhabited and uninhabitable."

There are some 360 oases in the Sahara of various sizes. One of the chief is Biskra, which has not less than 160,000 palms, and from which we get large quantities of our dates. To see, after hours of weary traveling, so many palms in such a setting is a sight as impressing as it is beautiful.

The French Sahara covers 123,500 square miles, and 50,000 Arabs live in it. In the oases they build their houses beneath the palms, which afford much needed shade from the hot sun. Sun-dried mud bricks are the chief things used in making these houses.

Palm trees provide any timber necessary. The houses are two stories high. But for the low doorways one would think they were high walls only. All the internal light is obtained by an opening on the courtyard, round which the house is built.

The Arab home is somewhat of a prison for the women, who are rarely seen abroad. They take their walks upon the flat roofs, which are common to all Eastern lands.

But few Arabs live in houses. They are great wanderers. Wherever you travel in Algeria you are always meeting large caravans on the move.

These Bedouins live in tents, which are simply camel-cloths stretched over boughs. For the most part they are very poor, and live on the produce of a few sheep and goats.

But although poor, the Arab is always picturesque. The European beside Arab looks ridiculous. Let his top hat be ever so shiny, his clothes ever so well fitting, his form ever so straight, he looks at a disadvantage beside the spare figure and the flowing draperies of the wandering Bedouin, whom he despises.

The Arab is poor without being abased. He is sordid without being mercenary. Even his raggedness has a grandeur about it.

The chief item in the Arab costume is a white cloak called the burnous, which covers the whole figure.

It has a hood which protects the head from the sun.

Beneath this there are all sorts of gorgeous vests and jackets.

The legs are bare, but the feet are covered with rich red leather shoes, dyed with the juice of the pomegranate.

A group of Arabs is always striking, but few more remarkable gatherings will be seen than in the market place of Biskra, where hundreds of Arabs assemble each day to buy and sell cattle, dates and other wares.

THOMAS MINAHAN.

Who Wishes to Abolish the Custom of Treating.

Thomas B. Minahan, who originated a movement for the abolition of the American custom of "treating," is a prominent attorney of Columbus, Ohio, and deputy of this district of the Knights of Columbus. The movement is indorsed by eminent divines. He says that the obliteration of the custom of treating, so extensively practiced by Americans, is the first real step toward total abstinence. He is confident that with the active support of the churches the movement will become national. The initial step was taken in the ranks of the Columbus Council No. 1, Knights of Columbus, which adopted resolutions pledging its members to refrain from the custom. When it is considered that the national organization has a membership of 80,000, the real importance of this crusade will be understood.

T. B. MINAHAN.

Lawful "Enterprise."

Sidney W. Curtis, a New York broker, told a story recently, according to the New York Times, of a scheme worked in one of the Western cities in the early '80s for the purpose of giving the contracts for the building of city water works to a favored concern. All the bids had to be submitted before 12 o'clock noon, when the city comptroller's office was closed and the representatives of the various bidders were locked out.

A little alley led to a rear window of the office, and here appeared the agent of the company that was to get the contract by hook or by crook. He had his bids all made out except the figures. When the bids had been opened and the lowest bid had been found he received a signal and filled out his bid a few cents below that of the lowest bidder. Then he handed his bid through the window to the clerk, who duly opened it and awarded him the contract. Then the doors were opened and the waiting representatives were informed of the result.

Making No Mistake.

"What a beautiful gown Mrs. Spingles had on at the reception!" remarked Mr. Cumrox.

"I am glad to see you showing so much taste and discernment!" exclaimed his wife.

"Oh, I knew I couldn't go wrong on that proposition. Her husband told me that gown cost him over $600."—Washington Star.

Odd Names of Kentucky Towns.

Kiddville, Right Angle and Log Lick are Kentucky postoffices.

Some beaten paths are too long; cut offs are possible.

The Absence of It.

If there is any truth in the saying that happiness is the absence of all pain, mental and physical, the enjoyment of it can only be found in heaven. But so far as the physical is concerned, it is within easy reach; at least measurably so, as far as cure will go. The sum of human misery in this line is made up of greater or less degrees of physical suffering. The minor aches and pains which afflict mankind are easy to reach and as easily cured. There are none in the whole category, which, if taken in time, cannot be cured. They must in some form afflict the nerves, the bones, the muscles and joints of the human body. They are all more or less hurtful and wasteful to the system. St. Jacobs Oil is made to cure them, to search out hidden pain spots, and to cure promptly in a true remedial and lasting way. Very, very many have not known happiness for years till they used it, and very many are putting off cure and happiness because they don't use it.

The Best Prescription for Malaria Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

DEAFNESS CANNOT BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and it when is entirely closed deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that can not be cured by Hall's Catarrh Cure. Send for circulars, free.

F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

Hall's family pills are the best.

For pimples, sallow complexion, impure blood and poor digestion use Adams' Sarsaparilla Pills. They improve complexion and cure constipation. 10c, 25c. Druggists.

"New York City, June 12th, 1901.—I heartily recommend Garfield Tea for liver trouble. Our family physician prescribed your Tea, and after taking four packages my system is in perfect condition and my complexion has become clear." It has been demonstrated by years of use throughout the world that Garfield Tea cleanses the system and purifies the blood; from all reports it would seem that nothing can equal this simple herb medicine that cures in Nature's way.

Piso's Cure is the best medicine we ever used for all affections of the throat and lungs.—WM. O. ENDSLEY, Vanburen, Ind., Feb. 10, 1900.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

The Penmanship of Authors.

Is there really any connection between the cast of a writer's mind and his handwriting? asks The Pall Mall Gazette. Thackeray was one of the neatest of writers and boasted that if other trades failed he could get his living by writing the Lord's Prayer on a shilling. Keats wrote like a clerk, and Gray, Tom Moore, Leigh Hunt and Sir Walter Scott all used running hands, which were legible without any marked characteristics. The same may be said of the writings of Anthony Trollope and Professor Tyndall, none, perhaps, of these writers being much given to subtlety of expression.

Carlyle, on the other hand, is said to have produced the most untidy and awful scribble that ever puzzled a compositor, and Victor Hugo, Browning and Tennyson were nearly as bad. Yet, although this looks as if there might be some sort of a rule in such matters, we find Napoleon, who certainly never failed in directness of expression, writing a hand that he could not read himself, and Macready, the actor, whose order for the theater was once taken for a prescription for a cough mixture.

One thing seems pretty certain—that the mere size of the letters has little to do with character.

Raleigh's Favorite Tipple.

Sir Walter Raleigh seems to have had a pretty taste in stimulants, to judge by his "cordial water," the recipe for which is copied from a cookbook nearly 300 years old. This is how Sir Walter concocted his favorite drink:

"Take a gallon of strawberries and put them into a pint of aqua vitæ (brandy). Let them stand so four or five days. Strain them gently out and sweeten the water as you please with fine sugar or else with perfume."

Queen Elizabeth was exceedingly fond of perfumes, and, according to this old book, her favorite scent was made in this manner: "Take eight spoonfuls of compound water, the weight of twopence in fine powdered sugar and boil it on hot embers or coals softly. Add half an ounce of sweet marjoram, dry it in the sun, the weight of twopence of powdered benjamin (benzoin?). This perfume is very good and sweet for the time."

Shorts In a Corner.

"Yes," said young Mr. Bashful to his best girl, "the stock market has been through considerable excitement of late."

"Oh, yes," the girl responded, eager to take part in conversation on a topic which interested her Adolphus. "I have read a lot about it in the paper—all about those dreadful bulls and bears and things."

"Yes," Adolphus went on; "they got the shorts in a corner and effectually squeezed them."

"Did they?"

"Yes."

"I think," the demure maid added, after a few minutes' meditation, "that if ever I become a speculator I shall be a short."

A few minutes later she found it was not necessary to speculate in stock in order to be treated as a "short."—Pittsburg Commercial Gazette.

Eczema

How it reddens the skin, itches, oozes dries and scales!

Some people call it tetter, milk crust or salt rheum.

The suffering from it is sometimes intense; local applications are resorted to—they mitigate, but cannot cure.

It proceeds from humors inherited or acquired and persists until these have been removed.

Hood's Sarsaparilla

positively removes them, has radically and permanently cured the worst cases, and is without an equal for all cutaneous eruptions

HOOD'S PILLS are the best cathartic. Price 25 cents.

Strange Hiding Places.

There are standing at the present day Elizabethan houses known to contain hidden chambers. The very positions of these chambers can be shown, yet their secrets have remained inviolate for centuries, the spring that should serve as the open sesame being undiscoverable. Some day the accidental touch of a girl's finger may set a column of stone rotating or a panel sliding or a door in a picture frame retreating on invisible hinges, and the secret—if any remain—will be revealed.

The place of mystery in these ancient granges that served as shelter to a friend in distress might equally prove the death of an enemy of the house. The priest's hole behind a fireplace was easily converted into an oven. There were staircases which the foot of a friend might press in perfect security. Another, not instructed how to tread, sets his foot apparently on the same place, the stair yawns open, and at the end of the pit is the water. Here is much romance.—London Chronicle.

Pipe Smoking.

There are many pipe smokers who do not know how to get the best there is out of their indulgence. The great point in pipe smoking is to smoke slowly. Nervous smokers smoke too rapidly and burn their tongues with hot smoke, besides failing entirely to get the fullest and best flavor out of the tobacco. It is all a matter of habit, but slow smoking is a habit which it is hard for some people to acquire. In some cases pipe smokers have tried for years to check their smoking speed without success. They began too late, and the habit of rapid smoking is shaken off with difficulty when it is once acquired.

Rapid smoking is as bad as rapid eating—or worse. It is also "bad form." Whether it is cigar, pipe or cigarette, the smoking should be deliberate in order to get the fullest enjoyment. It is especially so with a pipe.—New York Press.

Hypnotic Influence.

Buyer—Look here, you! You said this horse was sound and kind and free from tricks. The first day I drove him he fell down a dozen times, and he's as bad today.

Dealer—Um—you've been wondering if I cheated you, maybe?

"Yes, I have."

"And the first time you drove the hoss you wondered if he hadn't some tricks, didn't you?"

"Of course."

"And you kept saying to yourself, 'I wonder if that there hoss will tumble down,' eh?"

"Probably."

"And you had your mind on it a good deal, most like?"

"That's true."

"That's wot's the matter. You've hypnotized him. See?"

The Typewriter Invention.

A statistician has proved that the invention of the typewriter has given employment to 500,000 people, but he fails to state how many cases of weak stomachs and dyspepsia it has induced. All people of sedentary occupation need Hostetters Stomach Bitters. It is a wonderful medicine and helps nature bear the strain which ensues from confinement. It also cures dyspepsia, indigestion, constipation and flatulency. Be sure to try it and you will not be disappointed.

Almost Saw Her.—"I think I haven't seen you for more than a year," remarked the caller, shaking hands with Tommy. "Nome," said Tommy, "but I come mighty near seeing you down town the other day. I saw somebody that looked almost exactly like you."

YOU KNOW WHAT YOU ARE TAKING

When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

Adams' Sarsaparilla Pills cure sick headaches, constipation, biliousness, dyspepsia, purify the blood. 10c, 25c. Druggists.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for FREE $2 trial bottle and treatise. Dr. R. M. Kline, Ltd., 931 Arch St., Philadelphia, Pa

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

The new Chutes of San Francisco have already spent $150,000 on constructions. A. Van der Naillen Jr. of the Engineering School has been engaged to design an automatic canal some 1200 feet long in a space 60x200 feet. This will be quite an engineering feat and something new.

Mem. for Good Health.

Today drink some "Castlewood" Bourbon, or Rye Whisky. Highest grade Kentucky goods. Cartan, McCarthy & Co., sole distributers, San Francisco.

A NARROW ESCAPE

An Indiana Woman's Terrible Experience.

"It was a frightful experience and I never expected to come out alive," said Mrs. Ellen Bowman, of No. 82 Windsor Block, Indianapolis, Ind., in the course of an interview recently published in the Sun of that city. "I do not suppose it ever would have happened," she continued, "but, some years ago, I began to worry, and to do more work than I ought. This brought on a general physical weakness, my blood became thin and I grew nervous. I went to a doctor and he said I had consumption."

"Did he advise any course of treatment?"

"Yes, he gave me some medicine, which I took, but it did me no good. Other doctors failed to help me and I became despondent of ever getting well. My limbs ached, my head was dizzy and I was most miserable."

"You don't look now as if you had ever been sick," ventured the reporter.

"No, and I don't feel as if I ever had," she said. "I owe my present health to Dr. Williams' Pink Pills for Pale People. About four years ago a friend from Ohio recommended the pills to me, saying they had benefited his daughter whose symptoms were similar to mine, so I began to use them. It was only a very short time before I experienced relief. I have recommended the pills to many, for I am confident that benefit will follow their use."

There is hardly a person who does not worry at times and fret about things that go wrong. And worry is responsible for as much sickness as any other cause. It interferes with the action of the stomach and racks the nerves. The result is that the blood becomes poor and the nervous system impaired. The power of Dr. Williams' Pink Pills for Pale People in the vast number of diseases due to derangements of the nervous system or to impure blood has been demonstrated in thousands of instances as remarkable as the one related above. They cure locomotor ataxia, partial paralysis, St. Vitus' dance, sciatica, neuralgia, rheumatism, nervous headache, after-effects of the grip, palpitation of the heart, pale and sallow complexions and all forms of weakness either in male or female. At all druggists, or direct from Dr. Williams Medicine Co., Schenectady, N. Y., 50 cents per box; six boxes, $2.50.

Won by His Wit.

A story is told of an English clergyman who owed his appointment to a rich living to a lucky pun. He was tutor to the son of a nobleman and had not long taken orders when he attended the funeral of the rector of the parish in which the nobleman's seat was situated.

The father of his pupil was patron of the living and was also present at the funeral of the deceased rector. There was a young clergyman present also whose grief was so demonstrative that the noble patron was much affected by the sight and asked if the young man was a son of the deceased gentleman.

"Oh, dear, no, my lord—no relation at all," said the tutor.

"No relation!" exclaimed the nobleman in a surprised tone.

"None, my lord; he is the curate, and I think he is not weeping for the dead, but for the living."

His lordship, who was something of a wit and a cynic himself, was so delighted with the bonmot that he conferred the living upon the ready punster.

Tactful.

Mrs. Nosepoke—John, don't you think it's about time for us to call on our new neighbors?

Husband—Why, they only moved in this morning.

Mrs. Nosepoke—Oh, I know, but all their stuff will be downstairs and I can see it better.—Ohio State Journal.

Requiescat In Pace.

"He thought the gun wasn't loaded."

"But it really was loaded?"

"After he found it out it wasn't."—Philadelphia Press.

ENGLISH OF THE ENGLISH.

"London Is a Nice Place if You Know the Language."

That hackneyed American maiden who said London was a nice place if you knew the language was not a bit absurd. We speak English, but we have built up our forms of English expression upon the English of a few shires of the old country as it was spoken between two and three centuries ago, while they have been blending and changing the speech of all their home peoples during the same period. The result is that an American can hardly utter a sentence in England without calling attention to the difference between his speech and that of the people about him.

Only yesterday, after 18 months' residence in England, I rushed up to a conductor in Charing Cross station and asked, "Which car for Bromley?" He stared at me, and I knew I had spoken a foreign tongue to him, because street vehicles like omnibuses and horse cars are called road cars and tram cars, and there are no other cars in England.

If you ask a guest at your home in England whether he likes his meat rare, he asks what you said because he does not understand you. He calls meat underdone when it is not thoroughly cooked. If you tell him you fear the asparagus is canned, he is at a loss again, because he would have said it was tinned. To ask him to pass the powdered sugar will again set him to wondering, for he calls it icing sugar generally, though he knows that it is sometimes called caster or sifted sugar. And if you have candy on the table you may not call it so without betraying your foreign origin, for he calls candy "sweets," abbreviated from "sweetmeats," and used to designate all preserves, puddings, pies, candies and jams.

To go further along the eccentricities of English at the dining table most persons know, I suppose, that the beet is called beet root, cornstarch is corn flour, corned beef (or a particular cut of it) is called "silver sides of beef" and napkins are serviettes.—Julian Ralph in Harper's Magazine.

Most Satisfying.

They were speaking of the billionaire's insufferable pretensions.

"Upon what meat does this our Cæsar feed that he has grown so great?" exclaimed Mordaunt bitterly.

"Mint's meat, possibly!" observed Meltravers, trying to be cheaply witty while yet preserving the easy grace of a man of the world.—Detroit Free Press.

SYSTEMIC CATARRH.

Peruna Cures Catarrh Wherever Located.

Miss Mattie L. Guild, of Chicago, Ill.

Miss Mattie L. Guild, President Illinois Young Peoples' Christian Temperance Union, in a recent letter from Chicago, Ill., says:

"I doubt if Peruna has a rival in all the remedies recommended today for catarrh of the system. A remedy that will cure catarrh of the stomach will cure the same condition of the mucous membrane anywhere. I have found it the best remedy I have ever tried for catarrh, and believing it worthy my endorsement I gladly accord it."

Catarrh of the abdominal organs is very much more common in summer than in winter time. This form of catarrh might be appropriately classed as summer catarrh.

Peruna will cure catarrh wherever located. In pelvic catarrh it has won well deserved renown. Peruna will cure any case of diarrhoea, acute or chronic. Peruna is an absolute specific for dysentery. Peruna cures catarrh of the liver. Peruna cures catarrh of the stomach.

Address The Peruna Medicine Co., Columbus, O., for a free book entitled "Summer Catarrh."

CASTORIA

The Kind You Have Always Bought has borne the signature of Chas. H. Fletcher, and has been made under his personal supervision for over 30 years. Allow no one to deceive you in this. Counterfeits, Imitations and "Just-as-good" are but Experiments, and endanger the health of Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhœa and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

The Kind You Have Always Bought

Bears the Signature of

Chas. H. Fletcher.

In Use For Over 30 Years.

THE CENTAUR COMPANY, 77 MURRAY STREET, NEW YORK CITY.

Skin Diseases

ECZEMA, TETTER, PSORIASIS, SALT RHEUM, ACNE and a great many other diseases of like character are classed as skin diseases, when they could just as properly be called blood diseases, for they undoubtedly originate in the blood, like Cancer, Catarrh, Scrofula, Rheumatism, Contagious Blood Poison, etc.; the only real difference being in the intensity and nature of the poison. The more serious diseases, Cancer, Catarrh, etc., are caused by some specific poison or virus, which is either inherited or in other ways gets into the blood and attacks certain vital organs or appears in the form of terrible sores and ulcers, while the milder and less dangerous skin diseases are caused by blood humors or an over acid condition of that fluid. These acid poisons, as they ooze out through the pores of the skin, cause great irritation, with intense itching and burning. The eruption may be of a pustular kind, with excessive discharge of thick, gummy fluid, or the skin may be hot, dry and feverish, swollen and fissured. Skin diseases, whether they appear as sores, blotches or pimples, become more deeply rooted and intractable the longer neglected, the skin in time having a thick, hard, rough and unsightly appearance. You can hide the blemishes for a time with cosmetics; and washes, lotions, soaps and powders may relieve temporarily the itching and burning, but eventually the pores of the skin become so clogged up by this treatment that the poisonous matter thrown off by the blood cannot pass out of the system, and settles on the lungs, heart or some other vital organ and endangers life.

I can cheerfully and most sincerely endorse your specific as a cure for Eczema, the most irritating and annoying disease, I think, that flesh is heir to. I was troubled with it for twenty-five years, and tried many remedies with no good effect. After using your medicine a short time I think I am entirely relieved. You can give this statement any publicity you may desire, as it is voluntarily made, more for those afflicted than notoriety for myself.

Very respectfully,
WM. CAMPBELL,
313 West Central. Wichita, Kans.

To purify and build up the polluted blood is the right treatment for skin diseases, and for this purpose no other medicine is so deservedly popular as S. S. S. It is a perfect antidote for all blood humors, and when taken into the circulation, gently but thoroughly eliminates all impurities and puts the blood in a healthy, normal state. The skin can't remain in an irritated, diseased condition when nourished with rich, new blood. S. S. S. is the only guaranteed purely vegetable remedy, and the safest and best skin beautifier. Write our physicians if you have any blood or skin disease, and they will cheerfully advise you without charge.

BEST FOR THE BOWELS

Cascarets

CANDY CATHARTIC

THEY WORK WHILE YOU SLEEP

10¢ 25¢ 50¢

ALL DRUGGISTS.

CANDY CATHARTIC — Cascarets taste good. Eat them like candy. They remove any bad taste in the mouth, leaving the breath sweet and perfumed. It is a pleasure to take them, and they are liked especially by children.

SWEETEN THE STOMACH — Cascarets sweeten the stomach by cleansing the mouth, throat and food channel. That means, they stop undigested food from souring in the stomach, prevent gas forming in the bowels, and kill disease germs of any kind that breed and feed in the entire system.

PURELY VEGETABLE — Cascarets are purely vegetable and contain no mercurial or other mineral poison. They consist of the latest discoveries in medicine, and form a combination of remedies unequaled to make the blood pure and rich and make clean skin and beautiful complexion.

LIVER TONIC — Cascarets tone the stomach and bowels and stir up the lazy liver. They do not merely soften the stools and cause their discharge, but strengthen the bowels and put them into lively, healthy condition, making their action natural.

MILD BUT SURE — Cascarets never grip nor gripe. They act quietly, positively and never cause any kind of uncomfortable feeling. Taken regularly they make the liver act regularly and naturally as it should. They keep the sewerage of the body properly moving and keep the system clean.

BOON FOR MOTHERS — Cascarets increase the flow of milk in nursing mothers. If the mother eats a tablet, it makes her milk mildly purgative and has a mild but certain effect on the baby. In this way they are the only safe laxative for the nursing infant.

CURE CONSTIPATION — Cascarets taken patiently, persistently, will cure any form of constipation, no matter how old or how often other remedies have failed. They are absolutely guaranteed to cure any case, or purchase money will be cheerfully refunded.

NEVER SOLD IN BULK — Cascarets cost 10c, 25c, 50c a box. Samples sent free for the asking. We publish no testimonials but sell Cascarets on their merit under absolute guarantee to cure. Buy and try a box to-day, or write us for free samples and booklet.

670 Address STERLING REMEDY CO., CHICAGO or NEW YORK.

$100 REWARD will be paid to any reader of this paper who will report to us any attempt of substitution, or sale of "something just as good" when Cascarets are called for, and furnish evidence upon which we can convict. All correspondence confidential.

FROM POORHOUSE TO PALACE

BY MARY J. HOLMES

CHAPTER II.—(Continued.)

At last Frank, pulling the old blue jacket from under his head and passing it to Mary, said: "Take it to Bill Bender—he offered me a shilling for it, and a shilling will buy milk for Allie and crackers for mother—take it."

"No, Franky," answered Mary, "you would have no pillow; besides, I've got something more valuable, which I can sell. I've kept it long, but it must go to keep us from starving"—and she held to view the golden locket which George Moreland had thrown around her neck.

"You shan't sell that," said Frank. "You must keep it to remember George; and then, too, you may want it more some other time."

Mary finally yielded the point, and gathering up the crumpled jacket started in quest of Billy Bender. He was a kind-hearted boy, two years older than Frank, whom he had often befriended and shielded from the jeers of their companions. He did not want the jacket, for it was a vast deal too small; and it was only in reply to a proposal from Frank that he should buy it that he had casually offered him a shilling. But now, when he saw the garment, and learned why it was sent, he immediately drew from his old leather wallet a quarter, all the money he had in the world, and giving it to Mary, bade her keep it, as she would need it all.

Half an hour after a cooling orange was held to Frank's parched lips, and Mary said, "Drink, brother; I've got two more, besides some milk and bread," but the ear she addressed was deaf and the eye dim with the fast-falling shadow of death. "Mother! mother!" cried the little girl, "Franky won't drink, and his forehead is all sweat."

Mrs. Howard had been much worse that day, but agony made her strong. Springing to his side, she wiped from his brow the cold moisture which had so alarmed her daughter, chafed his hands and feet, and bathed his head, until he seemed better and fell asleep. Fast the shades of night came on, and when all was dark in the sick room Mary sobbed out, "We have no candle, mother, and if I go for one, and he should die——"

The sound of her voice aroused Frank, and feeling for his sister's hand, he said, "Don't go, Mary; don't leave me—the moon is shining bright, and I guess I can find my way to God just as well."

Nine—ten—eleven—and then through the dingy windows the silvery moonlight fell, as if indeed to light the way of the early lost to heaven. Mary had drawn her mother's lounge to the side of the trundle bed, and in a state of almost perfect exhaustion Mrs. Howard lay gasping for breath, while Mary, as if conscious of the dread reality about to occur, knelt by her side. Once Mrs. Howard laid her hands on Mary's head, and prayed that she might be preserved and kept from harm by the God of the orphan, and that the sin of disobedience resting on her own head might not be visited upon her child.

After a time a troubled sleep came upon her and she slept until roused by a low sob. Raising herself up, she looked anxiously toward her children. The moonbeams fell upon the white, placid face of Frank, who seemed calmly sleeping, while over him Mary bent, pushing back from his forehead the thick clustering curls, and striving hard to smother her sobs, so that they might not disturb her mother.

"Does he sleep?" asked Mrs. Howard, and Mary, covering with her hands the face of him who slept, answered:

"Turn away, mother—don't look at him. Franky is dead. He died with his arms around my neck, and told me not to wake you."

Mrs. Howard was in the last stages of consumption, and now she lay back, half-fainting upon her pillow. Toward daylight a violent coughing fit ensued, and she knew that she was dying. Beckoning Mary to her side, she whispered, "I am leaving you alone in the wide world. Be kind to Ella and our dear little Allie, and go with her where she goes. May God keep and bless you my precious children—and reward you as you deserve, my darling——"

The sentence was unfinished, and in unspeakable awe the orphan girl knelt between her mother and brother—shuddering in the presence of death, and then weeping to think that she was alone.

CHAPTER III.

Just on the corner of Chicopee Common, and under the shadow of the century-old elms which skirt the borders of the grass plat called by the villagers the "Mall," stands the small red cottage of Widow Bender, who in her way was quite a curiosity. All the "ills which flesh is heir to" Widow Bender, if she could ascertain the symptoms, was sure to have in the most aggravated form.

On the morning following the events narrated in the last chapter Billy, whose dreams had been disturbed by thoughts of Frank, arose early, determined to call at Mrs. Howard's and see if they were in want of anything. But his mother, who had heard rumors of the scarlet fever, was up before him, and on descending to the kitchen Billy found her sitting before a blazing fire—her feet in hot water and her head thrown back in a manner plainly showing that something new had taken hold of her in good earnest.

"Oh, William," said she, "I've lived through a sight, but my time has come at last. Such a pain in my head and stomach. I do believe I've got the scarlet fever, and you must run for the doctor, quick."

"Scarlet fever!" repeated Billy; "why, you've had it once, and you can't have it again, can you?"

"Oh, I don't know—I never was like anybody else and can have anything a dozen times. Now be spry and fetch the doctor; but before you go hand me my snuff box and put the canister top heapin' full of tea into the teapot."

Billy obeyed, and then, knowing that the green tea would remove his mother's ailment he hurried away toward Mrs. Howard's. The sun was just rising. Within the cottage there was no sound or token of life, and, thinking its inmates were asleep, Billy paused several minutes upon the threshold, fearing that he should disturb their slumbers. At last, with a vague presentiment that all was not right, he raised the latch and entered, but instantly started back in astonishment at the scene before him. On the thundle bed lay Frank, cold and dead, and near him, in the same long, dreamless sleep, was his mother, while between them, with one arm thrown lovingly across her brother's neck, and her cheek pressed against his, lay Mary—her eyelids moist with tears which, though sleeping, she still shed. On the other side of Frank, and nestled so closely to him that her warm breath lifted the brown curls from his brow, was Ella. But there were no tear stains on her face, for she did not yet know how bereaved she was.

For a moment Billy stood irresolute, and then, as Mary moved uneasily in her slumbers, he advanced a step or two toward her. The noise aroused her, and instantly remembering and comprehending the whole, she threw herself with a bitter cry into Billy's extended arms, as if he alone were all the protector she now had in the wide, wide world. Ere long Ella, too, awoke, and the noisy outburst which followed the knowledge of her loss made Mary still the agony of her own heart in order to soothe the more violent grief of her excitable sister. Billy's tears were flowing, too, but at length rising up, he said to Mary, "Something must be done. The villagers must know of it, and I shall have to leave you alone while I tell them."

In half an hour from that time the cottage was nearly filled with people, some of whom came out of idle curiosity. But there were others who went there for the sake of comforting the orphans and attending to the dead, and by noon the bodies were decently arranged for burial.

"There will be no trouble," said one, "in finding a place for Ella, she is so bright and handsome; but as for Mary, I am afraid she'll have to go to the poorhouse."

"Were I in a condition to take either," replied Mrs. Johnson, "I should prefer Mary, for in my estimation she is much the best girl; but there is the baby, who must go wherever Mary does, unless she can be persuaded to leave her."

Before anyone could reply to this remark Mary, who had overheard every word, came forward, and, laying her face on Mrs. Johnson's lap, sobbed out, "Let me go with Alice; I told mother I would."

Billy Bender, who all this while had been standing by the door, started for home, never once thinking, until he reached it, that his mother more than six hours before, had sent him in great haste for the physician. On entering the house he found her, as he expected, rolled up in bed, apparently in the last stage of scarlet fever; but before she could reproach him he said, "Mother, have you heard the news?"

Mrs. Bender had a particular love for news, and now forgetting "how near to death's door" she had been, she eagerly demanded, "What news? What has happened?"

When Billy told her of the sudden deaths of Mrs. Howard and Frank, an expression of "What? That all?" passed over her face, and she said, "Dear me, my snuff, Billy. Both died last night, did they? Hain't you nothin' else to tell?"

"Yes, Mary Judson and Ella Campbell, too, are dead."

Mrs. Bender, who, like many others, courted the favor of the wealthy and tried to fancy herself on intimate terms with them, no sooner heard of Mrs. Campbell's affliction than her own dangerous symptoms were forgotten, and, springing up, she exclaimed, "Ella Campbell dead! What'll her mother do? I must go to her right away. Hand me my double gown there in the closet, and give me my lace cap in the lower drawer, and mind you have the teakettle biled agin I get back."

"Before you go anywhere, suppose you stop at Mrs. Howard's and comfort poor Mary, who cries all the time because she and Alice have got to go to the poorhouse."

"Of course they'll go there, and they ort to be thankful they've got so good a place."

"I want to ask you," said Billy, "can't we—couldn't you take them for a few days, and perhaps something may turn up?"

"William Bender," said the highly astonished lady, "what can you mean? A poor, sick woman like me, with one foot in the grave, take the charge of three pauper children! I sha'n't do it, and you needn't think of it."

"But, mother," persisted Billy, who could generally coax her to do as he liked, "it's only for a few days, and they'll not be much trouble or expense, for I'll work enough harder to make it up."

"I have said no once, William Bender, and when I say no, I mean no," was the answer.

Billy knew she would be less decided the next time the subject was broached, so for the present he dropped it, and taking his cap he returned to Mrs. Howard's, while his mother started for Mrs. Campbell's.

Next morning between the hours of 9 and 10 the tolling bell sent forth its sad summons, and ere long a few of the villagers were moving toward the brown cottage, where in the same plain coffin slept the mother and her only boy. Near them sat Ella, occasionally looking with childish curiosity at the strangers around her, or leaning forward to peep at the tips of the new morocco shoes which Mrs. Johnson had kindly given her; then, when her eyes fell upon the coffin, she would burst into such an agony of weeping that many of the villagers also wept in sympathy, and as they stroked her soft hair, thought, "how much more she loved her mother than did Mary," who, without a tear upon her cheek, sat there immovable, gazing fixedly upon the marble face of her mother. Alice was not present, for Billy had not only succeeded in winning his mother's consent to take the children for a few days, but he had also coaxed her to say that Alice might come before the funeral, on condition that he would remain at home and take care of her.

CHAPTER IV.

Scarcely three hours had passed since the dark, moist earth was heaped upon the humble grave of the widow and her son, when again, over the village of Chicopee, floated the notes of the tolling bell, and immediately crowds of people, with seemingly eager haste, hurried toward the Campbell mansion, which was soon nearly filled.

On a marble table in the same room lay the handsome coffin, and in it slept young Ella. Gracefully her small waxen hands were folded one over the other, while white, half-opened rosebuds were wreathed among the curls of her hair. "She is too beautiful to die, and the only child, too," thought more than one as they looked first at the sleeping clay and then at the stricken mother, who, draped in deepest black, sobbed convulsively. And yet she was not one-half so desolate as was the orphan Mary, who in Mrs. Bender's kitchen sat weeping over her sister Alice, and striving to form words of prayer which should reach the God of the fatherless.

"My mother, oh! my mother," she cried, as she stretched her hands toward the clear blue sky, now that mother's home. "Why didn't I die, too?"

There was a step upon the grass, and looking up, Mary saw standing near her Mrs. Campbell's English girl, Hannah. She had always evinced a liking for Mrs. Howard's family, and now after finishing her dishes, and trying in vain to speak a word of consolation to her mistress, who refused to be comforted, she had stolen away to Mrs. Bender's, ostensibly to see all the orphans, but in reality to see Ella, who had always been her favorite.

The sight of Mary's grief touched Hannah's heart, and sitting down by the little girl she tried to comfort her. Mary felt that her words and manner were prompted by real sympathy, and after a time she grew calm, and listened while Hannah told her that "as soon as her mistress got so anybody could go near her, she meant to ask her to take Ella Howard to fill the place of her own daughter."

"They look as much alike as two beans," said she, "and s'posin' Ella Howard ain't exactly her own flesh and blood, she would grow into liking her, I know."

That night after her return home Hannah lingered for a long time about the parlor door, glancing wistfully toward her mistress, who reclined upon the sofa with her face entirely hidden by her cambric handkerchief.

"It's most too soon, I guess," thought Hannah. "I'll wait till to-morrow."

Accordingly next morning, when, as she had expected, she was told to carry her mistress' toast and coffee to her room, she lingered for awhile, and seemed so desirous of speaking that Mrs. Campbell asked what she wanted.

"Why, you see, ma'am, I was going to say a word about—about that youngest Howard girl. She's got to go to the poorhouse and it's a pity, she's so handsome. Why couldn't she come here and live? I'll take care of her, and 'twouldn't be nigh so lonesome."

At this allusion to her bereavement Mrs. Campbell burst into tears, and motioned Hannah from the room.

"I'll keep at her till I fetch it about," thought Hannah. But further persuasion from her was rendered unnecessary, for Mrs. Lincoln called that afternoon, and after assuring her friend that she never before saw one who was so terribly afflicted, casually mentioned the Howards, and the extreme poverty to which they were reduced.

Here Mrs. Campbell commenced weeping, and as Mrs. Lincoln soon took her leave she was left alone for several hours. At the end of that time, impelled by something she could not resist, she rang the bell and ordered Hannah to go to Mrs. Bender's and bring Ella to her room, as she wished to see how she appeared.

(To be continued.)

STRANGEST OF ALL FISH.

Denizen of the Deep that Angles for the Food It Devours.

Most remarkable of strange fishes is the angler fish, whose very name seems a paradox. The fishing fish is nevertheless a reality, and a stern one to all that approach those awful jaws of his. With a body the color of mud, he generally lies in the shadow of some rock on the bottom of the sea, waiting motionless for the approach of his prey. He is provided with an odd kind of fin just over the mouth, and this is held out in front of him to give warning of the coming of something to be swallowed. One taken alive was experimented on and it was found that if this projecting fin was touched with a stick, even though the stick did not come near the mouth, the jaws closed convulsively. This shows that the fin, by some provision of nature, closes the jaws as soon as it is touched.

The mouth is tremendous, growing to the width of a foot, while the whole fish is only three feet long. One of these anglers was caught not long since and, although it was only twenty-five inches long, a fish fifteen inches long was found sticking in its throat. The angler is provided with a peculiar set of teeth, in double or treble rows along the jaws and at the entrance of the throat. Some of these teeth are a foot long. He is not a pretty fish to look at, but he attends strictly to business and will swallow anything that touches his warning fin, whether it be meant for food or not. All kinds of things have been found in the stomach of anglers, from bits of lead and stone to fish almost as large as the angler itself. This is without doubt one of the most peculiar and interesting fish in the whole ocean.

Clever Soapmaker.

Friend—Why do you dump all the dirt into your soap kettles?

Soap Manufacturer—If folks don't find the water dirty after washin' they think the soap is no good.—New York Weekly.

HISTORIC BATES HOUSE, OF INDIANAPOLIS, A MEMORY.

The historic old Bates House, Indianapolis, will be removed to make way for a modern hotel. The old Bates will be wiped out wholly, even to its name. For fifty years the Bates was the most noted hotel in Indiana, and for a long time it has been one of the most famous hotels in the country. The house was built in 1852 by Harvey Bates, Sr., in whose honor it was named. Its first cost was $60,000, a goodly sum for an investment of this kind in a small Western town. A few years later improvements and additions to the cost of $75,000 were made. Under its various ownerships the hotel entertained many eminent men. Lincoln stopped there before the Civil War, President Johnson spoke from its balcony, Stephen A. Douglas was a guest within its walls, and all the noted Indiana statesmen honored the hotel with their presence at one time or another. Another national event in which the Bates figured was the funeral of the late Vice President Hendricks, whose home was in this city, and to whose obsequies eminent men came from all parts of the country. Other famous people whose faces gladdened its corridors are Calve, Patti, Irving, Edwin Booth, John McCullough and other artists and actors of distinction.

THOMAS G. SHAUGHNESSY.

American President of the Canadian Pacific Railway System.

Thomas G. Shaughnessy, who succeeded Sir William Van Horne as President of the Canadian Pacific Railway system, on June 12, 1898, has had a most rapid and brilliant railroad career. He is an American by birth, having been born in Milwaukee, Wis., on Oct. 6, 1853. He entered railway service in July, 1869, in the purchasing department of the Milwaukee and St. Paul Railway. In January, 1879, he was appointed general storekeeper of that road, and in 1882, when Mr. Van Horne left the Milwaukee and St. Paul to become general manager of the Canadian Pacific, he took Mr. Shaughnessy with him to Montreal and made him general purchasing agent for that system. In 1884 he was made assistant general manager, and in 1889 became assistant to the President, Mr. Van Horne, who, having been advanced to the Presidency, felt that he needed the assistance of the bright and active Shaughnessy. In June, 1891, he was elected a director and Vice President, and in 1898 he succeeded Van Horne as President of the Canadian Pacific system.

THOMAS G. SHAUGHNESSY.

MAKING A GLOBE.

Brief Description of a Very Interesting Process in Geography.

First, the model is covered with a thick layer of pasteboard in a moist state. When it is dry, a sharp knife is passed around it so as to separate the pasteboard coat into two hemispherical shells, which are then taken off the model and united at the cut edges with glue. The hollow sphere thus formed is the skeleton of the globe that is to be.

The next thing is to cover it with a coating of white enamel, about one-eighth of an inch in thickness. When this is done the ball is turned into a perfect roundness by a machine. The iron rod running through the center of the original model, and projecting at both ends through the surface, has left holes in the new globe, which serve for the north and south poles, and through these a metal axis is run to represent the axis of the earth.

Then the surface is marked off with pencil lines into mathematical segments corresponding precisely in shape with the sections of map that are to be pasted on. These map sections are made from copper plates in just the size and shape required to fit the globe that they are intended for, one set, of course, covering the entire spherical surface. They are printed, many of them, like dress patterns, on sheets of the finest linen paper, and are cut out carefully with a sharp-pointed knife.

When they have been pasted on, the different countries are tinted by hand with water colors. There is no special rule for this, except that contrasts are aimed at as a help to the eye of the user. Finally, the whole is overlaid with a brilliant white varnish, which is of almost metallic hardness, and will wear indefinitely without scratching or losing its brightness.—Milwaukee Sentinel.

Spraying as a Business.

In almost any city, and even in many comparatively small villages, a professional sprayer could make excellent wages during the spring and early summer. There are hundreds of people who have three or four trees in the garden, and who would gladly pay 50 cents or a dollar to have them treated with Bordeaux mixture and Paris green at the proper season, but who do not think it worth while to own a spray-pump of their own. Moreover, it is a nasty, messy, troublesome business to make up a few gallons of Bordeaux mixture, and almost any one would rather let out the job to some man who already has his overalls daubed with lime and blue vitriol. An efficient professional sprayer could apply kerosene emulsion in suitable emergencies, give a dose of tobacco water to a troublesome colony of plant lice, or whitewash a hen house with his pump on occasion. There is a good business opening in it for the handy man. To add a practical observation to this theorizing, we may say that we have known a few cases in which this has been tried, and that it proved highly satisfactory to all parties.

Quick Eaters.

"Have you any idea," remarked the cashier of one of the largest lunch restaurants in New York, "how many minutes the average down-town business man devotes to his midday meal?"

"At a venture," answered the reporter, watching the hurried play of knives and forks about him, "I should say about fifteen minutes."

"You set about the time usually estimated," returned the cashier, "but in reality half of that time would be nearer right. The average time consumed for lunch by the patrons of this establishment is just eight minutes. The fact is," continued the cashier after the reporter had ventured a foreboding for New York digestion, "people find it such a trifling and unobtrusive matter just to get 'a bite of lunch' that few realize what a gigantic business it is merely to supply hungry people down-town at noon, because few bring their lunches with them, and from the formation of the city, none can go home.

"This establishment feeds 3,000 people a day, and the amount of food required to care for that patronage is enormous. For example, when we put hash on the 'specials,' enough is made up actually to fill a wagon. We are not the largest lunch room, however."—New York Sun.

Those Lucky Boston Girls.

"Miss Beenz never gets nervous about the heat."

"But she's from Boston, you know."

"Yes, I fancied so. She scowled horribly when I split an infinitive yesterday. But why does that save her from worrying over the heat?"

"She never knows how hot it really is."

"Explain."

"Why, when she takes the thermometer from the hook her hands are so cold that the mercury gets a chill and falls down in a comatose condition, and by the time she can bring her near-sighted spectacles to bear on the tube the freezing point is in sight. 'Fifty-three,' she said yesterday, as she stared at the thermometer. 'Isn't it singular how the imagination will affect the human mind? Now, I don't—call that hot.' And it was actually 91 in the shade!"—Cleveland Plain Dealer.

Seeding Lawns.

One cause of poor lawns is not seeding often enough. This is more marked in the village than the country. During seasons of protracted drouth more or less of the seeding dies and severe winters do much injury. If seed is not sown to replace what dies out, it is impossible to have good lawns. White clover should be sown as soon as danger of frost killing the young plants is past. A light seeding of blue grass and red top should be made the first of August, and another the middle of the month. This will insure a better catch than sowing all the seed at one time. Fall is the best time for seeding.

Some men are so skeptical that they refuse even to believe the report of a cannon.

An ordinary piano contains a mile of piano wire.

FARM AND CITY BOYS.

ADVANTAGES OF YOUTHS BRED AMONG RURAL SCENES.

Men Who, Coming from the Fields and Woods, Have Made Striking Marks in the World's History—Some Traditions Sadly at Fault.

The traditional difference between a city and a country bred boy is that the one is smart and "knows life," while the other is dull and merely "knows beans" and other agricultural products. And yet some of the most successful men in this country to-day have been country boys and look back proudly, perhaps regretfully, to the days when they were free with nature, and labored for their daily bread "by the sweat of their brow."

To enumerate the great men of history who have been country boys would be a tedious task. The great Roman dictator, Cincinnatus, not only spent his youth in the country, but the prime of his manhood, and when the citizens of the republic came to him to entreat him to lead them out of their political difficulties, they found him at the plow. George Washington, perhaps the best parallel in modern times to Cincinnatus, reluctantly left his ancestral farm on the banks of the Potomac to assume governmental authority. As regards great literary men who have sought their earliest inspiration from the fields and roads surrounding their abodes, Robert Burns, the plowboy, may be adduced as, perhaps, the best known example, although some of our own bards, such as Whittier and Bryant, have painted the glowing colors of nature and sung of her matchless harmony.

Lincoln, the rail splitter; Garfield, the mule driver, and Clay, the "Mill Boy of the Slashes," stand out prominently as country boys who have become legislators. These examples, and countless more, as the fact that many have received the schooling of a farm life in the days of their youth, leads to the very natural query: "Has the country boy, after all, been misrepresented, and is it the city boy who is under the real disadvantage?" Although difficult of solution, the question is an interesting one, and any views tending to throw light on the matter will doubtless be acceptable. Some have recently been given by eminently successful country boys, among whom is John Wanamaker, who says:

"It is an undeniable fact that the boy in the country possesses advantages not open to the youth growing up in our great cities. The lad whose introduction to the busy world about him occurs amid rural surroundings finds his horizon not limited by the countless structures of God's goodness to man, as exemplified in his works through bounteous nature. The country boy has abundant evidence that among the honored men of the nation may have had the advantages of a youth spent amid the green fields and pleasant surroundings of a country life.

"The many benefits of a health-giving atmosphere and wholesome food are advantages the country boy possesses in excess of the boy in the city. Combined with these, regular hours of sleep and rest serve to perpetuate the sound mind in a sound body, so necessary for those who would attain the highest measure of usefulness in this busy world.

"Free from the temptations which beset the city youth on every side, luring him on to dissipation and ruin, the country boy finds his joy and recreation in rational amusements, which leave no aftermath of vain regret. Thus he prepares the foundation of a vigorous constitution and good health on which to build his life."

While Gen. Grant, a poor country lad, was breaking wild colts, and when, below his teens, he was sent to the woods with wagon and team and chain to load heavy timbers, a task requiring all the tact and genius of a man, he was forced to rely upon himself. Necessity was the mother of resourcefulness developed in young Grant that enabled him to accomplish this marvelous feat. It was by such conditions in country life, and not at West Point, that forces were put in motion that made Gen. Grant the hero of Donelson and Vicksburg, culminating in the crowning honor of Appomattox.

While Abraham Lincoln, in the ill-clad, unpromising boy of poverty, in the obscurity of the log cabin, where he climbed to his bed of leaves in the loft by means of wooden pins in the logs, who would have been jeered by the boy of affluence, he was there learning the great lesson of sympathy for the plain people, and the self-reliance that fitted him in subsequent years to become the trusted leader who piloted the nation through the dark night of peril, and to break the shackles that bound a race in thraldom.

While returning recently with a company of gentlemen from the grave of the mother of Abraham Lincoln, and discussing the advantages of country life to the boy, a prominent business man of Indianapolis said he pitied the boy who did not enjoy the advantages of country life. I would that the country boy could know and appreciate his advantages. Personal experience intensifies my interest in the country boy. Having experienced myself the privations and hard work of the country boy, never having a penny to spend that I did not earn, and but few hours that I could appropriate for that purpose, what I deemed a hardship then, in the light of experience I now view as a blessing, for in this school of economy and patient drudgery I was obtaining the needed education to success. These environments did not abate my enthusiasm, but only tended to increase energy. I was learning self-reliance and will power, for I knew unaided I must fight the battle of life. Under such tutorage, obstacles became stepping stones to higher levels.

"In conclusion, a word to country boys. Don't grow weary of your lot; a change to the gaity of the city will be worse for you. Patient toil is the road to true success. Be industrious, be economical, be hopeful; aim high, stand for nobility of character, and you will win honor and success. A student of nature working in harmony with the God of nature."—Washington Post.

PRINCE OF FAS HION A WRECK

Former New York Epicure and Dandy Now a Pauper.

Alfred Claggett, known fifteen years ago in all the principal hotels and restaurants in New York as "Prince" Alfred, because of the faultlessness of his dress and the elaborate courtesy of his manner, was locked up in the West 30th street police station recently, says the New York Herald, because he was unable to take care of himself. He is now 60 years old. All his former grandeur is gone, and there is hardly a trace about him of what he once was.

Coming from a good Southern family and graduating from a Tennessee college, upon his arrival in New York City he entered a prosperous tea house on Front street, which was conducted by his father. In time he succeeded to the business and made money rapidly. He supplied tea to the leading hotels, and for many years lived at the Hoffman House, the Victoria and the Murray Hill Hotel.

He gave a great deal of attention to his dress, and his costume was always immaculate and of the latest cut. He was recognized as an authority on gastronomic matters, and his opinion was always received with respect.

Though his business yielded him a large income, he spent it as fast it came in, and when the business went to pieces he was left penniless. He then became a wine agent, and for a time he made a success of this, but finally this failed and he was forced to seek assistance from his friends.

Frank Work carried him along until it became evident that assistance of this kind was doing him no good. About a year ago some of his friends raised a fund of $2,000 to send him to a sanitarium in Westchester County. He was discharged several months ago and seemed to be much improved, but he soon lapsed into his old habits.

Although he fell into the habit of sleeping in the parks or wherever he could find shelter in case the weather was inclement, he still tried to keep up appearances, and would always go to one of the hotels where he had been known in his prosperous days to arrange his toilet in the morning. Many of the attendants knew him and were glad to do what they could to help him.

Best Ivory Carvers Are Americans.

With very little experience it was soon demonstrated that the old story must be told once again. The expert American carver is the best. Ivory carvings are valuable. A small specimen of merit is worth from $3,000 to $5,000, and such a work an American artist can produce in five months, while a Japanese of corresponding ability will be occupied for two years, and the lower Chinese will be seven years. This is actual fact, not exaggeration. Even there the comparison does not end. The American can design or copy, even to portraiture. The Japanese can copy absolutely correct; he can take two profile and a full face photograph and reproduce a statuette from them, but it will have a Japano-Americano face. The Chinaman can slavishly copy the statuette, reproducing every blemish and blur, but he cannot do the last thing with the three portraits, and can produce nothing from them.—Home Magazine.

Caste in Cuba and Spain.

A Spaniard was born in Spain. His son, who was born in Cuba, is not a Spaniard, but a Cuban. If a Cuban should go to Madrid when he is two weeks old and spend all his life in the palace he would still be a Cuban and not quite as good as a Spaniard. If a Spaniard should go to Havana when he is two weeks old and spend all his life in that city or upon a plantation he would still be a Spaniard and enjoy a distinction and social position which a Cuban can never attain. The sons and daughters of Spaniards are Cubans if they are born in Cuba, but the sons and grandsons and great-grandsons of a Cuban must always be Cubans, no matter if they were born in Madrid and spend their whole lives in that city. No Cuban can ever become a Spaniard, no matter what happens to him, and from the Spanish point of view he is a degenerate.—New York Times.

A Maiden on Time.

Men claim that women are tardy—in
fact, that they're never on time,
That among their thousand sweet virtues promptness you never will find.
But I know of a dear little woman,
quite worthy of praises in rhyme,
Who is pretty and gracious and charming, and always, yes, always on time.
She never is fretful and flurried, nor given to dumps nor to tears;
She's a beautiful Grecian maiden who has posed on my clock for years!
—The Ladies Home Journal.

Topography of Kansas.

Kansas has 52,000,000 acres of land without mountains and without swamps; also thirty-eight rivers, 163,000 acres of artificial forests and 14,000,000 fruit-bearing trees.

There is nothing like being ready when opportunity knocks.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

Issued Every Friday

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, NOVEMBER 8 1901

Smitz, the Labor candidate, has been elected Mayor af San Francisco by a large majority.

The Pan-American Exposition at Buffalo was brought to a close last week. The projectors of the big show lost $3,000 000 on the venture.

With the Call and Chronicle both out for Tobin, the democratic nominee for mayor, and the Examiner knocking on everybody, things are decidedly mixed in San Francisco politics.

In Nome five thousand people have gone into retirement for the winter, shut out from the world so effectively that by next June they will get an eight months' installment of news from the civilized world.

The Union-Democrat of Sonora, Tuolumne county, says that the $37,000 pocket recently extracted from the Tanzy mine was taken out in less than one day—one-third of all the material removed in its extraction being gold.

Four men were killed and another seriously wounded in an accident at the Treadwell mine on Douglass Island. The men had recklessly attempted to open a box of giant powder with a pick, which resulted in a fearful explosion.

The Los Angeles Herald seems to have the knack of skimming the cream off of the literary material for its Sunday edition. Its magazine surely presents more valuable matter every Sunday than any other Sunday magazine in the country.

General Chaffee is of the opinion that troops will be required in the Philippines for twenty-five years to come and that the civil government established there is a failure. Such predictions are not comforting to the tax-payers of this country, but it is more than probable that General Chaffee is right.

The labor question has always been settled and will remain so perhaps until the earth reaches that part of space on the way to the sun where the water and air all enter its crust. The man who is broad across the shoulders and narrow between the eyes has done and will do the work, and the man with brains will see that he does it. It is a law of nature which can only be overcome by developing our possibilities. When we deserve to rise to a higher level there is no power that can keep us down.

The Supervisors of Santa Clara county paid $1000 to a Frenchman to write the county up, and he put in it such ridiculous things as to make every body mad, and the books were not circulated. Santa Clara is not the only county that has been taken in. A stranger can always play the confidence game better than a home man. Perhaps the reason is that a home fake is known as such, and unless he comes as a black-mailer of whom the supervisors are afraid, he gets nothing. The fake book that is kept locked up however does mention the county seat!

The State prison directors announce that vigorous steps will be taken to find out who has been getting grain bags from San Quentin unlawfully. The idea that the legislators had in mind was that bags were to be sold in lots of not to exceed 2,000 to any one man and in order to protect the grain growers it was required that each applicant should make an affidavit that the bags were for his own use. It seems that San Francisco dealers have been enabled to get large numbers of bags for sale and the prison directors naturally would like to know how they secured them.

A serious backset to the development of antitoxin treatment of certain diseases is caused by the reported fatalities in St. Louis. Such treatment for the prevention of diphtheria resulted in the death of eleven children from lockjaw, and as many more are suffering from the same cause, with but slight chances of recovery. The preparation used was manufactured by the city chemist and great precaution was taken, presumably, to have it absolutely pure. This experience in St. Louis is a terrible warning of dangers that lurk in the new practice with the aid of antitoxins. In this case a more dreadful malady than the one at which prevention was aimed caused the sacrifice of many youthful lives. While there is no question about the usefulness of the new preventive methods, it is evident that much is yet to be learned about their application.

It transpires that the whole Schley difficulty grew out of the fact that he made a report of the battle to Sampson in which the New York, Sampson's flag ship, was not mentioned because it was not there. He was required to make a report mentioning the New York among the others. If the New York had been there then Schley would not have been required to make a report. The people of these United States have followed the testimony very closely and their verdict is made up no matter what the court finds. The Washington correspondent of the San Francisco Examiner well says: "To those who have followed this inquiry closely, the whole conduct of the case seems as far fetched as if England had put Nelson on the stand to defend himself after the battle of Trafalgar. Nelson had made no preliminary plans of battle. Upon the appearance of the enemy he simply signaled: 'England expects every man to do his duty.' Admiral Schley's signal was, 'Follow the flag.'"

Brome Grass Seed.

Beardless brome grass has come into great favor in the west. This has not only made the price of the seed high,

BEARDLESS BROME GRASS (BROMUS INERMIS).
1. One pound of seed as bought. 2. Pure seed. 3. Chaff and dirt. 4. Spurious seeds. 5. Total waste. 6. Pure and germinable seed.

but has led to the sale of chaffy and adulterated seed. A. J. Pieterr, expert on pure seed, reports that the standard weight is 14 pounds per bushel, and most seedmen quote prices either "per 100 pounds" or "per bushel of 14 pounds."

The figure illustrates the amount of good seed and waste in one pound of a commercial sample. This seed contained more than 40 per cent of chess and less than 16 per cent of the total could be used, the balance being waste.

Testing Texas Steers.

After all, from a beef standpoint, the true test of value of any breed of cattle is what will they do when prepared for the block. Realizing this fact, the San Antonio International Fair association has offered a large prize for the best carload of fed Texas steers to be shown at the fair, the first prize being $250 and the second $150. These premiums are large enough to induce many Texas feeders to make a show at the fair, and there will doubtless be several carloads of choice fed cattle on exhibition.—Texas Stockman.

LEGAL.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

W. E Pedley, Plaintiff, vs. William Remsen, Peter A. Graff, Yellett D Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company a Corporation, Surprise Canyon Mill and Water Company a Corporation Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

The People of the State of California send Greeting to William Remsen, Peter A. Graff, Yellett D Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company, a Corporation, Surprise Canyon Mill and Water Company a Corporation, Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

You are hereby required to appearin an action brought against you by the above-named plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein within ten days (exclusive of the day of service) after the service on you of this Summons—if served within said County; if served elsewhere within thirty days.

And you are hereby notified that if you fail to so appear and answer the Plaintiff will take judgment for any money or damages demanded in the Complaint, as arising upon contract, or will apply to the Court for any other relief demanded in the Complaint.

Witness my hand and the seal of said Superior Court of the County of Inyo, State of California, this 15th day of October, A. D. 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] In the Superior Court of the County of Inyo, State of Cal.

W. E. Pedley, Plaintiff vs. William Remsen, et als., Defendants.

Summons.

W. A. HARRIS, 508 Stimson Building, Los Angeles, Cal., and MACK & FORBES Independence, Cal., Attorneys for Plaintiff.

Commissioner's Sale.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

A. W. EIBESHUTZ, Plaintiff, vs. E. M. DINEEN, Defendant.

SUPERIOR COURT Order of Sale and Decree of Foreclosure.

UNDER AND BY VIRTUE OF AN ORDER of sale and decree of foreclosure issued out of the Superior Court of the County of Inyo State of California, on the 9th day of October, 1901, in the above-entitled action, wherein A. W. Eibeshutz, the above plaintiff, obtained a judgment and decree against E. M. Dineen, defendant, on the 7th day of October, 1901, which said decree was, on the 8th day of October, 1901 recorded in Judgment Book 2 of said Court, at page 157, I am appointed Commissioner and commanded to sell:

All the right, title and interest of the defendant E M Dineen, consisting of an undivided one third interest in and to those certain mines and mining claims situate, lying and being in Wild Rose Mining District, County of Inyo, State of California commonly known and designated as the "Monarch," "Combination," "Monopoly" and "Kennedy" mines, the notices of location thereof being of record in the mining records of said Wild Rose Mining District, and in the office of the County Recorder of said Inyo County.

Notice is hereby given that on THURSDAY, the 14th day of NOVEMBER, 1901, at 2 o'clock p m of that day, in front of the Court House, in the town of Independence, I will in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy the plaintiff's judgment, with interest thereon and costs, to the highestand best bidder, for cash, in gold coin of the United States.

GEO. S. WOOD
Commissioner.

Dated October 14, 1901.

DESERT LAND, FINAL PROOF.

UNITED STATES LAND OFFICE, INDEPENDENCE, CAL., Oct. 8, 1901.

NOTICE IS HEREBY GIVEN that Augusta F. Kispert, of Phebe, Inyo Co., California, has filed notice of intention to make proof on her desert-land claim No. 862, for the NE¼ of SE¼, Sec. 27, T. 14 S., R. 35 E., M. D. M., before the Register and Receiver at Independence, Cal., on TUESDAY, the 12th day of November, 1901.

She names the following witnesses to prove the complete irrigation and reclamation of said land: John Kispert, Augustus G. McGovern, Louis Thurnau, of Thebe, Inyo Co., Cal., and Ben. H. Yandell, of Independence, Cal.

S. W. AUSTIN, Register.

DESERT-LAND, FINAL PROOF.

UNITED STATES LAND OFFICE, INDEPENDENCE, CAL., Oct. 11, 1901.

NOTICE IS HEREBY GIVEN, that Lemuel Baxter, of Independence, Inyo Co., Cal., has filed notice of intention to make proof on his desert-land claim No. 844, for the S½ SE¼, Sec. 23, SW¼ SW¼ Sec. 24 and N½ NE¼ Sec. 26, T. 13 S., R. 35 E., before Register and Receiver, at Independence, Cal., on SATURDAY, the 16th day of November, 1901.

He names the following witnesses to prove the complete irrigation of said land: Jarius D. Mairs, David Rogers, Harry Burt and Clifford Baxter, all of Independence, Cal.

S. W. AUSTIN,
Register.

SEED POTATOES.

Run Out and True Stock—Selection Before Tubers Ripen.

Thousands of planters use the small tubers in the pit or bins after having used the choice tubers for sale or on the table. These small tubers will be used year after year until the entire crop will all be good seed (?), and yet these very same people will argue that these small tubers are "just as good as

RUN OUT STOCK AND TRUE STOCK.

any." However, I would not always choose the very largest tubers, as these may be rough, coarse or unshapely, but always those true to a type.

A great deal of advantage may be gained by selection in the field before the crop is ripe and while it is yet growing. Selection should be made at this time with respect to growth of vine, health, size and height of vine, appearance, number, color and manner of growth in the hill, whether compact or scattering, as the tubers being not mature will show their characteristics most forcibly at this time. This should be done just before the vine begins to ripen.

The writer very much prefers mature potatoes for seed as compared with immature seed, notwithstanding the geat cry for second crop seed to the contrary, provided this mature seed can be stored in a cool enough place to keep them from starting the least particle of growth and at the same time not freeze. However, as so very few are prepared to keep mature tubers thus, we must either rely on second crop or immature first crop seed, and here comes in our selection and digging before the crop is ripe. We must take into consideration that the extra early varieties will be more difficult to keep than the late ones if we are to use immature first crop seed, and as we cannot grow second crop in the north this is the best we can do.

Potatoes will run out under certain conditions, the same as other vegetables or fruits, consequently we must be on the lookout for the tuber that has the "run out" marks. A potato that has begun to decline will show it in a difference in the shape and depth of eye, eyes will be more numerous, and the skin will have changed its appearance, as shown in the cut where the upper figure is a tuber from run out stock and the lower is from true stock of the same variety. The foregoing is the advice of a writer in American Gardening.

Brown Rot of Prunes.

Delaware treatment for brown rot of the prune:

Very early in the spring it will be well to spray the trees thoroughly with a solution of copper sulphate, one pound to 25 gallons of water.

When the fruit buds begin to swell, spray either with the acetate of copper solution or the bordeaux mixture.

Just before the first buds open repeat the latter.

When the bloom begins to shed, spray with bordeaux mixture.

In ten days or two weeks repeat the latter.

When fruit begins to color, spray with the copper acetate solution.

Repeat the latter in a week or ten days.

An Aid to Earliness.

One way in which a gardener may gain a little advance in earliness of vegetables, especially of heat lovers like beans, cucumbers and that class,

EARTH SHELTER FOR TENDER THINGS.

is to build a soil shelter, as shown in the accompanying cut from Vick. This consists merely of drawing up a ridge of earth to the north or windward side of the row as protection on the one hand from raw winds and on the other to catch the sun heat. The row can be thrown up with a small plow, care being taken not to have the soil fall over and cover the seed too deeply.

The Ideal Condition For Alfalfa.

The ideal conditions of soil and moisture for the growth of the plant are found, according to G. L. Clothier of Kansas, in the valleys of streams where sheet water is obtained at the depth of 20 feet or less and where the soil is a porous, sandy loam with a permeable subsoil. He is convinced, however, that alfalfa will grow and give remunerative returns upon as many varieties of soil as any other cultivated plant. It will produce a fair crop upon poor land if not water soaked. Sufficient moisture in the soil is the one condition indispensable to a good crop of alfalfa.

Columbus Brought Cards.

Christopher Columbus introduced cards into America in 1492. On the quarter deck of the Santa Maria he used to play the stately game of ombre, a favorite among princes, nobles and courtiers, with its Spanish name, el hombre (the man), and the Spanish terms, spadille, manille, punto, matador, basto, gano del rey and codilla.

A Little Sermon.

To be honest; to be kind; to earn a little and spend a little less; to make, upon the whole, a family happier for his presence; to renounce, when that shall be necessary, and not be imbittered; to keep a few friends, but these without capitulation; above all, on the same grim condition, to keep friends with himself—here is a task for all that a man has of fortitude and delicacy.—Robert Louis Stevenson.

FRUIT AND FLOWERS

THE FOREST TENT WORM.

From August to April Extends the Campaign Against It.

The forest tent caterpillar is very injurious to shade and fruit trees and does special damage in maple sugar groves. In New England, New York and perhaps elsewhere there has been this season a very destructive outbreak of this caterpillar. Without entering fully into its life history, it suffices to

MOTH, LARVA, COCOON, ETC.

say that the young caterpillars appear in the spring about the time of the unfolding of leaves and feed upon the tender foliage. When full grown, each caterpillar spins its cocoon. Many remain in the trees and tie up the leaves, forming a covering for the cocoon, as shown in the figure. Fully one-half wander off from the tree and utilize any shelter they may come upon, such as sides of houses, fences, etc. The moths generally emerge from the cocoon about the last of June. Soon afterward the females deposit their eggs in masses of about 200 each upon twigs, dying themselves soon after the eggs are laid. The eggs deposited early in June remain unhatched till the following spring. The cut shows a female moth, a caterpillar and its back and side markings (a and b) and a cocoon in a maple leaf.

The Vermont station has given a fully illustrated and comprehensive account of this insect, from which the cut is reproduced. The remedial measures recommended by various stations include egg destruction; killing the young caterpillars by swabbing the colonies with a bunch of cotton waste, old rags or the like; jarring them off with a padded mallet into a sheet or canvas and immediately destroying them; early spraying with bordeaux and paris green; banding trees with cotton batting, tar, etc.

For the first of these remedies Professor Slingerland of Cornell would enlist the aid of the school children. He says: "Let a few public spirited citizens or the village board offer a prize to those pupils who collect over a certain number, say, 1,000 or 10,000 of the unhatched egg clusters at any time between Aug. 1 and April 1 of the following year, or pay the children a certain sum, a few cents for every hundred unhatched egg clusters collected. All egg clusters collected should be burned. The rivalry between the children will soon spread to rivalries between schools, and the result will be that the number of the caterpillars will be reduced to the minimum by a single season's crusade of the children. Such a crusade has been successfully carried out even in so large a city as Rochester. Begin the warfare in August or September, 1899, or, better, after the leaves have fallen so that the eggs can be more easily seen on the twigs, and keep it up until the last egg cluster is burned before April 1, 1900."

Professor Weed of Vermont, also advocating egg destruction, says: "The gathering may be done by sending a sharp eyed boy into the trees to cut off the glistening masses, or by means of a pruning hook or a pair of long handled pruning shears."

The Carman Peach.

The Carman peach is being very highly recommended by those who have tried it, who think it likely to prove a formidable rival to the Eberta, says American Cultivator. The fruit is large, pale yellow, with deep red cheek and of good form. It has a tough skin, which enables it to stand transportation well, and the flesh is tender, juicy and of good flavor. The tree is a strong grower and hardy where it has been tested.

He Was Acquitted.

Here the voice of counsel for the defense thrilled with emotion.

"Gentlemen of the jury," he cried, "you cannot believe the prisoner to be the cool, calculating villain the prosecution would make him out to be! Were he cool and calculating would he have murdered his wife, as he is accused of doing? Would he not rather have spared her in order that she might be here at this trial to weep for him and influence your verdict with her tears?"

Only the thoughtless think lawyers do not assist the ends of justice.—Detroit Journal.

HOME MIXED FERTILIZER.

Items From the Ohio Station About Fertilizing Materials and Their Cost.

For several years the Ohio station has been using a mixture of equal parts of tankage and acid phosphate, with a small addition of muriate of potash (200 pounds to the ton), with most satisfactory results, but in order to make a more direct comparison of this mixture with factory mixtures the station began a year ago a comparative experiment in which four brands of factory mixed fertilizers, bought direct from four of the oldest fertilizer manufacturing firms in the state, are being used side by side with four home mixtures, made from the materials named, in such a way as to give approximately equal percentages of ammonia, total and available phosphoric acid and potash in the home mixtures to those claimed in the factory mixed brands.

The general outcome of this test to date is that home mixtures of similar chemical composition, made from the materials named, have given an equal increase of crop when used on corn with standard brands of factory mixed fertilizers, and at a reduction of more than 40 per cent in cost.

Acid phosphate is the basis of the phosphoric acid in practically all factory mixed fertilizers. It is a fossil bone, found in South Carolina, Florida and Tennessee, which is ground to a fine powder and mixed with sulphuric acid in order to make its phosphoric acid more easily soluble. The northern markets are supplied chiefly from Baltimore, where it may be bought at prices ranging from $10 per ton for single sack lots down to $7.50 per ton in carloads in bulk for a grade analyzing 14 per cent soluble phosphoric acid. In the experiments made at the Ohio experiment station a pound of available phosphoric acid in acid phosphate has apparently been as effective as a pound of phosphoric acid in bone.

Tankage is made at all the great slaughter houses. It contains both phosphoric acid and ammonia and is variable in quality. Different grades are classed as 6 and 35, 7 and 30, 8 and 20, 9 and 20, etc., meaning that they contain 6 per cent ammonia and 35 per cent bone phosphate or 7 per cent ammonia and 30 per cent bone phosphate, etc., the term bone phosphate meaning that combination of phosphoric acid and lime which is found in bone and of which about 46 per cent is phosphoric acid. The lower grades shade off below into raw bone, which might be called a 5 and 50 tankage, and above into dried blood, which contains 10 to 14 per cent ammonia with 2 or 3 per cent or only a trace of phosphoric acid.

A 7 and 30 tankage has been sold in Cleveland for several years at the uniform price of $17 per ton in single sacks or carloads. The latest quotations in Chicago range from $12.50 per ton for 6 and 35 tankage up to $15.50 for 9 and 20 tankage, this being the standard grade.

Muriate of potash is a product of the Stassfurt mines in Germany, and its sale is controlled by a German syndicate. It may be bought in New York or Cleveland at about 2 to 2¼ cents per pound. Both acid phosphate and tankage are fine, dry meals, in perfect condition to be used in the fertilizer drill, and mixing them does not alter their condition. Muriate of potash resembles common salt in appearance, except that it is usually somewhat yellowish in color. In its commercial condition it is about half actual potash.

A Business Method.

The cut, from The Farm Journal, tells it own story. The owner of this device is going to know hereafter just what each cow is doing. He will weigh each cow's milk as it is drawn, and then put it down on the paper in black and white—the milk record for each week. The prosperous farmer makes use of business methods. He knows what each animal is doing, and whether she gains or loses on particular kinds of feed. Guesswork is poor business on the farm, as elsewhere.

WEIGHING THE MILK.

And in this connection it may be mentioned that the pleasing, cleanly and economical practice of delivering milk in glass bottles is steadily increasing.

Not Satisfactory.

"Mose," said Mr. Subbubs, "I want you to clean out my cellar tonight."

"'Deed, sah," Mose protested, "I kaint do no wuck lalk dat at night, sah, dat would be satisfact'ry to yo', sah."

"Why, not? You've often cleaned out my chicken coop at night."

"Yes, sah; but I reckon dat wuzn' satisfact'ry to yo', sah."—Philadelphia Record.

Chronic Condition.

Prospective Tenant—Of course the house needs repairs.

Owner—Huh! Did you ever see a house that didn't?—Indianapolis News.

ARE YOU DEAF? ANY HEAD NOISES?

ALL CASES OF

DEAFNESS OR HARD HEARING ARE NOW CURABLE

by our new invention. Only those born deaf are incurable.

HEAD NOISES CEASE IMMEDIATELY.

F. A. WERMAN, OF BALTIMORE, SAYS:

BALTIMORE, Md., March 30, 1901.

Gentlemen:—Being entirely cured of deafness, thanks to your treatment, I will now give you a full history of my case, to be used at your discretion.

About five years ago my right ear began to sing, and this kept on getting worse, until I lost my hearing in this ear entirely.

I underwent a treatment for catarrh, for three months, without any success, consulted a number of physicians, among others, the most eminent ear specialist of this city, who told me that only an operation could help me, and even that only temporarily, that the head noises would then cease, but the hearing in the affected ear would be lost forever.

I then saw your advertisement accidentally in a New York paper, and ordered your treatment. After I had used it only a few days according to your directions, the noises ceased, and to-day, after five weeks, my hearing in the diseased ear has been entirely restored. I thank you heartily and beg to remain Very truly yours,

F. A. WERMAN, 730 S. Broadway, Baltimore, Md.

Our treatment does not interfere with your usual occupation.

Examination and advice free. YOU CAN CURE YOURSELF AT HOME at a nominal cost.

JOHN J. MCLEAN,
Observer.

*Record beginning March 6th 1898

W. G. Sanger is down from Alvord.

Ed Walker was in town last Tuesday.

Webb Walker returned home to Olancha Wednesday.

County Treasurer Bunney went to Bishop last Tuesday.

About ten inches of snow fell during the last storm at Bodie.

Bert Rhine's goat is wearing a handsome hand painted collarette.

Geo. Thorpe will leave for Los Angeles just as soon as Mr. Squires returns.

Did you ever see lovelier fall weather? The coldest night this week was 42.

Hens are on a strike and there is a consequent shortage in the egg crop.

The attention of teamsters is directed to the ad "Teams Wanted" in this issue.

Charley Walters will leave for Tonopah in a day or two with a four horse load of apples and cider.

Dr. Woodin went to Big Pine this morning. He reports his patients as doing very nicely and all out of danger.

Arlie Mairs will leave for Saline Valley in a day or two to perform assessment work on the copper mine at Ubaheba.

A social dance will be given by the young people at Mairs' Hall to-morrow evening. Come out and enjoy yourself.

Mrs. Rose Matlack arrived from Los Angeles last Tuesday morning and is visiting with her daughter, Mrs. Avah Bell.

Miss Mary Mulholland left for San Frrncisco on Tuesday's train. She will take a surgery course at St. Luke's Hospital.

Mrs. F Rhine has gone to San Francisco to buy a large supply of fall and winter goods. She is expected back about the end of next week.

District Attorney Dehy has gone to Bishop. Sailor Jack has been on the war path and stands a chance for a brief sojourn in the county Bastile.

Hans Meyer has gone to Los Angeles for a visit. His health has been bad for some time and he is going down to be doctored, and also for the benefit of a change of climate.

John Alexander left here last Tuesday for San Francisco, where he will become an inmate of the Odd Fellows' Home. He is a veteran of the order, and the old man is getting very feeble. He is one of the early pioneers of the county.

W. K. Miller has again become the proprietor of the Keeler and Mojave stage line. He contemplates some radical changes in the near future which will greatly facilitate travel over the line. Bill is a good rustler and is accommodating.

We are informed by reliable authority that a daily train will be in operation over the C. & C. within two weeks. The large amount of hauling created by Tonopah and the increased output of the Soda works at Keeler will make additional train service necessary.

Tonopah now has 1,000 people. It contains 200 canvas and 125 board structures. There are nine restaurants, seven saloons, ten stores, three doctors and one dentist. Wood is $15 a cord. Board $8 and $9 a week. Single meals are 50 cents. All drinks are a bit a glass.

We notice in the Washington Post of Saturday last Richard S. Miner, the well known attorney of Bridgeport, has been admitted to practice in the United States Supreme Court. This will be gratifying to the friends of Mr. Miner in this county. He has been East for several months, and is expected home in a day or two.—Chronicle Union.

Mr. Stewart, who has been section foreman for the Citrus section for over two years, left for Los Angeles last Sunday with his family. While his duties did not permit of his making many acquaintances in Independence, those who know him say he is an honorable man, and he bears a good reputation here. He was discharged because of friction with Road Master McBride.

Thos. W. Hill of Big Pine spent several days in town this week. Mr. Hill has great faith in the Montezuma mine which he recently sold to Mr. Nolan for $8,500 and states that only his advanced age caused him to dispose of the property. Mr. Hill states that the new owner has installed a dry crushing plant and will use concentrators. A very large body of low grade concentrating ore has been blocked out.

Tonopah News

The following articles of interest are clipped from the Tonopah Bonanza of November 2d:

S. A. Knapp of Hawthorne arrtved on Monday's stage.

N. Wolfskill, a prominent mining man of Los Angeles, is here examining mines.

J. S. Stotler, an ex-merchant of Ballarat, is in town and will engage in business.

This is a very cheap town to live in, in fact the cheapest on the coast. Whenever you go to the store for an article they are always out, consequently you return home with your money in your pocket and at the end of a month it has not cost you more than $5.75 to live. This is surely a cheap camp to live in.

The total number of teams engaged in hauling ore from Tonopah to Sodaville is 45. These 45 teams are made up of 396 animals. The ore-moving capacity of these 396 animals every ten days, the length of time required to make the trip to Sodaville and return, is 276 tons. This would amount to 828 tons a month. As is very well known the teams at present on the road can haul only a fraction of the shipping ore which is actually being produced.

The cry this week has been no butter or lard in town. Where is that Wabuska man that had contracted for all the butter made at the creamery near that place. About 200 rolls of the article are consumed daily in Tonopah.

Late reports from the new strike south of town, mention of which was made in our columns not long since, are very encouraging. An eighteen inch ledge of $200 ore has been developed to such extent that its permanency to considerable depth is assured. This ledge extends practically the length of three or four claims and in places carries a seam of talc along one wall that assays as high as $1400 a ton. Several leases have been let in the new district and every few days a wagon loaded with supplies can be seen leaving town for that locality.

The Liberty Springs district is also attracting considerable attention and a number of prospectors are now on the ground.

Several monster low grade ledges of free-milling ore are known to exist there and samples of lead carbonate ore running well in both gold and silver are being sent in for assay.

Distressing Accident.

A. C. Harvey of Lone Pine furnishes the following facts relative to the death of W. A. Baldwin last Tuesday. The deceased and Ben T. Williams were working with picks and shovels on the north grade from Cerro Gordo to Keeler, repairing the road where it was recently washed out. They were working under a bank when it suddenly fell; a lump of earth weighing about 300 pounds narrowly missed Williams and struck Baldwin, knocking him against a sled which was on the grade, breaking his neck and causing instant death. A coroner's jury, consisting of Abraham Morris, John H. Halterman, Jas. Rice, J. J. Morton, R. Lockett and Fred Spear was summoned by Mr. Harvey and a verdict was rendered in accordance with the above facts. The two Baldwins, father and son, have been around Keeler for some time, and the unusually strong attachment existing between them was a matter of frequent comment. The father had some trouble with his eyes and left for Los Angeles Monday to have them treated. The lamentable accident will be a terrible blow to him. The remains were interred at Keeler and the coffin was covered with floral offerings by the ladies of that place. It is a peculiarly sad affair and the poor father who lost at once a son, brother and loving comrade is to be pitied.

A New Fire Brick.

Referring to the car of 6,500 bricks that came in from the east recently, we learn that the Inyo Development Company is building a new plant for the furnacing of carbonate of soda; the bricks used in the furnace are known as magnesite and are manufactured in Greece, Europe. As compared with the ordinary English fire brick, which were used in the construction of the present furnace, these bricks show a much greater density, although there is no appreciable difference in weight. These magnesite brick which are not to be secured any where but in Greece, are particularly adapted for the work of the soda company, as it is claimed they are impregnable and will be proof against the carbonate of soda, which readily eats into the ordinary fire brick, destroying its utility.

Commencing Work.

William E. Cox Esq. secretary of the William Penn Colonial Association, arrived at Independence yesterday and will remain in the vicinity some time. The company contemplate considerable work in cleaning out the ditches and in all probability extending them. A force of men is now at work clearing off a town site at a point about three miles north of the Lone Pine station. Quite a number of families will settle on the lands of the company this fall and the work of bringing the large tract under cultivation systematically begun. They mean business and are going about it in the right way. See the ad for teams in this issue.

Did What They Could.

Anent the article on the Kearsarge trail in the last issue, we learn that Rangers Naylor, Harvey and Carrasco did considerable work on it last year. Naylor in particular did some good work in building a new section of trail around a swamp at at the foot of the hill below Bull Frog, and also in breaking up rock on a very bad place about two miles below this point. The trail down Bubbs Creek hill to Kings River was also fixed up. He was unable, however, to do the necessary work for lack of powder for blasting and necessary appliances. As it now stands the trail is unsafe and difficult to travel and next year should be put in first class coudition.

SUPERIOR COURT.

Hon. Walter A. Lamar, Judge.

TUESDAY, Nov. 5, 1901.

The People vs. Maxwell and Hunter—Trial set for Saturday, Nov. 16, 1901.

Real Estate Transfers.

Recorded since last report:

W. H. Adams to Chas. Douglas—60 acres of oil land near Olancha, $1.

S. E. Knapp to G. L. Adams—40 acres of oil land near Olancha, $1.

Geo. Krornert to W. H. Adams—20 acres of oil land near Olancha, $1.

Geo. K. Prior to W. H. Adams—20 acres of oil land near Olancha, $1.

F. J. Syvertson to W. H. Robinson—100 acres of oil land near Olancha, $1

Jas. Taylor to Snover & Meyers—⅙ undivided interest in 4 mining claims near Ballarat, $500.

Hannah Eldred Pitman to Robt. M. Chrysler—Lots 14 and 15 in Big Pine (Seeley's Plat), $2000.

Hattie McKell et als to Adams Oil Company—All their interest in 7360 acres of oil land near Olancha, consideration: stock in Adams Oil Co.

Should Be Preserved.

What is perhaps the largest and most unique specimen of wood carving known exists at a little green meadow on the Kaweah river. Many years ago a consumptive named Wolverton went into the Sierras, seeking the pure mountain air to prolong his life. In a beautiful, grassy glade he found one of the giant redwoods, upward of twenty feet in diameter, uprooted by a storm of a pre-historic era and stretched in its giant length upon the sward. He first erected a rude shelter beside the monster, and then conceived the idea of constructing a home within it such as surely no man ever had before. He began chopping and the log proved solid throughout First a room 14 x 14 feet square with a ceiling 8 feet high was hewn out of the firm timber. Windows were cut through and the casements carefully carved in the walls. In removing the surplus wood a table was carved in place, settees about the walls and a dresser in one corner. Next a raise of two steps was made and a bed chamber hewn out. His bed was carved with the same patient care, a washstand, wardrobe and chairs. Beneath the bedroom and still in the log he made a basement with chests and bins cut out the same as the rest of his furniture. A wash room was cut in another part of the log, with wash-tubs cut in the solid timber. It took years to complete the work, and the patient worker took great pride in his self-appointed task. He died a short time ago, and as this most curious of dwellings is within the confines of a National Park, the authorities should look to its preservation.

Clippings.

The following items are culled from the Mojave Tomahawk;

George Lewis is with us for a few weeks' stay. His wife is visiting Tehachapi friends.

Fifteen Mongolians came in Wednesday morning and were shipped to Keeler Thursday. They are to work in the borax and soda mines of Inyo.

Mrs. M. G. Reddy is in Los Angeles now visiting relatives and friends. Can't you tell by the hungry look on Mike's face that he is keeping bach?

The Ratcliff's Settlement.

A settlement of the affairs of the Ratcliff Consolidated Mining Company has been effected in the United States Circuit Court. Judge Wellborn has approved the final accounting of Receiver Gordon Surr and ordered the balance of $4,232.60 to be apportioned among the creditors. Mr. E. C. Nichols will receive 81.31 per cent and Wells, Fargo & Co. 18. 69 per cent of the amount. The Ratcliff mines, which are near Ballarat, this county, will in the meantime remain in charge of Mr. Surr.

NEW ADVERTISEMENTS.

TO LAKE TAHOE.

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains on Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leav- promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the mo ning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spen examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,10 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

Women Must Sleep.

Avoid Nervous Prostration.

If you are dangerously sick what is the first duty of your physician? He quiets the nervous system, he deadens the pain, and you sleep well.

You ought to know that when you ceased to be regular in your courses, grow irritable without cause, and pass sleepless nights, there is serious

MRS. HARTLEY.

trouble somewhere, and nervous prostration is sure to follow.

You ought to know that indigestion, exhaustion, womb displacements, fainting, dizziness, headache, and backache send the nerves wild with affright, and you cannot sleep.

Mrs. Hartley, of 221 W. Congress St., Chicago, Ill., whose portrait we publish, suffered all these agonies, and was entirely cured by Lydia E. Pinkham's Vegetable Compound; her case should be a warning to others, and her cure carry conviction to the minds of every suffering woman of the unfailing efficiency of Lydia E. Pinkham's Vegetable Compound.

Pure Sugar.

A San Francisco chemist says there is only one refinery in the world that makes absolutely pure sugar. The manufactory is in Germany, and it supplies chemists and druggists with sugar for solutions which must be unclouded. This chemically pure article would not find much sale for table use, as it is a dirty grayish white in appearance. When dissolved, it gives a clear solution, there being no artificial coloring matter in suspension.

Accounting For It.

"It may be merely fancy," remarked Mrs. Selldom-Holme, "but since my husband began drinking the water from that iron spring he has seemed to be ten times as obstinate as he used to be."

"Perhaps," suggested Mrs. Nexdore, "the water is tinctured with pig iron."—Chicago Tribune.

Take Nature's remedy, Garfield Tea. Inexpensive and Effective. 15 pints or 30 doses for 25c. It is composed of medicinal HERBS, not mineral Poisons. It cures constipation and sick headache, kidney and liver diseases. Good for all.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

For pimples, sallow complexion, impure blood and poor digestion use Adams' Sarsaparilla Pills. They improve complexion and cure constipation. 10c, 25c. Druggists.

Mem. for Good Health.

Today drink some "Castlewood" Bourbon, or Rye Whisky. Highest grade Kentucky goods. Cartan, McCarthy & Co., sole distributers, San Francisco.

The Best Prescription for Malaria

Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

As She Saw It.

Mrs. Kleener—What is the matter with you this evening, John, that you ain't smoking?

Mr. Kleener—The doctor says I mustn't. He says I must stop smoking or die.

Mrs. Kleener—Oh, I'm so glad! You won't be scenting up my curtains any more, will you?—Boston Transcript.

BRICKS WITHOUT STRAW.

More than a thousand years ago—
Shadows of time, how the days go by—
There was a man I used to know—
May seem strange, but you'll see it's so
After I tell you the reason why—
Worked in a brickyard, same as you
And all of us have to do;
Mixed in the trouble and worry and strife,
The mirth and the other things of life;
Stirred in the hopes and the pains and fears,
Kneaded the mud with his sweat and his tears,
Humanest mass that ever you saw.
"Poor brick!" said the man, "but I have no straw!"

Up to his knees in the miry pit,
A pygmy's way, but a giant's grit;
His back was a chain of throbbing aches,
Lifting the mold with its earthen cakes;
Elbows rusty as hinges of steel,
Knees so lame he could hardly kneel;
Mud so stiff it would clog a plow
And couldn't be stirred with a wheel nohow;
Nights as short as the days were long;
Nothing seemed right, but everything wrong.
"Best I can do," said the man; "but, pshaw,
You can't make brick when you have no straw!"

Taskmasters pitiless lashed the man.
"Can't!" sobbed Weakness, but Courage cried, "Can!"
"Don't!" said Despair, but Duty cried, "Do!"
"All right," said the man, "I'll worry her through!
Can't do much, and I reckon you'll see
Brick won't be just what they ought to be;
Ain't nigh so good as I know I could make
If I just had straw; but you'll have to take
The best I can do for the work's own sake."

He finished his tale of brick and then
Went home to rest, and the sons of men
Looked on his perfect work and saw
He'd have spoiled the brick had he put in straw.
—Robert J. Burdette.

GREYHOUNDS.

They Are the Fleetest of All Four Footed Animals.

Comparatively few people realize of what remarkable speed dogs are capable. Some remarkable statistics in regard to this have been gathered by M. Dusolier, a French scientist.

After pointing out the marvelous endurance shown by little fox terriers who follow their masters patiently for hours while the latter are riding on bicycles or in carriages, he says that even greater endurance is shown by certain wild animals that are akin to dogs.

Thus the wolf can run between 50 and 60 miles in one night, and an arctic fox can do quite as well, if not better.

Nansen met one of these foxes on the ice at a point more than 70 miles northwest of the Sannikow territory, which is 480 miles from the Asiatic coast. Eskimo and Siberian dogs can travel 45 miles on the ice in five hours, and there is one case on record in which a team of Eskimo dogs traveled 6½ miles in 28 minutes.

According to M. Dusolier, the speed of the shepherd dogs and those used in hunting ranges from 10 to 15 yards a second. English setters and pointers hunt at the rate of 18 to 19 miles an hour, and they can maintain this speed for at least two hours.

Foxhounds are extraordinarily swift, as is proved by the fact that a dog of this breed once beat a thoroughbred horse, covering four miles in 6½ minutes, which was at the rate of nearly 18 yards a second.

Greyhounds are the swiftest of all four footed creatures, and their speed may be regarded as equal to that of carrier pigeons. English greyhounds, which are carefully selected and which are used for coursing, are able to cover at full gallop a space between 18 and 23 yards every second.

How great an achievement this is may be judged from the fact that a thoroughbred horse rarely if ever exceeds 19 yards. Moreover, it is said that a hare at its greatest speed never goes faster than at the rate of 18 yards.

These interesting statistics are exciting much comment among sportsmen and other lovers of dogs, and the opinion is unanimous that M. Dusolier has fully proved the right of the greyhound to rank as the swiftest of the quadrupeds. Express engines only surpass them.—London Mail.

He Knew.

She—How beautifully Miss Heavyweight dances! She doesn't seem to touch the floor sometimes!

He (whose feet are still suffering from the last polka with her)—She doesn't!—Punch.

His Record as an Abstainer.

She—Are you a total abstainer, Colonel Blue Grass?

He—Yes, ma'am. I hain't touched water for 40 years.—Chicago News.

An Old Friend

S. S. S. has been before the public for many years; from a small beginning, it has steadily worked its way to the front, and is now known in every city, town and hamlet in the country. Its staunchest friends are those who have known it longest and have witnessed its wonderful curative powers in their own families or among their friends and acquaintances. Grateful patients in all parts of the country tell of their restoration to health and happiness, and the testimony of these is the highest evidence of the medicine's worth. S. S. S. is more popular today than ever in its history—no other remedy stands so high, has ever given such perfect satisfaction or is so reliable in the cure of Cancer, Rheumatism, Catarrh, Contagious Blood Poison, Scrofula, Eczema, Psoriasis, Salt Rheum, Acne, or any disease that originates in the blood. Being strictly a vegetable preparation, you will find it agrees with you much better than a drug store concoction or any of the widely advertised potash and mercury remedies, which affect the bones, muscles and stomach, causing Rheumatism or Dyspepsia. If you have never tried S. S. S., you will be surprised at the immediate good effects,

Don't Experiment—Take S. S. S.

for no sooner does it get into the circulation than the appetite increases; you grow stronger, and gradually but surely it drives out the poisons and restores the blood to a healthy condition. If there is a sore or ulcer on the body, it begins to heal around the edges, the discharge finally ceases and the place gets well; muscular and bone pains vanish, and the skin is relieved of all itching, irritating eruptions. Nervous, run down and anaemic people will find S. S. S. just the medicine they need, for blood poverty and illy nourished nerves are responsible for their condition. For old people and children S. S. S. has no equal; being free from all minerals, it does not nauseate or have any injurious effect whatever, and keeps the blood in good condition, thus fortifying against disease. Experience teaches what is good and what is not good; this applies particularly to medicine, and S. S. S., a remedy that has retained the confidence of the people for nearly 50 years, must have merit—IT CURES, is the secret of its success. When you call for S. S. S. don't be persuaded to accept something else—there is no substitute for S. S. S. It is the only guaranteed purely vegetable blood purifier, and the safest and best for all blood and skin troubles. Do not let them force an inferior mineral remedy on you because there is a larger profit in it. If you have any blood or skin disease, don't hesitate to write us about it; our physicians will carefully consider your case and advise you without charge. Book on Blood and Skin Diseases free.

HOTTEST PLACE ON EARTH

It is Bahrein, on the Southwestern Coast of Persia.

The hottest region on the earth's surface is on the southwestern coast of Persia, on the border of the Persian gulf. For 40 consecutive days in the months of July and August the mercury has been known to stand above 100 degrees in the shade night and day and to run up as high as 130 degrees in the middle of the afternoon.

At Bahrein, in the center of the most torrid belt, as though it were nature's intention to make the place as unbearable as possible, water from wells is something unknown. Great shafts have been sunk to a depth of 100, 200, 300 and even 500 feet, but always with the same result—no water. This serious drawback notwithstanding, a comparatively numerous population contrives to live there, thanks to copious springs which burst forth from the bottom of the gulf more than a mile from the shore.

The water from these springs is obtained in a most curious and novel manner. "Machadores" (divers), whose sole occupation is that of furnishing the people of Bahrein with the life giving fluid, repair to that portion of the gulf where the springs are situated and bring away with them hundreds of bags full of the water each day. The water of the gulf where the springs burst forth is nearly 200 feet deep, but these machadores manage to fill their goatskin sacks by diving to the bottom and holding the mouths of the bags over the fountain jets—this, too, without allowing the salt water of the gulf to mix with it.

The source of these submarine fountains is thought to be in the hills of Osmond 400 and 500 miles away. Being situated at the bottom of the gulf, it is a mystery how they were ever discovered, but the fact remains that they have been known since the dawn of history.

ANIMAL LIFE.

The army worm is essentially a grass eating insect, though it often feeds upon other plants, and is said to prefer oats to corn.

The malaptecurus, a fish only eight inches long, can develop a shock of 200 volts of electricity in the two-thousandth part of a second.

Several pairs of pigeons which a scientist has observed in Paris have raised their young in nests made entirely of hairpins collected on the paths of the Luxembourg.

The largest nest in the world is built by the mound bird, a sort of Australian fowl. It makes mounds sometimes 150 feet in circumference, in which it buries its eggs five feet deep.

The heaviest bird that flies is the great bustard. In size it exceeds the Norwegian blackcock. The old males weigh about 35 pounds, but when food is plentiful the young males may weigh 40 pounds. Great bustards were formerly as plentiful in western Europe as partridges. Now they are rarely found.

Eruptions

Dry, moist, scaly tetter, all forms of eczema or salt rheum, pimples and other cutaneous eruptions proceed from humors, either inherited, or acquired through defective digestion and assimilation.

To treat these eruptions with drying medicines is dangerous.

The thing to do is to help the system discharge the humors, and strengthen it against their return.

Hood's Sarsaparilla permanently cured J. G. Hines, Franks, Ill., of eczema, from which he had suffered for some time; and Miss Alvina Wolter, Box 212, Algona, Wis., of pimples on her face and back and chafed skin on her body, by which she had been greatly troubled. There are more testimonials in favor of this great medicine than can be published.

Hood's Sarsaparilla

Promises to cure and keeps the promise. Don't put off treatment. Buy a bottle of Hood's today.

HUSTLING FOR BUSINESS.

More or Less of It Done In New York Lawyers' Offices.

"Get a move on! That's the great modern motto," said a New York lawyer who has been practicing in the local courts for the last 25 years.

"When I was admitted to the bar," he went on, "there was a great idea of the dignity of the profession. A lawyer would about as soon have paraded Broadway carrying a sandwich sign calling attention to his legal ability as he would have thought of hustling in any other way for business. The thing to do was to rent an office and sit in it until somebody came and dug you out of the dust and spider webs and asked you to take a case.

"The march of progress has changed all that. Every law firm in this city hustles for business. I don't mean that the big men of the firm chase around after clients. Of course they don't. But the firm does a lot of shrewd planning ahead. It schemes in a particular fashion of its own to widen its sphere of usefulness—to itself.

"Of late years one of the expedients adopted has been the taking into the firm of young college graduates who can give a reasonable guarantee that they will bring business. College men know of this custom, and many of them shape their life at the university accordingly. They are after friends. They want to be popular. They want to be able to 'swing' as much of the future legal business of their fellow graduates as they can.

"A chap who can bring business of that sort is taken in on a good salary even when he is the veriest tyro at law. He's expected, of course, to do what real work he can and to study hard. But the salary is for the pull he can exert over his fellows."—New York Sun.

Ingenious.

"I can't help admiring the ingenuity of the landlady at our house."

"In what way?"

"At breakfast time she burns a grain or two of coffee on the kitchen stove, so as to fill the dining room with the odor, and then gives us chicory to drink."

A SUCCESSFUL MAN.

How He Attained His Present Enviable Position.

"Honesty, aggressiveness and health are the requisites for success."

These are the words of John H. Riley, of Cazenovia, N.Y., who has attained the main thing that all men desire. "The first two qualities I mention are necessary," he continued, "if a man or a woman wants to rise in life, but they are of little use if the third is not in your possession."

In response to questions he said:

"About two years ago I was taken down with inflammatory rheumatism and was flat on my back, racked with pain and as helpless as a child for fourteen weeks. During those weeks I suffered as only they who have inflammatory rheumatism can suffer."

"Didn't you have any medical attendance" queried the reporter.

"Yes, I had the best that could be procured but the doctors did not help me."

"But how did you become cured?"

"Before I was taken sick I had seen advertisements of Dr. Williams' Pink Pills for Pale People which stated that they were good for rheumatism. I was willing to try anything for relief so I got some and was benefited almost immediately. I had taken but six boxes when I was able to return to my work, but I continued taking them till nine boxes were used up. I was entirely cured and have had no return of the trouble since. I consider Dr. Williams' Pink Pills for Pale People a wonderful remedy, and I have recommended them to a great many people."

Rheumatism has been cured in hundreds of other instances by Dr. Williams Pink Pills for Pale People. They are a specific not only for that disease but for all ailments arising from a disordered condition of the blood or shattered nerves, such as locomotor ataxia, partial paralysis, St. Vitus' dance, sciatica, neuralgia, nervous headache, the after-effects of the grip, palpitation of the heart, pale and sallow complexions and all forms of weakness either in male or female.

Dr. Williams' Pink Pills for Pale People are sold in boxes at 50 cents a box or six boxes for $2.50, and may be had of all druggists, or direct by mail from Dr. Williams Medicine Co., Schenectady, N. Y.

THE BIRTH OF THE MOON.

When the Earth Was a Sphere of Lava, Molten and Flattened.

The earth revolves on its axis once in 24 hours. Millions of years ago the day was 22 hours; millions of years before it was 21 hours. As we look backward into time we find the earth revolving faster and faster. There was a time, ages ago, long before geology begins, when the earth was rotating in a day of five or six hours in length. In the remotest past the earth revolved in a day of about five hours. It could revolve no faster than this and remain a single unbroken mass.

It was at this time that the moon was born—separated, broken off from the parent mass of the earth. The earth was then a molten, flattened sphere of lava. Its whole body was fluid. The tides, which now are small, superficial and, so to say, local, were then universal and immense. They occurred at short intervals. The whole surface of our globe was affected. And the corresponding lunar tides in the fluid, molten moon were indefinitely greater still.

Our day is now 24 hours; the distance of the moon is now 240,000 miles. When our day was about five hours long, the moon was in contact with the earth's surface. It had just broken away from its parent mass. As the length of the terrestrial day increased, so did the distance of the moon. The two quantities are connected by inexorable equations. If one varies, so must the other. Whenever the rotation time of a planet is shorter than the period of revolution of its satellite, the effect of their mutual action is to accelerate the motion of the satellite and to force it to move in a larger orbit—to increase its distance, therefore.

The day of the earth is now shorter than the month—the period of revolution—of the moon. The moon is therefore slowly receding from us, and it has been receding for thousands of centuries. But the day of the earth is, as we have seen, slowly growing longer. The finger of the tides is always pressing upon the rim of our huge flywheel and slowly but surely lessening the speed of its rotation. So long as the terrestrial day is shorter than the lunar month, the moon will continue to recede from us.—Professor E. S. Holden in Harper's Magazine.

Animal Intelligence.

In a circus in Paris a lion was given some meat shut up in a box with a lid to it, and the spectators watched to see whether the lion would open the lid or crack the box. He did the former, much to the gratification of the company.

In the London "Zoo" a large African elephant restores to his would be entertainers all the biscuits, whole or broken, which strike the bars and fall alike out of his reach and theirs in the space between the barrier and his cage. He points his trunk straight at the biscuits and blows them hard along the floor to the feet of the persons who have thrown them. He clearly knows what he is doing, because if the biscuit does not travel well he gives it a harder blow.

Refining Petroleum.

The refining of petroleum is a process of distillation in which it is separated into several marketable products. There are two methods of distillation, known technically as "in vacuo" and "cracking." In the first the petroleum is distilled in a partial vacuum and in the second with superheated steam. This process receives its name from the cracking sound of the steam as it enters the undistilled petroleum.

STERILIZED BARBER-SHOP.

A Famous Shop in the Carrollton Hotel, Baltimore, Maryland.

The barber-shop in the Carrollton hotel, Baltimore, sterilizes everything it uses in the shop. The sterilizing is done by heat. The towels, the razors, the strops, the soap, the combs and brushes are all sterilized before being used on a customer. Where there is no sterilization, have the barber use Newbro's Herpicide. It kills the dandruff germ, and it is an antiseptic for the scalp, and for the face after shaving. All leading barbers everywhere appreciate these potent facts about Herpicide and they use it. "Destroy the cause, you remove the effect."

YOU KNOW WHAT YOU ARE TAKING

When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c

Brooklyn, N. Y., Sept. 30th.—Information has been received regarding the wonderful curative powers of the Garfield Headache Powders; people everywhere are using them and writing the manufacturers of the good results obtained.

Advice to Students.

To Whom It May Concern: The best College to attend for the purpose of becoming practical Stenographers is, in our judgment, the Gallagher-Marsh, Parrott Building, S. F., Cal. Ernest A. Gurvin, L. A. Washburne, W. J. Nicholson, Official Reporters Supreme Court, State of Cal. Send for catalogue.

The next time you call for a drink try Gilt Edge Whiskey, because it is pure. Wichman, Lutgen & Co., San Francisco, Cal., Sole proprietors for U. S. A.

There is more Catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease, and prescribed local remedies, and by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease, and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials.

Address, F. J. CHENEY & CO., Toledo, O.

The Backslider.

"Many years ago," says the Providence Journal, "in a village not 20 miles from Providence a revival was in progress. A young man, one of indistinguishable twin brothers who had previously been observed, as was supposed, in an attentive attitude at the meeting, rose for prayers, walked to the anxious seat, and there wailed and moaned to such good purpose that the deacons were sure he was on the high road to salvation.

The next day he was overheard in the back yard at home chopping wood and swearing painfully at a refractory log. When remonstrated with for his sudden backsliding, he merely said, "Oh, brother Jim couldn't go to the meeting last night, so I went and hollered for him."

Meant What It Said.

"No," said the impecunious one, "you can't believe all that you see in the newspapers."

"Are you prepared to specify?" the other man asked.

"I am. I saw a statement in the financial columns that money was easy, but when I tried to negotiate a loan I found that the reverse was true."

"You misunderstood the paragraph. It didn't say the people were easy."—Judge.

PARTRIDGE EGGS.

Said to Be More Nutritious Than the Birds Themselves.

"Few persons are aware of the fact," said a well known physician, "but it is true, nevertheless, that the egg of the partridge is one of the most nutritious things in the world. They are not used for eating purposes except in very rare cases, and then it generally happens in remote rural districts. I have known negro families in the state of Louisiana during the laying season to live on the eggs of partridges. And they would flourish handsomely and grow fat on account of the rich properties of the eggs.

"These eggs, of course, never find their way into the market because they are never taken from their nest except by such persons as I have mentioned, and they rob the nests, I suppose, because their principal food supply comes from this source. Quail meat comes pretty high in the market at all times, and the average man will find it more profitable to spare the eggs and wait for the birds when the hunting season rolls around. These men would pass 100 nests in one day without disturbing an egg. The sport of hunting the birds is an additional incentive.

"The average negro does not care so much about this aspect of the case. He figures that the white man, having the best gun and the best dog, will beat him to the bird. So he goes after the egg. One partridge will lay anywhere from 12 to 20 eggs, and a nest is a good find. I know of many families in rural sections who feast on these eggs in the laying season. I have tried the egg myself as an experiment. I found it peculiarly rich. It has a good flavor, is very palatable and in fact is altogether a very fine thing to eat. Really I believe that the egg has more nutrition in it than the fully developed bird, but of course, as one of the men fond of the game in the field, I would like to discourage the robbery of the nests."—New Orleans Times-Democrat.

Preparing For a Journey.

Jerome K. Jerome recalled, with reverence, a habit of his methodical uncle who, before packing for a journey, always "made a list." This was the system which he followed, gathered from his uncle's own lips:

Take a piece of paper and put down on it everything you can possibly require. Then go over it and see that it contains nothing you can possibly do without.

Imagine yourself in bed. What have you got on? Very well; put it down, together with a change. You get up. What do you do? Wash yourself. What do you wash yourself with? Soap. Put down soap. Go on till you have finished. Then take your clothes. Begin at your feet. What do you wear on your feet? Boots, shoes, socks. Put them down. Work up till you get to your head. What do you want besides clothes? Put down everything.

This is the plan the old gentleman always pursued. The list made, he would go over it carefully to see that he had forgotten nothing. Then he would go over it again and strike out everything it was possible to dispense with. Then he would lose the list.

Iron In the Sixteenth Century.

The cost of the railings around St. Paul's cathedral (claimed by several Sussex parishes, but really made at Lamberhurst, a parish partly in Kent) is recorded in the account books of the manufactory as having been £11,202 0s. 6d. The total weight was 200 tons. The amount of employment given may be conjectured from the statement of Richard Woodman, one of the Marian martyrs burned at Lewes in 1557, that he had set a hundred persons to work for the year together.—London Spectator.

Sober Second Thought.

"I thought I was riding into office on a wave of popular enthusiasm!"

"Yes?"

"But after I'd paid the bills I felt as if I'd footed it in, so to speak."—Detroit Journal.

End of the Boer War.

The Boer war which has been raging for the past two years, will soon be ended, according to the latest advices. News of peace will be hailed with joy by all. War is a terrible thing and has slain many people, but we believe stomach troubles have slain even more. When the stomach is out of order, and you suffer from dyspepsia, indigestion, flatulency, sick headache or constipation, we would urge you to try Hostetter's Stomach Bitters. It will cure you.

She—It's no use bothering me, Jack. I shall marry whom I please. He—That's all I'm asking you to do, my dear. You please me well enough!

It, like truth, only asks a hearing. Wizard Oil cures pain.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

Her Mother—Edith, don't you think you are getting too old to play with little boys? Edith—No, mamma; the older I get the better I like them.

The debilitating drains and discharges which weaken so many women are caused by Catarrh of the distinctly feminine organs. The sufferer may call her trouble Leuchorrhoea, or Weakness, or Female Disease or some other name, but the real trouble is catarrh of the female organs and nothing else.

Pe-ru-na radically and permanently cures this and all other forms of Catarrh. It is a positive specific for female troubles caused by catarrh of the delicate lining of the organs peculiar to women. It always cures if used persistently. It is prompt and certain.

BEST FOR THE BOWELS

If you haven't a regular, healthy movement of the bowels every day, you're sick, or will be. Keep your bowels open, and be well. Force, in the shape of violent physic or pill poison, is dangerous. The smoothest, easiest, most perfect way of keeping the bowels clear and clean is to take

FROM POORHOUSE TO PALACE

BY MARY J. HOLMES

CHAPTER IV.—(Continued.)

With the utmost care Ella arranged her long curls, and then, tying over her black dress the only white apron which she possessed, she started for Mrs. Campbell's. The resemblance between herself and Ella Campbell was indeed so striking that but for the dress the mother might easily have believed it to have been her own child. As it was, she started up when the little girl appeared, and, drawing her to her side, involuntarily kissed her; then, causing her to sit down by her side, she minutely examined her features, questioning her meantime concerning her mother and her home in England. Of the latter Ella could only tell her that they lived in a city, and that her mother had once taken her to a large, handsome house in the country, which she said was her old home.

From this Mrs. Campbell inferred that Ella's family must have been superior to most of the English who emigrate to this country, and after a few more questions she decided to take her for a time at least; so with another kiss she dismissed her, telling her she would come for her soon. Meantime arrangements were making for Mary and Alice, and on the same day in which Mrs. Campbell was to call for Ella Mr. Knight, one of the "selectmen," whose business it was to look after the town's poor, also came to the cottage. After learning that Ella was provided for, he turned to Mary, asking, "how old she was, and what she could do," saying that his wife was in want of just such a girl to do "chores," and if she was willing to be separated from Alice he would give her a home with him.

But Mary only hugged her sister closer to her bosom as she replied, "I'd rather go with Alice. I promised mother to take care of her."

"Very well," said the man. "I'm going to North Chicopee, but shall be back in two hours, so you must have your things all ready."

"Don't cry so, Mary," whispered Billy, when he saw how fast her tears were falling. "I'll come to see you every week, and when I am older, and have money, I will take you from the poorhouse, and Alice, too."

Just then Mrs. Campbell's carriage drove up. She had been taking her afternoon ride, and now, on her way home, had stopped for Ella, who in her delight at going with so handsome a woman, forgot the dreary home which awaited her sister. While she was getting ready Mr. Knight returned, and, driving his old-fashioned yellow wagon up by the side of Mrs. Campbell's stylish carriage, he entered the house, saying, "Come, gal, you're ready, I hope. The old mare don't want to stand, and I'm in a desput hurry, too. I ort to be to hum this minute, instead of driving over that stony Partupog road. I hope you don't mean to carry that ar' thing," he continued, pointing with his whip toward Alice's cradle, which stood near Mary's box of clothes.

The tears came into Mary's eyes, and she answered, "Alice has always slept in it, and I didn't know but——"

Here she stopped and, running up to Ella, hid her face in her lap and sobbed, "I don't want to go. Oh! I don't want to go; can't I stay with you?"

Billy's yellow handkerchief was suddenly brought into requisition, and Mrs. Bender, who, with all her imaginary aches and pains, was a kind-hearted woman, made vigorous attacks upon her snuffbox, while Mrs. Campbell patted Mary's head, saying, "Poor child, I can't take you both, but you shall see your sister often."

Ella was too much pleased with Mrs. Campbell and the thoughts of the fine home to which she was going to weep, but her chin quivered when Mary held up the baby for her to kiss, and said, "Perhaps you will never see little Allie again."

When all was ready Mr. Knight walked around his wagon, and, after trying to adjust the numerous articles it contained, said: "I don't see how in the world I can carry that cradle; my wagon is chuck full now. Here is a case of shoes for the gals to stitch, and a pillercase of flour for Miss Smith, and forty 'leven other traps, so I guess you'll have to leave it. Mebby you can find one there, and if not, why, she'll soon get used to going without it."

Before Mary could reply Billy whispered in her ear, "Never mind, Mary; you know that little cart that I draw mother's wood in; the cradle will just fit it, and to-morrow afternoon I'll bring it to you, if it doesn't rain."

Mary knew that he meant what he said, and, smiling on him through her tears, climbed into the rickety wagon, which was minus a step, and, taking Alice into her arms, she was soon moving away. In striking contrast to this Ella, about five minutes afterward, was carefully lifted into Mrs. Campbell's handsome carriage, and reclining upon soft cushions was driven rapidly toward her new home.

Will their paths in life always continue thus different? Who can tell?

CHAPTER V.

How long and tiresome that ride was, with no one for a companion except Mr. Knight, who, though a kind-hearted man, knew nothing about making himself agreeable to little girls, so he remained perfectly taciturn. Alice soon fell asleep, and though the little arms which held her ached sadly, there was no complaint.

Only Mary's tears gushed forth, and falling upon the baby's face awoke her. Her nap was not half out, and setting up a loud cry she continued screaming until they drove up to the very door of the poorhouse.

"For the land's sake," said Mr. Knight, as he helped Mary from the wagon, "what a racket; can't you contrive to stop it? you'll have Sal Furbush in your hair, for she don't like a noise."

Mary glanced nervously round in quest of the goblin Sal, but she saw nothing save an idiotic face with bushy, tangled hair, and nose flattened against the window pane. In terror Mary clung to Mr. Knight, and whispered, as she pointed toward the figure, which was now laughing hideously: "What is it? Are there many such here?"

"Don't be afeerd," said Mr. Knight; "that's nobody but foolish Patsy; she never hurt anybody in her life. Come, now, let me show you to the overseer." And he led her toward the red-whiskered man, who stood in the door.

"Here, Parker," said he, "I've brought them children I was tellin' you about. You've room for 'em, I s'pose?"

"Why, ye-es, we can work it so's to make room."

They now entered the kitchen. Mary was very tired with holding Alice so long, and, sinking into a chair near the window, she would have cried; but there was a tightness in her throat, and a pressure about her head and eyes which kept the tears from flowing. She pressed her hands tightly and said, "Oh, I hope I shan't faint."

"To be sure you won't," said a loud, harsh voice, and instantly large drops of water were thrown in her face, while the same voice continued: "You don't have such spells often, I hope, for Lord knows I don't want any more fitty ones here."

"No, ma'am," said Mary, meekly; and looking up, she saw before her a tall, square-backed, masculine looking woman, who wore a very short dress, and a very high-crowned cap, fastened under her chin with bows of sky-blue ribbon. Mary secretly hoped she would not prove to be Mrs. Parker, the wife of the overseer. She was soon relieved of her fears by the overseer himself, who said, "Polly, I don't see any other way but you'll have to take these children into the room next to yourn. The baby worries a good deal, and such things trouble my wife, now she's sick."

The person addressed as "Polly" gave her shoulders an angry jerk, and sticking the pin on the waist of her dress, replied, "So, I s'pose it's no matter if I'm kept awake all night, and worried to death. But I guess you'd find there'd be queer doin's here if I should be taken away. I wish the British would stay to hum, and not lug their young ones here for us to take care of. Come, child, I will show you where you are going to sleep;" at the same time she caught up Alice, who, not liking her handling, kicked so vigorously that she was soon dropped, Polly remarking that "she was mighty strong in her legs for a sick baby."

After passing up a dark stairway they came to a door, which opened under the garret stairs, and Mary was startled by a voice which seemed to be almost over her head, and which, between a sneer and a hiss, called out, "See where the immaculate Miss Grundy comes!" Mary sprang in terror to Polly's side.

"Oh, what is it?" she said. "Is it Patsy?"

"Patsy!" was the tart reply. "She never is saucy like that. It's Sal Furbush."

Mary asked who Sal Furbush was, and was told she was one of the poor insane inmates. She subsequently learned that Sal was perfectly harmless, and struck up quite a friendship with her. At present Mary followed her guide until they came to a longer and lighter hall, or "spaceway," as it is frequently called in New England. On each side of this there were doors opening into small sleeping rooms, and into one of these Polly led her companion, saying, as she did so, "This is your room, and it's a great favor to you to be so near me. But mind, that child mustn't cry and keep me awake nights, for if she does, maybe you'll have to move into that other space, where we heard the laugh."

Mary thought she would rather do anything than that. She also felt a great curiosity to know who her companion was, so she at last ventured to ask, "Do you live here, Miss Polly?"

"Why, yes. I'm staying here for a spell now; kind of seeing things. My name isn't Polly. It's Mary Grundy, and somehow folks have got to nicknaming me Polly, but it'll look more mannerly in you to call me Mrs. Grundy; but what am I thinking of? The folks must have their supper."

That night Alice, who missed her cradle, was unusually restless, and Mary, remembering Mrs. Grundy's threat, carried her in her arms until after midnight. Then, without undressing, she threw herself upon the bed, and for the first time in many weeks dreamed of George and his parting promise to see her again. The next morning when she awoke, the clouds were pouring rain. "Billy won't come to-day," was her first thought, and, throwing herself upon the floor, she burst into tears, wishing, as she had once done before, that she had died with her mother.

In the midst of her grief the door was pushed hastily open, and Mrs. Grundy's harsh voice exclaimed, "Wall, so you are up at last, hey? I didn't know but you was goin' to take it upon you to sleep over, but that don't answer here. Do you think we's goin' to support you in idleness?"

Here, touched perhaps by the pale, tearful face, uplifted to hers, Mrs. Grundy's voice softened, and in a milder tone she added, "We won't mind about it, seein' it's the first morning; but, come—you must be hungry by this time."

Mary glanced at Alice. She was sleeping sweetly, and, though there seemed to be no reason, she still lingered.

"What are you waiting for?" asked Mrs. Grundy, and Mary, with some hesitation, answered, "I haven't said my prayers yet."

A change passed suddenly over Mrs. Grundy's face, and she turned away without a word. When she was gone Mary fell on her knees, and though the words she uttered were addressed more to her mother than to God, she felt comforted, and, rising up, started for the kitchen. It was a motley group which she found assembled around the breakfast table, and as she entered the room a man called Uncle Peter smiled on her, saying, "Come here, little daughter, and let me touch you with the top of my fourth finger."

About noon the clouds broke away, while here and there a patch of bright blue sky was to be seen. But the roads were so muddy that Mary had no hope of Billy's coming, and this it was, perhaps, which made the dinner dishes so hard to wash, and which made her cry when told that all the knives and forks must be scoured, the teakettle wiped and set with its nose north, in what Mrs. Grundy called the "Pout Hole," and which proved proved to be a place under the stairs, where pots, kettles and ironware generally were kept.

All things have an end, and so did the scouring, in spite of Mary's fears to the contrary, and then watching a time when Mrs. Grundy did not see her, she stole away upstairs. Taking Alice on her lap, she sat down by the open window where the damp air cooled and moistened her flushed face. The rain was over, and across the meadow the sun was shining through the tall trees, making the drops of water which hung upon the leaves sparkle and flash in the sunlight like so many tiny rainbows. Mary watched them for a time, and then looking into the road, she saw directly opposite the house Billy Bender and with him Alice's cradle. In a moment Mary's arms were thrown around his neck as tightly as if she thought he had the power and was come to take her away.

"Oh, Billy, Billy," said she. "I was afraid you would not come, and it made me so unhappy."

As Billy released her he was startled at hearing some one call out, "Bravo! That, I conclude, is a country hug. I hope she won't try it on me!"

Turning about he saw before him a white-faced boy, nearly of his own age, whose dress and appearance indicated that he belonged to a higher grade, as far as wealth was concerned. It was Henry Lincoln, notorious both for pride and insolence. Billy, who had worked for Mr. Lincoln, had been insulted by Henry many a time, and now he longed to avenge it, but native politeness taught him that in the presence of Mary 'twould not be proper, so without a word to Henry he whispered to the little girl, "That fellow lives near here, and if he ever gives you trouble just let me know."

"Kissed her then, didn't you?" sneeringly asked Henry, retreating at the same time, for there was something in Billy's eyes which he feared.

"Come into the house," said Mary, "where he can't see us," and leading the way she conducted him up to her own room, where there was no fear of being interrupted.

Alice was first carefully fixed in her cradle, and then kneeling down at Billy's side, and laying her arms across his lap, Mary told him of everything which had happened, and finished by asking, "how long she must stay here?"

Had Billy's purse been as large as his heart, that question would have easily been answered. Now he could only shake his head in reply, while Mary next asked if he had seen Ella.

"I have not seen her," returned he, "but I've heard that rainy as it was this morning, Mrs. Campbell's maid was out selecting muslins and jaconets for her, and they say she is not to wear black, as Mrs. Campbell thinks her too young."

Mary did not speak for some time, but her head dropped on Billy's knee, and she seemed to be intently thinking. At last, brushing aside the hair which had fallen over her forehead, Billy said: "What are you thinking about?"

"I was wondering if Ella wouldn't forget me and Alice now she is rich and going to be a lady."

Billy had thought the same thing, and lifting the little girl in his lap, he replied: "If she does, I never will;" and then he told her again how when he was older and had money he would take her from the poorhouse and send her to school, and that she should some time be as much of a lady as Ella.

(To be continued.)

NOT CONCLUSIVE OF GUILT.

Fair-Minded Men Are Often Deceived by Circumstantial Evidence.

"As to circumstantial evidence, it's a queer thing," said the man in the brown suit. "Five or six years ago I was in a town in Indiana for a night when a bank was robbed. Next morning I was arrested as an accomplice, it being contended that I was seen idling in front of the bank and evidently acting as sentinel for those within. Three different persons identified me as the man and the fourth claimed to have seen me enter the hotel at a late hour by way of a shed and a window. I was locked up for examination, with a chance of things going hard with me, when evidence began to come forward on my side. The landlord asserted and swore that I was sitting in the office at 10 o'clock p. m. Two servants swore to seeing me go to my room half an hour later. A man having rooms opposite the hotel swore that he saw me smoking at my window at midnight. A guest of the hotel who had a room next to mine swore that my snores disturbed him from midnight till 2 o'clock and that he heard me turn over in bed at 3, and so I was honorably discharged from custody."

"But about it's being queer?" was asked.

"Why, all the people on both sides were mistaken. I was not outside the bank at the time mentioned and neither was I in the hotel."

"But you were somewhere."

"Oh, of course. Fact is I got mashed on the landlord's daughter and we sat up all night on a balcony and squose hands and talked love and looked at the moonlight and slapped mosquitoes. Yes, sir, sat there all night like a couple of idiots, and though I declared I would die for her and she said she only wanted me and a humble cottage she was married to a red-headed butcher within a year and I was sued by a snub-nosed widow for breach of promise. I was simply observing, you know, that circumstantial evidence is a queer thing, and I wish to add that a juryman shouldn't be influenced too much by it."—Washington Post.

There is no distinction of parts of speech in the Chinese language, and no recognition of the principle of inflection.

TO understand correctly the origin of the dispute between Admiral Sampson and Admiral Schley it is absolutely necessary that the environment of the two men prior to the Spanish-American war and their physical and mental characteristics should be well understood.

The declaration of war with Spain did not come until April 25, but prior to that time the Navy Department assembled two squadrons for active naval duty—one called then the Key West squadron, having for its purpose the blockading of Havana, and the other a flying squadron. The first was commanded by Sampson and the second by Schley. Neither squadron entered upon active duty until after the declaration of war, nor in reality until after May 1, when Dewey's victory far east was known. On May 2 the Key West squadron sailed for Cuba under command of Rear Admiral Sampson. Following this was the naval fighting at Cardenas, the bombardment of San Juan by Sampson. On May 13 the Navy Department received word that the Spanish squadron of Admiral Cervera was west of Martinique, the Windward Islands. Later Sampson was advised that it was off Curacoa. He was ordered to proceed to Key West at once, to which point Schley's flying squadron had also been ordered. Both squadrons reached Key West, coaled and awaited orders. The flying squadron, under Schley, was the first to be ordered out Composed of the Brooklyn, Texas, Massachusetts and Scorpion, it was directed to proceed to Cienfuegos, a Cuban port near Havana, and to blockade the same. The Spanish squadron was supposed to be headed for that port, and Schley was clearly intended to intercept it. So confident was Washington that he would find Cervera at Cienfuegos that the Iowa, Castine and the collier Merrimac were sent to join him there after he had set his battleships on their course. But after he had left Key West the Navy Department was informed that Cervera was at Santiago, and advised Sampson to so instruct Schley. The Marblehead was sent to Schley advising him that the Spanish squadron was probably at Santiago, and directing him, if he were satisfied that it was not at Cienfuegos, to proceed with all dispatch to Santiago, and upon arrival there to establish communications with some of the inhabitants and ascertain definitely whether the ships were in port or not. Schley received these dispatches on May 23.

According to the official records at Washington on May 22 Sampson received advices from Key West that Cervera was at Santiago on May 21. Sampson, therefore, on May 23, left off his Havana blockade and sailed for St. Nicholas channel, intending to occupy that in such a manner as to prevent the approach of the Spanish squadron in that direction. There he received information on May 24 that Cervera was still at Santiago. On May 26 he heard from Schley to the effect that the latter was not satisfied that Cervera was not in Cienfuegos harbor, and that he would therefore remain off that port. The Wasp was sent on May 27 to Schley and from Sampson advising him that daily confidential reports stated that Cervera had been in Santiago from May 19 to May 25. He was ordered to proceed to that port at once. Before Schley could reply to these orders two dispatches from him to Sampson, dated May 25, were received by the latter. Schley stated in these that coaling off Cienfuegos, owing to high seas, was uncertain; that he was satisfied Cervera was not there, and that he would at once go eastward, but that on account of short coal supply in his ships he could not blockade the Spanish squadron if it was in Santiago, but would proceed to the vicinity of the Mole St. Nicholas, on the western coast of Hayti, from which point he would communicate. Sampson, on learning this, put in to Key West for coal himself, but before doing so he sent a dispatch to Schley to "remain on the blockade at Santiago at all hazards, assuming that the Spanish vessels are at that port." Sampson arrived at Key West on May 28, and then cabled Schley to ascertain definitely if Cervera was at Santiago. In the meantime Schley left Cienfuegos on the evening of May 24, and on May 26 was within twenty miles of Santiago, where the squadron stopped for repairs to the Merrimac. That night he signaled the squadron: "Destination Key West, via soupth side of Cuba and Yucatan channel, as soon as collier is ready. Speed nine knots." The squadron was under way by 9 o'clock and steamed two hours, when it was compelled to stop and make repairs on the Yale. The next morning Schley was met by a dispatch boat and given this dispatch from the Secretary of the Navy: "All department's information indicates Spanish division is still at Santiago. The department looks to you to ascertain the facts, and that the enemy, if therein, does not leave without a decisive action. Cubans familiar with Santiago say that there are landing places five or six nautical miles west from the mouth of the harbor, and that there insurgents will be found and not Spaniards. From the surrounding heights one can see every vessel in port. As soon as ascertained notify department whether enemy is there. Could not squadron and also the Harvard coal from the Merrimac leeward off Cape Cruz, Gonaives channel, or Mole Hayti? The department will send coal immediately to Mole. Report without delay situation at Santiago de Cuba."

Here arises the first great query of the opponents of Admiral Schley as to the wisdom of his course after the receipt of this dispatch. He was in bad shape for coal, his squadron was not in the best of condition. His opponents say he should have obeyed orders even if he lost every vessel he had. He contends that the safety of his squadron was his first consideration, and that a commander at sea must necessarily know better what he ought to do than a bureau chief on dry land at Washington. However this may be, he sent this message to Washington:

Merrimac engines disabled; sea is heavy; am obliged to have towed to Key West. Have been absolutely unable to coal the Texas, Marblehead, Vixen, Brooklyn from collier, owing to very rough sea. Bad weather since leaving Key West. The Brooklyn alone has more than sufficient coal to proceed to Key West. Cannot remain off Santiago present state squadron coal account. Impossible to coal leeward Cape Cruz in the summer, all owing to southwesterly winds. Much to be regretted cannot obey orders of department. Have striven earnestly; forced to proceed for coal to Key West by way of Yucatan passage. Cannot ascertain anything respecting enemy positive. Very difficult to tow collier, to get cable to hold.

Schley steamed westward that day toward Key West until a calm sea being reached he signaled the flying squadron to stop, and the Texas and Marblehead were coaled from the Merrimac. At that time Schley was forty miles southward and westward from Santiago. He remained there until the afternoon of May 28, when he gave the signal to return to Santiago. On the morning of May 29 he sighted the Cristobal Colon in the mouth of Santiago harbor and cabled Washington that Cervera was "bottled up." On May 31 he exchanged fire with the ships inside the harbor. June 1 he was joined by Admiral Sampson, and the blockade of the port commenced, and did not end until the destruction of the Spanish fleet on July 3.

The charge that Admiral Schley disobeyed orders after leaving Cienfuegos, in not going direct to Santiago, has been hotly pressed by his opponents. His official report as to his actions at that time states:

On May 23 the Hawk arrived with dispatches from Admiral Sampson, directing me to move eastward with the squadron to Santiago, if satisfied that the enemy's vessels were not in Cienfuegos. Not being satisfied at this time that they were not there, I held my position, being further strengthened in my opinion by the fact that I was informed by the captain of the British steamer Adula that when he left Kingston a cablegram had been received on the Thursday preceding my arrival off Cienfuegos, stating that the Spanish squadron had sailed from Santiago.

He coaled after stopping and adds:

Inasmuch as it was known that in case the Spanish squadron had reached Santiago Admiral Sampson was able to block any movement of the enemy through the Bahama channel, my intention in standing to the westward was, should it become necessary, to bar any effort of the enemy to reach Havana by a dash through the Yucatan passage.

The department at Washington did not accept the explanation, nor has it ever. Schley was not interfered with in his command, but he was given to understand that his delay at Cienfuegos was unaccountable; that his leaving Santiago after once arriving there was strange, and that his failure to turn back until he got ready to was a practical disobedience of orders.

His critics were busy at Washington and elsewhere while he remained off Santiago. They found fresh material for attack when on May 31, with the Massachusetts, Iowa and New Orleans, he engaged the Colon in the entrance to the harbor and the shore batteries. The engagement lasted about an hour, with the loss of eight men on the Reina Mercedes and no damage to the American vessels. Schley asserted that this was but a reconnoissance, but Washington asked why the Colon was not destroyed. Admiral Schley was very much in disfavor at Washington all during the month of June and throughout the blockading of Cervera at Santiago. Admiral Sampson was in charge of the blockade, and devised all the plans for it, and gave the orders indicating how the vessels should act in the event of Cervera's coming out. It was perhaps the irony of fate or something else equally unexplainable that on the morning of July 3, 1898, Admiral Schley should have been the ranking officer of the fleet at the moment when the first Spanish vessel poked her nose out of Santiago harbor and started on the dash for freedom. When the Spanish fleet came out the flagship New York, having Admiral Sampson on board, was four miles east of her blockading station, and seven miles from the harbor entrance. The New York was steaming rapidly for Siboney, where Admiral Sampson was to have a conference with Gen. Shafter. The Indiana was at her blockading station, to the east of the harbor and a mile and a half from land. The Oregon, Iowa, Texas and Brooklyn were two miles from shore and west of the harbor. The Gloucester was just east of the harbor entrance. The Spanish vessels came out at a speed ranging from eight to ten knots an hour, the Maria Teresa leading. They began firing the instant they sighted the American vessels. As their course was directed they were most directly headed for where the Brooklyn, with Admiral Schley on board, lay, and as Admiral Cervera afterward stated, they intended to sink the Brooklyn if possible.

MAP SHOWING POSITION AND MOVEMENTS OF WAR VESSELS AT THE BATTLE OF SANTIAGO HARBOR.

The admiral then continues, after relating how he ascertained that Cervera was not at Cienfuegos, detailing his run to Santiago:

The run to Santiago was marked by rain and rough weather. * * * On arriving off Santiago the collier Merrimac was disabled by the breaking of her intermediate pressure valve stem and the cracking of the stuffing box. This served as a further embarrassment to the squadron and a source of considerable anxiety. With the weather conditions that had prevailed since leaving Cienfuegos, it appeared absolutely necessary to abandon the position off Santiago and seek a place where the vessels could be coaled and the collier's machinery repaired. Off Santiago the St. Paul, Yale and Minneapolis were sighted and communicated with. * * * Arrangements were at once made whereby the Yale was to tow the collier, and as this prospect did not seem favorable for replenishing the meager coal supply of the other vessels the squadron stood to the westward towing the collier. * * * After standing to the westward for about three hours, or about twenty-five miles, the conditions became less unfavorable and the squadron stopped.

The Brooklyn and the Iowa were the first two American vessels to discover the oncoming of the Spanish fleet. The Brooklyn lay west of the Texas. Her first move after starting to engage the Spanish vessels was to describe a loop from left to right, which loop enabled her to use her guns on both sides and which also returned her to her original position and on a parallel course with the one taken by the Spaniards during their flight. It has been claimed that Admiral Schley in taking this loop exposed the Texas to great danger of being rammed by him, that he told his own captain and the navigator of his vessel that the Texas must take care of herself when his attention was called to her danger, and that, tactically at least, his "loop" was a dangerous and uncalled for proceeding. The Brooklyn was hit oftener than any other American vessel, she suffered the only loss of life, she was the first in the fight, and, with the Oregon, last to quit.

Schley's official report to Sampson of his part in the battle states:

I congratulate you most sincerely upon this great victory to the squadron under your command and I am glad that I had an opportunity to contribute in the least to a victory that seems big enough for all of us. From Capt. Eulate, of the Vizcaya, and the second in command of the Colon, Commander Contreras, I learned that the Spanish admiral's scheme was to concentrate all fire for a while on the Brooklyn, and the Vizcaya to ram her in hopes that if they could destroy her the chance of escape would be increased, as it was supposed she was the swiftest ship of your squadron.

MEMBERS OF THE COURT OF INQUIRY.

Gold in Teeth Not Stylish.

It is no longer considered good form to make a display of gold in the teeth. The fad—for such it was—is dying out.

"The custom had grown to such an extent," said a Walnut street dentist recently, according to the Philadelphia Record, "that young men and women actually had small holes drilled in teeth that were perfectly sound in order that gold fillings might be inserted. Even sets of false teeth for older people were thus decorated. Gold caps were in great demand and were often put on when there was no occasion, simply because people thought they looked well. I remember seeing a chorus girl who came over with an English company several years ago who had a diamond inserted in one of her front teeth. Her smile was literally dazzling. All that is changed now, though. The tendency seems to be to preserve as much as possible the natural whiteness of the teeth and sometimes enamel is placed over a gold filling."

River Seine Holds Record

The Seine holds the record for traffic carrying in France—50,048 vessels carried last year, 27,000,000 passengers and 10,000,000 tons of merchandise.

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, NOVEMBER 15 1901

Poet Laureate Austin has written a poem to commemorate the recent journey of the Duke of York. It may yet become necessary to keep the royal family home.

When you decide to try the experiment of "doing unto others as you wish to be done by," you will find that many of the mean things you have heard about your neighbors are not true.

The death of Li Hung Chang is doubly regretted because he was the only influential Chinese who could deal with foreign governments with an appreciation of the foreign point of view.

Gorman, after several years of retirement, will again take his place in the United States Senate. The returns from Maryland show that he has a handsome majority in the legislature, and his election is conceded by all.

When will the American people awaken to a realization of the fact that from the practical standpoint, as well as from that of mere sentiment and devotion to "old fogy notions," the American people are paying altogether too much for their Philippine "whistle?"

It is reported that John D. Rockefeller will make his home in England. Shouldn't wonder. The United States is good enougo for accumulating fortunes, with the aid of congressional legislation, but John Bull double discounts Uncle Sam in furnishing facilities for spending them gracefully.

The executive committee of the Union Labor party has decided to perpetuate the party and to put a congressional and legislative ticket in the field next year, for San Francisco at least. The naming of congressional and legislative tickets in the interior districts was left for subsequent consideration, as also was the running of a state ticket.

No man in public life can be safe if any man form a resolve to surrender his own life to kill him. Our Presidents must continue to move among the people in democratic simplicity and freedom. Their only protection is in popular respect and affection. Isolation is not to be thought of, and only public patriotism can suppress the evil incitements of sensational publications.

According to information received at the headquarters of the Natioual Livestock Association in Chicago Congress will have the Western public land situation brought to its attention this winter in a new and startling manner. A number of prominent cattlemen of the West who have been quietly investigating are prepared to show that during the past five years there has been an enormous decrease in the number of cattle in this country, a decrease which seriously threatenes the beef food supply, and that unless speedy action be taken by Congress, in the course of a very few years beef will be selling at such fabulous prices that only the wealthy can afford to indulge in the luxury of a beefsteak. The cause of this rapid decline in the number of beef cattle is said to be due solely to the contraction of the Western public grazing lands and the increase in the consumptive demand. The rapid settlement of the West has caused the ranges left to become crowded and this crowded condition has prevented the reseeding of grasses and consequently millions of acres of once good pasture have been turned into absolute desert. Most of the large herds have been dispersed and slaughtered and the bulk of the cattle supply is now being furnished by the small stockmen. But the evolution from the large herds on the open range to the small herds in pastures is too slow owing to unfavorable land conditions, and where a few years ago the markets were supplied with cattle four, five and six years of age, even yearlings are being slaughtered to make up the supply of beef. The stockmen assert that the unfavorable methods of administering the public lands of the West are back of the threatened shortage and at the coming national convention in Chicago next month an effort will be made to throw the whole matter into Congress and ask that a commission be appointed with expert assistance to investigate and devise plans for relieving the situation. The stockmen in the National Association have been striving for several years to devise some plan for amending the land laws that would remedy existing evils, but have been unable to agree. One faction is in favor of leasing the lands by the Government; another wants the lands ceded to the States, and another wants the laws left as they are and irrigation work continued to redeem the lands. As a compromise for all it is now proposed to have Congress take charge of the whole matter through a commission and after investigation take such action as will tend to stop the waste and destruction now going on and encourage the establishment of small stock farms. The plan will also recommend Government aid in building storage reservoirs on the ranges near the headwaters of streams. The big packers admit that there has been a decrease in the visible supply of cattle during the past five years, and they are looking forward to higher prices in the near future. They say the people will be forced to eat mutton instead of beef though even mutton will probably become scarce later on, as the same conditions that are diminishing the beef supply will also affect the sheep supply.

A REMARKABLE DUEL

BOTH OF THE PARTICIPANTS WERE QUICK ON THE TRIGGER.

An Enforced Parade Preceded the Gun Play, Which Was on the Pull and Shoot Order—Why Bratton Was Glad He Lost His Right Hand.

"The most affectionate looking two handed gun play that I ever saw," said a Colorado gentleman in one of the house committee rooms, "was the one that happened at La Junta, in my state, between 'Big Divide Jim' Bratton and George Gannon, as pizenish a pair of real bad men of the type that has now passed away as ever fanned a .45 or twisted a Bowie.

"Gannon was the proprietor of the Gilt Edge honkatonk in La Junta, and it was at this place that he had some trouble with Bratton. The argument ended by Bratton backing out of the door with his hands up, Gannon having the drop. Gannon didn't shoot then because his gun wasn't loaded. He had been cleaning it and had forgotten to replace the cartridges. He'd have killed Bratton otherwise as a matter of course.

"That same night Bratton sent word to Gannon that he meditated shooting him up some on the following day. Gannon wasn't a man to take to the cliffs or the cactus, having plenty of notches on his gun barrel himself, and he walked around the next afternoon like a light battery of artillery. 'Big Divide Jim' Bratton bulged him, however, by turning a corner suddenly as Gannon paraded down the main street, and then it was Gannon's hands that went up for a change. Bratton had two guns covering him, and Gannon knew his gait.

"'This,' said Bratton, 'is where I get an even break for my coin. Now, you like me so much, Gannon, that I want you to sort of show your appreciation of me by walkin around town linked arms with me for awhile.'

"It was up to Gannon to comply with this peculiar request. 'Big Divide Jim' Bratton jabbed his guns back into his belt, and then he clutched Gannon's left arm and passed it through his right. The disadvantage of this arrangement accrued to Bratton. It left Gannon's gun arm free, while in case of argument Bratton would have to use his left gun. But 'Big Divide Jim' wasn't selfish.

"The population of La Junta was amazed to see 'Big Divide Jim' Bratton and George Gannon, who had always been more or less sore on each other and who had had a quarrel that meant the death of one or both of them on the night before, walking arm in arm up and down the main street of the town. It looked like a peripatetic love feast between the two of 'em. But they were watching each other like cats. At the end of the street Bratton, still with his right arm linked to Gannon's left, stopped suddenly and said:

"'George, I ain't much on the blow about any gun suddenness that I may possess, but I sure want to give you a chance. You thrung it into me last night in a way that's eat up so much of the atmosphere around here that there's not enough air left in this neighborhood for both of us to breathe at one and the same time. I'm a-goin to count three, and when I say "three" it's a breakaway and a finish. You've got a loose right arm, but I ain't no hog. One—two—three!'

"The event proved 'Big Divide Jim' Bratton the quicker man and the better marksman. He got Gannon through the heart, whereas Gannon's ball lodged in Bratton's right wrist. Bratton had to suffer his right hand to be cut off that same night.

"The last time I saw him was in Creede. He was sitting on the edge of a bunk in his own cabin, close to a claim he was working. I hadn't seen him since he'd lost his hand.

"'Jim,' said I, 'it's too bad you should have lost that right hand. If the fellow that plugged you had only got the left hand, why'—

"'Oh, I don't know,' said Bratton philosophically. 'If I'd ha' lost my left, I wouldn't have been able to play the fiddle any more.'

"He reached under his bunk and brought forth an old violin. Then he rigged up an attachment he had for holding the bow in his right stump, and he played the instrument real sweetly for me for half an hour or so.

"'I couldn't have done no fingerin if I'd ha' lost my left hook, you know,' he said simply when he put the old fiddle away."—Washington Post.

The Result of His Study.

"I suppose you have made a study of human nature," remarked the friend.

"I attribute my success in life to that fact," answered Senator Sorghum.

"Were you ever tempted to give the world the benefit of your observations, to put them into book form as a human comedy or something of that sort?"

"My dear sir, it wouldn't take a book to do it. I have figured on the problem of human nature until I know the answer. I should just say, 'Human nature loves money,' and let it go at that."—Exchange.

Buttons.

Towne—For goodness' sake, what are you so cranky about?

Browne—Oh, I asked my wife to sew a button on my coat.

Towne—And wouldn't she do it?

Browne—Yes, but I've just discovered that the button she sewed on my coat she cut from my vest.—Exchange.

Took No Chances.

"I'll tell you how it is, parson," said the board of trade clerk. "You've married us, and you'll admit that it is a good deal of a speculation. Now, I'll pay you $2, the regular fee, now and call it square or I'll wait 60 days and pay you what experience teaches me the job is really worth to me, even if it's $100."

The clergyman looked long and earnestly at the energetic, determined young woman and sighed.

"Give me the $2," he said.—Chicago Post.

They Hadn't Made Up.

"Well," said he, anxious to patch up their quarrel of yesterday, "aren't you curious to know what's in the package?"

"Not very," his wife, still unrelenting, replied indifferently.

"It's something for the one I love best in all the world."

"Ah, I suppose it's those suspenders you said you needed."—Philadelphia

The True Poker Flat.

In 1852 Poker Flat produced $700,000 in gold bullion in a single month and celebrated the event with a triple hanging. Then came the public spasm of virtue which caused the John Oakhursts and the "outcasts of Poker Flat" to depart from thence and die of cold and starvation on the snow bound road to Sandy Bar. There are no "Oakhursts" nor "Uncle Billys" in Poker Flat today, and when the stranger makes the slow descent and suddenly by a sharp turn in the trail comes upon the famous camp he finds in that huddle of cabins little to remind him of the Poker Flat of 1852.

The famous slope presents almost a picture of utter ruin. There are but eight persons living in the old town, while a hundred dead ones sleep in the cemetery. Some of the graves are marked with wooden headboards, some with stakes, but many have nothing above them. Nearly all of them were laid to rest without religious rites save a Bible reading by old Charlie Pond, who, though a professional gambler, was selected for the religious office owing to his excellent voice and oratorical ability.

In 1853 and 1854 there were 2,000 souls in Poker Flat and 15 stores, 5 hotels, 3 dance halls and 7 gambling houses. There is but one man left today of that original company. He is an old and grizzled veteran, who delights to tell how in 1856 a circus came to town and sold 1,500 tickets of admission at $20 each.—W. M. Clemens in Bookman.

A Day Dream of Tennyson.

In the "Life of Tennyson" occurs the following:

"A kind of waking trance I have frequently had, up from boyhood, when I have been all alone. This has generally come upon me through repeating my own name two or three times to myself silently, till all at once, as it were out of the intensity of the consciousness of individuality, the individuality itself seemed to dissolve and fade away into boundless being, and this not in a confused state, but the clearest of the clearest, the surest of the surest, the weirdest of the weirdest, utterly beyond words, where death was an almost laughable impossibility, the loss of personality (if so it were) seeming no extinction but the only true life. This might be the state which St. Paul describes, 'whether in the body I cannot tell, or whether out of the body I cannot tell.' I am ashamed of my feeble description. Have I not said the state is utterly beyond words? But in a moment when I come back to my normal state of 'sanity' I am ready to fight for mein liebes Ich and hold that it will last for æons and æons."

The New Rabbit.

"Why, where did you come from, Uncle Jasper?" I said to the old darky who had sent the house girl in to tell me that he wanted to see me.

"I come f'um Decatur, Miss Alice," he said. "I got to Atlanta 'bout two hours ago, but I didn't 'low you wus ready to see nobody."

"Did you come on the train?" I asked.

"No, ma'am; dat I didn't. I come in on de rabbit."

"On what?"

"On de rabbit. You sholy done heerd er de new rabbit dey's got."

"Oh," I said, "you mean the rapid transit?"

"Yessum, de rabbit transhunt. Dat's whut I tol' you. She ain't de color er no rabbit"—bursting into a laugh—"but she sho do git ober de groun' lak one."—Leslie's Weekly.

A Slander.

Greene—They say that Senator Keener is on the make. They even go so far as to say that that new house of his was given him in payment for his vote.

Gray—It puts me all out of temper to hear such slanders! It is as far as possible from the truth! I know all about it. It was this way: Some people who were interested in a certain bill bet him that house that he would vote against the bill, and he didn't and won the house. That was all there was about it. The idea of Keener's being open to bribery!—Boston Transcript.

Adjourned Unanimously.

Correspondent (approaching Irish sergeant)—I am told, sergeant, that you had a skirmish with the enemy this morning.

Sergeant—We did that, sor.

Correspondent—And did you come off with flying colors?

Sergeant—Floyin colors, is it? Bedad, it wasn't ownly the colors that was floyin, but ivery mother's son of us in the bargain.—Boston Courier.

The Sun.

Astronomers tell us that refractory elements like iron, silicon and carbon, perhaps dissociated into simpler substances, are present as vapors in the atmosphere of the sun and that many others of our well known elements, including hydrogen, are also present in this glowing atmosphere, while the heat of the sun's surface and that of the hotter stars is vastly higher than that of the electric furnace.

FARM HOGS.

How This Class of Stock May Be Easily Improved.

This class of stock can be improved more rapidly than any other on the farm, says J. W. Jamison of Ohio in The National Stockman. Three steps are necessary to accomplish this most rapidly. These are selection, feeding and purchase. Every farm herd can be improved in part or in all of these ways.

Purchase alone amounts to little without the others. Nor can selection and feed do it all. Where the custom is to feed corn almost exclusively as the grain ration the hogs are sure in time to lack in bone. Their bones gradually become smaller with each succeeding generation. Selection cannot wholly overcome this. Some farmers try to overcome it by purchase, but this is not wholly satisfactory and fails to a great extent. We have long since found that the best way to secure an abundance of bone is to grow it. There are good reasons for this—the animals are more thrifty; again, we cannot get satisfactory weights without plenty of bone.

In the matter of selection, the best should be retained. The best in this case means those showing the greatest thrift and that have made the most rapid growth. Rapid growth is the most important characteristic to establish in a herd, and this cannot be done by selling those growing fastest and retaining the slow growers.

When the farmer has good stock to start with, it is only necessary to buy males to introduce new blood. The sow can always be selected on the farm. In fact, this is a better place to do it than on some other man's farm. In our own case we would not expect to purchase a class of sows as satisfactory as what we now have, that we have worked years to develop.

We are not in favor of the practice of cleaning up the farm of all home grown stock every few years and purchasing entirely new. This is not the most satisfactory way to secure improvement. However, it may be the best practice for some men that make a practice of letting their hog stock "run out," as it is termed. "Run out" is the result of bad feeding, selection and too close breeding. The "running out" system of management is not profitable. The building up of a herd should yield an increasing profit. The cost of males to improve a farm herd should not deter the farmer from making the purchase.

A Long Maned Wonder.

The long maned horse Linus II, owned by J. K. Rutherford, St. Lawrence county, N. Y., is a golden chestnut, with mane and tail nearly white. The mane is double and reaches down and out on the ground about four feet on

LINUS II.

both sides. The tail reaches out on the ground about ten feet. Horse stands about 16 hands and weighs 1,300 pounds. Ordinarily his hair is kept braided and looped up with bags made to fit the loops drawn over them and fastened so his hair does not interfere with his movements. He is of beautiful form, high spirited, but kind and affectionate. He becomes very much attached to his groom and those who attend him.

Uses of the Music Roll.

Enter girl with that subtle air of refinement which belongs only to such as earn their living and are ashamed of it.

"I wish to look at music rolls," she says.

Smiles the clerk affably.

"Here is something very fine," he says. "We guarantee that batter won't soak through it so as to show on the outside."

Yes, the habits of eating certainly does get people into awkward situations now and then.—Detroit Journal.

His Only Chance.

"Do you know that you talk in your sleep, Henry?" asked Mrs. Peck.

"Well, do you begrudge me those few words also?" he snapped back.—Philadelphia North American.

What Was Needed.

Henry Ward Beecher used to tell a story about a priest in the olden time who was called to bless the field of a poor farmer prior to the planting. He came and after surveying the soil remarked to the agriculturist, "Praying won't do here; what you want is manure."

ARE YOU DEAF? ANY HEAD NOISES?

ALL CASES OF

DEAFNESS OR HARD HEARING ARE NOW CURABLE

by our new invention. Only those born deaf are incurable.

HEAD NOISES CEASE IMMEDIATELY.

F. A. WERMAN, OF BALTIMORE, SAYS:

BALTIMORE, Md., March 30, 1901.

Gentlemen:—Being entirely cured of deafness, thanks to your treatment, I will now give you a full history of my case, to be used at your discretion.

About five years ago my right ear began to sing, and this kept on getting worse, until I lost my hearing in this ear entirely.

I underwent a treatment for catarrh, for three months, without any success, consulted a number of physicians, among others, the most eminent ear specialist of this city, who told me that only an operation could help me, and even that only temporarily, that the head noises would then cease, but the hearing in the affected ear would be lost forever.

Then saw your advertisement accidentally in a New York paper, and ordered your treatment. After I had used it only a few days according to your directions, the noises ceased, and to-day, after five weeks, my hearing in the diseased ear has been entirely restored. I thank you heartily and beg to remain Very truly yours,

F. A. WERMAN, 720 S. Broadway, Baltimore, Md.

Our treatment does not interfere with your usual occupation.

Examination and advice free. YOU CAN CURE YOURSELF AT HOME at a nominal cost.

INTERNATIONAL AURAL CLINIC, 996 LA SALLE AVE., CHICAGO, ILL.

LEGAL.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

W. E. Pedley, Plaintiff, vs. William Remsen, Peter A. Graff, Yellett D. Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company a Corporation, Surprise Canyon Mill and Water Company a Corporation Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Chares Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

The People of the State of California send Greeting to William Remsen, Peter A. Graff, Yellett D Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company, a Corporation, Surprise Canyon Mill and Water Company a Corporation, Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

You are hereby required to appearin an action brought against you by the above-named plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein within ten days (exclusive of the day of service) after the service on you of this Summons—if served within said County; if served elsewhere within thirty days.

And you are hereby notified that if you fail to so appear and answer the Plaintiff will take judgment for any money or damages demanded in the Complaint, as arising upon contract, or will apply to the Courtfor any other relief demanded in the Complaint.

Witness my hand and the seal of said Superior Court of the County of Inyo, State of California, this 15th day of October, A. D. 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] In the Superior Court of the County of Inyo, State of Cal.

W. E. Pedley, Plaintiff vs. William Remsen, et als., Defendants.

Summons.

W. A. HARRIS, 503 Stimson Building, Los Angeles Cal., and MACK & FORBES Independence, Cal., Attorneys for Plaintiff.

Commissioner's Sale.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

A. W. EIBESHUTZ, Plaintiff, vs. E. M. DINEEN, Defendant.

SUPERIOR COURT. Order of Sale and Decree of Foreclosure.

UNDER AND BY VIRTUE OF AN ORDER of sale and decree of foreclosure issued out of the Superior Court of the County of Inyo State of California, on the 9th day of October, 1901, in the above-entitled action, wherein A. W. Eibeshutz, the above plaintiff, obtained a judgment and decree against E. M. Dineen, defendant, on the 7th day of October, 1901, which said decree was, on the 8th day of October, 1901 recorded in Judgment Book 2 of said Court, at page 167, I am appointed Commissioner and commanded to sell:

All the right, title and interest of the defendant E. M. Dineen, consisting of an undivided one third interest in and to those certain mines and mining claims situate, lying and being in Wild Rose Mining District, County of Inyo, State of California commonly known and designated as the "Monarch," "Combination," "Monopoly" and "Kennedy" mines, the notices of location thereof being of record in the mining records of said Wild Rose Mining District, and in the office of the County Recorder of said Inyo County.

Notice is hereby given that on THURSDAY, the 14th day of NOVEMBER, 1901, at 2 o'clock p m of that day, in front of the Court House, in the town of Independence, I will in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy the plaintiff's judgment, with interest thereon and costs, to the highestand best bidder, for cash, in gold coin of the United States.

GEO. S. WOOD
Commissioner.

JOHN J. MCLEAN,
Observer.

*Record beginning March 6th 1898.

BORN.

JENKINS—At Independence, Cal., November 14, 1901, to Mr. and Mrs. James Jenkins, a son.

J. S. Stotler has gone into the saloon business at Tonopah.

Mrs. Hanby of Bishop is visiting her daughter, Mrs. J. E. Meroney.

The Yellow Aster mining company has a $20,000 monthly payroll.

Ivan Bunney has put two four-horse teams to work on the Eastside canal.

Ed Ober has gone to Visalia and Dr. Middleton has left Visalia for Tonopah.

Supervisor Jones was looking after the roads in this vicinity during the week.

The grippe is again prevalent. Quite a number of people are complaining.

George Thorpe left for Los Angeles by team yesterday and will spend about a month there.

The net returns on Tonopah ore shipments for the last five days in October was $40,562.15.

Mrs. Augusta Kispert made final proof last Tuesday on her desert land claim at Georges Creek.

A. M. Squires got back last Saturday morning from a visit of a couple of weeks to Los Angeles.

Mr. And Mrs. Halloway of Cottonwood were guests at the Independence Hotel this week.

What with attorneys, clients, witnesses and jurors the town has been filled with visitors this week.

Miss Maggie Bunney will leave for Bishop soon where she will attend the new high school.

The nights have turned colder. Early risers have found ice on the creek for several mornings.

J. C. Crocker came up from Bakersfield a couple of days ago and will spend a month in the Valley.

George Willis brought in a beautiful specimen of malachite from the Green Monster the other day.

There was a light shower of rain in the valley to-day and apparently a heavy fall of snow on the mountains.

Bert Rhine left for Los Angeles on Monday's stage and will return next week by way of San Francisco.

Dr. Clifford Baxter is making a professional visit to Johannesburg. He expects to be gone about a month.

Wm. Hunter Jr. arrived here Monday evening from San Francisco. This is his first visit home in several years.

Tommy Kehoe has gone to Los Angeles with George Thorpe. It is his first trip out of the Valley in many years.

Jim Jenkins came over from the Green Monster mine yesterday. He says they have a six-foot breast of shipping ore.

John Baxter has gone to Los Angeles on account of ill health. He intends to undergo an operation before he returns.

W. O. Meroney came down from Bishop last Monday and is assisting in the Clerk's office during the rush of Court work.

Ernest Laird arrived at Independence Tuesday morning from Bakersfield. He is reporting the criminal cases now on trial in the Superior Court.

Mrs. Walter J. Hanby and little daughter arrived at their Independence home Wednesday; and that accounts for the beaming visage of our pedagogue.

Miss Irene Reynolds has returned from Ballarat. The removal of several families from that place left an insufficient number of children to maintain a school.

Lafe Gill Esq. arrived here Thursday morning from Riverside for the purpose of assisting District Attorney Dehy in the conduct of a trial next week. Mr. Gill was welcomed by many old-time friends.

A succession of cloud-bursts along the eastern slope of the Inyo range has washed the canyons out. It is now impossible to get down Willow Creek on the old trail and Lead Canyon is also washed out.

Dr. Woodin says that W. L. Hunter is dangerously ill. He was improving when he first arrived home, but recent trouble and consequent worry has weakened him alarmingly. The high esteem in which Mr. Hunter is held makes his illness a matter of public sorrow.

Hotel Arrivals.

The following-named guests registered at the local hotels this week:

INDEPENDENCE HOTEL.

R. L. Sunter, Keeler; A. M. Squires, Los Angeles; J. Harry Cole, Ballarat; J. A. Hulseman, Benton; J. E. Dunlap, J. C. Newlon, A. E. Fitzgerald, Mrs. J. H. Bulpitt, Fred Bulpitt, Bishop; J. R. Shipley, Round Valley; O. F. Dearborn, Lone Pine; F. A. Huggins, C. W. Perry, San Francisco.

NORMAN HOUSE.

J. White Smith, Fred Smith, Thomrs Hughes, F. R. Andrews, D. W. Pittman, A. E. Sais, W. W. Yandell, T. C. Harness, Maymie Clark, S. E. Vermilyea, Geo. Best, Andrew Clark, J. H. Shannon, J. W. Clark, Bishop; N. L. Baker, W. P. McMurry, J. H. Coe, Jas. Crocker, Sam McMurry, A. K. Eugley, Big Pine; J. C. Anton, Norman Dodge, Lone Pine; J. H. Connors, Jas. Jones and daughter, Tinnemaha; Jas. Nerny and wife, Modoc Co.; A. L. Springstein, J. P. Culver, San Francisco; W. C. Smith, F. B. Russell, W. J. Langevin, Sacramento; J. C. Johnson, Reno.

Railroad News.

The Salt Lake Herald of Sunday last contains an article to the effect that both the Oregon Short Line and Clark's San Pedro road have a surveying line in the field surveying a line from Calientes to De Lamar, the theory being that whichever road is defeated in the litigation now pending over the right of way down the Meadow Valley wash will take a new route to the west by way of De Lamar and then probably down through the Tem Piute Valley and the southern end of Nye county, crossing the line at Ash Meadows. There are large bodies of low grade ores in the Funeral Mountains that will be opened up by means of this road, besides the exploiting of the immense nitre and salt beds of the Death Valley region. The completion of this road will add greatly to the taxable property of this county.

Prospecting.

Archie Strong and Arthur Nobles got back a couple of days ago from a prospecting trip to the north end of Death Valley. They crossed the Inyo range by way of Willow Creek, went around by way of Tule Canyon and returned by Grapevine mountain and Hunter's ranch. They found good feed for their animals most of the way, but in places the Indian horses had cleaned it up pretty well. In the south end of Mesquite Valley there is about three thousand acres of good grass. They found nothing worthy of note in the way of mineral.

Real Estate Transfers.

Recorded since last report:

J. S. Cain to Adam Farrington and wife—480 acres near Laws, $3,250.

Emily J. Shelly to Hannah E. Pittman—Lots 1, 2, 3, 4, and ½ of lots 5 and 6 in Block G, Academy addition, Bishop, $1,000.

Gilbert H. Nease and wife to Andrew Clark—160 acres near Laws, $500.

W. S. Eldred to L. Joseph—½ interest in Fay mine, Black Canyon, $10.

L. Joseph to P. E. Robins—½ interest in Fay mine, $1.

Tonopah is increasing in population at the rate of 100 people a week. The local paper advises those in search of work to stay away as there is nothing for them.

Mr. and Mrs. Geo. Montgomery, Clare Tyler and Jim Christy left for Wild Rose yesterday to do the necessary assessment work on the group of antimony mines there. Monty expects to be back for Christmas.

Norman Breedin arrived from Bakersfield last Saturday. He and other Bakersfield parties have bonded a copper mine from Walter, Hargis and Calvert near Tibbetts and Mr. Breedin has commenced development work.

Mrs. F. Rhine arrived home last Monday from San Francisco. While there she purchased an extensive stock of holiday goods, which will soon begin to arrive. Announcements of a "Holiday Opening" will be made in due time.

A "Children's Club" has been organized under the supervision of Mrs. Sophia Frank, who takes a great interest in the young folks. A building owned by H. Levy has been secured, and it is being cleaned and repaired for a club-room.

The C. & C. will run regular trains from Hawthorne south six times a week beginning about the 20th of this month. This is made necessary by increased passenger and freight traffic to and from southern points. Two additional crews will be put on.

John B. Clarke, Isaac Shaw, Leslie Horton, Charles Titus and Geo. Barnum left this week with teams and vehicles for the Clarke stage line between Candelaria and Tonopah Johnny Clarke and Titus will steer the steeds on the new line.—Register.

An extra train of nineteen carloads of Tonopah ore was shipped north last week. Nine carloads came from Candelaria and ten carloads from Soda. This is in addition to the large shipments by regular trains. This ore goes to San Francisco and thence by water to Everett Washington.

Four thousand visitors went to Yosemite valley this year. This means that an immense sum of money was left in Mariposa county by sight-seers. When we get our mountains ready for inspection through the building of roads and trails we ought to have thousands of visitors annually. This is a prize worth working for.

The Children's Club will give a grand ball Thanksgiving evening at the pavilion. This club has established a reputation for doing all they undertake well, and we can promise that this ball will prove quite up to the Club's usual standard. The aim will be to give the guests an enjoyable time. They promise the best of music, fine decorations and a number of surprises throughout the evening.

SUPERIOR COURT.

Hon. Walter A. Lamar, Judge.

TUESDAY, Nov. 12, 1901.

People of the State of California, Plaintiff vs. John Barnes, Defendant—The following list of Jurors was called: W. P. McMurry and F. M. Crocker sworn and excused from jury duty on account of sickness in respective families.

J. H. Bulpitt, J. S. McQueen and W. A. Sanger excused from attendance at this term of Court. Court proceeded without L. H. J. Ehlen being present. Thos. Williams, excused for actual bias. W. H. Evans sworn. Jas. H. Connor, J. W. Clark, Geo. Hall and Chas. A, Winter excused by defendant, peremptory. W. J. Perry sworn. J. W. Lacy excused by plaintiff for actual bias. C. Walter, J. D. Mairs, J. H. Coe and John C. Anton sworn and examined as to their fitness to serve as jurors.

Recess until 2 o'clock p. m. when the Court reconvened, all jurors in the panel noted present. O. F. Dearborn sworn.

J. E. Dunlap excused. peremptory by defendant. D. W. Pittman excused, peremptory by plaintiff. T. J. McComas excused, peremptory by defendant. F. K. Andrews excused for actual bias. S. J. Newlon and Chas. Houle sworn. Louis Thurnan excused, peremptory by plaintiff. June H. Smith sworn. J. N. Reynolds excused for actual bias. Norman M Dodge sworn. John R. Shipley excused; peremptory by defendant. Fred Albers sworn.

The Jury was admonished by the Court. After a recess of 10 minutes the Court reconvened, the Jury was called, all being present.

Geo. F. Willis sworn and examined.

A recess was then taken until 10 a. m. of Wednesday, Nov. 12. The reporter was instructed to make three copies of the testimony.

WEDNESDAY, Nov. 13, 1901.

People vs. Barnes—On trial. Jury called, all being present.

George Willis resumed the witness stand.

Court made an order directing the Sheriff to burchase a blackboard and easel for use in the Court room.

A. M. Given sworn and examined.

Bottle of liquor taken from Indian filed and marked "Plaintiff's Exhibit A".

People rest their case.

John D. Lewis, Henry Fehrman, J. E. Meroney and W. O. Meroney were sworn and examined for the defense. Whereupon the defense rests.

Geo. Willis recalled on rebuttal.

The jury heard argument of counsel and a recess was taken until 9:30 a. m. of November 14, 1901.

THURSDAY, November 14, 1901

People vs. Barnes—Court reconvened, jury all present. Court instructs jury. Jury retired. Jury came into Court, roll called and all present. Asked if they had agreed upon a verdict; upon answering in the affirmative the Clerk recorded verdict and read it to the jury and thereupon declared if to be their verdict, "Not Guilty."

T. C. Harness et al, Plaintiffs, vs. F. H. Bulpitt, defendant—Defendant moves the Court for judgment on the pleadings on the ground that the complaint does not state facts sufficient to constitute a cause of action. Motion argued by Counsel. Motion denied. The following witnesses were sworn and all witnesses excluded from the Court-room: Andrew Clark, Minerva Powers, Ellen Matlack, W. W. Yandell, Isabella Bulpitt, W. O. Meroney, John Clarke, A. E. Sais, W. T. Bunney, A. K. Eugley.

A. K. Eugley examined by Plaintiff's counsel and excused.

Recess until 9:30 a. m., November 15, 1901.

This case involves the title to a strip of land 20 feet wide at the rear of Bulpitt's store in the town of Bishop. Harness brings suit to open the strip for an alley way and Bulpitt contends that the land is his private property. By agreement the case is heard without a jury.

TO LAKE TAHOE

A TRIP OF RARE ITEREST.

Passengers on west-bound overland trains o Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leav promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the mo ning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spen examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,10 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

Our Working Girls.

Life to the most favored is not always full of sunshine, but to the average American girl or woman who is obliged to work for her living, and, perhaps to help others at home, life is often a heavy drag in consequence of illness.

Women who work, especially those who are constantly on their feet, are peculiarly liable to the development of organic troubles, and should particularly heed the first manifestations, such as backache, pains in the lower limbs and lower part of the stomach, irregular and painful monthly periods,

MISS ELLA BRENNER, E. ROCHESTER, OHIO.

faintness, weakness, loss of appetite and sleep.

The young lady whose portrait we publish herewith had all these symptoms, and in addition leucorrhoea, and was cured by Lydia E. Pinkham's Vegetable Compound. First, she wrote a letter to Mrs. Pinkham's laboratory at Lynn, Mass., describing her trouble, received in reply accurate instructions what to do to get well, and now wishes her name used to convince others that they may be cured as she was.

The same helping hand, free of charge or obligation, is extended, to every ailing woman in America. If you are sick you are foolish not to get this valuable advice, it costs you nothing, and she is sure to help you. Don't wait until it is too late — write to-day.

Her Mother—Edith, don't you think you are getting too old to play with little boys? Edith—No, mamma; the older I get the better I like them.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

Brooklyn, N. Y., Sept. 6th.—The secret of the remarkable success of the Garfield Headache Powders, manufactured here by the Garfield Tea Co., lies in the fact that they are harmless as well as effective; people have confidence in them.

Prof. A. Van der Naillen, the president of the Engineering School of that name in San Francisco, has recently received the papers appointing him an honorary member of the section of Engineering of the Paris Exposition. This section is composed of the most prominent chief engineers of the world. The Professor values the honor conferred upon him very much and we state it is also a great honor to California.

Adams' Sarsaparilla Pills cure sick headaches, constipation, biliousness, dyspepsia, purify the blood. 10c, 25c. Druggists.

There is more Catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease, and prescribed local remedies, and by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease, and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials.

Address, F. J. CHENEY & CO., Toledo, O.
Sold by Druggists, 75c.
Hall's Family Pills are the best.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure E. W. Grove's signature is on each box. 25c.

For pimples, sallow complexion, impure blood and poor digestion use Adams' Sarsaparilla Pills. They improve complexion and cure constipation. 10c, 25c. Druggists.

MRS. MARY GREGOVICH,

Of Philipsburg, Montana, Tells How She Was Cured of Dandruff.

Mrs. Mary Gregovich, of Philipsburg, Montana, under date of Nov. 26, 1899, writes: "I had typhoid fever this summer, consequently was losing my hair terrible, and my head in places was perfectly bald. Newbro's Herpicide had just come into use in Philipsburg, and the doctor strongly recommended it to me. After 3 or 4 applications my hair stopped falling out, and is coming in again quite thick. I used to be troubled greatly with dandruff, of which I am now quite cured." Kill the dandruff germ with Herpicide.

YOU KNOW WHAT YOU ARE TAKING When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c

The Best Prescription for Malaria

Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

She—It's no use bothering me, Jack. I shall marry whom I please. He—That's all I'm asking you to do, my dear. You please me well enough!

Value of Diamonds.

As to the value of diamonds, perfectly white stones or decided tints of red, rose, green or blue are most highly prized. Fine cinnamon and salmon or brown, black or yellow stones also are esteemed. If flawless and without tint of any kind, they are termed first water. If they possess a steely blue color, at times almost opalescent, they are called blue white. Such are usually Brazilian stones. Exceptionally perfect stones are termed gems, and for such there is no fixed value, the price depending on the purity and the brilliancy of the stone. The term first water varies in meaning, according to the class of goods carried by the dealer using it.

It is impossible to estimate the value of a diamond by its weight. Color, brilliancy, cut and general perfection of the stone all are to be taken into account. Of two stones, both flawless and weighing ten carats, one may be worth $600 and the other $12,000. Exceptional stones often bring special prices. Off color or imperfect stones sell at an average price per carat regardless of size.

How Fortress Monroe Was Built.

The manner of constructing the fort at Old Point Comfort is interesting and throws some light on customs and practices then in vogue. The work was almost wholly done by slaves who were brought to the place by their masters and leased to the engineers in charge. The slave owner received 50 cents a day for each slave, and the government furnished each "laborer," as the slave was called, with two suits of working clothes, a pair or two of shoes, rations, quarters and occasionally a little tobacco. The "laborers" worked with very little clothes and generally without shoes. They lived in barracks and were subject to a kind of military discipline. The owners were regular in coming in to collect the hire for their slaves, from which we may infer that the "constituents" of those days knew how to appreciate a good thing to a degree worthy of the present generation.—Leslie's Weekly.

THE AMERICAN GIRL.

Is She Losing the Beauty That Was Once a National Boast?

Bright eyes, rosy cheeks, and elastic step and a good appetite are the birthright of every American girl. These are the conditions that denote perfect health. But, unfortunately, every day are seen girls with pale, sallow complexions, languid, round shouldered and listless, and the question is often asked whether the woman of today has lost the healthy beauty which was once a national characteristic. One of the most common afflictions of womankind is anæmia, a watery condition of the blood. This causes untold misery and often leads to other and even more serious diseases. It can be cured, however, as the following interview in the Harrisburg Star-Independent will show. Miss Annie L. Reel, of No. 910 Green street, Harrisburg, Pa., who has been a sufferer from this trouble, in answer to a reporter's question, said:

"Yes, I am entirely well now, but I was a very sick girl. About five years ago I had an unnatural craving for highly seasoned food and after that I was afflicted with headache and my heart would beat about twice as fast as it should. My limbs got so weak that I had to rest on every step when going up stairs. The color of my skin was like that of a dead person. My limbs and, in fact, my whole body, would swell at times. The doctor who treated me said my complaint was anæmia.

"The doctor told me if I had let the disease go a few weeks longer I would have had dropsy. I was under his care for several weeks, but with little change for the better."

"How, then, were you so completely restored to health?" asked the reporter.

"I had been sick for two months when I began taking Dr. Williams' Pink Pills for Pale People. In about a week I was feeling better. The headache left me and I began to get stronger. I took the pills for six weeks and became thoroughly cured."

Dr. Williams' Pink Pills for Pale People are an unfailing specific for locomotor ataxia, partial paralysis, St. Vitus' dance, sciatica, neuralgia, rheumatism, nervous headache, the after-effects of the grip, palpitation of the heart, pale and shallow complexions and all forms of weakness. At all dealers or direct from Dr. Williams Medicine Co., Schenectady, N. Y., 50 cents per box; six boxes, $2.50.

Use the best dairy sire obtainable; be sure that his ancestry is good.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

Do Not Remain So.—Mr. Manhattan—Are the divorced women in Chicago called widows? Mrs. Wabash—Not for any length of time.

Labor World

Harry White, Secretary of the United Garment Workers, has brought suit for $10,000 against two members of the union at Rochester, N. Y., for charging him with having sold out a strike at Rochester.

Philadelphia United Labor League, one of the largest central labor bodies in the country, has decided to set apart one hour at each meeting for a discussion of the principles of all political parties, and prominent speakers have been invited to make addresses.

In the case of the International Broommakers' Union against Charles A. Spade for the illegal use of the label of that organization, the defendant was allowed to plead guilty, and the court assessed a fine of $100 and costs of the case against him. The trial occurred before the Court of Criminal Correction at St. Louis, Mo.

A new machine to load and unload grain, coal, iron ore, etc., from vessels is being tried in New York harbor. It will necessitate the throwing of present machines in the scrap heap. The new revolutionizer does tenfold more work than the old appliances, and only about the same number of men are required to work it.

The Garment Workers' label is now being used by 125 firms employing, it is estimated, about 12,000 persons. During last year about 14½ million labels were used, as against 7½ millions for the year previous. The union has found it necessary, in order to prevent the transfer of labels from overalls and shirts to clothing, to designate the labels with the words "overalls," "shirts," or "clothing," in the margin on the right.

A clothing manufacturer expressed the fear that the policy of the Garment Workers' Union would drive the business out of New York. Well, what of it? says the Garment Workers' Journal. The U. G. W. of A. is not confined to New York City, and there are better and cleaner places than the East Side tenements in which to make clothing. It is the same stereotyped argument about removing somewhere else if living wages are insisted upon. The national union's mission is to get after that "somewhere else."

By this time people have come to hold a great deal of respect for Horace Greeley. He was the first president of the New York Typographical Union, and the following is from an address he made when proprietor of the State's leading paper: "I stand here, friends, to urge that a new leaf may be turned over—that the laboring class, instead of idly and blindly waiting for better circumstances and better times, should begin at once to consider and discuss the means of controlling circumstances and commanding time, by study, calculation and foresight."

Local No. 316, of the Cigarmakers' Union at McSherrytown, Pa., in two months lost more than a dozen of its female members, brought about by the men marrying them. It seems that their affiliation with the union and attending the meetings were the means of bringing them in contact with desirable husbands. In speaking of the matter, President Perkins, while regretting the loss of membership from a financial standpoint only, says that the girls that join the union to better their condition are most likely to make better wives, and men recognize this fact and are anxious to procure such girls as life partners.

Music Hath Strange Charms.

"It requires tact and diplomacy to collect little outstanding accounts these days, especially when dealing with city employes," said a Manayunk business man the other day, according to the Philadelphia Record. "It's no use making a bluff or pleading poverty when dealing with policemen. Their hearts are like adamant. You must go gently—kind of size them up, as it were. Strike them about pay day before their wives get at the wallet; for, of course, if their better halves get it first you are left, and the poor copper has hardly enough let to buy his tobacco until the next month.

"You see, I have an advantage because I am a sort of musician. When the officer gets his money he will return to the sitting room of the station, take an account of stock and confer with the other fellows about how to make the pile reach out until the next pay day.

"I enter the room with a cheery 'Good-morning, gentlemen,' inquire into their various healths, talk quietly of the weather, and then sit down at the organ and sing that beautiful song, 'Then You'll Remember Me.' By-and-by they pony up and I hurry off to the next station and play the same old tune."

A Juvenile Bunko Man.

Tommy had been quiet for fully five minutes. He seemed to be engaged with some deep problem.

"Papa," he said.

"Well?"

"'Do unto others as you would have others do unto you'—that's the golden rule, isn't it, papa?"

"Yes, my son."

"And it's puffickly right to follow the golden rule, isn't it, papa?"

"Yes, indeed."

Tommy rose, went to the cupboard and returned with a knife and a large apple pie. The latter he placed before his astonished sire with great solemnity.

"Eat it, papa!" he said.—San Francisco Bulletin.

Iron and Steel Export.

America last year exported $120,000,000 worth of iron and steel, an amount greater in value than her entire exports of all kinds in 1890.

When a boy begins to wash his face without being told he is passing through the ordeal of his first love affair.

When in trouble, don't you sort of hate your friends for not helping you?

Horses are supposed to be very tough. Think of the horses you've worn out!

Care In Making Axes.

An ax is subject to rigid tests before it is pronounced perfect. The steel must be of the required temper, the weight of all axes of the same size must be uniform, all must be ground alike and in various other ways conform to an established standard. The inspector who tests the quality of the steel does so by hammering the blade and striking the edge to ascertain whether it be too brittle or not. An ax that breaks during the test is thrown aside to be made over. Before the material of an ax is in the proper shape it has been heated five times, including the tempering process, and the ax when completed has passed through the hands of about 40 workmen, each of whom has done something toward perfecting it. After passing inspection the axes go to the grinding department and from that to the polishers, who finish them upon emery wheels.

Cunning Harry.

Harry and Charlie, aged 5 and 3 respectively, have just been seated at the nursery table for dinner. Harry sees there is but one orange on the table and immediately sets up a wail that brings his mother to the scene.

"Why, Harry, what are you crying for?" she asks.

"Because there ain't any orange for Charlie."—Exchange.

Bunched His Blunders.

"John," said Mrs. Billus after the caller had gone away, "I wish you wouldn't bunch your blunders so."

"What do you mean, Maria?" asked Mr. Billus.

"I didn't mind your telling her that you were ten years older than I, but you followed it up a minute later by letting it slip out that you were 52."—Chicago Tribune.

The Handicap of a Name.

Poppers—No; we haven't christened the baby yet. My wife wants to give him a fancy name out of a book, but I won't have it.

Ascum—Why not?

Poppers—Because then he'd grow up to be homely as blue mud and tough as nails. I never knew it to fail.—Philadelphia Press.

Willie's Idea.

"Isn't it awful how thin Mr. Henpeck is now?" remarked Mrs. Gabble to her husband. "And he used to be so stout."

"Perhaps," chimed in little Willie, remembering his trouble with his bicycle tires—"perhaps his wife forgets to blow him up regular, like you said she uster."—Philadelphia Press.

The Right Handling of Books.

A book should not be bent back till the binding is cracked and loosened nor laid face downward on a chair or table nor left out over night in the rain, nor should its leaves be turned down to mark the place. Cultivate a good memory as to the page where you leave off and be independent of external aids.—Ladies' Home Journal.

In a Vicious Circle.

"I wonder what makes a man's hair fall out so fast when it once starts?"

"Worry! Nothing tends to make a man bald so much as worry, and nothing worries a man so much as the idea that he is becoming bald."—London King.

Had Heard Them All.

Mrs. Hennypeck (in the midst of her reading)—Here is an item which says that there are more than 250,000 words in the English language.

Mr. Hennypeck—Yes, my dear; so I've heard.—Puck.

Promotion of Bravery.

Word reaches us of a small band of soldiers who held at bay a large number of Filipinos for over two hours until assistance arrived, thereby saving an important point from capture. For their bravery they were all given promotion. To be brave it is necessary to have strong nerves and a good digestion. If your stomach is weak and you suffer from indigestion, heartburn, belching, nervousness or insomnia, you should try Hostetter's Stomach Bitters. It will cure you.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for **FREE $2** trial bottle and treatise. Dr. R. H. Kline, Ltd., 931 Arch St., Philadelphia, Pa

E. W. Grove

This signature is on every box of the genuine **Laxative Bromo-Quinine** Tablets the remedy that cures a cold in one day

Don't try to dairy without pure water, and if it is not colder than 45 degrees, use ice as well.

The Stimulus of Pure Blood

That is what is required by every organ of the body, for the proper performance of its functions.

It prevents biliousness, dyspepsia, constipation, kidney complaint, rheumatism, catarrh, nervousness, weakness, faintness, pimples, blotches, and all cutaneous eruptions.

It perfects all the vital processes.

W. P. Keeton, Woodstock, Ala., took Hood's Sarsaparilla to make his blood pure. He writes that he had not felt well but tired for some time. Before he had finished the first bottle of this medicine he felt better and when he had taken the second was like another man—free from that tired feeling and able to do his work.

Hood's Sarsaparilla

Promises to cure and keeps the promise. Accept no substitute, but get Hood's today.

First Silver Wedding.

According to a historian, this is the way the first silver wedding came about. It was in the time of Hugues Caput. Two of his most faithful servants, a man and a woman, had grown gray in his employ. How could he reward them?

Calling the woman, he said: "Your service is great, greater than the man's, whose service is great enough, for the woman always finds work harder than a man, and therefore I will give you a reward. At your age I know of none better than a dowry and a husband. The dowry is here. This farm from this time forth belongs to you. If this man who has worked with you for five and twenty years is willing to marry you, then the husband is ready."

"Your majesty," said the old peasant, "how is it possible that we should marry, having already silver hairs?"

"Then it shall be a silver wedding." And the king gave the couple silver enough to keep them in plenty.

Such was the origin of the silver wedding, a custom which, spreading all through France, subsequently became known to the world.

Points on a Lobster.

A lobster is found in the water, but not always—in fact, some of the most successful lobsters that ever lobstered were born and raised on dry land.

One can usually tell a lobster by its actions. For instance, if a young man enters a crowded drawing room and walks all over the feet of the assembled guests without their consent or approval the young man at once becomes a lobster.

The fathers of lobsters usually have money. In fact, it is difficult to be a real stand up and fall down lobster unless the lobster's father has money.

It is an odd fact that many girls seem to admire lobsters. It would seem that a girl ought to know better, but she doesn't until she marries a lobster. Then she tumbles.

Lobsters have no brains. If you don't believe it, split a lobster's head open with an ax if you don't care anything about the ax.

This world would be a much more desirable abiding place if there were no lobsters in it.—Ohio State Journal.

Hodge, the Single Minded.

An election petition was being tried, and a witness was called to prove "bribery."

"One of the gentlemen says to me, 'Hodge, you must vote for the Tories,'" said the witness.

"And what did you answer to that?" asked the counsel.

"'Well,' says I, 'How much?'"

"And what did the agent say?"

"He didn't say nothing. The other gentleman comes to me and says, 'You must vote for the Liberals, Hodge.'"

"And what did you answer?"

"I said, 'How much?' So he arst me what t'other gentleman offered me, and I told him 5 shillings."

"And what did the Liberal agent do?"

"He gave me 10 shillings."

Counsel sits down triumphant, and up starts the other side.

"Did you vote for the Liberals?"

"No."

"Did you vote for the Tories?"

"No. I ain't got a vote!"—Spare Moments.

Writing For Money.

Fond Father—Yes, my boy at the varsity has written several articles for the magazines.

Friend—But he's not a professional writer, surely?

"What do you mean by 'professional?'"

"Why, he doesn't write for money?"

"Doesn't he? You ought to see some of his letters to me."—Exchange.

Men who though slight, yet reach the chest standard, are preferred as recruits in the British army to those that are stout, the former being considered to possess the better frame.

Butterflies are said to be very sleepy headed. They go to bed early and get up late.

Restoring the Polish.

Says a housekeeper: "My piano, which had been covered with a cambric cover, was loaded with dust that had sifted through the sleazy cloth. The dust was too thick to be wiped off. It should have been blown and lightly whisked off first, but this my maid did not do, and in consequence the grime was wiped in for all I know with a damp cloth. At all events the highly polished surface was clouded over almost to a gray, and I was in despair until a friend suggested a remedy. She advised me to wring as dry as I could a piece of chamois from out a basin of water and rub the piano until the chamois was bone dry. This I have done and completely restored the polish."

Wonderful Contrast.

Brevity may be the "soul of wit," but the laughable effect is sometimes the very thing the speaker doesn't mean. In the following case a word or two more would have made a clearer description, but it would not have been half so funny.

The head master of an English girl's high school is describing to the class the beauty of the Alps, which he has visited during his vacation, and ends his lecture in these words:

"And there, with one foot I stood on the ice of the glacier, while with the other I was plucking the most beautiful flowers."

How Pepper is Prepared.

The pepper plant is propagated by cuttings, comes into bearing three or four years after it is set and yields two crops annually for about 12 years. When a few of the berries change from green to red, all of them are gathered, because if they were allowed to ripen any longer they would be less pungent. To fit them for market they are dried, separated by rubbing with the hands and cleaned by winnowing. The black pepper of commerce consists of the berries thus prepared.

The greatest of professional athletes use Wizard Oil for a "rub-down". It softens the muscles and prevents soreness

The Blood HEALTHY OR DISEASED

When there is a natural and healthy circulation of the blood, the entire quantity, estimated at one-eighth the weight of the body, passes through the heart every five minutes. This rapid flow of the blood through the system prevents the entrance of disease germs and impurities of every description. It filters out all that is not necessary or good for the growth and development of the body and nourishing and strengthening the muscles, tissues, nerves and bones. But, unfortunately, few persons can rightly claim an absolutely pure blood supply and perfect and unpolluted circulation, and in consequence are exposed to innumerable diseases. Contagious Blood Poison, the greatest enemy to mankind, enters the system through the blood, and Cancer, Scrofula, Rheumatism, Catarrh, Eczema, Salt Rheum, Psoriasis, Tetter—in fact the majority of human ailments—are caused by poisons or humors that are engendered and fostered in a sluggish and impoverished blood. Old sores, chronic ulcers and rheumatic pains are common, especially among old people, whose blood naturally grows thin and pale because of the lack of the red corpuscles that give color and strength to youthful blood. Sallow complexions and rough, oily skins evidence some constitutional or blood trouble, which salves, lotions, powders nor any external treatment can cure. Diseases that originate in the blood, whether they manifest themselves as ulcers, tumors, itching eruptions, muscular or bone pains, require a tonic and blood purifier such as S. S. S., which not only antidotes and neutralizes blood poisons and humors, but possesses health-giving tonic properties that no other blood medicine does. It goes down to the very foundation of the disease and eliminates from the system everything of a poisonous character or that obstructs and clogs the circulation. It builds up and imparts new strength and vitality to the old innutritious blood, and when the arteries and veins are once more filled with new rich blood, the general health begins to improve, muscles grow stronger, and sores and eruptions of every kind disappear.

The Blood is the Source of All Strength

Polluted Blood Breeds Disease

S. S. S. is the only guaranteed purely vegetable blood purifier, and the purest and most reliable in all blood diseases. It has been tested in thousands of cases during the past fifty years and is more popular today than ever. We will be glad to send you our book free, and if in need of medical advice write our physicians all about your case; this information will cost you nothing and comes from experienced and educated doctors. All correspondence is conducted in strictest confidence. THE SWIFT SPECIFIC COMPANY, ATLANTA, GA.

He thinks he lives, but he's a dead one. No person is really alive whose liver is dead. During the winter most people spend nearly all their time in warm, stuffy houses or offices or workshops. Many don't get as much exercise as they ought, and everybody knows that people gain weight in winter. As a rule it is not sound weight, but means a lot of flabby fat and useless, rotting matter staying in the body when it ought to have been driven out. But the liver was overburdened, deadened—stopped work. There you are, with a dead liver, and right now is the time for resurrection. Wake up the dead! Get all the filth out of your system, and get ready for the summer's trials with clean, clear blood, body, brain free from bile. Force is dangerous and destructive unless used in a gentle persuasive way, and the right plan is to give new strength to the muscular walls of the bowels, and stir up the liver to new life and work with *CASCARETS*, the great spring cleaner, disinfectant and bowel tonic. Get a 50c box to-day—a whole month's treatment—and see how quickly you will be

BROUGHT BACK TO NEW LIFE BY

Cascarets

LIVER TONIC

BEST FOR THE BOWELS

10c. 25c. 50c.

ALL DRUGGISTS.

NEVER SOLD IN BULK.

CURE all bowel troubles, appendicitis, biliousness, bad breath, bad blood, wind on the stomach, bloated bowels, foul mouth, headache, indigestion, pimples, pains after eating, liver trouble, sallow complexion and dizziness. When your bowels don't move regularly you are getting sick. Constipation kills more people than all other diseases together. It is a starter for the chronic ailments and long years of suffering that come afterwards. No matter what ails you, start taking CASCARETS to-day, for you will never get well and be well all the time until you put your bowels right. Take our advice; start with CASCARETS to-day, under an absolute guarantee to cure or money refunded.

GUARANTEED TO CURE: Five years ago the first box of CASCARETS was sold. Now it is over six million boxes a year, greater than any similar medicine in the world. This is absolute proof of great merit, and our best testimonial. We have faith and will sell CASCARETS absolutely guaranteed to cure or money refunded. Go buy today, two 50c boxes, give them a fair, honest trial, as per simple directions, and if you are not satisfied, after using one 50c box, return the unused 50c box and the empty box to us by mail, or the druggist from whom you purchased it, and get your money back for both boxes. Take our advice—no matter what ails you—start today. Health will quickly follow and you will bless the day you first started the use of CASCARETS. Book free by mail. Address: STERLING REMEDY CO., NEW YORK or CHICAGO.

FROM

POORHOUSE TO PALACE

BY MARY J. HOLMES

CHAPTER VI.

Mary had been at the poorhouse about three weeks when Miss Grundy one day ordered her to tie on her sun-bonnet and run across the meadow and through the woods until she came to a rye stubble, then follow the footpath along the fence until she came to another strip of woods, with a brook running through it. "And just on the fur edge of them woods," said she, "you'll see the men folks to work;" and do tell 'em to come to their dinner quick."

It was a mild September day, and Mary determined not to hurry. She had not gone far when she came suddenly upon a boy and two little girls, who seemed to be playing near the brook. In the features of the boy she recognized Henry Lincoln, and remembering what Billy had said of him, she was about turning away when the smallest of the girls espied her, and called out: "Look here, Rose, I reckon that's Mary Howard. I'm going to speak to her."

"Jenny Lincoln, you mustn't do any such thing. Mother won't like it," answered the girl called Rose.

But whether "mother would like it" or not, Jenny did not stop to think, and going toward Mary she said: "Have you come to play in the woods?"

"No," was Mary's reply. "I came to call the folks to dinner."

"Oh, it was you that screamed so loud. I couldn't think who it was, but it can't be dinner-time?"

"Yes, 'tis; it's noon."

"Well, we don't have dinner until 2, and we can stay here till that time. Won't you play with us?"

"No, I can't; I must go back and work," said Mary.

"Work!" repeated Jenny. "I think it's bad enough to have to live in that old house without working; but come and see our fish pond;" and taking Mary's hand, she led her to a wide part of the stream where the water had been dammed up until it was nearly two feet deep and clear as crystal. Looking in, Mary could see the pebbles on the bottom, while a fish occasionally darted out and then disappeared.

"I made this almost all myself," said Jenny. "Henry wouldn't help me because he's so ugly, and Rose was afraid of blacking her fingers. But I don't care. Mother says I'm a great—great—I've forgotten the word, but it means dirty and careless, and I guess I do look like a fright, don't I?"

Mary now for the first time noticed the appearance of her companion, and readily guessed that the word which she could not remember was "slattern." She was a fat, chubby little girl, with a round, sunny face and laughing blue eyes, while her brown hair hung around her forehead in short, tangled curls. Altogether she was just the kind of little girl which one often finds in the country swinging on gates and making mud pies.

Mary was naturally very neat; and in reply to Jenny's question as to whether she looked like a fright, she answered, "I like your face better than I do your dress," because it is clean."

"Why, so was my dress this morning," said Jenny, "but there can't anybody play in the mud and not get dirty."

Jenny drew nearer to Mary and said: "If you'll never tell anybody as long as you live and braeathe, I'll tell you something."

Mary gave the required promise, and Jenny continued: "I shouldn't like to have my mother know it, for she scolds all the time now about my 'vulgar tastes,' though I'm sure Rose likes the same things that I do, except Billy Bender, and it's about him I was going to tell you. He was so pleasant I couldn't help loving him, if mother did say I mustn't. He used to talk to me about keeping clean, and once I tried a whole week, and I only dirtied four dresses in all that time. Oh! how handsome and funny his eyes looked when I told him about it. He took me in his lap, and said that was more than he thought a little girl ought to dirty. Did you ever see any boy you loved as well as you do Billy Bender?"

Mary hesitated a moment, for, much as she liked Billy, there was another whom she loved better, though he had never been one-half as kind to her as Billy had. After a time she answered: "Yes, I like, or I did like, George Moreland, but I shall never see him again;" and then she told Jenny of her home in England, of the long, dreary voyage to America, and of her father's death; but when she came to the sad night when her mother and Franky died, she could not go on, and laying her face in Jenny's lap she cried for a long time. Jenny's tears flowed, too, and she, softly caressing Mary, said: "Don't cry so, for I'll love you, and we'll have good times together, too. We live in Boston every winter, but it will be 'most six weeks before we go, and I mean to see you every day."

"In Boston?" said Mary, inquiringly. "George lives in Boston."

Jenny was silent a moment, and then suddenly clapping her hands together, she exclaimed: "I know George Moreland. He lives just opposite our house, and is Ida Seldon's cousin. Why, he's 'most as handsome as Billy Bender, only he teases you more. I'll tell him about you, for mother says he's got lots of money, and perhaps he'll give you some."

Mary felt that she wouldn't for the world have George know she was in the poorhouse, and she quickly answered, "No, no, you mustn't tell him a word about me. I don't want you to. Promise that you won't."

CHAPTER VII.

One afternoon about the middle of October Mary sat under an apple tree in the orchard, weeping bitterly. It was in vain that Alice, who was with her, and who by this time was able to stand alone, climbed up to her side, patting her cheeks and trying in various ways to win her attention. She still wept on, unmindful of the sound of rapid footsteps upon the grass, nor until twice repeated did she hear the words, "Why, Mary, what is the matter? What's happened?" Then looking up she saw Billy Bender, who raised her in his arms.

Laying her head on his shoulder, she sobbed out: "She's gone—she's gone, and there's nobody left but Sally. "Oh dear, oh dear!"

"Gone! Whose gone?" asked Billy.

"Jenny," was Mary's reply. "She's gone to Boston, and won't come back till next May; and I loved her so much."

"Oh, yes, I know," returned Billy. "I met them all on their way to the depot; but I wouldn't feel so badly. Jenny will come again, and besides that, I've got some real good news to tell you."

"About Ella?" said Mary.

"No, not about Ella, but about myself; I'm coming here to live with you."

"Coming here to live!" repeated Mary with astonishment. "What for? Are your folks all dead?"

Billy smiled and answered, "Not quite so bad as that. I went to school here two years ago, and I know I learned more than I ever did at home in two seasons. The boys, when Henry Lincoln is away, don't act half as badly as they do in the village; and then they usually have a lady teacher, because it's cheaper, I suppose, for they don't pay them half as much as they do gentlemen, and I think they are a great deal the best. Anyway, I can learn the most when I go to a woman."

"But what makes you come here, and what will your mother do?" asked Mary.

"She's got a sister come from the West to stay with her, and as I shall go home every Saturday night, she'll get along well enough. I heard Mr. Parker in the store one day inquiring for a boy to do chores. So after consulting mother I offered my services and was accepted. Won't we have real nice times going to school together?"

Three weeks from that time the winter school commenced, and Billy took up his abode at the poorhouse, greatly to the satisfaction of Sally and Mary and greatly to the annoyance of Miss Grundy.

"Smart idea!" said she, "to have that great lummox around to be waited on!" and when she saw how happy his presence seemed to make Mary, she vented her displeasure upon her in various ways, conjuring up all sorts of reasons why she should stay out of school as often as possible, and wondering "what the world was coming to, when young ones hardly out of the cradle begun to court! It wasn't so in her younger days, goodness knows!"

Much as Mary had learned to prize Sally's friendship, before winter was over she had cause to value it still more highly. Wretched and destitute as the poor crazed creature now was, she showed plainly that at some period or other of her life she had had rare advantages for education, which she now brought into use for Mary's benefit.

Each night Mary brought home her books, and the rapid improvement which she made in her studies was as much owing to Sally's useful hints and assistance as to her own untiring perseverance. One day when she returned from school Sally saw there was something the matter, for her eyes were red, and her cheeks were flushed as if with weeping. On inquiring of Billy, she learned that some of the girls had been teasing Mary about her teeth, calling them "tushes."

As it happened, one of the paupers was sick, and Dr. Gilbert was at that time in the house; to him Sal immediately went, and after laying the case before him asked him to extract the offending teeth. Sally was quite a favorite with the doctor, who readily consented, on condition that Mary was willing, which he much doubted, as such teeth came hard.

"Willing or not, she shall have them out. It's all that makes her so homely," said Sal, and, going in quest of Mary, she led her to the doctor, who asked to look in her mouth.

There was a fierce struggle, a scream, and then one of the teeth was lying upon the floor.

"Stand still," said Sal, more sternly than she had ever before spoken to Mary, who, half frightened out of her wits, stood still while the other one was extracted.

"There," said Sal, when the operation was finished, "you look a hundred per cent better."

For a time Mary cried, hardly knowing whether she relished the joke or not; but when Billy praised her improved looks, telling her that "her mouth was real pretty," and when she herself dried her eyes enough to see that it was a great improvement, she felt better, and wondered why she had never thought to have them out before.

Rapidly and pleasantly to Mary that winter passed away, for the presence of Billy was in itself a sufficient reason why she should be happy. He was so affectionate and brother-like in his deportment toward her that she began questioning whether she did not love him as well, if not better, than she did her sister Ella, whom she seldom saw, though she heard that she had a governess from Worcester, and was taking music lessons on a grand piano, which had been bought a year before. Occasionally Billy called at Mrs. Campbell's, but Ella seemed shy and unwilling to speak of her sister.

"Why is there this difference?' he thought more than once, as he contrasted the situation of the two girls—the one petted, caressed and surrounded by every luxury, and the other forlorn, desolate, and the inmate of a poorhouse; and then he built castles of a future when, by the labor of his own head or hands, Mary, too, should be rich and happy.

CHAPTER VIII.

As spring advanced Alice began to droop, Sally's quick eye detected in her infallible signs of decay. But she would not tell it to Mary, whose life now seemed a comparatively happy one. Mr. and Mrs. Parker were kind to her. Uncle Peter petted her, and even Miss Grundy had more than once admitted that "she was about as good as young ones would average." Billy, too, had promised to remain and work for Mr. Parker during the summer, intending with the money thus earned to go the next fall and winter to the academy in Willbraham. Jenny was coming back ere long, and Mary's step was light and buoyant as she tripped, singing, about the house, unmindful of Mrs. Grundy's oft-expressed wish that "she would stop that clack," or of the anxious, pitying eyes Sal Furbush bent upon her, as day after day the faithful old creature rocked and tended little Alice.

At last Mary could no longer be deceived, and one day when Alice lay gasping in Sally's lap she said, "Aunt Sally, isn't Alice growing worse? She doesn't play now, nor try to walk."

Sally laid her hand on Mary's face and replied: "Poor child, you'll soon be all alone."

There was no outcry—no sudden gush of tears, but nervously clasping her hans upon her heart, as if the shock had entered there, Mary sat down upon her bed, and burying her face in the pillow, sat there for a long time. But she said nothing, and a careless observer might have thought that she cared nothing, as it became each day more and more evident that Alice was dying. But these knew not of the long nights when with untiring love she sat by her sister's cradle, listening to her irregular breathing, pressing her clammy hands and praying to be forgiven if ever, in thought or deed, she had wronged the little one now leaving her.

And all this time there came no kind word or message of love from Ella, who knew that Alice was dying, for Billy had told her so.

The end came peacefully. There was some talk of burying the child in the poorhouse inclosure, but Mary pleaded so earnestly to have her laid by her mother that her request was granted, and that night when the young spring moon came out it looked quietly down upon the grave of little Alice, who by her mother's side was sweetly sleeping.

* * * * * * *

Three weeks had passed away since Alice's death, and affairs at the poorhouse were beginning to glide on as usual. Mary, who had resumed her post as dishwasher in the kitchen, was almost daily expecting Jenny; and one day when Billy came in to dinner he gave her the joyful intelligence that Jenny had returned and had been in the field to see him, bidding him tell Mary to meet her that afternoon in the woods by the brook.

Mary bounded joyfully away to the woods, where she found Jenny, who embraced her in a manner which showed that she had not been forgotten.

"Oh," said she, "I've got so much to tell you, and so much to hear, though I know all about dear little Alice's death—didn't you feel dreadfully?"

Mary's tears were a sufficient answer, and Jenny, as if suddenly discovering something new, exclaimed, "Why, what have you been doing? Who pulled your teeth?"

Mary explained the circumstances of the tooth-pulling and Jenny continued: "You look a great deal better, and if your cheeks were only a little fatter and your skin not quite so yellow, you'd be real handsome; but no matter about that. I saw George Moreland in Boston, and I wanted to tell him about you, but I'd promised not to; and then at first I felt afraid of him, for you can't think what a great big fellow he's got to be. Why, he's awful tall—and handsome, too. Rose likes him, and so do lots of the girls, but I don't believe he cares a bit for any of them except his cousin Ida, and I guess he does like her."

Here the chatterer was interrupted by Henry Lincoln, who directly in front of her leaped across the brook. He was evidently not much improved in his manners, for the moment he was safely landed on terra firma he approached Mary, and, seizing her round the waist, exclaimed, "Halloo, little pauper! You're glad to see me back, I dare say."

Then drawing her head over so that he could look into her face, he continued, "Had your tusks out, haven't you? Well, it's quite an improvement, so much so that I'll venture to kiss you."

Mary struggled, and Jenny scolded, while Henry said, "Don't kick and flounce so, my little beauty. If there's anything I hate it's seeing girls make believe they're modest. That clodhopper Bill kisses you every day, I'll warrant."

(To be continued.)

New Ideas.

The Kaffirs have had an opportunity to learn something of the art of surgery since the soldiers and the military doctors have overrun Africa. Possibly advanced methods will not altogether supersede primitive surgery among these people, however, for they are not fond of change.

Time was when a Kaffir with a broken leg submitted to peculiar treatment. It was customary to place the limb in a hole dug in the earth, and keep it there till the bones were knit together again.

The Leisure Hour tells of a case in which the bones of a certain Kaffir lad, having been set by European aid, the Kaffir father dissented from the method employed. He had the splints removed, carried the boy home on horseback, and then took the usual course of setting the limb in the earth. The consequence was that it took six months to effect a cure.

Kaffir doctors are hereditary, the cleverest son in the doctor's family being usually chosen to succeed his father.

There are other modern things that a Kaffir has to learn besides the newest mehods in surgery. In his language there is no such term as "Thank you." He is beginning to learn it, however, although he does not think it becoming to show any emotion—whether of gratitude or anything else.

When two Kaffirs meet one says, "I see you," which is answered by "Yes." More poetical is his parting word, "May peace go with you," to which comes the response, "May peace stay with you."

An Effect Spoiled.

"After the ceremony the bride wept."

"Grief at leaving her home?"

"No; she forgot herself, and held up her beautiful long satin train going down the aisle."

WHISKERS OUT OF STYLE.

PAST STYLES IN BEARDS.

"Is the whisker doomed?" is now one of the questions of the hour. Apparently, while there has been but little comment on the subject, the moustache and the beard are rapidly going out of style. The beard went into a decline some years ago, but it is only within the last year or two that the ban has fallen on the moustache and its doom plainly sealed. Few society men wear the moustache nowadays, and only once in a great while can one be discovered brave enough to sport a beard. Whiskers have been the target for the comic artist and the stage comedians for many years. Every man aspiring to be known as a wit or any especially clever young person has always considered it the height of merriment to gently pull the tip of a friend's beard and make a noise like the sighing of a summer wind. Beards have been called "wind teasers," "lilacs," "weeping willows," "little bunch of spinach," and a hundred other things until the man who wore a beard was ready to commit murder when the next alleged humorist tried to air his witticisms.

The moustache used to be excessively popular and was considered the necessary badge of manhood. The first ambition of a young man after arriving at the age when he felt he was no longer a boy was to raise a moustache. But there is no denying that this feeling has changed. The moustaches are being rubbed off right and left, and it is common experience nowadays to meet a friend and pass him for a stranger because he has shaved off his moustache which for years was his chief facial characteristic.

The antipathy against beards and moustaches has always been more or less pronounced among women, who have always used their influence with the sterner sex to induce them to take off those "nasty old whiskers." The general impression seems to prevail that whiskers and moustaches are unsightly, untidy things unless extremely well kept. It is an art for the wearer of a beard and moustache to eat as well as the man who has a smooth face. A woman sued for divorce in an Ohio town not long ago, and laid as the principal grounds why she could no longer live with her husband the fact that he dropped crumbs and coffee on his beard at the table and the sight was so intensely disagreeable to her that she could not eat and would have to leave the table at every meal. The wearer of a beard or moustache who dines as neatly as the smooth-faced man at his side is entitled to great credit. He has to pay a price for his beard and moustache, however, for he is obliged to take much more pains with his eating and eat more slowly and more carefully. The beard and moustache, too, have to be carefully trimmed and dressed. The smooth-faced man can shave himself with neatness and dispatch, but the man with the whiskers must have a barber to trim and anoint his beard and properly curl his moustache. The beard and moustache must be carefully nurtured and trained from the first, and cause untold worries, which the smooth-shaven man never has to contend with. The styles in beards and moustaches continually change, too, and after a man has carefully trained his moustache and his beard into growing a certain way a new style is proclaimed, and then a long series of careful brushing, trimming and waxing must be begun to induce the refractory beard to change its shape to accord with the new order of things. In some towns in the country the antipathy of the gentler sex towards the beard has become so pronounced that the young women have organized societies pledged never to kiss any man who wore such a disgusting thing as a beard, and sometimes they have gone to the length of putting the moustache under the ban. All these things have doubtless had their effect. Some have induced one man to part with his beard, and others have operated to induce other men with beards to finally expose them to the remorseless razor of the barber. The barbers themselves have always been friends of the beard. They have championed its virtues in season and out of season. In summer they have pointed out that the beard was a protection to the face against mosquitoes and flies, while in winter the beard, they contend, warms the face and protects the nerves from neuralgic and other pains. Eye specialists also contend that shaving affects to some extent the eyes. Old German doctors always tell a young man affected with weakness of the eyes to let his beard and moustache grow, and that then his eyes will be stronger.

In Germany the women have now begun a crusade against whiskers and are filling the columns of the Berlin and the provincial papers with bellicose communications insisting that beards and moustaches must go. As long as Emperor William clings to his famous curling moustache, it is not to be presumed that the men of the empire will consent to shave their upper lips. But however hopeless a task the anti-beard and moustache war in Germany may be, it is certain that without any formal declaration of hostilities in America the moustache and beard are slowly being annihilated. People who do not believe that the beard and moustache are doomed have only to look about theme. And the number of smooth-shaven men is growing every day.

HURTFUL TO BOOKKEEPERS.

Typewriter that Performs the Labors of the Penman.

The bookkeeper is on the toboggan slide. The advance in labor-saving machinery has finally reached his sphere and warned him that he must seek other occupation. The latest piece of mechanism consists of three machines which dispense with bookkeepers in large establishments and perform their labor through the medium of an operator and a typewriter. One of the machines (all are called the Fisher) in an ordinary establishment does away with the labor of two men; another dispenses with the labor of eight men.

The first machine, under the direction of an ordinary typewritist, makes out a bill, copies the invoice permanently in a book, and makes a permanent sales sheet copy. The work is all done in typewriting and in permanent books. The second machine makes a sales copy, an original invoice and duplicate of the same, an acknowledgment of the

THE MECHANICAL BOOKKEEPER.

order, a file copy, an original, a duplicate and a triplicate bill of lading, a platform order, a factory shippingorder, a bagroom order, a loading order and a car card. Still a third machine makes one bill a month adding the items day by day, recording the date and salesman's number by a lock arrangement which makes it impossible for the operator to enter a series of items without dating the same and entering the salesman's number, enters all credits in red ink, and carries 1,200 accounts at one time.

A Tennessee bank cashier is responsible for the invention of these machines. His name is Fisher, and he lives at Athens. Some years ago, looking through a postoffice window, he noted a clerk cancelling stamps with a hand stamp. He wondered why the same work could not be done by machinery. From that point his thoughts wandered on to the wonder why his own books could not be kept by machinery. He tried to make a bookkeeping machine. A year ago he produced the three machines, which are now supplanting bookkeepers in large establishments.

The apparatus is a typewriter, with a basket upside down, set over a flat platen of sheet steel, which is covered with vulcanized rubber. Books, papers or anything to be written upon are easily placed upon this platen, properly clamped, and no matter what their thickness, easily adjusted to the work of the typewriter. One operator is required for the machine. She strikes the keys with the lightest kind of a touch—a piano touch, and they work. Despite the lightness of the touch, they will make thirty-two manifold copies at one time or will mark five library cards at one time. Carbons and papers are so cleverly cut and arranged that the machine performs its work on each sheet beneath, just as the operator directs.

LAST OF THE BOLIVARS.

Death of a Nephew of the Great South American Liberator.

When we turn our eyes through the lens of South American history and recall that bloody struggle for independence, we behold the shadows of many deathless heroes, whose steps along the corridors of time have left a trailing light of glory behind them. Such a cluster of noble patriots include Miranda, Paes, Sucre, Monagas, Bermudez, Falcon, Vargas and Simon Bolivar, whose names will live in imperishable grandeur as long as the human heart can cherish deeds of valor and sentiments of unalloyed patriotism.

But by far the most eminent and foremost man of that period and the one who infused his lofty individuality among all his followers, was Gen. Simon Bolivar, who has ever since been known as the Libertador—the Washington of South America. And well has he won such fame, as the idol of his people, the admired hero of Europe and America, the conqueror of Spain, the liberator of half a continent, and the founder of five nations. By the strange tergiversations of Latin-American politics, and the rivalries and jealousies of smaller men, the great Libertador, within two years after his successes, found himself an exile—an outcast from the nations he had created. In the sadness and humillation of exile he passed his last days, dying at Santa Marta in 1830. A tardy reversion of national feeling succeeded, and, twelve years later, his remains were brought back to Caracas, and amid the greatest pomp he was laid to rest in the pantheon of his native city.

The last direct relative of the Libertador, bearing his family name, has just died in Caracas, at the extreme age of 91 years. He was Don Fernando Simon Santiago Bolivar y Palacios, the son of Col. Juan Vicente Bolivar y Palacios, the only brother of Gen. Bolivar (this brother being lost at sea while conducting a filibustering expedition during the patriot wars). Don Fernando lived until the time of his death in an unpretentious quarter of Caracas, in a very ordinary house, sparsely furnished, which could in no particular give an impression of the large wealth he is reputed to have left. He was extremely infirm, feeble, and palsied, requiring constant attention, as his helplessness was so complete during the last years that his food had to be raised to his mouth by another. Through the influence of such physical weakness, long confinement, and the drooping energies and faculties of extreme old age, his mind was naturally weakened, and, as unfortunately often occurs with the aged, this beclouded condition was manifest in an intense bitterness against all who were directly or remotely related to him.—Venezuela Herald.

BROKE BLAINE'S BOOM.

Ex-Gov. Newell's Medical Opinion Turned Jersey Delegates.

Friends of the late William A. Newell, once Governor of New Jersey, have recalled an old story in which he figures as the rock upon which the Presidential hopes of James G. Blaine were wrecked in 1876. The ex-Governor, who was a physician as well as a politician, was a delegate to the Republican national convention in that year, and he was prominent among those members of the New Jersey delegation who favored Mr. Blaine's nomination.

While the struggle for the various aspirants was in progress, the news came that Mr. Blaine had been stricken with what was variously described as apoplexy and sunstroke. This event was eagerly seized upon by the two or three Jersey delegates who favored Mr. Conkling, and these, hearing that Dr. Newell had expressed a fear that the effects of such a "stroke" as Mr. Blaine had suffered might seriously and permanently affect his mental faculties, saw an opportunity, as they thought, to help their candidate. They secured a conference of the delegation, and, when it had met, they called upon the ex-Governor to give his opinion, as a medical man, as to whether, in the circumstances, it would be prudent to nominate the Maine statesman. The answer, given with extreme reluctance and regret, and of course entirely sincere, was in the negative, Mr. Blaine's hold upon the New Jersey delegates was immediately broken, but their votes ultimately went, not to Mr. Conkling, but to Mr. Hayes.

Those who like to ascribe great effects to small causes saw at the time, in the inaccurate, long-distance diagnosis of Dr. Newell the explanation of Mr. Blaine's failure to reach the Presidency, for they say that, though he was defeated in 1884, if he had been nominated in 1876 he would have been elected.—New York Times.

Negative Electricity.

"You know there are two kinds of electricity, positive and negative," said the man who is always trying to tell people things.

"Yes," answered Willie Washington. "I have had experience with the latter kind."

"Got a shock?"

"Severe. I sent a wire asking a young woman if she would marry me, and she sent another saying 'No.'"—Boston Traveler.

It must be heavenly to be a baby and be privileged to screw up your face and howl whenever people whom you don't like speak to you.

Charity begins at home—but if you hasn't a home of your own you can easily get the loan of one to practice on.

CURE INSOMNIA BY MACHINERY.

THE FASCINATOR.

If the inventors and those who have tried their inventions are to be believed there is no longer any reason why people should suffer from insomnia. More than a dozen different mechanical devices are on the market, all of which have been tested and declared effective by authorities of greater or less repute.

One of these sleep producers, made by Verdin, a famous instrument maker of Paris, is called the "fascinator." It has been successfully tested in several Paris hospitals. It consists of a helmet, which is fastened about the head by two straps buckling in the back. Across the forehead rests a band of flat steel, from the center of which projects a steel tube, into the end of which is inserted a flexible steel wire tipped with a glistening nickel-plated ball about the size of a grape. By bending the wire the ball may be adjusted at any angle desired and extremely close to the eyes. With this apparatus in place the patient lies down and fixes his gaze on the ball. This fixed gaze fatigues the eyelids and in a few minutes a sound sleep is produced.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

Issued Every Friday

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, NOVEMBER 22 1901

The New York woman who was held responsible for a tailor's bill contracted by her husband will have to "wear the trousers" in order to get even.

The San Francisco Post declares that consumption is a contagious disease, and that consumptives should not be allowed to travel in railway coaches or compartments with persons who are healthy.

Tower, a mining town of 5,000 inhabitasts in Minnesota, has just unveiled the first McKinley memorial monument, a plain shaft costing $12,000. Tower has put the other cities of the country to shame.

Of the 21,329,819 males of voting age in this country, 2,326,295 are illiterate. This seems almost incredible, but the census report cannot be questioned. A man who can neither read nor write is not fit to exercise the right of suffrage.

The fact that 180 Cape Colony troops of the Dutch race surrendered to the Boers after a poor pretense of fighting contains a warning to the British of what may yet happen in Cape Colony if the war be not brought to a speedy conclusion.

The railroad, manufacturing and mining interests have combined to fight the re-enactment of the Chinese exclusion law. The laboring element in this country should unite on this subject and serve notice that they will retire any man from public life if he dares to surrender on this question. There is not a single argument that can be made in favor of Chinese immigration.

A company of Philadelphia capitalists, among whom are the Cramps, are about to establish a plant for the manufacture of a new rifle which they claim will revolutionize war. It is said the gun at each pressure of the trigger fires five shots through a single barrel, ejects the cartridges and reloads the weapon, and all without any recoil. A few more such improvements in weapons and old man War will have to go way back and sit down.

While Uncle Sam is considering how he can best lighten the burden of taxation upon his people so as to get rid of the surplus in the treasury John Bull is devising ways and means of increasing taxation so that he can meet his expenditures without running into debt. Such being the situation, it is probable there will be a considerable shifting of population and of capital from John Bull's country to that of Uncle Sam within the next few years.

There will not be much need to worry over the surplus in the national treasury. The Philippine elephant is going to cost millions to maintain, and when we start on the scheme of building the Nacaragua canal there will be plenty of use for all the money Uncle Sam can rustle. Some statesman said a good while ago that a surplus was easier to handle than a deficit, and the streams of gold that are now filling the treasury should not be choked until the extraordinary demand for money ceases.

According to the report of the Director of Mints, the falling off of the gold output of the world for 1900 was $49,070,200 under that of 1899. A proportionate decrease for the next few years would bring the production down to an amount less than when all political parties in the United States recognized the necessity of money expansion to meet the requirements of national and international trade and commerce. The indications will hardly verify Senator Jones' announcement of the demise of silver as a post mortem declaration.

Everybody has said to the workingman that the ballot was the instrument for his redemption from the evils of which he complained, and now when is is taking up with the idea there seems to be a disposition to make light of it. It is certainly the remedy, if remedy be needed. Capital has ruled and it has made labor pay all the taxes; has made it pay a subsidy to enrich the already rich. The other side can scarcely become more one-sided. At San Francisco there was one candidate nominated by the great corporations with the especial purpose of deriving financial advantages from the general public, one by the labor side and one by just plain Democrats. The class man won and the other class squeals.—Colusa Sun.

Prosperity and prices form an interesting study. It is a well-known fact that prices are low in hard times and high in good times. The purchasing power of a dollar increases or diminishes, as the case may be. It is well to purchase and invest when prices are low; but one does not always have the money then. The cost of living follows the same rule. On July 1, 1897, the cost of living per capita per annum was, according to Dun's index, $72.45, the lowest point ever touched. On November 1, 1901, the cost of living had reached $97.74 per capita per annum, the highest point reached during the last ten years. The money circulation per capita on that date was $28.72, the highest figure ever reached. There is no money stringency, despite the enormous surplus tied up in the national treasury. The people are prosperous and busy, and there is no indication of a change in this flattering condition. Nor are there any signs of an era of speculation, calculated in the end to shake or overturn the solid foundation upon which the business of the country now stands.

SOWING WINTER WHEAT.

The Ideal Time In the Middle West. The Use of the Press Drill.

The ideal time for sowing winter wheat in most sections of the middle west is from Sept. 5 to 15. There are a number of conditions which will modify this, such as the presence of the Hessian fly, which may cause a delay in seeding, or the presence of a large number of grasshoppers. If the wheat is not sown until the latter part of September or the 1st of October, the majority of these pests will have disappeared. Early wheat, however, as a rule, withstands the disastrous effects of cold weather better than late and is also better able to grow away from chinch bugs next spring. Other things being equal, smooth varieties are preferable to bearded. The beared shatter badly in handling and are also most disagreeable for the farmer in stacking and thrashing.

The press drill is especially desirable during dry seasons and for seasons when there is more than the usual amount of freezing and thawing. The seed is covered better, sprouts more readily and thus secures a more vigorous start. The more abundant roots enable it to withstand any drought that may occur late in fall and also the heavy effects of freezing and thawing the following spring.

Many farmers are discouraged and have decided to sow no winter wheat. Low prices and poor crops have led them to conclude that something else is much more profitable. While this may be true in some instances and some years, winter wheat will continue, as heretofore, to be a paying crop from New York west. While it may not pay to sow it extensively on the average farm, it should by no means be neglected, and every farmer should have a field of winter wheat.

Taking the foregoing view of the subject, Orange Judd Farmer concludes with the advice to plow the ground early, prepare it well, sow the wheat early, have the ground properly fertilized, and eight years out of ten the winter wheat crop will be a paying one.

An Apple of Growing Fame.

Pennsylvania has an excellent apple, originated in York county, whose fame appears to be growing, and the state may become prominent for its yield of the York imperial apple. A recent state bulletin shows three forms of this apple that often occur on the same tree, and gives the following facts:

It is being planted largely in New York, Ohio, Illinois, Virginia, Maryland and Delaware. In Kansas it is growing in popularity. A speaker before the last Kansas state horticultural meeting said: "The York imperial is new to many of us because of its late sudden popularity. It has been sent to Europe, holding its own with the Missouri pippin and others. It is large, a good keeper and growers always seem pleased with it. It seems to be growing popular."

THE YORK IMPERIAL APPLE.

York Imperial is sometimes listed in catalogues as Johnson's Fine Winter and in its native county sometimes referred to as the Shep apple, shep being a word of the Pennsylvania German having reference to the oblique shape of the fruit. The tree is a vigorous grower, with slender, drooping branches, after the manner of Ben Davis. It comes into bearing at four years from planting and bears regularly and heavily. The foliage and fruit are remarkably free from scab.

The fruit is of medium size, skin yellow and almost wholly covered with two shades of red, flesh yellow, juicy, firm, subacid, season late winter. A good shipper, bringing high prices.

Lots of Pasture In a Little Rape.

"We have 110 hogs now running in six acres of rape, and there is enough rape for as many more. They don't seem to make any impression on it. They will eat one lot down, and by the time we are ready to turn back into it again it is thicker and larger than ever. I had no idea that there would be so much pasture in a small amount of rape. And then they seem to like it so well. They do so well on it, and they grow so fast. They are always satisfied and never squeal. It is a hard matter to call them out except at corn feeding time," says J. W. Cowdrey of Michigan in Farm, Field and Fireside.

One Thing and Another.

In California and Oregon the condition of hops Aug. 1 was respectively 12 and 6 points higher than at the corresponding date last year.

When grasses are hardy, sow in the fall, and sow as early as possible.

Pick all lima bean pods as soon as they are ready for use. By keeping the plants picked strong bearing is encouraged.

According to the Wisconsin station, corn well matured and in good condition for shocking, but with leaves still green, is the proper stage for the silo.

The belief is widespread that the alkali flats can probably be reclaimed by flooding the surface during a dry season and washing off the crust. Good authorities state, however, that the crust contains only a very small proportion of the alkali and that this method alone will not be sufficient to remove the trouble.

Educational Effort.

"Josephine, what possesses you to read aloud from the cookbook every evening?"

"Well, Julius, somebody told me that our new cook was perfectly awful about listening at the keyhole."—Chicago Record.

A carload of oranges will average 340 boxes, and the boxes contain about 176 oranges each. A carload of lemons will average 288 boxes, with 360 lemons to the box.

FARM AND GARDEN

THE IDAHO PEA.

Its Seeds Are Said to Possess High Feeding Value.

The Idaho pea is being talked of lately as a new forage plant, and its cultivation has been highly recommended in the west on account of the value of its seeds for horse feed and as a substitute for coffee. From the forage plant investigations of the department of agriculture it is learned that gram, Idaho pea or chick pea (Cicer arietinum) has been in cultivation in eastern countries longer than any other leguminous crop. It is estimated that there are now in India 5,000,000 acres devoted to its cultivation either alone or as a bycrop with wheat. Next to the cereals gram forms the largest part of the food used in India and in portions of northern Africa, Spain and other countries bordering on the Mediterranean.

GRAM OR IDAHO PEA.

This plant is a branching annual, with many upright stems from the same root. The leaves resemble those of the vetch, having seven pairs of small leaflets. These are oblong, soft, hairy all over, one-half inch long or less, and sharply toothed on the margins. The flowers are borne singly in the axils of the leaves on short stalks about one-half inch long. The pods are bladdery, inflated, from one-half to three-fourths of an inch long and finely pubescent, with glandular hairs. Each pod contains one, or very rarely two, large seeds, which are wrinkled and bear a fanciful resemblance to a ram's horn, whence the latin name arietinum. The seeds are a little larger than those of the common garden pea, to which they are quite similar.

The Idaho pea was cultivated in 1895 and 1896 at the Colorado experiment station. Professor Cooke states that it "has demonstrated its ability to make a large growth with plenty of water and a fair growth with a very limited supply." It belongs to the pea family, and is grown in rows 30 inches apart, and the plants 60 to 12 inches apart in the rows. Its growth indicates that it can be raised for about 1 cent a pound.

About 30 to 50 pounds of seed are used per acre, depending upon whether it is sown in drills or broadcast. All authorities agree that it is better suited to arid and semiarid regions than to humid ones, the crop apparently requiring a great many sunny days during its season of growth. Better results are obtained in growing it with irrigation than without, although it makes a fair yield on comparatively dry soils. If continued experiments with this plant in the west prove that its average yield is as high as has been claimed, it will undoubtedly prove a valuable addition to the list of forage plants suitable to semiarid regions.

The gram plant is very sensitive to cold. The seed should be sown not earlier than May 15, or, at the higher altitudes, about the 1st of June, and if some of the short season varieties are procured there will be less danger of their being caught by early frosts. Gram is sown in India as a winter crop. It is said to be adapted to almost any soil from light sandy to heavy clay or loam, apparently preferring the latter. It might prove of some value in parts of the southern states as a winter crop and soil cover on lands which are unsuited to the vetches and the crimson clover. It requires only moderate amounts of moisture and is said to be injured by prolonged cloudy weather or abundant rains, which cause it to flower prematurely and thus materially affects the yield of seed.

The Nearest He Ever Came to It.

"Colonel," she asked, "have you ever been up in a balloon?"

"No," he answered, "but I got to talking art to a Boston lady once, and she had me away up in the air inside of two minutes."—Chicago Herald.

Raising Hares.

A new industry has just been established in Indiana by Nathan Meyer, a prominent manufacturer, and his associates. The concern is regularly incorporated under the title of the Wabash Belgian Hare Breeding and Importing company. The company will undertake to import large numbers of the animals from Europe and will propagate them on an 80 acre farm leased for the express purpose. A 10 acre tract has been set apart for the breeding grounds and range, and a well built rabbit house, 16 by 200 feet, has been erected to shelter the hares in bad weather. The 10 acres are surrounded by a high and closely woven wire fence, and as the business grows the rang will be enlarged. Already 300 fine hares have been placed on the farm, and Herman Wolf, an agent, is now in Europe purchasing more, which will be shipped over this fall. Mr. Meyer says that when the company gets under way it will raise 1,000,000 hares a year, the market for the same being found here, where the fine fur is used in making crush hats. The hair suitable for these hats is high priced and difficult to obtain. The promoters expect to derive great profit from the industry.

Brome Grass Without Irrigation.

A man up in the Divide country has had very good success with Bromus inermis without irrigation, says the Denver Field and Farm. The seed was sown on upland soil where buffalo grass had formerly been. It was 228 feet to water and had been under cultivation for 11 years. The soil is a loam, with a yellowish loam subsoil. There is no alkali present. It is what would be termed a medium light soil. It was plowed 10 to 12 inches deep and then disked and harrowed until like a garden bed. The condition at time of planting was good, but not dry. The seed was sown in May, probably about the middle of the month, and plants appeared above ground about the last of the month, giving a good stand. The weeds were cut the last of July. During a dry spell of five weeks between Aug. 1 and Sept. 6 he thought he had lost it entirely. A four days' storm in September gave it a start and resulted in a splendid stand. He believes that Bromus inermis is going to be the hay grass for all that region.

He Doesn't Mean It.

When you hear a young man say, "I don't believe in a woman having anything to do but sit and read or manicure her finger nails all day. I don't want my wife to be busy about anything," why, of course, you know that the young man is simply talking against time. He doesn't mean a word he says, and it is safe to warrant that he is the first man who would be bored to death by such a girl. This young man may like to fancy that he is a believer in such false sentiments, and perhaps he does believe in them for the moment of saying. But this may more than likely be only his way of protesting against the wave of energy which the girlhood of today is responding to, out of which perhaps may come salvation even to man. Or else, possibly, there is nothing more than sly method in his old school assertion.—Philadelphia Inquirer.

Commissioner's Sale.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

A. W. EIBESHUTZ, Plaintiff, vs. E. M. DINEEN, Defendant.

SUPERIOR COURT Order of Sale and Decree of Foreclosure.

UNDER AND BY VIRTUE OF AN ORDER of sale and decree of foreclosure issued out of the Superior Court of the County of Inyo State of California, on the 9th day of October, 1901, in the above-entitled action, wherein A. W. Eibeshutz, the above plaintiff, obtained a judgment and decree against E. M. Dineen, defendant, on the 7th day of October, 1901, which said decree was, on the 8th day of October, 1901 recorded in Judgment Book 2 of said Court, at page 157, I am appointed Commissioner and commanded to sell:

All the right, title and interest of the defendant E. M. Dineen, consisting of an undivided one third interest in and to those certain mines and mining claims situate, lying and being in Wild Rose Mining District, County of Inyo, State of California commonly known and designated as the "Monarch," "Combination," "Monopoly" and "Kennedy" mines, the notices of location thereof being of record in the mining records of said Wild Rose Mining District, and in the office of the County Recorder of said Inyo County.

Notice is hereby given that on THURSDAY, the 5th day of NOVEMBER, 1901, at 2 o'clock p m of that day, in front of the Court House, in the town of Independence, I will in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy the plaintiff's judgment, with interest thereon and costs, to the highestand best bidder, for cash, in gold coin of the United States.

GEO. S. WOOD
Commissioner.

Dated October 14, 1901.

INYO LODGE No. 221, F. & A. M.

STATED MEETINGS OF INYO LODGE, No. 221, F. & A. M., for the year 1901, will be held at Masonic Hall, Independence, as follows:

P. H. MACK, W. M.

ARE YOU DEAF? ANY HEAD NOISES?

ALL CASES OF

DEAFNESS OR HARD HEARING ARE NOW CURABLE

by our new invention. Only those born deaf are incurable.

HEAD NOISES CEASE IMMEDIATELY.

F. A. WERMAN, OF BALTIMORE, SAYS:

BALTIMORE, Md., March 30, 1901.

Gentlemen:—Being entirely cured of deafness, thanks to your treatment, I will now give you a full history of my case, to be used at your discretion.

About five years ago my right ear began to sing, and this kept on getting worse, until I lost my hearing in this ear entirely.

I underwent a treatment for catarrh, for three months, without any success, consulted a number of physicians, among others, the most eminent ear specialist of this city, who told me that only an operation could help me, and even that only temporarily, that the head noises would then cease, but the hearing in the affected ear would be lost forever.

I then saw your advertisement accidentally in a New York paper, and ordered your treatment. After I had used it only a few days according to your directions, the noises ceased, and to-day, after five weeks, my hearing in the diseased ear has been entirely restored. I thank you heartily and beg to remain Very truly yours,

F. A. WERMAN, 730 S. Broadway, Baltimore, Md.

Our treatment does not interfere with your usual occupation.

Examination and advice free. YOU CAN CURE YOURSELF AT HOME at a nominal cost.

INTERNATIONAL AURAL CLINIC, 596 LA SALLE AVE., CHICAGO, ILL.

LEGAL.

Application for Patent.

NOTICE OF APPLICATION OF THE Inyo Marble Company of California, a Corporation, for a United States Patent.

INDEPENDENCE, CAL., Nov. 16, 1901.

NOTICE IS HEREBY GIVEN THAT IN pursuance of Chapter Six of Title Thirty-two, of the Revised Statutes of the United States, the Inyo Marble Company of California, a corporation organized and existing under and by virtue of the laws of the State of California, whose Post Office address is Room 31, 10th Floor, Mills Building San Francisco, Cal., claiming 120 acres of the mineral deposit bearing marble, lying and being situated within the Mining District, County of Inyo and State of California, has made application to the United States for a patent for the said mining claim, which is more fully described as to metes and bounds by the official plat herewith posted, and by the field notes of survey thereof, now filed in the office of the Register and Receiver of the U. S. Land Office at Independence, which field notes of survey describe the boundaries and extent of said claim on the surface, with magnetic variation at fifteen degrees thirty minutes East in June, 1892, as follows, to wit:

Beginning at the original location corner at the N. E. corner of the S. W. ¼ of Section 14, Township 16 South, Range 37 East, Mount Diablo Meridian. Whence the ¼ Section corner between Sections 14 and 15 bears West 40.00 chains distant the ¼ section corner between 14 and 23 bears South 40.00 chains distant, set post 4 in. square 4½ feet long 12 in. in ground with rock mound marked 1. No. 1.

Thence, the magnetic variation being 15 degrees East, North 14.50 chains. Top of spur bears N. W. descending along West slope of spur, 40 chains, 2640 feet. No location corner to be found. At point identified by claimants set post 4 in. square 4½ ft. long 12 in. in ground with rock mound marked I No 2

Thence deflecting to left 90 degrees, West descending 13.50 chains cross gulch 10 lks. wide, course North ascend 18 chains. Top of spur bears N 50 degrees W. descend 27 chains. 1782 feet cross wash 25 lks. wide course S. 70 degrees W. 30 chains, 1980 feet. No location corner to be found. At point identified by claimants set post 4 in. square 4½ feet long 12 in. in ground with rock mound marked I No. 2 cor. to sections 10, 11, 14, and 15 bears N. 89 degrees 30 minutes W. 10.00 chains distant.

Thence deflecting to left 90 degrees, South descending gradually 4.50 chains cross wash 25 lks. wide, course West and gradual descent. 10.00 chains top of low point of spur bears West gradual descent. 20.60 chains S. W. corner boarding house bears S. 56 degrees 30 minutes E. 9 chains. 24.00 chains S. W. cor. lodging house bears S. 64 degrees 00 minutes E. 7.50 chains. S. W. corner of office upon which location notice is posted bears S. 81 degrees 00 minutes E. 9.00 chains S. W. corner of blacksmith shop at upper excavation of quarry bears N. 61 degrees E. 7.50 chains 40.00 chains, 2640 feet to original location corner set post 4 in. square 4½ feet long in rock mound which I marked I No. 4.

Thence deflecting to left 90 degrees, East 2.75 chains road from excavation at quarry bears N. and S. 4.50 chains cross railroad side track from quarry connecting with main line of the Carson and Colorado railroad bears N. 18 degrees 30 minutes E. and S. 18 degrees 30 minutes W. 7.75 chains. Road to quarry bears N. W. and S. E. 10.00 chains S. W. corner of boarding house bears N. 9 degrees 30 minutes W. S. W. corner of blacksmith shop at excavation at upper quarry bears N. 10 degrees W. 20 chs. excavation at lower quarry bears N. 8 degrees W. 19.00 chs. excavation at upper quarry 150 ft. above lower quarry bears N. 11 degrees W. 21.00 chs. 13.00 chains cross railroad switch track from office to upper marble quarry N. W. and S. E. 29.00 chains excavation in deposit of marble 10 lks. to left. 30.00 chains, 1980 feet to corner No. 1, at place of beginning.

Containing an area of 120 acres.

The said mining claim being of record in the office of the Recorder of Inyo county at Independence in the County and State aforesaid in Book "E" Land, Water and Mining Claims, p. 471, said mineral deposit being shown upon the plat posted herewith, as near as can be determined from present developments. This claim being for 120 acres of the surface ground shown upon the official plat posted herewith, the said claim being designated as Lot No. 37 in the official plat posted herewith.

Any and all persons claiming adversely the mining ground, premises, or any portion thereof so described, surveyed, platted and applied for, are hereby notified that unless their adverse claims are duly filed according to law, and the regulations thereunder, within the time prescribed by law, within sixty days from the date of the first publication hereof, with the Register of the U. S. Land Office at Independence, in the State of California, they will be barred, in virtue of the provisions of said Statute.

It is hereby ordered that the foregoing notice be published in the Inyo Independent, a weekly newspaper published at Independence, Inyo County, California, for 60 days (10 weeks) which paper I hereby designate as the paper published nearest said land.

S. W. AUSTIN.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

W. E. Pedley, Plaintiff, vs. William Remsen, Peter A. Graff, Yellett D Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company a Corporation, Surprise Canyon Mill and Water Company a Corporation Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Chares Doe, John Roe, Richard Roe, Charl s Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

The People of the State of California send Greeting to William Remsen, Peter A. Graff, Yellett D Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company, a Corporation, Surprise Canyon Mill and Water Company a Corporation, Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

You are hereby required to appearin an action brought against you by the above-named plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein within ten days (exclusive of the day of service) after the service on you of this Summons—if served within said County; if served elsewhere within thirty days.

And you are hereby notified that if you fail to so appear and answer the Plaintiff will take judgment for any money or damages demanded in the Complaint, as arising upon contract, or will apply to the Courtfor any other relief demanded in the Complaint.

Witness my hand and the seal of said Superior Court of the County of Inyo, State of California, this 15th day of October, A. D. 1901.

[SEAL.] J. E. MERONEY. Clerk.

[Endorsed:] In the Superior Court of the County of Inyo, State of Cal.

W. E. Pedley, Plaintiff vs. William Remsen, et als., Defendants.

Summons.

BORN.

BELL—At Independence, Cal. November 20, 1901, to Mr. and Mrs. Avah Bell, a son.

It is getting that time of day when the gobbler gets gobbled.

The Harness—Bulpitt case has been continued until December 10th.

J. Scott Broder and Up. Tracey came down from Tinnemaha on Wednesday.

Taxes will be delinquent on and after next monday. Pay up in time and save costs.

Bert. Rhine got back last Tuesday evening from a trip to Los Angeles and San Francisco.

The Inyo Marble Company is applying for a patent. The notice is published this week.

Dr. L. W. Allingham and S. P. Mc Knight, former Inyoites, are located at Randsburg.

Since March 12, 1901, there have been 78 locations made in the Tonopah mining district.

A contract has been let to R. Hofer to construct a telephone line between Soda and Tonopah.

The Bluestone smelter in Mason Valley started up last week with a full force of workmen.

W. H. Rees, Superintendent of the Saline Valley Borax Works, was in town early in the week.

Herb. Hartshorne came down from Bishop yesterday as a witness in the naturalization of John Pedrue.

Say! Don't miss the Children's Club entertainment and ball next Thursday night. If you do you'll regret it.

Six big teams arrived at Tonopah from Sodaville last Wednesday loaded with lumber and it was not a murker; it was all sold before night.

Ed. Crocker and George Mitchell have gone to Monache to make a final round-up of what cattle may be left there. They will find it rather chilly

John Pedrue, a resident of Bishop, was granted his second papers in the Superior Court this morning and is a full-fledged citizen of the United States.

Rev. Richard Fysh, who has been appointed pastor to this charge by the M. E. Conference, will arrive here next week. He is traveling by team from Oregon.

Felix Cardinel passed through town last Tuesday with about 30 head of horses en route to Los Angeles. They were all fine looking young animals and should bring good prices.

Regular meeting Inyo Lodge No 221 F. & A. M. to-morrow night. This will be the regular meeting for the election of officers for the ensuing year. A full attendance is earnestly requested.

Mrs. F. Rhine has received during the past week about 30 tons of new goods purchased during her recent trip to the City. Her force of clerks is kept jumping getting them marked and put away.

Tom Keefe, a mining man well known all over the coast, arrived at Independence last Monday. He is making an examination of several properties in this vicinity. Mr. Keefe carries an assaying outfit with him and make his tests upon the ground.

Johnny Clarke has got his stage line from Candelaria to Tonopah in good running order. The stage leaves Candelaria daily on the arrival of the south-bound train and goes through in twelve hours. The time card will be published next week.

Mr. and Mrs. J. H. Storey left Wednesday for Oakland. Mr. Storey has been the operator in the local telegraph office for some time past. An operator will arrive here from San Francisco the first of next week to take charge of the office.

Ivan Bunney came over from the East-side yesterday. He says there are five four-horse teams at work cleaning out the Inyo canal below the Reward mill. This will take about six weeks, when the water will be turned out above the mill and work commenced on that section.

Mars, Venus, Mercury, Jupiter and Saturn are in conjunction this year and can be seen in the early evening in the southwestern sky. This is a conjunction, says Prof. Bernard, the noted astronomer, which may not occur again in a thousand years.

Nature's Handiwork.

An interesting study is the big wash that occurred on Symmes creek last summer. There came a very heavy rain and water rushed down the steep mountain sides in torrents. The stream leaves the mountains through a narrow gorge and through this the pent-up waters forced a mass of mud, rocks and debris 30 feet or more in depth. Huge trees were torn out by the roots and carried down by the avalanche. A dam was caused at the mouth of the canyon and the flood was forced over the banks, cutting a channel 100 feet wide and a mile long down the hill. The mud carried with it a cement, and the bed of this gorge is now hard as a rock. Boulders 10 feet thick rolled down like pebbles. The willows and birch bordering the stream were twisted and torn like straws, and the entire creek is denuded of foliage. We have often wondered at the small rocks piled on boulders along the mesa skirting the foothills. It seemed unaccountable that they should have gotten there by any agency other than human hands. This wash fully explains it. The great mass of mud, boulders and water came down in a semi-liquid state and was deposited wherever the subsidence of the waters left it. The rains of ages wash the mud away and leave the small boulders piled in monuments on the larger ones. This creek still runs in its old channel, and this has been cut into a huge "V" flume about 20 feet deep and 40 feet wide at the top, with the sides plastered with cement. It is worth seeing.

New Kind of Smelter.

A number of Carson people have formed a company for the purpose of putting in a Vulcan smelter plant at that place. The Vulcan furnace differs greatly in essential points from all others. It is claimed for it that it utilizes a down draught instead of an up draught. The claim is that this prevents anything from going out the smoke-stack and collects every bit of value in the ore in the crucible, where it belongs It is claimed to consume only from 40 to 60 per cent. of the fuel used by other furnaces. The ore may be smelted for an average cost of $3.50 per ton, and that with ores containing sulphur little or no fuel is used beyond that contained in the ore, after the smelting has started. Also that "blowing in" or "out" may be accomplished in a half hour without the necessity of a large ore dump at hand. If this machine proves a success it could be made much use of in this county. There are a large number of low-grade smelting propositions here which a cheap and effective method of working would make very valuable.

Real Estate Transfers.

Recorded since last report:

W. H. Uhlmeyer to R. K. Love—April 15, 1901, Lot 8 Blk 4, Seely's plat of town of Big Pine. $60,

Jas. H. Love and wife to Robert K. Love—March 6, 1901, Two acres at Big Pine, $10.

G. E. Bailey et al to American Nitre Co.—July 11 1901 an und 7/8 int in 31 Nitre claims in Tecopah Mining Dist., Stock certificates in company.

Thomas E. Brink to American Nitre Co.—Und 1/8 int in 31 mining claims in Tecopah Mining Dist., Stock certificates in Company.

Inyo Academic Association to Fred H. Bulpitt—April 22 1901, Lot 5 Blk E, Academy Addition to town of Bishop, $10.

The Children's Club.

The managers of the Childrens Club are hard at work on the programme for Thanksgiving night. A novel feature of the occasion will be several musical numbers and a series of tableux interspersed between dances. A supper will be served at midnight and good things in abundance will be provided. The object of the affair is to provide funds for repairing their Club room and furnishing necessaries. The little chaps should meet with every encouragement in their efforts to provide benefiting amusements. It is a great improvement on running the streets wild. Admission to ball, $1.00. Supper. 50 cts. a plate. Tickets now on sale at all business houses.

Change The Boundary.

A petition is being circulated through the County and extensively signed asking the Interior Department to change the existing eastern boundary line of the Sierra Forest Reserve. The present line is well down into the Valley and it is sought to have it changed so that it will skirt the foothills. The petition is accompanied by an excellent map showing the desired change in detail We can see no good reason why this should not be done. There is absolutely no timber within the line of the proposed change, and no injury to the forest could possibly occur by making it.

New Time Card.

According to the new time table just received, south-bound trains leave Mound House daily at 10:45 a. m., arriving at Hawthorne at 5:00 p. m. Leave Hawthorne daily at 6:00 a. m. next day, arriving at Independence station at 5:30 p. m. North-bound trains leave Independence station at 7:20 a. m. daily, arriving at Hawthorne at 6:55 p. m. Leave Hawthorne at 10:30 a. m. next day, arriving at Mound House at 4:45 p. m. Close connection is made with V. & T. trains at Mound House and C. P. trains at Reno for San Francisco.

Claimed By Death.

A telegram was received here yesterday announcing the death at Bishop of John W. Stockton. The deceased came to Bishop a year ago from Southern California and bought the Harvey place about four miles south of town. He made many friends and leaves an excellent reputation for probity and honor. He was a member of the Knights of Pythias and the funeral was conducted yesterday under the auspices of that order.

Quite a number of horses have died during the last two weeks of distemper on the Tonopah road.

SUPERIOR COURT.

Hon. Walter A. Lamar, Judge.

FRIDAY, Nov. 15, 1901.

T. C. Harness, plaintiff, vs. Fred H. Bulpitt, defendant—T. C. Harness examined by plaintiff and cross-examined by defendant.

The records of Inyo county concerning the property in question were submitted and placed in evidence.

Andrew Clark was called and examined for the plaintiff.

Jurors J. E. Dunlap, J. H. Smith and J. C. Anton were excused.

Recess taken until November 16th.

SATURDAY, Nov. 16, 1901.

Harness vs. Bulpitt—Andrew Clark resumed the stand. John Clarke and A. E. Sais called and examined. Deposition of John B. Clarke offered in evidence and filed. Court adjourned until November 18th.

MONDAY, Nov. 18, 1901.

Harness vs. Bulpitt—J. C. Mills, J. B. Collett, J. E. Meroney and Maymie B. Clark called and examined. Recess until November 19th.

TUESDAY, Nov. 19, 1901.

Harness vs. Bulpitt—Maymie B. Clark resumed the stand. T. C. Harness recalled by the defense and re-examined by plaintiff. Additional records of Inyo county offered in evidence, whereupon the plaintiffs rest. Defendant moves the Court for a judgment of non-suit and costs on the ground that the plaintiff has failed to prove his case as set up in the complaint. Argument by counsel. Motion denied. F. H. Bulpitt called and examined for the defense. Records of Inyo county offered in evidence. Recess until November 20th.

WEDNESDAY, Nov. 20, 1901.

Harness vs. Bulpitt—Examination of F. H. Bulpitt continued. Recess until November 21st.

THURSDAY, November 21, 1901.

Harness vs. Bulpitt—Trial of case continued until December 10, 1901, by consent of all parties.

People vs. Hunter and Maxwell—Defendants waive right to separate trial. Court proceeded to select a jury. D. W. Pitman peremptory challenge by defense. N. M. Dodge excused for disqualification. Fred Strohmeyer peremptory by defense. Chas. Walter peremptory by plaintiff. Thomas Williams peremptory by defendant. S. G. McMurry, W. H. Evans, J. W. Lacey and A. E. Fitzgerald sworn as jurors. George Hall peremptory by defense. Louis Thurnau peremptory by defense. F. R. Smith excused for actual bias. O. F. Dearborn excused for actual bias. N. L. Baker peremptory by defense. Jas. H. Conners, Thomas J. McComas, Charles Houle, J. N. Reynolds, Charles A. Winter, S. J. Newlon and J. W. Clark sworn as jurors. Thos. Hughes peremptory by defense. J. F. Sanders peremptory by plaintiff. F. K. Andrews and John R. Shipley excused. J. D. Mairs peremptory by defense. W. J. Perry peremptory by plaintiff. Fred Albers peremptory by defense. The Court ordered the Sheriff to summon a special venire of five jurors. Recess until 10 o'clock a. m. November 22d.

Lecture Course.

A series of lectures are being given at Big Pine under the auspicies of the literary department of the Epworth League. On November 29th Judge G. W. Shutter-Cottrell of Reno will deliver an address on "The Right of the United States to Acquire Foreign Territory from a Lawyer's Standpoint." These lectures are being largely attended and are highly instructive. Other addresses will follow at later dates, the next one being December 13th by C. W. Van Deventer.

Connects at Carson with Stages for LAKE TAHOE, GENOA, PINE NU CARSON VALLEY, SILVER MOUNTAIN, SWEETWATER MINES, ETC.

Connects at MOUND HOUSE with CARSON & COLORADO RAILROAD.

TO LAKE TAHOE.

A TRIP OF RARE ITEREST.

Passengers on west-bound overland trains o Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the mo ning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spen examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,10 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug6-tf

The Story of a Woman's Suffering.

"DEAR MRS. PINKHAM:—When I began the use of Lydia E. Pinkham's Vegetable Compound I was suffering terribly. At times the pain was almost more than I could stand. My heart would nearly stop beating and I would get cold and numb.

"My husband thought many times I was dying and did not dare to leave me alone. I also suffered severely at times of menstruation.

"I had tried several doctors and they told me that they had done all that medicine could do. In the face of all this, and to the astonishment of my family and friends, your remedies cured me. I am now well and do the work for eight in the family. I feel very grateful for my recovered health, and constantly recommend your medicine."—MRS. CARRIE BELLVILLE, Ludington, Mich.

The record of Lydia E. Pinkham's Vegetable Compound is written in thousands of such letters as Mrs. Bellville's. When during its whole career of thirty years no physician has to our knowledge criticised this medicine adversely, and thousands are daily prescribing it in their practice, should you, who know less about medicine than they, say, "Oh, I do not believe it is any good"?

Mrs. Pinkham advises women free of charge. Her address is Lynn, Mass. No woman knows the truth about women's ills as thoroughly as Mrs. Pinkham, and no medicine in the world has done so much good as

Lydia E. Pinkham's Vegetable Compound.

$5000 REWARD We have deposited with the National City Bank, of Lynn, $5,000, which will be paid to any person who can find that the above testimonial letter is not genuine, or was published before obtaining the writer's special permission.—LYDIA E. PINKHAM MEDICINE CO.

FINICKY TURKISH LADIES.

They Are Very Careful About What They Take In Their Hands.

Our Constantinople correspondent writes: It is not generally known that there exists among Turkish ladies of high class a kind of caste feeling similar to that prevailing among Hindoos. It takes the form of a fear of contamination from the outer world and is only observed, as far as I know, by those who cannot afford to keep servants in sufficient numbers. Before meals ladies always wash their hands at a tap from which the water runs into a marble basin. They will turn on the tap when they are just going to wash, but when they have finished they let the water run till somebody shuts it off, as to do it themselves would make them unclean. They cannot open or shut a door, as the handle would be unclean, so a slave is generally kept handy for the purpose.

One of these fastidious ladies was talking to a small niece the other day who had just received a present of a beautiful doll from Paris. The child presently laid the doll on the lady's lap, who was horrified and ordered the child to take it away. As the little girl would not move it and no servant was near, and the lady would be defiled by touching a doll that was brought from abroad, the only thing she could think of was to jump up and let the doll fall, which broke to pieces. The same lady will not open a letter coming by post, but a servant opens it and holds it near her for her to read. If her handkerchief falls to the ground, it is immediately destroyed or given away, so that she should not use it again. This curious state of exclusiveness or fanaticism exists, I am told, in many of the large harems. Among men it is not practiced.—London Telegraph.

Advice to Students.

To Whom It May Concern: The best College to attend for the purpose of becoming practical Stenographers is, in our judgment, the Gallagher-Marsh, Parrott Building, S. F., Cal. Ernest A. Gurvin, L. A. Washburne, W. J. Nicholson, Official Reporters Supreme Court, State of Cal. Send for catalogue.

The fruit of some family trees seems to consist largely of apples of discord.

There is more Catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease, and prescribed local remedies, and by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease, and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials.

Address, F. J. CHENEY & CO., Toledo, O.

Kind Lady—Poor fellow, hyve you got no friends? Hap Hazard—No, mum; I hain't got nobody but relatives.—Tit-Bits.

E. W. Grove

This signature is on every box of the genuine **Laxative Bromo-Quinine Tablets** the remedy that cures a cold in one day

"It's no use," sighed the Pork Packer's fair daughter, "trying to go in society when pa insists on calling a golf club a shinny stick!"

Taken before bed time Gilt Edge Whiskey will break up any cold. Wichman, Lutgen & Co., San Francisco, Cal., sole proprietors for U. S. A.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists. CONSUMPTION

Insects and X Rays.

A writer in The American X Ray Journal tells of some unusual experiments upon insects with Roentgen rays. A box was made, half of wood and half of sheet lead. In the wooden half a number of larvæ of flies, bees, beetles and other insects were placed, and the box was then put in the field of the X rays. The insect colony at once became greatly excited, and after crawling to and fro finally emigrated to a worm to the leaden half of the box, where the rays could not penetrate. The experiment was repeated many times and always with the same result.

A similar experiment was tried with the blind larvæ of a certain species of beetle. A number of them were placed in an open cigar box, which also contained a metal box with an opening. No sooner were the rays turned on than the insects showed signs of distress. Their uneasiness increased, and in a little while they all sought refuge in the metal box. As the larvæ in the second experiment were entirely sightless their perception of the rays must take place through the nerves of the skin.

The Inquisitive Antelope.

An antelope is as curious as a woman. If the hunter will lie down in the grass and wave a red handkerchief, a band of antelope will keep circling around until within reasonable distance for a safe shot. After completing a circle the antelope halt suddenly and bring down one fore foot with a vigorous stamp on the ground, and at the same instant they make a sort of snort that sounds like a half whistle. That is the propitious moment for peppering them with rifle balls.

I learned this trick when a frontiersman came along and found me crawling for miles on the level prairie endeavoring to get a shot at one of the timid creatures. The man asked me if I thought I could get him. I answered: "Get him! I've got to get him. I'm out of meat." He then posted me about lying still and flirting with the handkerchief, and I found they liked that better than chasing, and I made an entry right there that an antelope possessed some of the characteristics of a woman.—Exchange.

Wrenched Foot and Ankle Cured by St. Jacob's Oil.

Gentlemen: A short time ago I severely wrenched my foot and ankle. The injury was very painful and the consequent inconvenience (being obliged to keep to business) was very trying. A friend recommended St. Jacob's Oil, and I take great pleasure in informing you that one application was sufficient to effect a complete cure. To a busy man so simple and effective a remedy is invaluable, and I shall lose no opportunity of suggesting the use of St. Jacob's Oil. Yours truly, Henry J. Doirs, Man'gr. The Cycles Co., London, England.

St. Jacob's Oil is safe, sure and never failing. Conquers pain.

Of course England wouldn't be a Shakespearean country with its hamlets left out.

Sure to be arrested!—any ache or pain—by Hamlin's famous Wizard Oil. Your druggist sells it.

YOU KNOW WHAT YOU ARE TAKING When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

Every man in the German army must learn to swim.

Catarrh

The cause exists in the blood, in what causes inflammation of the mucous membrane.

It is therefore impossible to cure the disease by local applications.

It is positively dangerous to neglect it, because it always affects the stomach and deranges the general health, and is likely to develop into consumption.

Many have been radically and permanently cured by Hood's Sarsaparilla. It cleanses the blood and has a peculiar alterative and tonic effect. R. Long, California Junction, Iowa, writes: "I had catarrh three years, lost my appetite and could not sleep. My head pained me and I felt bad all over. I took Hood's Sarsaparilla and now have a good appetite, sleep well, and have no symptoms of catarrh."

Hood's Sarsaparilla

Promises to cure and keeps the promise. It is better not to put off treatment—buy Hood's today.

A LIFE'S SAD ENDING.

Sir Edwin Arnold's Days Solaced by His Japanese Wife.

To thousands of Americans who have read the works of Sir Edwin Arnold and listened to his lectures it will be news to learn that the distinguished English scholar and sage, robbed of his life's savings by his son, is forced, though blind and feeble, to work hard for a living. The sharer of his burdens—the uncomplaining and constant attendant upon him—is a little, black-haired, black-eyed, dark-skinned Japanese woman, who, by virtue of the

SIR EDWIN ARNOLD.

magic which Japanese people attach to a cup of tea, is his wife.

The pathetic tenderness and faithfulness of this little wife in the stricken condition of Sir Edwin, has caused great comment in social and literary circles in London.

Sir Edwin has lost the sight of his eyes and, as a result of paralysis, he cannot walk a step. Constant and tender in her devotion to him, is his little, dark-faced wife, who, before her marriage, was Mrs. Watambb, widow of a distinguished officer of the Japanese army.

His marriage to this woman was the sensation of England at the time. He met her in Yokohama in 1891 when he was visiting Japan with his daughter, Edith. Their marriage was sudden—so sudden that Miss Edith was shock-

LADY ARNOLD.

ed. It was explained to her that they had been wedded by the Japanese method of drinking a cup of tea together. When the daughter asked her father about the ceremony, which seemed to her questionable, he said:

"It is the custom of the country, and will be as binding to me as would be a pompous ceremony in a cathedral."

And now toward the close of a life's vicissitudes the devoted creature who clings to him when others have forsaken is the woman whom he won by a cup of tea.

HIS "BLINDNESS" AN EXCUSE.

Had His Eyes Shut So Didn't Know It Was an Officer.

"Old Billy Jones, who picks up bones," remarked Recorder Broyles, poetically, as an aged negro came from the waiting room. The arresting officer had told the recorder that Billy Jones was a rag picker and bone gatherer by trade and a blind man by profession.

"Old Billy Jones," said the recorder to the prisoner, "you will have to tell us about this blind man's bluff of yours. I understand that you play off blind and get a few coins by the trick. A policeman came along and you begged him for a dime, which was a stupendous folly as well as very thoughtless.'"

"How I gwine ter know hit war er perlice when I wus blin'?" asked the old man.

"But you are not blind," urged the recorder.

"But I had dese eyes shot, jest de same," the old man explained.

"I am glad you have some sort of an excuse to offer," the recorder went on to say, "for the world would put you down as an idiotic ignoramus to expect an Atlanta policeman to have a dime. Don't you know it is against the law to beg on the streets?"

"I mos' knows hit now," stated old Billy Jones, "ter mer sorrow."

"I'm going to make you sorry $5 worth," the recorder told him.

"Larnin' in disser cote cums mouty high," muttered the old man, says the Atlanta Constitution, as he prepared to return to the waiting room.

"Yes, we deal in a sort of fine art," stated the recorder. "You see, or rather you didn't see, you went it blind and the officer raised you one. The only stake you got was a mis-stake. Don't beg, Billy Jones, and if you do, let the copper pass you by."

Beaten.

"It beats everything," said Farmer Corntossel, "how rivalrous these musicians get. One of the boys got a violin."

"Did the neighbors get jealous?"

"I should say so. The first thing we knowed the Thompson boys get a viola. Then the Dinkin' boys got a violoncello. An' now Seth Twiggles has gone an' bought hisself a regular bass fiddle. An' as there ain't anything made bigger'n a bass fiddle, there ain't no way fur the others to do excep' to give up an' allow that Seth has beat 'em out."—Washington Star.

How Wood Is Seasoned.

Timber is seasoned by the evaporation of the water, the extraction of the vegetable juices and the solidification of the woody tissue.

When your troubles are so firmly anchored in your mind that you dream of them, whoa!

When a man likes gossip, he is the worst kind.

SPIRIT SLATE WRITING.

How the Mysterious Sentences Are Prepared In Advance.

Spiritualistic slate writing, if cleverly done, always makes a marked impression on a magician's audience because it utterly baffles their efforts to detect the trick. They see a small cabinet suspended above the stage by means of cords or ribbons. It has an open front and is empty. The magician turns it around so that every part of it may be seen and taps it inside and out with his wand to show that it is hollow.

On a stand near by he has a small easel, a common school slate, a bottle of india ink with a quill pen in it and a few sheets of ordinary white writing paper. All these he passes around among the audience for examination. Then he fixes a sheet of the paper to the slate by means of wafers, places the slate on the easel and the easel in the cabinet, together with the bottle of ink, the latter having the pen still in it.

Having allowed the audience to see the articles thus arranged in the cabinet, he throws a large silk handkerchief over it. Mysterious sounds are immediately heard, and the cabinet shakes as if some living thing had entered it. When the sounds and the shaking cease, he removes the handkerchief, showing an inscription written in bold black letters on the paper and the pen not in the ink bottle, but lying on the bottom of the cabinet. He then removes the paper from the slate and passes it around for examination, when the writing is immediately recognized as having been done with India ink.

The explanation of the trick is simple. The writing was done in advance by the performer, the fluid used being a solution of sulphuric acid of the purest quality. To make the solution 50 drops of the concentrated acid are added to one ounce of filtered water. Writing done with this solution is invisible until exposed to heat. When so exposed, it comes out perfectly black, looking exactly like dried India ink.

The heat is applied by means of an electric current running over wire with which the slate is wound. The cords by which the cabinet is suspended conceal copper wires, which conduct the current to the slate. Black silk threads suitably attached enable the performer to make the sounds in the cabinet, to cause the cabinet to shake and to jerk the pen out of the ink bottle.

Several sheets of paper are prepared in advance, each with a different inscription, the performer telling one inscription from another by secretly marked pin pricks.—New York Herald.

ANIMAL LIFE.

In Maryland sparrows have been known to raise six broods in one year. In England there are seldom more than three broods.

Ostrich farms are profitable. Birds are worth $100 apiece, and a good specimen yields about $25 worth of feathers at a plucking.

Cats evince, as is well known, a curious emotional disturbance when in the neighborhood of valerian plant, of which they are very fond. It apparently produces in them a species of intoxication.

There are records of elephants that have lived for 200 years, and an age of 150 years is not regarded as so very old for an elephant. It takes about a quarter of a century to get the elephant to full maturity.

A French anatomist has analyzed the skeletons of 86 chimpanzees, gorillas and orang outangs and asserts that he has found in them bone diseases like those which afflict mankind and in about the same proportion.

A PUZZLING CASE

That Has Attracted Wide-Spread Attention in Medical Circles.

From The Item, Lynn, Mass.

Thousands of dollars have been spent in doctors' bills by those afflicted with epilepsy and, very frequently, it has been in vain. It so often happens that the doctors do not strike at the root of the trouble. A cure which was easily effected, after physicians had failed to accomplish any permanent results, is that of Miss Annie R. Herbert, of No. 507 Western avenue, Lynn, Mass. After years of suffering from this terrible affliction she was made well by the use of Dr. Williams' Pink Pills for Pale People. She makes the following statement:

"I was a victim of epileptic fits and spasms of the nerves from the time I was two years old until I reached the age of seventeen, when Dr. Williams' Pink Pills for Pale People cured me. Ten well-known physicians of Lynn treated me at different times but none succeeded in helping my case. I have even been to the Lynn Hospital, but the physicians there failed to cure me, so you can see it was a disease that puzzled a good many doctors.

"My illness at times caused racking headaches and an awful dizziness made my head swim. I had what the doctors called spasms of the nerves about four times a day. The blood would rush to my head and a feeling come over me so that I wouldn't know what was going on around me. The spasms left me very weak. During one year I had eight epileptic fits.

"At last when all the efforts of the doctors had proved in vain I tried Dr. Williams' Pink Pills for Pale People, and hardly three weeks had passed before I found they gave me great relief. I continued using them faithfully and in six months I was entirely cured and have had no return of my illness since." Signed, MISS ANNIE R. HERBERT.

Subscribed and sworn to before me this 10th day of April, 1901.

THOMAS F. PORTER, Notary Public.
[Seal]

The pills which cured Miss Herbert are a specific for all forms of weakness arising from a watery condition of the blood or shattered nerves, two fruitful causes of almost every ill to which flesh is heir.

Dr. Williams' Pink Pills for Pale People are sold by all dealers, or will be sent postpaid on receipt of price, 50 cents a box, or six boxes for $2.50, by Dr. Williams Medicine Co., Schenectady, N. Y.

Bill—I see Illinois is organizing a $50,000,000 Plow Trust. Jill—I thought this trust business would be run into the ground after awhile.

The Camphor Tree.

The camphor tree (Cinnamomum camphora) is an evergreen, a member of the laurel family, belonging to the same genus as the tree whose bark furnishes the spice called cinnamon, and is related to the bay and to the sassafras of the United States. Of symmetrical proportions, it is one of the noblest objects in the forests of eastern subtropical Asia. In its native habitat it attains gigantic dimensions, notably in girth of trunk, some specimens measuring 10 to 15 feet in diameter. It is said they have been known to reach as much as 20 feet, and they may be 60 to over 100 feet high, and live to a great age.

As a rule, they rise 20 or 30 feet without limbs and then branch out in all directions, becoming a mass of splendid and luxuriant foliage. Their leaves, broadly lanceolate in form, are of a light green color, smooth and shining above and whitish or glaucous on the undersurface. Small white or greenish white flowers are borne from February to April and by October ripen into berrylike, one seeded fruits about three-eighths of an inch in diameter.—Good Words.

Getting a Day Off.

A certain government officer was noted for being a hard taskmaster to those who were under him, the servants in his own establishment being no exception. His valet was expected to be on duty 365 full days in the year.

Being detailed to accompany a scientific expedition on an extended cruise, the officer unbent a little in communicating the news to his personal attendant.

"Well, James," he said, "how would you like to go with me around the world?"

"Do we go from east to west, sir?" asked the valet.

"Yes."

"We lose a day in going that way, don't we?"

"We do."

"Well, sir, I'd like it first rate. It would give me one day off."

His master was so pleased with the aptness of the retort that he gave him a week off to prepare for the trip.—Youth's Companion.

Cooking a Mackerel.

Many a dainty nose with beauty and fortune behind it has been airily elevated at the mention of plain, old fashioned salt mackerel, but never at the salt mackerel as cooked by the famous John Chamberlin of Washington. His testimony runs to this effect:

"Take one or more mackerel and soak about 48 hours, changing the water once. Then put them in a pan large enough to hold them, cover them with cream or the nearest you can get to it, put in oven and cook until cream is brown. This beats any mackerel cooking on earth."—New York Herald.

A Business Tonic.

Advertising is not a cure all for business ills, but a pharmacopia of business tonics. All depends upon the prescribing. Magazine space is good for certain business diseases that will never yield to billboards, while the newspaper is the quinine for business chills that are beyond the power of dodgers. Every remedy in the list has its uses, and the whole result of treatment depends upon the doctor.—Printers' Ink.

Arriving at a Total.

Tax Collector—How much is your husband worth?

Mrs. Wise—About a million.

Tax Collector—Are you sure?

Mrs. Wise—Oh, yes. You see, the jury awarded him $2,000 for the loss of a finger. I think in proportion the rest of him would be worth about 500 times as much.—Chicago News.

Losing No Chances.

Genial Doctor (after laughing heartily at a joke of his patient)—Ha! ha! ha! There's not much the matter with you, though I do believe that if you were on your deathbed you'd make a joke.

Irrepressible Patient—Why, of course I should. It would be my last chance.—Punch.

"Dobbins is a good talker, isn't he?"

"Good talker? I went to his office once to borrow five dollars, and before I got away he had borrowed five dollars from me."

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

For pimples, sallow complexion, impure blood and poor digestion use Adams' Sarsaparilla Pills. They improve complexion and cure constipation. 10c, 25c. Druggists.

"Shall I sing 'Because I Love You?'" asked Mrs. Darley, as she seated herself at the piano. "No," replied Mr. Darley, who is a brute, "if you love me, don't sing."

Nothing Equals St. Jacob's Oil For Rheumatism, Gout, Sciatica, Neuralgia, Cramp, Pleurisy, Lumbago, Sore Throat, Bronchitis, Soreness, Bruises, Toothache, Headache, Backache, Feetache, Pains in the Chest, Pains in the Back, Pains in the Shoulders, Pains in the Limbs, and all bodily aches and pains, it acts like magic. Safe, sure and never failing.

The average size of freehold farms in New South Wales is 634 acres, and of South Australian sheep runs 78,000 acres.

CLEANLY WOMAN.

Erroneously Thinks By Scouring Her Scalp That She Cures Dandruff.

Cleanly woman has an erroneous idea that by scouring the scalp, which removes the dandruff scales, she is curing the dandruff. She may wash her scalp every day, and yet have dandruff her life long, accompanied by falling hair, too. The only way in the world to cure dandruff is to kill the dandruff germ, and there is no hair preparation that will do that but Newbro's Herpicide. Herpicide killing the dandruff germ, leaves the hair free to grow as healthy Nature intended. Destroy the cause, you remove the effect. Kill the dandruff germ with Herpicide.

If you build castles in the air, your labor will not be lost—that is where they should be—now put foundations under them!

The Best Prescription for Malaria Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price, 50c.

BEST FOR THE BOWELS. Cascarets CANDY CATHARTIC. THEY WORK WHILE YOU SLEEP. 10¢ 25¢ 50¢ ALL DRUGGISTS.

CANDY CATHARTIC — Cascarets taste good. Eat them like candy. They remove any bad taste in the mouth, leaving the breath sweet and perfumed. It is a pleasure to take them, and they are liked especially by children.

SWEETEN THE STOMACH — Cascarets sweeten the stomach by cleansing the mouth, throat and food channel. That means, they stop undigested food from souring in the stomach, prevent gas forming in the bowels, and kill disease germs of any kind that breed and feed in the entire system.

PURELY VEGETABLE — Cascarets are purely vegetable and contain no mercurial or other mineral poison. They consist of the latest discoveries in medicine, and form a combination of remedies unequaled to make the blood pure and rich and make clean skin and beautiful complexion.

LIVER TONIC — Cascarets tone the stomach and bowels and stir up the lazy liver. They do not merely soften the stools and cause their discharge, but strengthen the bowels and put them into lively, healthy condition, making their action natural.

MILD BUT SURE — Cascarets never grip nor gripe. They act quietly, positively and never cause any kind of uncomfortable feeling. Taken regularly they make the liver act regularly and naturally as it should. They keep the sewerage of the body properly moving and keep the system clean.

BOON FOR MOTHERS — Cascarets increase the flow of milk in nursing mothers. If the mother eats a tablet, it makes her milk mildly purgative and has a mild but certain effect on the baby. In this way they are the only safe laxative for the nursing infant.

CURE CONSTIPATION — Cascarets taken patiently, persistently, will cure any form of constipation, no matter how old or how often other remedies have failed. They are absolutely guaranteed to cure any case, or purchase money will be cheerfully refunded.

NEVER SOLD IN BULK — Cascarets cost 10c, 25c, 50c a box. Samples sent free for the asking. We publish no testimonials but sell Cascarets on their merit under absolute guarantee to cure. Buy and try a box to-day, or write us for free sample and booklet. Address STERLING REMEDY CO., CHICAGO or NEW YORK. 670

$100 REWARD will be paid to any reader of this paper who will report to us any attempt of substitution, or sale of "something just as good" when Cascarets are called for, and furnish evidence upon which we can convict. All correspondence confidential.

WHAT ANARCHY IS

ONCE more the pistol of the assassin has brought anarchy and the anarchist to the cynosure of the world's eyes. The red emblem of the order is once more subjected to the scrutiny of the world's police powers, and once more the question arises:

What is anarchy? What is this hydra-headed thing against which, the searing by fire of the bleeding necks is no longer effective?

The question may be answered in a paradox—perhaps must be answered so. Anarchy, broadly speaking, is at once the gentlest and the most violent of social remedies. Its apostles have been gentle dreamers on the one hand and scourges, armed with fire and sword, on the other. In its advancement the individualist and the assassin have been coupled in the public mind. The man who would do right simply because it is right, and the fiend who, conceiving all society to be wrong, would add one more gigantic wrong to the whole in order to set all right again.

In a word, anarchy, of whichever type, means an abolition of the government of man by man and the constitution of a society without government. It is not a new idea in men. It has been contended that the principle antedates the reformation. But as "anarchy" the movement belongs to the times of Proudhon in France, who voiced it in the mildness of the philosopher, and to Hess, the German, who in 1843 flung its red banner to the breeze under which the Russian, Prince Kropotkin, came later as an exponent of the terrorism for which one form of anarchy so long has stood.

For anarchy is of two classes, individualistic and communistic. The first is the philosophy of the thinker, which has advanced as the object of its being the attainment of "Liberty, not the daughter but the mother of order." That other anarchy is that which through the influence of terrorism shall crumble empires and republics alike, while from their dust shall rise a free people who shall be in no need of restraints at the hands of their fellow-men. Disciples of this philosophy would build communistic centers upon the ruins of government which violence should have brought about.

To-day that form of anarchy such as is giving concern to the police and military powers of the world has its hotbed in continental Europe. Vienna, beyond all the other capitals on the continent, is said to harbor its doctrinaires. Switzerland has contended with its "propaganda of action," which Kropotkin stood for in 1879. Italy, France, Spain, Russia, and nearly every other continental country has felt its force. London itself has been a nest of anarchistic vipers in times past. From all this territory, too, the gradual closing in of the police power has forced both leaders and tools of anarchy to seek asylums in America. The problem of anarchy as now presented to the United States government has to deal almost wholly with this foreign born element.

Its principles, as voiced by the manifesto of the Geneva conference in 1882, stand in great measure for the propaganda of action of to-day:

Our ruler is our enemy. We anarchists are men without any rulers, fighting against all those who have usurped any power or who wish to usurp it.

Our enemy is the owner of the land who keeps it for himself and makes the peasant work for his advantage.

Our enemy is the manufacturer who fills his factory with wage slaves; our enemy is the state, whether monarchical, oligarchical, or democratic, with its officials and staff officers, magistrates and police spies.

Our enemy is every thought of authority, whether men call it God or devil, in whose name the priests have so long ruled honest people.

Our enemy is the law which always oppresses the weak by the strong to the justification and apotheosis of crime.

But if the landowners, the manufacturers, the heads of the state, the priests, and the law are our enemies, we are also theirs, and we boldly oppose them. We intend to reconquer the land and the factory from the landowner and the manufacturer; we mean to annihilate the state under whatever name it may be concealed; and we mean to get our freedom back again in spite of priest or law.

According to our strength we will work for the humiliation of all legal institutions, and are in accord with every one who defies the law by a revolutionary act. We despise all legal means because they are the negation of our rights. Between us anarchists and all political parties, whether conservatives or moderates, whether they fight for freedom or recognize it by their admissions, a deep gulf is fixed. We wish to remain our own masters. It is ours to conquer and defend common property and to overthrow governments by whatever name they may be called.

This is the anarchy which stands for the "propaganda of action." It is no relation of that constructive anarchy of Proudhon and of Tucker, who advocated "Liberty, not the daughter, but the mother of order." It has no kinship with socialism and so little affinity the socialistic atmosphere that Germany, the hotbed of socialism, is prohibitive of anarchy.

WHEN POLLY DANCED A MINUET

Now high and clear, then low and sweet
The music rippled through the air,
While waxen candles shed soft light
Upon the gay throng gathered there.

The fragrant breath of new-mown hay
Came from the fields that lay outside,
And perfume from the roses stole
Through doors and windows open wide.

The dusky fiddlers' rosined bows
Flew o'er the quick responding strings
And Love tripped with the dancers gay,
And touched them with his shining wings

The powdered hair framed faces young,
Their coats were gay as Joseph's own,
And tongues and feet as lightly flew
As seed from ripened thistles blown.
—New Lippincott.

ROSES AND VIOLETS.

THE curtain had been rung down on the matinee performance at the Empire Theater and the streets in the vicinity of the popular playhouse presented a lively scene. An animated crowd choked the pavements and impeded progress in all directions. Private carriages drew up at the curb to receive their aristocratic owners, while less fortunate patrons succeeded in making their way to homeward-bound electrics.

A number of the younger element—and that class had formed a good part of the large audience—hurried around to the stage entrance. There they waited patiently for the appearance of the various members of the company, their laughing chatter revealing their enjoyment, but more particularly their devotion to the "star."

An audible murmur of admiration greeted John Leonard as he paused an instant outside the door. The girls had ample opportunity to view the hero of the afternoon, minus make-up and romantic surroundings.

Richard Alton smiled slightly as he joined Leonard, and together the two men started for their hotel. Alton impersonated the villain in the famous drama, a most thankless character, save that it afforded him capital scope to display his talents. As an actor he excelled in the heavy parts, and in that line, as well as all others calling for strong scenes, he far outshone the leading man in the eyes of the critics. But to the matinee girls he represented the enemy of virtuous manhood, as personified in Gerald Marden (John Leonard) and the persecutor of the idol of their girlish hearts, Laura Kingsley.

"Miss Kingsley's popularity seems at its height," said Leonard, as a commotion in the street behind them attracted his attention. Alton did not speak until the carriage which was dashing down the street passed them as they stood on the crossing. He caught a glimpse of the occupant, and she saw him as he raised his hat involuntarily. She nodded to both men and smiled cordially, but for one brief instant her eyes rested on Alton with a swift gleam which would have betrayed pain, but for the smile on her lips. Alton caught the expression and walked on in silence. Leonard made no comment, but kept pace with his friend.

When they reached the hotel Alton became talkative.

"You said Miss Kingsley's popularity was at its height just now, Jack," Alton said slowly.

"Well, so it is, and she deserves all the praise and homage they can shower upon her. Did you notice those girls waiting to see their favorite? They adore her, and I glory in their admiration and willing worship."

Leonard smiled a trifle cynically.

"You mean you join with them in their worship," he said significantly. "Why not speak plainly, Dick? Praise for them, but none for yourself, eh? That will never do, old boy. Your heart's secret would probably interest Miss Kingsley more deeply than a crowd of schoolgirls and their fleeting affection.

Alton looked at him eagerly.

"That is if she has a heart to give you in return," Leonard went on. "Some members of the profession think otherwise, I must confess."

Alton's hand closed on his arm fiercely.

"Don't mention her if you hold any such opinion as that," he said, threateningly.

Leonard laughed a bit sharply.

"Don't flare up, old man. But you know her past experience, Dick; Jim Morton broke her heart years ago, before he died, that's all, old man. I do not think you can bring happiness to her at this late day."

Alton arose and faced him calmly, resolutely.

"I mean to try, Jack," he said simply. "To-night I shall send a bunch of violets to her room, and if she accepts them in my name I shall rejoice——"

"And I shall send her roses," Leonard interrupted, airily; "the costliest, most fragrant shower of American Beauties my salary can stand. No violets for me, my boy; the way to win a woman's regard by flowers is through the rose. It costs more, you know, and thereby makes a better impression, and then it is love's own messenger, Dick. Had you forgotten that?"

When Alton entered the theater that evening his cheeks were flushed and his eyes glistened, but his manner was reassuring. He made his way between the rows of set pieces to the narrow stairway leading to the second floor. He paused on the landing and looked about for the call boy. That individual did not materialize on the instant, but in his place appeared a beautiful little creature closely resembling a picture-book fairy.

"Oh, Dick," cried the fairy, ecstatically, "what lovely flowers! Are they for mamma? She loves violets."

"Does she, Dolly? I am glad to hear that."

The fairy was a trifle surprised at the fervor of his tone.

"Yes, they are for mamma, and you must handle them carefully; they are not as durable as the 'props,' Dollykins. And, mind you, don't lose the note—that's far more precious than the flowers."

He detached several of the modest flowers from the pretty bunch and put them in the child's other hand as she reached for the bouquet. She danced away from him in delight, kissing her hand to him as she skipped down the stairs. On the lower floor she confronted the leading man in the act of ascending. Her eyes widened as she saw the huge cluster of roses Leonard endeavored to conceal from her.

"Give me a rose, Mr. Leonard?" she begged saucily, placing the violets behind her.

"I guess not," Leonard answered shortly. "These flowers come too high, young lady, to waste their fragrance in a child's careless hand."

Little Miss Dolly looked after his retreating form with angry resentment blazing in her big, brown eyes.

"I'll just tell mamma," she confided to the violets. "I don't think she likes Mr. Leonard, anyway. Dick isn't stingy," she added, a little smile dispelling the frown with the swiftness of magic. "And—I think mamma likes Dick."

At the close of rehearsal the following afternoon Leonard accosted Alton. "I congratulate you, Dick," he said, extending his hand with forced cordiality. "I misjudged the lady's choice, it seems. I bow before the violet's supremacy and hail that particular flower as love's accepted messenger in this important instance."

Miss Kingsley had approached the two men unseen and laid her hand lightly on Alton's arm. Then she turned to Leonard, smilingly.

"The violets told me one story," she said, with bewitching naivete. "A very sweet and welcome one, I admit, but the little maiden who brought them to me told another. She was only a child, but she loved violets, as did her mother. She held them tenderly and was rewarded with a cluster all her own. The generous giver marred the beauty of the florist's creation to please a child and the child appreciated the act. So did the child's mother. She realized the difference between the man who offered the modest violet, enriched by the wealth of his heart's best love, and one who imagined the more expensive the flower the more impressive his suit."

Leonard bowed and walked away without a word.

Dick bent his handsome head and kissed Miss Kingsley. "My darling," he whispered, softly. "My beautiful wife that is to be." And she realized that for her life had just revealed its brightest colors, and the man before her brought treasures beyond price and hitherto unknown—love and happiness. —Indianapolis Sun.

EMPLOYMENTS FOR WOMEN.

Five Hundred Occupations Open Forty Years Ago.

An odd book was that published 30 or 40 years ago, entitled "Five Hundred Employments Adapted to Women." The compiler stretched her materials somewhat in order to make up the 500, separating "painters," for instance, into 15 different classes, and assigning women to occupations—like that of "colonization agent"—which, to say the least, have never been overcrowded. But the book showed so much enthusiasm and good will that it is certain the compiler, whether on earth or in heaven, rejoices at the many new opportunities opened to her sex since her day.

One of these most modern employments is that of "sunshiner," a woman who visits and amuses invalids and depressed persons. Another is that of "cooperative housekeeper," one who stands ready to supply any household with the necessaries and luxuries of the table, on any scale of weekly allowance. A third is that of "house hunter," and this brave woman engages to examine and report upon every house offered to unfortunate people who find it necessary to move.

These services are rendered for money, of course. Doubtless the money is earned and the women play a very useful part in society. They must, indeed, since they are prepared to do for the public what every good wife and mother does for her own family. Such a one is housekeeper and house-hunter and sunshiner, all three, and in her case no one questions that these occupations are "adapted to women." But it seems a little curious that when the wife's unmarried sister, say, undertakes to serve the public and earn her own bread by these means, there should always be some one ready to define her action as "unwomanly."

HE HAD ORDERS TO DISMOUNT.

But When He Obeyed Them He Was Sent to the Guardhouse.

No originality claim is made in connection with this story, says the Detroit Free Press, and it may have gone the rounds, but it was well told the other evening by a Detroit minister who was engaged in a very earnest debate with an army colonel over the alleged arbitrary methods of those commanding the rank and file.

The colonel had warmly contended that there was every effort to be just and that departures from equity were exceptional. "You have given this matter considerable attention, and I venture that you cannot give an instance of abused authority toward a private?"

"Can't I?" and the dominie's eyes twinkled. "Did you ever hear of the case of poor Tim Murphy?"

"Never did, sir."

"Tim enlisted in the cavalry service, though he had never bestrode a horse in his life. He was taken out for drill with other raw recruits under command of a sergeant. As luck would have it, Tim had one of the worst buckers in the United States army.

"'Now, min,' said the sergeant in addressing them, 'no man is allowed to dismount without orders from a supa-rior ossifer, moind thot.'

"Tim was no sooner in the saddle than he was propelled through a lengthy parabola and came down so hard that he had barely enough breath to subsist upon.

"'Murphy,' shouted the sergeant as he discovered the offender spread out on the ground, 'yez dismounted.'

"'I did, sor.'

"'Did yez have orthers?'

"'I did, sor.'

"'From headquarters?' with a sneer.

"'No, sor, hoindquarthers.'

"'Take him to th' g'ard house.'"

Engiand's Royal Library.

The royal library at Windsor castle contains about 100,000 volumes, and among them are many literary curios. A unique Caxton on vellum, the Bible which Charles I. took with him to the scaffold, the same monarch's copy of Shakspeare and an original copy of "The Faery Queen" are among Windsor castle's literary treasures.

Forbearance.

Forge—I often wonder how Noah ever succeeded.

Fenton—What? Sailing forty days without sighting land?

Forge—No. Sailing forty days without slapping at those two mosquitoes he had aboard.

Novel Employment for Firemen.

On a recent Sunday the fire department of Berlin was called upon to disperse four different swarms of bees which had taken up quarters in the streets.

Love is responsible for a good many frosts in summer and for a few hot waves in winter.

FROM POORHOUSE TO PALACE

BY MARY J. HOLMES

CHAPTER VIII.—(Continued.)

One morning about two weeks afterward Mary was in the meadow gathering cowslips for dinner when she heard some one calling her name; and looking up, she saw Jenny hurrying toward her, her sunbonnet hanging down her back, as usual, and her cheeks flushed with violent exercise. As soon as she came up she began with, "Oh, my, ain't I hot and tired, and I can't stay a minute, either, for I ran away. But I had such good news to tell you, that I would come. You are going to have a great deal better home than this. You know where Rice Corner is, the district over east?

Mary replied that she did, and Jenny continued: "We all went over there yesterday to see Mrs. Mason. She's a real nice lady, who used to live in Boston, and be intimate with ma, until three or four years ago when Mr. Mason died. We didn't go there any more then, and I asked Rose what the reason was, and she said Mrs. Mason was poor now, and ma had 'cut her;' and when I asked her what she cut her with, she only laughed, and said she believed I didn't know anything. But since then I've learned what it means."

"What does it?" asked Mary and Jenny replied:

"If a person dies and leaves no money, no matter how good his folks are, or how much you like them, you mustn't know them when you meet them in the street, or you must cross over the other side if you see them coming; and then when ladies call and speak about them, you must draw a great, long breath, and wonder 'how the poor thing will get along, she was so dreadfully extravagant.' I positively heard mother say those very words about Mrs. Mason; and what is so funny, the washwoman the same day spoke of her, and cried when she told how kind she was, and how she would go without things herself for the sake of giving to the poor."

After a moment's pause Jenny proceeded: "This Mrs. Mason came into the country and bought the prettiest little cottage you ever saw. She has lots of nice fruit, and for all mother pretends in Boston that she does not visit her, just as soon as the fruit is ripe she always goes there. Pa says it's real mean, and he should think Mrs. Mason would see through it."

"Did you go there for fruit yesterday?" asked Mary.

"Oh, no," returned Jenny. "Mother said she was tired to death with staying at home. Besides that, she heard something in Boston about a large estate in England, which possibly would fall to Mrs. Mason, and she thought it would be real kind to go and tell her. Mrs. Mason has poor health, and while we were there she asked mother if she knew of any good little girl she could get to come and live with her; 'one,' she said, 'who could be quiet when her head ached, and who would read to her and wait on her at other times.' Mother said she did not know of any, but when Mrs. Mason went out to get tea, I followed and told her of you, and the tears came into her eyes when I said your folks were all dead, and you were alone and sorry. She said right off that she would come round and see you soon, and if she liked you you should live with her."

So saying, she ran off; Mary, having gathered her cowslips, sat down to think of Mrs. Mason, and wonder if she should ever see her. That afternoon, when the dishes were all washed, she, as usual, stole away to her books. She had not been long occupied ere some one called her, saying Mr. Knight was downstairs and wanted to see her, and that there was a lady with him.

Mary readily guessed that the lady must be Mrs. Mason, and carefully brushing her hair and tying on a clean apron, she descended to the kitchen, where she was met by Mr. Knight, who called out, "Hallo! my child, how do you do? 'Pears to me you've grown handsome. It agrees with you to live here, I reckon, but I'll venture you'll be glad enough to leave and go and live with her, won't you?" pointing toward a lady who was just coming from Mrs. Parker's room and toward whom Mary's heart instantly warmed.

"You see," continued Mr. Knight, "one of the Lincoln girls has taken a mighty shine to you, and it's queer, too, for they're dreadful stuck-up folks."

"If you please, sir," said Mary, interrupting him, "Jenny isn't a bit stuck-up."

"Umph!" returned Mr. Knight. "She does not belong to the Lincoln race, then, I guess. I know them, root and branch. Lincoln's wife used to work in the factory at Southbridge, but she's forgot all about that, and holds her head dreadful high whenever she sees me. But that's neither here nor there. This woman wants you to live with her. Miss Mason, this is Mary. Mary, this is Miss Mason."

The introduction being thus happily over, Mrs. Mason proceeded to ask Mary a variety of questions, and ended by saying she thought she would take her, although she would rather not have her come for a few days, as she was going to be absent. Miss Grundy was now interrogated concerning her knowledge of work, and with quite a consequential air she replied: "Perhaps, ma'am, it looks too much like praising myself, considerin' that I've had the managin' of her mostly, but I must confess that she's lived with me so long, and got my ways so well, that she's as pleasant a mannered, good-tempered child, and will scour as bright a knife as you could wish to see!"

Saturday came at last, and long before the sun peeped over the eastern hills Mary was up and dressed. Just as she was ready to leave her room she heard Sally singing in a low tone, "Oh, there'll be mourning — mourning — mourning — mourning; Oh, there'll be mourning when Mary's gone away."

About nine o'clock Mr. Knight drove up alone, Mrs. Mason being sick with nervous headache. "I should have been here sooner, said he, "but the roads is awful rough, and old Charlotte has got a stub or somethin' in her foot. But where's the gal? Ain't she ready?"

He was answered by Mary herself, who made her appearance, followed by Billy bearing the box. And now commenced the leave takings, Miss Grundy's turn coming first.

"May I kiss you, Miss Grundy?" said Mary. Miss Grundy bent down and received the child's kiss, and then darting off into the pantry, went to skimming pans of milk already skimmed. Uncle Peter between times kept ejaculating: "Oh, Lord; oh, massy sake!—oh, for land!" Billy knew it would be lonely without Mary, but he was glad to have her go to a better home, so he tried to be cheerful.

Aside from him, Sally was the only composed one. It is true her eyes were very bright, and there was a compression about her mouth seldom seen, except just before one of her frenzied attacks. Occasionally, too, she pressed her hands upon her head, and walking to the sink, bathed it in water, as if to cool its inward heat.

CHAPTER IX.

Very different this time was Mary's ride with Mr. Knight from what it had been some months before, and after brushing away a few natural tears, and sending back a few heart-sighs to the loved ones left behind, her spirits rallied, and by the time they reached the borders of Rice Corners there was such a look of quiet happiness on her face that even Mr. Knight noticed it. As they rode on Mary fancied that the country looked pleasanter and the houses better than in the region of the poorhouse; and when a sudden turn of the road brought into view a beautiful blue sheet of water, embosomed by bright green hills, her delight knew no bounds. Springing up and pointing toward it, she exclaimed: "Oh, please stop a moment and look. Isn't it lovely? What is it?"

"That? Oh, that's nothing but 'Pordunk Pond,' or as folks most generally call 'em, seein' there's two, North and South Pond."

"How far is the pond from Mrs. Mason's?" asked Mary, casting longing glances toward the distant sandy beach and the graceful trees which drooped over the water's edge.

"It's farther back than 'tis there, 'cause it's uphill all the way," said Mr. Knight, "but here we be at Miss Mason's—this house right here," and he pointed to a neat, handsome cottage, almost hidden from view by the dense foliage which surrounded it.

There was a long lawn in front, and into the carriage road on the right of it Mr. Knight turned, and driving up to a side door, said to Mary, "Come, jump down, for my foot is so lame I don't believe I'll get out. But there's your chest. You can't lift that. Halloo! Judith, come 'ere."

In answer to this call a fat, pleasant-looking colored woman appeared in the doorway, and as if fresh from the regions of cookdom wiped the drops of perspiration from her round, jolly face.

"Here, Judith," said Mr. Knight, "help this gal lift her traps out."

Judith complied, and then bidding old Charlotte to "get up," Mr. Knight drove away, leaving Mary standing by the kitchen door.

"Come in and sit down," said Judith, pushing a chair toward Mary with her foot. "It's as hot here as an oven, but I had crambry sass and ginger snaps, and massy knows what, to make this morning and I got belated; but set down and make yourself to home."

Mary took the proffered seat, and then Judith left the room for a few moments, saying when she returned that, as Mrs. Mason was still suffering from a headache, she could not see Mary until after dinner. "And," continued Judith, "she told me to entertain you, but I don't know what to say nor do first. Harry died just a week to a day before he was to be married, and so I never had any little girls to talk to. Can't you think of something to talk about? What have you been used to doing?"

"Washing dishes," was Mary's reply.

"Wall," answered Judith, "I guess you won't have that to do here for one night; when some of the neighbors were in I heard Miss Mason tell 'em that she got you to read to her and wait on her. And then she said something about your not having an equal chance with your sister. You han't but one, now t'other's dead, have you?"

Mary replied in the negative, and Judith continued: "Wall, now you've got over the first on't, I reckon you's glad the baby's dead, for she must have been kind of a bother, wasn't she?"

Instantly Mary's thoughts flew back to an empty cradle, and again a little golden head was pillowed upon her breast, as often in times past it had been, and as it would never be again. Covering her face with her hands, she sobbed, "Oh, Allie, Allie! I wish she hadn't died!"

Judith looked on in amazement, and for want of something better to do placed a fresh stick of wood in the stove, muttering to herself, "Now, I never! I might of knew I didn't know what to say. What a pity Harry died. I'll give her that big ginger snap the minute it's baked. See if I don't."

Accordingly, when the snap was done, Judith placed it in Mary's hands, bidding her eat it quick, and then go up and see the nice chamber Mrs. Mason had arranged for her.

"Come," said Judith; and leading the way, she conducted Mary up the staircase, and through a light, airy hall to the door of a small room, which she opened, saying, "Look, ain't it pretty?"

Mary's heart was too full to speak, and for several minutes she stood silent. With the exception of her mother's pleasant parlor in old England, she had never before seen anything which seemed to her so cosy and cheerful as did that little room, with its single bed, snowy counterpane, muslin curtains, clean matting, convenient toilet table, and what to her was fairer than all the rest, upon the mantelpiece there stood two small vases, filled with sweet flowers, whose fragrance filled the apartment with delicious perfume. All this was so different from the bare walls, uncovered floors and rickety furniture of the poorhouse that Mary trembled lest it should prove a dream from which ere long she would awake.

When Mary was finally sent for by Mrs. Mason she had been so much accustomed to sick persons that she knew intuitively just what to do and when to do it, and her step was so light, her voice so low, and the hand which bathed the aching head so soft and gentle in its touch that Mrs. Mason involuntarily drew her to her bosom, and kissing her lips, called her her child, and said she should never leave her; then, laying back in her easy chair, she remained perfectly still, while Mary alternately fixed her hair and smoothed her forehead, until she fell into a quiet slumber, from which she did not awake until Judith rang the bell for supper, which was neatly laid out in a little dining parlor, opening into the flower garden. There was something so very social and cheering in the appearance of the room, and the arrangement of the table, with its glossy white cloth, and dishes of the same hue, that Mary felt almost as much like weeping as she did on the night of her arrival at the poorhouse. But Mrs. Mason seemed to know exactly how to entertain her; and by the time that first tea was over there was hardly a happier child in the world than was Mary.

Mrs. Mason soon dismissed her to her own room, where she for some time amused herself with watching the daylight as it gradually disappeared from the hills which lay beyond the pond. Then when it all was gone, and the stars began to come out, she turned her eyes toward one which had always seemed to her to be her mother's soul looking down upon her from the windows of heaven. Now to-night there shone beside it a smaller, feebler one, and in the fleecy clouds which floated around it she fancied she could define the face of her baby sister. Involuntarily stretching out her hands, she cried, "Oh, mother! Allie! I am so happy now;" and to the child's imagination the stars smiled lovingly upon her, while the evening wind, as it gently moved the boughs of the tall elm trees, seemed like the rustle of angels' wings. Who shall say the mother's spirit was not there to rejoice with her daughter over the glad future opening so brightly before her?

(To be continued.)

NO WONDER HE WAS BALKED.

Difficulties the Frenchman Experienced in Learning English.

A Frenchman thirsting for linguistic superiority recently began a course of English lessons with a teacher of languages. After toiling conscientiously through a good many exercises the following dialogue between the pupil and his master was overheard:

"I find the English very difficult," complained the Frenchman. "How do you pronounce t-o-u-g-h?"

"It is pronounced 'tuff.'"

"Eh, bien, 'tuff;' 'snuff,' then, is spelt s-n-o-u-g-h, is it not?"

"Oh, no; 'snuff' is spelt s-n-u-ff. As a matter of fact, words ending in o-u-g-h are somewhat irregular."

"I see; a superb language! T-o-u-g-h is 'tuff' and c-o-u-g-h is 'cuff.' I have a very bad cuff."

"No; it is 'coff,' not 'cuff.'"

"Very well; cuff, tuff and coff. And d-o-u-g-h is 'duff,' eh?"

"No, not 'duff.'"

"'Doff,' then?"

"No; 'doh.'"

"Well, then, what about h-o-u-g-h?"

"That is pronounced 'hock.'"

"'Hock!' Then I suppose the thing the farmer uses, the p-l-o-u-g-h, is 'pluff,' or is it 'phlock,' or 'plo?' Fine language—'plo.'"

"No, no; it is pronounced 'plow.'"

"I shall soon master English, I am sure. Here we go. 'Plow,' 'coff,' 'tuff,' 'hock,' and now here is another—r-o-u-g-h; that is 'row,' I suppose?"

"Oh, no, my friend; that's 'ruff' again."

"And bo-u-g-h is 'buff?'"

"No; that happens to be 'bow.'"

"Yes, wonderful language. And I have just e-n-o-u-g-h of it; that's 'enou,' is it not?"

"No; 'enuff.'" — Sheffield Weekly News.

Lady "Bobs" and Her Trunks.

There is a story going around about Lady Roberts and her trunks, for the truth of which, says the Westminster Gazette, a man returning from South Africa vouches.

At the height of the transport difficulties, Lady Roberts carried eight large trunks from Cape Town to Bloemfontein in the very teeth of the officers.

Everybody wondered, everybody grumbled. No one but Lady Roberts could have taken the things through. The transport of stores had been stopped for the time, the sick lacked every comfort, and those who were not sick were half-starved and only half-clad. Therefore, when a fatigue party was told off to fetch those eight trunks from Bloemfontein station, some rather uncomplimentary things were said about women travelers in general and this latest transgressor in particular.

Next day seven of the eight trunks were unpacked, and their contents distributed among the soldiers. The clever lady had snapped her fingers at red tape, and had smuggled through comforts for the men. One small trunk contained her personal belongings.

Sea Fish in Lake Ontario.

The deepening of the St. Lawrence canal system has had other results than to allow the passage of ocean-going freightage. Following in the wake of the vessels sea herrings have made their appearance in Lake Ontario, and are being eagerly captured by the fishermen.

Preliminary Steps.

"Are you educating your child with a view to his future college career?"

"Oh, yes; he's got to begin next week and take a drop of tabasco sauce three times a day."

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

Issued Every Friday

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, NOVEMBER 29 1901

Frank James says he is going on the stage for the money there is in it. Mr. James, in former days, used to stop the stage for the same reason.

Roosevelt is a sporting President. He shot bear and mountain lions in Colorado, killed a panther in Montana and recently he had a coon for dinner.

A recent snowstorm covered the whole central region of New York with ten ten inches of snow, and the foolish people began to get ready for sleigh-riding instead of taking the first train for California.

A printer in New York, says a telegram, was robbed of some $4,000 in cash and diamonds. It's a pretty fishy story, unless, indeed, printers in the effete east are of a different variety from those out this way. The printers here don't wear many diamonds.

Within the past ten years the number of Chinese in this state have decreased from 72, 472 to 45,753, while the Japanese have increased from 1147 to 10,151. The bars should be put up against the Japs as well as the Chinese. We have no use for either kind of labor in California.

President Eliot of Harvard, in a recent address before the Twentieth Century club, said: "The courts are, as a whole, less efficient and less respected than they were a generation of two generations ago." An Iowa attorney sternly criticised the courts in a notable address a few months ago. Where do the fault and responsibility lie?

With characteristic manliness Admiral Schley discountenances the proposition of friends to make good to him the expenses he incurred in the court of inquiry. He courteously but decidedly declines to accept any tribute of esteem of that character, in striking contrast to the greed of Sampson, who claimed the lion's share of the prize money of a battle in which he did not participate.

President Roosevelt in his message to congress will not only recommend the re-enactment of the Chinese exclusion act; but will go further and recommend that it be strengthened to increase its efficiency. The president gave this information to Representative Needham of California. The president told other western callers that he would call the attention of congress in his message to the advisability of doing something to reclaim the great arid region of the west.

If the published reports are true we now have a satisfactory treaty with Great Britain relative to building the Nicaragua canal. The big fight will now come when the railroad combines exert their pull to defeat the appropriation of the required money. This ought to be a non-partisan question and if there is any factious opposition the representatives who make it should be held to a strict accountability by their constituents, no matter what their politics may be. Politics are all right, but in the consideration of this canal enterprise business principles should be applied.

A remarkable illustration of the prosperity now enjoyed by the United States is afforded in the report of the fourth assistant postmaster general. He notes an extraordinary increase in the number of resignations from offices in his branch of the service. There has never been anything like so great a percentage since the beginning of the civil war. The fact is accounted for in the report by the opportunities everywhere presented for better salaries than those paid by the postoffice department. Inducements are offered in civil life for employes in the postal service to take positions in various lines of business, and the matter has caused much concern in official circles. It is a novel situation as well as a significant one. The old maxim that in public life "few die and none resign," is not appropriate in this instance. And if this situation exists in the postal service there appears to be no reason why it should not develop in other official lines. If it should reach such a pass that it will be necessary to advertise for men to fill public offices, the fact may be taken as positive evidence that the millenium is at hand.

The eastern agitation in favor of unrestricted Chinese immigration is due, in large part, to to the insidious work of the Chinese minister at Washington. Wu Ting Fang, like his famous countryman, Ah Sin, is noted for his "child-like and bland" demeanor. He has insinuated himself into the good graces of Americans in the east by his genial personality and his scholarly attainments. But he has never lost sight of the fact that his diplomatic business is to further the interests of his countrymen in the United States. In all his addresses and other public utterances he has pointed out the benefits that would be derived by Americans if the Chinese exclusion act were annulled. Along with that promised benefit he has endeavored to excite sympathetic feeling on the ground of the injustice of barring out his helpful countrymen. The seed planted by the wily Wu has undoubtedly taken deep root in the east, and heroic measures will be needed to check its growth. The plan of a great popular petition to Congress by the Pacific Coast people may be helpful, but more direct action is necessary. The press of the coast States voices the public sentiment accurately, and it is unanimous in favor of extending the exclusion act. A strong and well backed representation in Washington is essential, however, and upon its work the fate of the exclusion act will largely depend.

FARM AND GARDEN

IRRIGATION CANALS.

Interesting Features In Their Operation—The Ditch Rider.

The owner of an individual ditch uses it as he pleases, subject only to the state laws governing the diversion and use of water. The practical operation of corporation canal systems is under the control of executive officers of the company, but the representative

FIG. I—DIVISION GATE ON LATERAL.

with whom the farmer and irrigator comes into most frequent and intimate contact is the ditch rider, who is generally appointed by the manager or president. His duties consist in patrolling the ditch throughout the season of actual operations for the purpose of seeing that the works are in good repair and to superintend the proper distribution of water to the various stockholders from the system.

The larger irrigation systems generally have several distributary canals leading from the main one and following as nearly as possible the highest ground of the areas designed to be watered from them.

At various points along the main canal or distributary lateral branches are diverted for conveying the water to land of individual consumers, and it becomes necessary to place regulating structures at the points of diversion for the purpose of regulating the flow into these laterals. These consist of wooden, boxlike structures in which sliding gates are placed, by which the size of aperture from the main canal is regulated and the flow of water therefrom controlled. Where accuracy of results is attempted there is also placed in the lateral ditch below the regulating gates a weir whose flow for all depths is tabulated, and a graduated scale is so placed with reference to the weir that the depth can be conveniently read off.

When it is desired to deliver into a lateral a given volume of water, the ditch rider consults his weir table and finds the depth over this weir necessary to discharge the required amount. He then increases or lessens the opening from the main canal by moving the sliding gate until the required depth over the weir is realized. This is the most important duty of the ditch rider, and for its proper execution he is expected to make a trip daily over the entire canal or his division of it. He usually travels on horseback or in a two wheeled cart and carries a shovel, a hatchet, a small sharp pointed bar and a number of empty sacks. The hatchet is used to repair structures, the

FIG. II—DIVISION BOX ON LATERAL.

bar is for raising gates which may be difficult to move by hand, and the shovel and sacks are frequently required for the repair of banks and the stoppage of holes caused by gophers, muskrats and other burrowing animals. The holes thus made are usually insignificant at first, but become rapidly enlarged by the escaping waters and if not stopped carry away a portion of the embankment.

Upon the discovery of a leak the ditch rider's first efforts are directed to the location of the point on the inside of the bank at which the water enters the hole. This is frequently detected through the eddy appearing at or near the opening. The orifice, if small, can be closed by pushing into the hole one or two empty sacks; if already large, it can usually be closed by first filling a few sacks a half or a third full of loose earth and ramming them into the mouth of the opening.

The regulating gates are frequently kept locked and the key carried by the ditch rider. When a water consumer has completed his irrigation for the time being, he may desire that the water be shut out from his lateral. In such cases he leaves a note tacked to his head gate requesting the ditch rider to shut it off at a specified time and in the same manner notifies him to turn it on when he again needs it. The ditch rider gets these messages when he makes his daily round over the ditch.

Such are some of the items in the operation of ditches as described by J. C. Ulrich in a recent bulletin.

A Side Hill Poultry House.

If the land slopes to the east, dig in to the bank so as to make a level floor. Dig a trench and fill with loose stones for a foundation. On this build a cement wall of rough stones as shown.

A WARM POULTRY HOUSE.

Then cement the floor. This will give an exceedingly warm pen. The cut shows a section of the earth, the straight dotted line indicating the position of the cemented floor and the other dotted lines the stone foundation and the cemented stonework. The open scratching shed is coming to be greatly prized by poultry men, says The Farm Journal, in giving this plan.

SUGAR BEET PULP.

One of the Features Which Recommend the Sugar Beet Industry.

Among points about feeding beet pulp which a Nebraska cattle man determined by experiment were:

First.—That the cattle would eat as much as 100 pounds of pulp a day.

Second.—That they eat pulp with evident satisfaction and great relish.

Third.—That they consume very little or no water at all while eating pulp.

Other points of which he feels satisfied in his own mind but has not clearly demonstrated are that the use of pulp will effect a valuable saving of other foods, both hay and grain.

In years of drought, when foodstuffs are very high, the saving will be a very valuable one. Pulp is bulky and costly to transport and expensive to handle. The charges, however, cut no figure with farmers delivering beets to a factory, who can as well as not take back a load of pulp to their farm.

Pulp, he further says, can be kept very easily indeed, as it becomes extremely compact and sours or ferments slightly. A large pile can even be left out of doors in very cold weather, and while a crust eight or ten inches will freeze on the outside the inside will remain in good condition.

All pulp should properly be fed in a barn where it cannot freeze and with other foods. During the earlier part of the feeding period, for instance, for three or four months outof six, it may be fed largely with a comparatively small feed of grain, although hay should always be fed with it. Toward the end of the feeding period the proportion of grain should be gradually increased and that of the pulp diminished for finishing the cattle for market.

He attaches the greatest possible importance in value to the use of beet pulp in beef production and does not doubt it will prove equally valuable in the dairy industry. Its value in feeding animals is one of the reasons why the production of sugar itself may find a firmer and more profitable location where dairy or beef animals are fed than in other sections where there are not so many animals to feed.

Another Nebraska stockman gives his experience thus:

I fed 300 3 and 4 year old western steers in 1891, the first year our factory opened. Of course I had no experience in feeding pulp, but I soon found that cattle were very fond of it. I think they will leave any other food known and eat it. As to the fattening quality, of course when fed alone it is almost valueless, though I believe stock would winter on it. Mixed with a cut feed of hay or straw or cornstalks on which cornmeal, bran or some other grain food is placed, it makes a ration which fattens very rapidly. By feeding the usual amount of meal with 75 to 100 pounds of this pulp per day per steer the fattening period will be shortened at least 30 days. In other words, you can get as good results in four months with pulp as you could in five without it.

I think steers will eat as much grain food per day or more with the pulp than they will without it. It is a great "conditioner" and appetizer, and we find the older it is the better the results. It will keep a number of years in the silo or piled up on top of the ground. It will turn black and spoil as far as the air goes through, which is from eight to ten inches. It will reduce in bulk fully one-half and grow as much richer. There are a number of big sheep and cattle feeders here, all of whom use it more or less. If anything, it is better for sheep than cattle.

How to Grow Watermelons.

This is the way an Iowa correspondent of Farm, Field and Fireside would grow watermelons: Select a rich loam—sandy loam is best—and dig holes six feet each way or in one long row and put a shovel of well rotted manure in each hill, covering with two inches of dirt. Plant about a dozen seeds in each hill, covering one inch deep. Plant from the 5th to the 10th of May. Soon after planting these, say five or six days, plant a hill between each two of the first ones. These will come up about the time the bugs show up generally, and they will not touch the first vines, but will destroy the second planting. Should the bugs come early and attack the first vines they are all gone before the others are up.

Chinese Names.

In China there is no fixed nomenclature—even the country itself is without a name—and this lack of distinct and recognized appellations was a frequent source of difficulty. Of personal information from natives there was none obtainable on which any credence could be placed. A Chinaman, unless he be a porter cooly or a boatman rarely travels or gets during his life more than a few miles in any direction from the place where he was born. When trying to procure information concerning the immediate locality, it was no uncommon thing to have a native, and even sometimes men of local position, say, "Oh, I have never been so far away as that," or, "I have never been across that hill and so do not know what is beyond."—Harper's Weekly.

He Cashes Pay Checks.

New York pays its employees by check, and each pay day sees a great many men with their whole month's salary in their hand, but no money. Various bankers whose places of business are near the city hall are willing to cash the city's checks, but they charge a commission, usually 10 cents on each $100.

The proprietor of a saloon near the city hall is willing to cash the checks without charging a commission, and on pay days his establishment is jammed with officials. He makes his profit on the increased sale of liquids at his bar, for no man after having his check cashed leaves the place without buying a drink. The proprietor of the establishment provides against the city pay day by drawing $25,000 from the bank and hiring a man to take entire charge of the check cashing business. Frequently the entire $25,000 is exchanged for checks. When this happens, the proprietor sends for more money. No city employee asks to have his pay check cashed and is not accommodated, and the extra pay day sales at the bar are a considerable feature of the year's trade.—New York Sun.

A Clever Dog.

There is more in a dog than man's philosophy accounts for. No theory of instinct—sometimes defined as a faculty prior to experience and independent reason—will explain some actions of a clever dog whose case is reported by a correspondent of the London Spectator:

I knew a dog in Ireland—a retriever—who had been taught always to bring his own tin dish in his mouth, to be filled at the late dinner. For some reason his master wished to make a change and to feed him twice a day instead of once.

The dog resented this, and, when told to bring the dish, refused, and it could nowhere be found, on which his master spoke angrily to him and ordered him to bring the dish at once.

With drooping tail and sheepish expression he went down the length of the garden and began scratching up the soil, where he had buried the bowl deep down to avoid having to bring it at an hour of which he did not approve.

Good Ear For That Music.

"There's a man who has a good ear for music," remarked the dyspeptic man who was bothered by the piano playing of the young woman next door.

"Who, Dumley? Why, he's deaf as a post," replied his friend.

"I know he is," said the dyspeptic man.—Philadelphia Press.

A Mahogany Cement.

Melt beeswax four ounces then add Indian red one ounce, and enough yellow ocher to produce the required tint. Use enough to fill up holes and cracks in the mahogany.

In the western islands of Scotland there is no industry which exerts so much influence upon the conditions of life as the herring fishery.

Statistics of accidents show that an American can travel by rail 72,000,000 miles before in the law of averages it is his turn to be killed.

Commissioner's Sale.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

A. W. EBBESHUTZ, Plaintiff, vs. E. M. DINEEN, Defendant.

SUPERIOR COURT Order of Sale and Decree of Foreclosure.

UNDER AND BY VIRTUE OF AN ORDER of sale and decree of foreclosure issued out of the superior Court of the County of Inyo State of California, on the 8th day of October, 1901, in the above-entitled action, wherein A. W. Ebbesanz, the above plaintiff, obtained a judgment and decree against E. M. Dineen, defendant, on the 7th day of October, 1901, which said decree was, on the 7th day of October, 1901 recorded in Judgment Book 2 of said Court, at page 107, I am appointed Commissioner and commanded to sell:

All the right, title and interest of the defendant E. M. Dineen, consisting of an undivided one third interest in and to those certain mines and mining claims situate, lying and being in Wild Rose Mining District, County of Inyo, State of California commonly known and designated as the "Monarch," "Combination," "Monopoly" and "Kennedy" mines, the notices of location thereof being of record in the mining records of said Wild Rose Mining District, and in the office of the County Recorder of said Inyo County.

Notice is hereby given that on THURSDAY, the 4th day of NOVEMBER, 1901, at 2 o'clock p m of that day, in front of the Court House, in the town of Independence, I will in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy the plaintiff's judgment, with interest thereon and costs, to the highest and best bidder, for cash, in gold coin of the United States.

GEO. S. WOOD
Commissioner.

Dated October 14, 1901.

INYO LODGE No. 221, F. & A. M.

STATED MEETINGS OF INYO LODGE, No. 221, F. & A. M., for the year 1901, will be held at Masonic Hall, Independence, as follows:

Saturday	February 2, 1901

P. H. MACK, W. M.

ARE YOU DEAF? ANY HEAD NOISES?

ALL CASES OF

DEAFNESS OR HARD HEARING ARE NOW CURABLE

by our new invention. Only those born deaf are incurable.

HEAD NOISES CEASE IMMEDIATELY.

F. A. WERMAN, OF BALTIMORE, SAYS:

BALTIMORE, Md., March 30, 1901.

Gentlemen:—Being entirely cured of deafness, thanks to your treatment, I will now give you a full history of my case, to be used at your discretion.

About five years ago my right ear began to sing, and this kept on getting worse, until I lost my hearing in this ear entirely.

I underwent a treatment for catarrh, for three months, without any success, consulted a number of physicians, among others, the most eminent ear specialist of this city, who told me that only an operation could help me, and even that only temporarily, that the head noises would then cease, but the hearing in the affected ear would be lost forever.

I then saw your advertisement accidentally in a New York paper, and ordered your treatment. After I had used it only a few days according to your directions, the noises ceased, and to-day, after five weeks, my hearing in the diseased ear has been entirely restored. I thank you heartily and beg to remain Very truly yours,

F. A. WERMAN, 730 S. Broadway, Baltimore, Md.

Our treatment does not interfere with your usual occupation.

Examination and advice free. YOU CAN CURE YOURSELF AT HOME at a nominal cost.

INTERNATIONAL AURAL CLINIC, 596 LA SALLE AVE., CHICAGO, ILL.

LEGAL.

Application for Patent.

NOTICE OF APPLICATION OF THE Inyo Marble Company of California, a Corporation, for a United States Patent.

INDEPENDENCE, CAL., Nov. 16, 1901.

NOTICE IS HEREBY GIVEN THAT IN pursuance of Chapter Six of Title Twenty-two, of the Revised Statutes of the United States, the Inyo Marble Company of California, a corporation organized and existing under and by virtue of the laws of the State of California, whose Post Office address is Room 34, 10th Floor, Mills Building, San Francisco, Cal., claiming 120 acres of the mineral deposit bearing marble, lying and being situated within the Mining District, County of Inyo and State of California, has made application to the United States for a patent for the said mining claim, which is more fully described as to metes and bounds by the official plat herewith posted, and by the field notes of survey thereof, now filed in the office of the Register and Receiver of the U. S. Land Office at Independence, which field notes of survey describe the boundaries and extent of said claim on the surface, with magnetic variation at fifteen degrees thirty minutes East in June, 1892, as follows, to wit:

Beginning at the original location corner at the N. E. corner of the S. W. ¼ of Section 14, Township 16 South, Range 37 East, Mount Diablo Meridian. Whence the ¼ Section corner between Sections 14 and 15 bears West 40.00 chains distant the ¼ section corner between 14 and 23 bears South 42.00 chains distant, set post 4 in. square 4½ feet long 12 in. in ground with rock mound marked 1. No. 1.

Thence, the magnetic variation being 15 degrees East, North 14.50 chains. Top of spur bears N. W. descending along West slope of spur, 40 chains, 2640 feet. No location corner to be found. At point identified by claimants set post 4 in. square 4½ ft. long 12 in in ground with rock mound marked 1 No 2

Thence deflecting to left 90 degrees, West descending 15.00 chains cross gulch 10 lks. wide, course North ascend 18 chains. Top of spur bears N. 50 degrees W. descend 27 chains. 1782 feet cross Wash 25 lks. wide course S. 70 degrees W. 30 chains, 1980 feet. No location corner to be found. A point identified by claimants set post 4 in. square 4½ feet long 12 in. in ground with rock mound marked 1 No. 3 cor. to sections 10, 11, 14, and 15 bears N. 80 degrees 30 minutes W. 10.00 chains distant.

Thence deflecting to left 90 degrees, South descending gradually 4.50 chains cross wash 25 lks. wide, course West and gradual descent. 10.00 chains top of low point of spur bears West gradual descent. 20.00 chains S. W. corner boarding house bears S. 56 degrees 30 minutes E. 9 chains. 24.00 chains S. W. cor. lodging house bears S. 64 degrees 00 minutes E. 7.50 chains. S. W. corner of office upon which location notice is posted bears S. 81 degrees 00 minutes E. 9.00 chains S. W. corner of blacksmith shop at upper excavation of quarry bears N. 61 degrees E. 7.50 chains 40.00 chains, 2640 feet to original location corner set post 4 in. square 4½ feet long in rock mound which I marked 1 No. 4.

Thence deflecting to left 90 degrees, East 2.75 chains road from excavation at quarry bears N. and S. 4.50 chains cross railroad side track from quarry connecting with main line of the Carson and Colorado railroad bears N. 18 degrees 30 minutes E. and S. 18 degrees 30 minutes W. 7.75 chains. Road to quarry bears N. W. and S. E. 10.00 chains S. W. corner of boarding house bears N. 9 degrees 30 minutes W. S. W. corner of blacksmith shop at excavation at upper quarry bears N. 10 degrees W. 20 chs. excavation at lower quarry bears N. 8 degrees W. 19.00 chs. excavation at upper quarry 150 ft. above lower quarry bears N. 11 degrees W. 21.00 chs. 13.00 chains cross railroad switch track from office to upper marble quarry N. W. and S. E. 29.00 chains excavation in deposit of marble 10 lks. to left 30.00 chains, 1980 feet to corner No. 1, at place of beginning.

Containing an area of 120 acres.

The said mining claim being of record in the office of the Recorder of Inyo county at Independence in the County and State aforesaid in Book "F" Land, Water and Mining Claims, p. 241, said mineral deposit being shown upon the plat posted herewith, as near as can be determined from present developments. This claim being for 120 acres of the surface ground shown upon the official plat posted herewith, the said claim being designated as lot No. 37 in the official plat posted herewith.

Any and all persons claiming adversely the mining ground, premises, or any portion thereof so described, surveyed, platted and applied for, are hereby notified that unless their adverse claims are duly filed according to law, and the regulations thereunder, within the time prescribed by law, within sixty days from the date of the first publication hereof, with the Register of the U. S. Land Office at Independence, in the State of California, they will be barred, in virtue of the provisions of said Statute.

It is hereby ordered that the foregoing notice be published in the Inyo Independent, a weekly newspaper published at Independence, Inyo County, California, for 60 days (10 weeks) which paper I hereby designate as the paper published nearest said land.

S. W. AUSTIN.

JOHN J. MCLEAN,
Observer.

*Record beginning March 6th 1898.

About ¼ inch of rain fell last night.

T. C. Boland spent several days in town this week.

Doc Woodin is busy to-day rounding up indigestion cases.

Several couples came up from Lone Pine yesterday to attend the ball.

Thos. W. Hill of Big Pine is spending Thanksgiving with the boys at Independence.

A free fight and a sore head or two in the morning was Wednesday night's record.

The kids worked like tigers yesterday getting their hall decorated. They are great little rustlers.

J. J. Gunn came in from the Minnietta early in the week and remained for Thanksgiving turkey.

Let's commence making preparations for Christmas. It is only four weeks off, and if we begin in time it will be a great success.

R. P. Hessian of Big Pine was a visitor in town this week. Dick does not get here very often, but he is always a welcome visitor.

C. A. Walter of Camp Independence has been very sick lately. The old gentleman has been suffering from throat and lung troubles.

George Wrinkle came down from Reno Wednesday to spend Thanksgiving with his family. He has been attending the Nevada State University.

Most flattering reports are received from San Jose of the record made by Miss Blanche Bunney, who will be a full-fledged school ma'am by February next.

The Independence Dramatic Club has a farce-comedy under way which will be presented some time during the next two weeks. Full particulars will be given in the next issue.

Messrs. Castro, Calayo and Cruz, the Lone Pine String Band, spent Wednesday night at Independence. Several of the residents were serenaded. They make delightful music.

M. W. Trask is very ill at the Hospital and it is extremely doubtful if he recovers. Mr. Trask is an old resident and has many friends who will learn his condition with deep regret.

F. McIver will leave for Los Angeles on Monday's stage on business connected with the Eastside canal. Mr. McIver owns a valuable property on the Eastside which is the result of years of hard work.

Rev. Richard Fysh, the new methodist minister, arrived at Independence to-day. There will be a donation party at the church on Thursday evening next, and it is to be hoped that everybody will attend and get acquainted with him.

We acknowledge with thanks the receipt of complimentary tickets to the course of lectures now being delivered at Big Pine and hope to be able to avail ourselves of them. These lectures are very instructive and entertaining and should be heard by all.

The Rebekah lodge held its regular bimonthly meeting at the Odd Fellows hall last Tuesday evening. Mrs. S. A. Fraser and Misses Louella Robinson and Rosa Roeper were initiated into the order. A collation was served by the ladies and a pleasant social evening enjoyed.

O. I. Mairs has carpenter Stecker at work on an extension of the Norman House. About twelve thousand feet of lumber is on the ground and it will be used in erecting a two-story addition on the west end of the building. The lower portion will be used as a large kitchen, pantrys etc. and four bedrooms will be added upstairs.

Tonopah Ore.

Ore of startling and extraordinary richness is now being extracted from various points on the main or Butler group and from Gold Hill, an outside proposition owned by Messrs Oddie Brougher Bros. and J. W. McCullough. The lease of Carlon & Co. on Gold Hill is now producing ore which assays 1980 ounces in silver and 32.50 ounces in gold per ton. No ore is being extracted from this lease of less value than $400 per ton. This is the only proposition outside of the Company group that is actually producing shipping ore at the present time A certain lease on the Valley View ledge is producing ore which assays 1700 ounces in silver and $1100 in gold per ton. This ore is peculiar in character and different from other high grade ore in camp.—Tonopah Bonanza.

Hung Jury.

The trial of the case of the People vs. Hunter and Maxwell, which has been occupying the time of the Superior Court and the attention of the people of this vicinity for the past two weeks, terminated yesterday in a hung jury. There being no possibility of a verdict the jury was discharged. The vote stood nine for acquittal and three for conviction. We have carefully refrained from any comment on this case and in view of the probability of a second trial the merits of the case will not be discussed. In the conduct of the trial there was very little of that bickering on the part of counsel unfortunately of too common occurrence. It was conducted in all fairness by both sides and the utmost latitude allowed in bringing in all the facts pertaining to the case. The closing arguments in all such cases are of great interest in our little community and as usual the court-room was crowded to hear the appeals of counsel. The closing statement was delivered by District Attorney Dehy in even, measured tones and was confined to the technical bearings of the case. S. E. Vermilyea delivered the closing argument for the defence. The gentleman is a finished rhetorician and his discourse was oratorical and brilliant. He has delivered many addresses in this county, his style is familiar to all, and this effort was in his best vein. Lafe Gill closed for the people. This is Mr. Gill's first appearance here since he was a justice court lawyer some twenty years ago and he was listened to with much curiosity. It may have been due to the exigencies of the case, but his address consisted principally of fulsome laudation of the complaining witness and cheap and tawdry ridicule of witnesses for the defense. His manner is forceful while his speech is ungrammatical. In summing up the case he wilfully and persistently went outside the record and presented matter to the jury which was not brought out in the trial. He recalled his early days when he wore little dresses; but very considerately omitted to mention his after career in this county, for which he is to be pardoned. It would also have been unnecessary—it is too well remembered. Mr. Gill is essentially a self-made man and like all products of human hands he is faulty in construction. The bricks were not thoroughly baked. He has one amiable quality which commends him to good fellowship; he dearly loves a joke and can give and take one with equal good-nature. Sometimes they are a little rough, and he has to explain that they are jokes. But any man who is good-natured enough to appreciate a joke must have many other good qualities. Mr. Gill's many friends in this, his old home, have good reason to congratulate him upon his brilliant success in life. He has filled with honor the dignified and important position of District Attorney of Riverside county, and as he is yet a comparatively young man, we confidently expect to hear of other honors being thrust upon him.

Thanksgiving Evening.

The children owned the town last night and the big folks looked on and clapped their hands. Thanksgiving may be a holiday and the consumption of the gobbler presumably the hardest work of the day, but those youngsters did not draw an idle breath yesterday. A load of pumpkins were cut into Jack-o' lanterns and they grinned and blinked along the stage and about the room, while bunches of corn stalks were clustered on the walls and a general air of peace and plenty prevailed. The club-members were all clad in the quiet garb of the Puritan. About 9 o'clock the grand march was formed and with Paul Mairs and Miss Lou Robinson in the lead about twenty-five couple wended their way through its intricate mazes. Mr. Mairs kept his head and heels very well and proved himself an able general. After the first quadrille Howard Mairs, president of the Club, gave a short address of welcome and introduced the first number on the programme. The tiny tots gave a sleigh song all bundled up in a snow-covered sleigh and as a wind-up over went the sleigh and a dozen yelling small-fry were piled up in the snow. The numbers of the programme were sandwiched between dances and served as a welcome diversion and breathing spell. Edith Gorman rendered an interesting description of that first Thanksgiving day in the old Plymouth colony. Ruth Mulholland was the prim little pilgrim maid with demurely folded hands but a naughty little twinkle in her eye. Next came the landing of the pilgrims, a tableau well set and arranged with all the children on the stage. Miss Birdie Levy then read in her best style selections from Longfellow's "Courtship of Miles Standish." The reading was illustrated by tableaux with Howard Mairs as John Alden, Lena Levy as Priscilla and Milt Levy as Miles Standish. An up-to-date song from a row of black men brought the listeners down with a jump to modern times. The line of black kids showed the touch of an experienced hand in their make up. Milt Levy as B'rer Coon exhorted on our many blessings and bid us be thankful for the same. A chicken-stealing was realistically portrayed by Dave Willis, Frank Willis, Eva Lawrence and a squawking hen. Mr. Getchel kindly sang a couple of coon-songs in his best end-man style and by this time the Puritans were busy spreading tables and pouring coffee for the first installment of hungry dancers. Good music, efficient floor directors and Harry Cook as caller kept some of us old boys stepping pretty high and blowing hard. The Children's Club has the good wishes and good dollars of our people. It is due to Mrs. Sophia Frank's indefatigable efforts that it has become a permanent organization, and we hope soon to attend the first reception at their new club-room.

Real Estate Transfers.

John Casey to J. S. Stotler—Nov. 2, 1901. Und. ½ int. in Midnight mine, Argus range, $50.

SUPERIOR COURT.

Hon. Walter A. Lamar, Judge.

FRIDAY, Nov. 22, 1901.

People vs. Hunter and Maxwell—On trial. P. S. Partridge sworn as a juror. August Stecker excused for cause. J. W. Wright, peremptory by defense. C. A. Collins, peremptory by plaintiff. A. E. Sais, excused for cause. The sheriff was ordered to summon another venire of five additional jurors. D. Stubblefield excused on account of sickness. A. M. Strong, E. H. Edwards, A. V. Lewis and J. S. Gorman excused for cause. The Sheriff was ordered to summon an additional venire of five jurors. Henry Fehrman excused for cause. Jacob Vagt was sworn to try the case, which completed tale. Case continued till next day.

SATURDAY, Nov. 23, 1901.

People vs. Hunter and Maxwell—Information read and plea of defendants stated to jury. Ordered that three copies of the testimony be transcribed as rapidly as possible till close of trial. Henry C. Mohand, Arthur Middleton, M. McSweeny, J. E. Shepherd, J. R. Moffett and John Shepherd sworn and excluded from the Court Room, all except John Shepherd, complaining witness. John Shepherd's branding irons introduced and marked People's Exhibits "A" and "B." Whereupon John Shepherd, the complaining witness, called for the People. J. E. Shepherd called and examined. Recess until Monday.

MONDAY, Nov. 25, 1901.

People vs. Hunter and Maxwell—J. E. Shepherd resumed the stand. John Arthur Shepherd called by the People and examined. F. M. Crocker and Elton Baker sworn. Elijah Robinson called and examined. J. R. Moffett called and examined. Recess until next day.

TUESDAY, Nov. 26, 1901.

People vs. Hunter and Maxwell—J. R. Moffett and T. C. Boland examined for the prosecution. The People rest their case. Counsel for the defendants make their opening statement. M. McSweeny, Henry C. Mohand, F. M. Crocker, Arthur Middleton, Nellie Hunter, Ellery Wrinkle, Charles Rose and John Maxwell examined for the defense. Recess until next day.

WEDNESDAY, Nov. 27, 1901.

People vs. Hunter and Maxwell—I. H. Mulholland sworn. J. R. Moffett recalled for further examination. I. H. Mulholland examined. Henry Mohand and Ellery Wrinkle recalled for direct examination. Ben. H. Yandell examined in rebuttal. This closed the case and it was given over to counsel for argument.

THURSDAY, November 28, 1901.

People vs. Hunter and Maxwell—Jury came into Court and foreman Fitzgerald stated that they could not agree. Jury polled and all stated that they could not agree. It appearing to the Court that a verdict could not be reached the jury was discharged.

FRIDAY, Nov. 29, 1901.

People vs. Hunter and Maxwell—Setting of trial postponed until Friday, December 6, 1901. Counsel for defendant moved to have the Sheriff take charge of the mules in question and hearing of motion continued till 2 o'clock p. m.

In the matter of drawing a grand jury the following names were drawn from the box:

1. George L. Albright
2. R. W. Scott
3. E. H. Blake
4. A. S. Kilpatrick
5. J. J. Morton
6. J. C. Irwin
7. Dennis Delaney

22. W. J. Dunn
23. W. H. Uhlmeyer
24. John S. McGee
25. Frank Shaw
26. George Best
27. R. W. Ford
28. O. I. Mairs
29. W. W. Watterson
30. A. W. Eibeshutz

Well Known Mining Man Here.

W. D. Loose, a mining man of Dome, Arizona, has been spending several days at Independence. Mr. Loose is a brother of Warren and Ed. Loose and all are well known mining men. They are all old-time friends of J. J. Gunn, who has been corresponding with them for some time past relative to mining interests here and more particularly the extensive copper deposits at Saline. As the result of Mr. Gunn's representations Mr. Loose has made a careful preliminary examination of the properties and has reported that they are worthy of further examination. Mr. Loose states that the surface showing is wonderful. In company with Mr. Gunn he visited the Green Monster mine yesterday and is very favorably impressed with the property.

From Saline.

Arlie Mairs got back last Tuesday from his copper mines at Ubaheba. While there he did considerable work on the croppings and uncovered large bodies of ore in several places. A representative of eastern capitalists will arrive here early next month for the purpose of making a thorough examination of the property. A great deal has been written of the extensive copper deposits in Saline Valley and there is no doubt but that with proper shipping facilities they could be profitably worked. To their inaccessibility alone is it due that they are not now being worked on a large scale.

TO LAKE TAHOE

A TRIP OF RARE ITEREST.

Passengers on west-bound overland trains o Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leav promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the mo ning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spen examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,10 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

ONLY PIGEON RANCH IN THE WORLD.

GENERAL VIEW OF THE UNIQUE PIGEON RANCH.

A brand new branch of industry in America has been started in southern California—that of extensive pigeon raising. The pigeon ranch here pictured is at Los Angeles, and is the only one of its kind in the world. It covers an area of eight acres, and in the gigantic lofts are over 15,000 of these birds. The cost of feeding them amounts to a little over $5 per meal. The ranch was started three years ago with 2,000 birds.

Nearly 250 dozen squabs are disposed of per month, except in the fall, which is the moulting season. At that time of the year it is possible to secure only one-fourth of the usual number. In Los Angeles about $3 a dozen is the usual market price of squabs. During the season when they are scarce, they sometimes bring as much as $10 a dozen.

When the ranch is well stocked, as it is when there are 15,000 birds flying about, the extensive family eats one wagon load of screenings, two sacks of wheat and about twelve gallons of boiled meal daily. In addition to this, they are given three barrels of stale bread, soaked in water, during the week.

The farm is a picturesque sight, especially at feeding time, when the birds swarm the place, picking their way daintily over the ground—a mass of white and gray fluffiness.

A remarkable fact in connection with this place is that the pigeons never leave the ranch, and it is seldom that one ever gets beyond the large wire fence that surrounds the yard.

SCHOOLBOY HONOR.

Lesson on Evils of Tale-Bearing Administered by a Schoolmaster.

A lesson in the evils of talebearing and how an English schoolmaster regarded it, is conveyed by Irving Montagu, the war artist, in a reminiscence of his school days. Talebearing, or "peaching," is considered among boys the most dishonorable of offenses, and young Montagu was duly impressed by this fact, as the story goes on to show.

Ten fellows were absent; they had gone to Bradley's farm, out of bounds, and were caught red-handed in the possession of illicit stores by "the doctor." Seven were intercepted at the cross-roads, laden with supplies; they were interrogated as to the names of the other three, and with a sneaking hope of lightening their own punishments at once gave them up.

The other three were Tom Beresford, Nipper Watkins and your humble servant, better known in those days as Peg Montagu.

Then came the query to the trembling three: "Who were the other seven?"

We fondly hoped that they had escaped, looked first at one another, then at the doctor; no one spoke. Threats followed, but we stood to our guns, and returned to the school still in custody.

The great bell was rung at an unwonted hour, and the silence was painful as the portentous step of the doctor was heard approaching. Mounting his rostrum, he called out:

"Beresford, Watkins, Montagu, stand out! Do you still refuse to give up the names of those boys who were with you out of bounds?"

"Yes, sir," in a sort of loud whisper.

"Very well, I give you five minutes to decide."

And then came the most fearful five minutes we had ever experienced. At the end the doctor said:

"Will you give up those names" (an awful pause), "or do you absolutely refuse to do so?"

We felt as if about to place a fusee at a given moment to a barrel of gunpowder, as we replied: "We refuse to give them up, sir."

"Very well," said the doctor, in a voice of thunder, "since that is the case there is only one course to follow. Come up here, each of you, and let me" (another awful pause) "shake you by the hand and congratulate you on having held on as you have done, in spite of prospective penalties, as a matter of schoolboy honor. I congratulate you, I say, on having refused to give up the names of those other fellows, who, to save themselves, were only too ready to give up yours."

How those rafters rang again, as the dear old doctor gave us that never-to-be-forgotten lesson! When the excitement had somewhat subsided, he concluded by addressing the remaining seven:

"I have no punishment to give you, except it be by expressing a hope that you may not be so ready on a future occasion to screen yourselves at the expense of others."

A MOST UNGRATEFUL MAN.

He Preferred Drowning to Scalping and Fought Hard.

"The most ungrateful man I can think of just now," said Geo. Howe, a well-known young man of East Baltimore, the other day, "was the fellow I rescued from drowning at our shore on Bear Creek about a year ago."

Mr. Howe was in a reminiscent mood, says the Baltimore American, and was urged to tell the story.

"Oh, there isn't much of it," he said, "but I'll tell it just to show how mean a man can be when he wants to be. We were having a good time together when suddenly a lad came running up to me and said that a man was drowning. I started for the creek and found him going down for the third time. He had been up twice and went down again. It was only in about six feet of water, but he was yelling lustily, so I reached over the end of the wharf and grabbed him by the hair of his head. It was thick, bushy hair and I got a good grip and gave a hard jerk. He came back from the watery grave howling like an Indian. Before I hauled him on the wharf he yelled to me to let him die a decent death rather than a lingering one, but I belong to the 'First-Aid-to-the-Injured Society,' and we are heavily fined if we let anybody get off the earth and we can help it. I could help this ungrateful man back to life and his pursuit of carpet beating for a livelihood, and I did so.

"He fought me hard, but I got him on the wharf, though I nearly pulled his scrub brush off his cranium. And what do you think he did after we rolled him on a barrel and ran him half a mile through a corn field to bring the light of the world to his body and brains? He cursed us all and made a break for me to mutilate my body. He said that his head was nearly off his shoulders, and he would have to sit in an arm chair the balance of his life, as his feet were in no condition for work in the future from the hard run we had given him through the waving corn.

"His name? Oh, every one will know who it is if you only publish it in the paper. There isn't a more ungrateful man in East Baltimore, and I tell you, gentlemen," continued Mr. Howe, "that while I'm still a member of the 'First-Aid-to-the-Injured Society,' I shan't attempt to rescue a man with such a head on him. I shall confine myself to the work of looking after bald-headed men. They won't have any kick coming and certainly no hair to mention."

BOON FOR BUSY MOTHERS.

An invention has just been patented which should prove, as the inventor anticipates, a boon for busy mothers who find it hard to get time from their household duties to read or study. It consists of a combination rocking-chair and cradle. The cradle, when not in use, telescopes into the lower part of the chair and is not in sight. When it is desired to rock the baby

LATEST BABY ROCKER.

to sleep the cradle is pulled out, the baby laid to rest, and the mother, seating herself in the comfortable rocker, proceeds to rock back and forth, while at the same time she reads the latest novel or prepares her paper on Egyptian mythology for the next meeting of the club. If there happen to be twins in the family, preparation has been made for this emergency by building the rocker with a double cradle, one being attached on either side, so that two babies may be rocked to sleep at the same time and without an extra effort on the part of the mother.

Pet Dogs Are Tattooed.

A decidedly novel occupation which has of late been noticed is that of tattooing the names of their owners upon dogs. Several months ago there appeared in northwest Baltimore a young man who is engaged in that pursuit and during the time he remained here did a good business. Among the dogs which underwent the operation is a pretty little fox terrier belonging to Charles F. Wohrna, which rejoices in the name of Booze, and a fine bred bull terrier, Jip, the property of the Chesapeake Brewing Company. Both animals bear upon their breasts, where the hair grows thinnest, the names of their respective owners.

Contrary to the belief of some that the operation is a cruel, painful one, those who have seen it performed declare that the animals apparently experienced very little pain. The operation last about 15 minutes. The animal is usually held by two men, one having hold of the hind legs while the other holds the front paws. With a set of very fine needles the operator then goes to work, deftly pricking the letters into the skin, just deep enough to draw a few drops of blood. Then he pours the Indian ink all over the wounds, or, rather, scratches, and the operation is over. In a few weeks the sores are completely healed and the animal bears during the remainder of its existence an unmistakable mark of identification. The price of the operation is 50 cents.—Baltimore American.

Church Cats of Naples.

In Naples there exists a race of cats which live in the churches. They are kept and fed by the authorities on purpose to catch the mice which infest all old buildings there. The animals may often be seen walking about among the congregation or sitting gravely before the altar during the time of mass.

QUEER OLD FLASKS.

New York Wine Merchant Has an Interesting Collection.

There is an old wine merchant in New York who has a curious collection of old bottles.

One, which he believes to be the oldest bottle used for holding liquor in this country, came from Nassau, in the Bahamas, originally filled with snuff. It is made of a coarse, seaweed colored glass and is shaped somewhat like a chestnut standing upright upon its broad end. There is a broad bottomed bottle which held madeira in Charleston in 1810 and a Viennese bottle 125 years old, whose slender, graceful curves have been supplanted today by a more commercial shape. The first American gin bottle, from the Schuchadt estate, has a pouter pigeon shape, which is delightful to the eye.

Among the later bottles are some which constitute the product of the bottle maker's art when impressed glass came into use. On each side figures are molded into the glass. There are a number of "railroad bottles." On one a wagon running on rails and drawn by a horse is depicted on both sides, with the motto, "Success to the Railroad." On another the same primitive arrangements are shown, commemorating the railroad at Lowell, and on the reverse of the bottle a spread eagle imbedded in thirteen stars.

George Washington figures on one bottle, upon the reverse of which was Zachary Taylor, who, so says the glass, "never surrenders." A spread eagle and what appears to be a Masonic shrine, a fruit basket and horn of plenty and two trees, one in leaf, the other bare, representing "summer" and "winter," are both two faced designs. A large, round bottle, which in these days would contain Holland gin, is impressed with a series of monks at their prayers. It was called the "apostles' bottle," but it drew fire from the pope, who had it put, by edict, out of general use.—American Wine Press.

ENGLAND'S SEA GYPSIES.

A Strange Little Tribe That Lives Always on Boats.

A strange and almost unknown part of the population (if it can be called that) of the British isles is the queer semiwild folk known as sea gypsies. Real gypsies they are, differing from their fellow gypsies in the fact that they always live on the sea and that, never having mingled with landsmen, their type is much purer and more nearly resembles the original.

There are about 500 sea gypsies in Britain. They cruise along the coast, seldom touching the land, but always close to it, in old and weatherbeaten craft that may have carried their grandfathers.

When the tide is out, the old craft will often drop anchor by a sand bank island far out at sea, and her crew will grub for cockles with their hands, filling a score of baskets, but saying nothing to each other, for they are almost out of the habit of speech. They find fifty shellfish where the ordinary fisherman finds one, but they rarely do the same thing two days running, and in the next hour they may be snaring rabbits on a headland miles away.

The sea gypsies are wild eyed and thickset. Their hair is always either jet black or golden. They are still of almost pure Norse or Danish descent, never having used the land and mixed with the shore folk to any extent. Their hands seem to be all thumbs instead of fingers, so powerful and stubby are the digits, because they have done nothing but haul ropes and dig in the wet sand.—New York Press.

A benevolent physician considers the poor his best patients, for God is our paymaster.

Brooklyn, N. Y., Oct. 14th.—People who have headaches know what they are, and those who take Garfield Headache Powders know how completely and how quickly they can be cured. This remedy is peculiarly adapted to the needs of nervous women.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

Always be quite as careful in your business transactions of taking credit as of giving it.

Scrofula

This root of many evils—

Glandular tumors, abscesses, pimples, and other cutaneous eruptions, sore ears, inflamed eyelids, rickets, dyspepsia, catarrh, readiness to catch cold and inability to get rid of it easily, paleness, nervousness, the consumptive tendency, and other ailments—

Can be completely and permanently removed, no matter how young or old the sufferer.

Hood's Sarsaparilla was given the daughter of Silas Vernooy, Wawarsing, N. Y., who had broken out with scrofula sores all over her face and head. The first bottle helped her and when she had taken six the sores were all healed and her face was smooth. He writes that she has never shown any sign of the scrofula returning.

Hood's Sarsaparilla

Promises to cure and keeps the promise. Ask your druggist for it today and accept no substitute.

Why a Horse Eats Often.

The horse can conveniently eat for twenty hours out of the twenty-four. A horse which is in good health has a good appetite at all times and is able to stand plenty of work and is rarely on the sick list. To be a good feeder, especially on a journey, is a great recommendation in the opinion of every good judge of horseflesh. The reason of a horse being such a constant eater is that its stomach is really small in proportion to the size of its body, and therefore it requires feeding often, not less than four times a day, two of which should be early in the morning and at night, while hay should in the stall be always within its reach.—London Tit-Bits.

The Tobacco Habit.

Chewing tobacco is a filthy habit. Smoking makes you so foul that you can smell yourself. Tobacco is very injurious to health. Every user of tobacco tries to quit it and finds it very difficult. Boys see their elders trying to quit, yet boys make themselves sick in acquiring the tobacco habit.—Atchison Globe.

AN INQUIRY.

You reckless south wind, rushing
 Across the gorsy brae,
Where the sunlight is flushing
 The blossoms bright and gay,
When you were crossing over
 The crested billows white,
Did you perchance discover
 My lover's ship last night?

South wind, be kindly hearted,
 And let the flowers be;
'Tis long since we were parted
 By leagues of land and sea.
Was his good ship still cruising?
 Now answer quickly, please,
And never mind amusing
 Yourself among the trees!

Well, was his vessel coming
 Homeward, with sails outspread,
Or was she idly roaming
 In foreign seas instead?
Ah, south wind, stop appeasing
 The foolish daisies so
After your saucy teasing—
 And mind you whisper low!

STELLA'S SUMMER TRIP.

I AM sick and tired of this life! I would rather die now than endure it year after year, without a hope of release!" Stella Monito threw her crochet work to the other side of the small room. "If I could go to the seaside like other girls, I might make a suitable match—one that would save me from the bondage of poverty!"

Netta sadly looked up from her lounge.

"You have much to be thankful for, dear Stella," she said softly. "Your health—a beautiful face——"

"What is the good of my beauty? Whom do I see now? No one but Dr. James, and he is old and stout, and knows our poverty too well to think of me."

At this juncture Mrs. Monito, a quiet, ladylike woman, entered the room and looked from one to the other of her daughters.

"What is the trouble?" she asked.

"Mamma, Stella is tired, and wants to go to the seaside," Netta said softly. "Poor Stella is weary of this life, and I think I had better give her Uncle Locrime's gift, and then she can have her way."

"Netta!" exclaimed the astonished mother.

"Yes; my money increases very slowly, and perhaps, after all, I may not get better."

At the girls' last birthdays, their mother's brother had given each a hundred dollars. Stella had bought some handsome finery with her money, but Netta, who had been for years crippled by a fall, laid hers aside, hoping to save enough to take her to some celebrated physician. Buoyed up with that hope, she had painted little pictures for the stores, and saved each dollar carefully; but Stella's constant repining was wearing, and she determined to give up her hope and let her have her long looked for trip.

"Do you really mean it, Netta?" Stella questioned eagerly.

"Yes."

"Then I will tell you what I'll do, you dearest of sisters! I shall be sure to make a conquest, and when I am married I will take you to France, to the physician you wish to see."

At that moment some one tapped at the door, and a moment later Dr. James, a tall, rather stout man of about forty-five years of age, with a grave,. kind face, entered.

Two weeks later Stella Monito was boarding in an aristocratic resort. Time went by, and her letters home were not very frequent. Finally one morning the postman brought one that ran thus:

"My Dear Mother and Sister—I am about to be married, and bid adieu to a life of poverty forever. Mr. Leland, my future husband, is immensely wealthy. He owns a magnificent residence in the city, and one on the Hudson. But there is one thing which I am sorry to mention—he does not wish me to acknowledge my relatives after marriage. Of course, I shall not forget you, mother and Netta, and shall return the money which brought me here at the earliest opportunity. My face has been my fortune. STELLA."

Mrs. Monito covered her face with her hands.

"My child has forsaken me!" she cried.

Netta could hardly utter a word of consolation. What was there to say? She knew her sister worshiped at the shrine of wealth, and cared not how many hearts she broke if she only reached her longed-for goal.

A few weeks later, Dr. James made them a visit which was not strictly professional.

"Netta," he said, sitting down beside her, "your sister's summer trip has won her a husband. I read the marriage notice in the paper yesterday. Now, I have a favor to ask of you. I am tired of being alone in the world; I want a wife to take care of, and there is no one else who would please me but you. I have loved you ever since you were that high"—with a motion of his hand—"and if you will have me, I will take you to France to the physician you have set your heart on seeing. If they cure you I shall rejoice; if they do not, I shall love you all the more."

Netta looked up in his kind eyes in surprise—his words were so unexpected.

"No, no!" she cried. "I will not take advantage of your generous offer. I will never be a burden to any man!"

And all the arguments he could use would not induce her to change her mind.

The days wore slowly on. A letter came from Stella:

"My Dear Sister—I am ashamed that I have not been able to return your money; but he truth is, though my husband is immensely wealthy, and I am dressed in the richest of gowns, and waited upon like a queen, I have not a penny of money under my own control. Everything I have is ordered and paid for afterward; but by-and-by I shall contrive a way to get it for you."

"Poor Stella!" the mother sighed. "I am afraid that in the end she will think her summer trip a failure."

"And her marriage, too," rejoined Netta, "as all marriages not based on true love prove."

"I have some good news for you!" Dr. James cried, as he entered the room followed by a strange gentleman. "Put away your letter, Netta, and listen."

Netta did his bidding, and the stranger introduced himself as a lawyer. He informed them that an uncle of Mrs. Monito's had died, and left her heiress to his wealth—a goodly sum.

Several weeks later found Mrs. Monito and Netta en route for England. Dr. James' nephew intended to cross the ocean, and the doctor had intrusted them to his care.

"God grant your dearest wish may be granted, Netta!" he said to her when parting.

Months went by, and Netta was on the road to recovery. By degrees she found her old strength returning, and at the end of a year was able to walk about without assistance.

She was very happy, and to crown all, her sister Stella and her husband visited them. They were making a tour, and as her relatives were wealthy now, Mr. Leland had no objection to his wife's associating with them. They insisted that Mrs. Monito and Netta should be of their party.

"For Stella's sake," Mrs. Monito said, "Netta, I will consent. She is unhappy enough. She sold herself for gold, and only too late realizes what that bargain means."

Another six months passed away. Netta had a number of suitors, but to none did she give encouragement and Theodore Duncombe, the doctor's nephew, interpreted that sign favorable to himself.

He wrote to his uncle that Netta's health was perfect, and her life was now a happy one; then he hinted that, in time, he dreamed of winning her.

"Theodore is a good boy," the doctor whispered, when he read the letter. "They will be a suitable pair, and I must forget my wild dream."

He went to meet them when they returned, and congratulated Netta on the fulfillment of her dearest wish. After that he called but seldom, and was grave and restrained when they met by chance.

Duncombe's wooing did not prosper, and at last he begged of his uncle to use his influence for him.

"She thinks so much of your opinion that she will heed you," he pleaded, and the doctor at last consented.

He went to see Netta, and made his errand known. She looked at him with a flushed face.

"I cannot accept your nephew," she said decidedly. "I do not care for him as a woman should for the man she marries."

"But in time you might."

"Never! I shall never love but one man, and he has had my heart since childhood."

"Netta, I never dreamed of this!" he said. "Who is he? Tell me!"

"Need I?" she asked softly. "Who cared for me when I was poor and afflicted, and would have burdened himself with me then? If he has changed, I——"

"Netta!" He opened his arms to fold her in his embrace. "I never dared hope for this moment!"

Theodore Duncombe did not stay to his uncle's wedding, but Stella and her husband came to witness it.

"May God bless you, my unselfish sister!" Stella whispered to the bride.

And to all appearances, her prayer is answered.—Waverley.

Something New in Mechanics.

Great is the humor of woman—when she doesn't mean it. Great is the nerve of woman—when she doesn't need it. And great are the nerves of woman—when it so pleases her. This combination is blamable for the following: A very pretty girl sat in a Long Island Railroad train en route for Manhattan Beach. Suddenly the whistle blew. It is perhaps not necessary to say that a Long Island Railroad whistle is more efficacious than otherwise. It is tuned to the key of W and is operated with a great diapason, giving out a different brand of yelping shriek than anything known to nature. To repeat, the whistle whistled. "Oooow," cried the pretty girl. "Isn't that awful? I should think the railroad company would have these things oiled. It is an outrage." Her companion had often heard of wetting whistles, but never heard before of oiling them. Think it over.—Brooklyn Times.

Good Evidence.

"Ah," mused the phrenologist, passing the hand over the bumps upon the head of Mr. Henpeck, "the element of combativeness is very largely developed."

"Yes," said Mr. Henpeck, sotto voce; "but you are supposed to be reading my character, not my wife's."—Baltimore American.

Umbrellas in India.

The umbrella has taken a firm hold upon the natives of India, or at any rate upon the Bengali. No less than 3,000,000 umbrellas are imported into the country every year.

The man who invented work ought to have finished it.

FARMERS CORNER

The Hessian Fly.

Every one who grows wheat understands pretty thoroughly the ravages of the hessian fly. The illustration will give the reader some idea of this insect and its growth at various stages. The plant at the left is an uninjured stalk, the one at the right shows a stalk infested with the hessian fly. It will be noticed that this stalk is dwarfed, the leaves withered and the stems swollen near the ground.

In the illustration A indicates the eggs of the fly; B the larva much enlarged; C shows the pupa case; D the chrysalis; E the adult female, natural size; F the adult female much enlarged;

THE FLY AND ITS RAVAGES.

G the male much enlarged; H the pupa in position between the leaf-sheath and stalk, and I the parasite. After years of experimenting with different methods scientists agree that the only way of successfully fighting the hessian fly is to have the soil in which wheat is to be sown in the best possible condition, use varieties that are resistant and sow the seed as late as possible in the fall. The soil should be so well fed and so fertile that a strong healthy growth of wheat will be secured in the fall even though the seeding is late. Dawson's Golden Chaff, Prosperity, Red Russian and White Chaff Mediterranean are among the best of the resistant varieties.—Indianapolis News.

Fruit Growing and Poultry Raising.

With a proper arrangement of buildings and yards, it is possible to make poultry raising and fruit growing combine profitable. If small fruits are grown extensively, it will be necessary, of course, to keep the poultry yards at some distance from the fruit plantation, but where orchard fruits are grown, considerable saving can be affected by building at least a portion of the poultry yards in the orchards. It is not a good plan to build the houses in the orchards, but some portion of the ground devoted to runs should extend under the trees. This arrangement gives the fowls considerable shade, without any detriment to the orchard. When poultry yards are arranged in this manner, especially if the orchard is young, the ground between the rows can be cultivated to advantage; in other words, it will not do to sacrifice the culture of the young orchard in any way to the poultry yard. One great advantage in combining fruit growing with poultry raising is that most of the important work in the care of fowls is done at a time when there is the least work to do with the fruit.

Cheap Corn Harvester.

A simple device for harvesting corn is a sled mounted on wheels, the front edges of the wide platform being covered with irons sharpened at the edge. The stalks are cut with these sharp-

DEVICE FOR HARVESTING CORN.

ened edges as the horse walks between the rows, and the stalks as they fall are caught by men standing on the platform of the sled. At intervals the horse is stopped, the corn gathered and placed in the shock. This tool can be cheaply made at home.

Horse Raising Profitable.

The advent of the automobile and similar contrivances seem to give farmers the impression that these mechanical things would largely take the place of horses, at least for driving purposes. During the Spanish-American war and in the present war between England and the Boers, vast numbers of horses and mules were taken out of the United States for use in the armies named, until to-day there is actually a dearth of work horses and mules. Everything points to the breeding of these animals being extremely profitable during the next ten years, at least. There is no question that there will be a heavy demand for American horses and mules in South Africa at the close of the war. Even at this time there is a decided shortage in horses in the English army operating in South Africa, and in sections of the West shippers of horses for war purposes are paying high prices for suitable animals. The Japanese government is also looking into the question of American horses, and there will be a large and steady demand from that country for the American product. The Japanese horse is small, and not at all strong, ill-fitted to do work required of it as the Japanese advance in Western ideas of soil manipulation. With these two markets in view, those who are familiar with horse and mule-breeding will find it profitable to go into the work again.

Filling the Silo.

A Pennsylvania correspondent of the National Stockman says that he wants to fill his silo when the ears reach that stage when they are a little too hard for him to eat, if roasted, or boiled. There might be quite a margin in this, as we do not know how mature he likes his corn. We very seldom see an ear of corn in a restaurant in Boston that we care to eat, because it is too mature for our fancy, and often made harder by boiling in salt water instead of fresh. We like our corn when it is fairly well grown, but often see it in such condition that one would need a mill or a gizzard to grind it in before it could be digested. We used to know a gardener who preferred to let his corn get hard before he took it to market, and sell it then at 35 to 50 cents a box, rather than to pick it a week earlier, when just as we liked it, for $1 a box. Like the old sailor who liked salt junk, or "salt horse," as it was called, better than fresh meat, he wanted something that had some "chaw" to it. But we agree with the Pennsylvania farmer, whether he cuts his corn as we would like it, or wait a few days longer, but think that every day he waits after it is fairly well filled injures its value for feeding to milch cows.—American Cultivator.

Shipping Poultry.

It is a common practice in most places to crowd as many fowls as possible into a crate and ship them without any provision being made for either food or water. This is not only cruel, but it is running a risk of money loss that no poultry raiser can afford, for aside from the danger of some one or more of the fowls being smothered, there is a decided loss in weight by the birds being forced to go without food and water. More than 100 pounds of poultry should never be placed in a crate and the crate should not be smaller than four feet long, two and a half feet wide and sixteen to eighteen inches high. Such crates should be made with a solid board bottom and slat top, sides and ends. In each should be placed a quantity of grain, in a small box, together with a basin of water after the crate is put on the cars, or at least just before the crate is loaded. The fowls to be shipped should have been well fed and watered just before being placed in the crate.—Exchange.

A New Strawberry.

A fine new strawberry is the Laxton, which was the center of a remarkable strawberry exhibition at the latest English Royal Horticultural Society meeting. It is described by American Gardening as "a darker, firmer and improved Royal Sovereign," a famous English berry. Its raisers claim that it is a "wonderful strawberry for earliness, size, firmness, quality, hardiness and vigor of plant combined."

LAXTON STRAWBERRY

Sunlight in Stables.

A recent experiment demonstrated the value of sunlight in the stables, twenty-four healthy cows, known or believed to be free from tuberculosis, were divided, and one-half put in a dark stable, the others in a stable into which the sun shone freely. Then a number of tuberculosis cows were procured and kept at intervals first with one lot and then with the other, interchanging at stated periods. At the end of a year the twelve in the dark stable were tuberculous and only four in the other stable. Plenty of sunlight and pure air in the stables will do more alone to exterminate tuberculosis than all the tuberculin tests and consequent slaughter of suspected animals can do without these aids.

Farm Notes.

Don't sow alfalfa on poor soil.

Summer wood is a good thing to be looking after in winter.

In selecting strawberry plants get none that have borne fruit.

Market when you can make a good profit, rather than hold for an uncertain rise.

When picking and packing fruit for market is done carelessly the results are rarely satisfactory.

Stalks break well in the winter time and they should be broken as soon as the stock is through feeding off of them.

Keep the farm well stocked. Buy plenty of calves, these grow into money quicker perhaps than any other live stock.

Fix up your machinery. Very likely there is some that needs a bolt here and there. Paint will make all machinery last longer.

To start poultry raising on the farm requires little or no capital. Under any circumstances, with proper management, poultry can be made with little cost a valuable adjunct to the farm.

Don't take the boys out of school before it is really necessary. Many men take their boys out of school as soon as the first sign of spring appears. Better hire a hand for a few days and give the boys another month at school.

PRESIDENT M'KINLEY'S FAVORITE HYMNS.

Thousands of voices, through many years, have been raised in melodious utterance of the beautiful words of "Lead, Kindly Light" and "Nearer, My God, to Thee," but probably never before have these hymns been sung with such a depth of feeling and such a fullness of meaning as during the days following the death of President McKinley. Ever dear, the fact that they were the favorites of the martyred President around whose bier a nation mourned has made them more than ever precious. Bands of music played the notes in solemn dirge and in the churches of the land organs pealed forth the touching strains and lips uttered the words, while the mind dwelt upon the scene where the spirit of William McKinley went out in sublime submission to the will of the Master.

How trustfully he yielded himself to the guiding hand of the Universe! Into the Great Beyond he passed, in the spirit so beautifully expressed by Cardinal Newman's hymn:

Lead Kindly Light, amid the encircling gloom,
 Lead Thou me on!
The night is dark, and I am far from home—
 Lead Thou me on!
Keep Thou my feet; I do not ask to see
The distant scene—one step enough for me.

I was not ever thus, nor prayed that Thou
 Shouldst lead me on.
I loved to choose and see my path; but now
 Lead Thou me on!
I loved the garish day, and, spite of fears,
Pride ruled my will; remember not past years.

So long Thy power hath blest me, sure it still
 Will lead me on
O'er moor and fen, o'er crag and torrent, till
 The night is gone;
And with the morn those angel faces smile
Which I have loved long since, and lost awhile.

This hymn was one of the favorites of the President, though perhaps less deeply rooted in his affections than that other song of praise and yearning, the words of which he murmured as life was leaving the body—

Nearer, my God, to Thee, Nearer to Thee;
 E'en though it be a Cross
That raiseth me;
 Still all my song shall be,
Nearer, my God, to Thee,
Nearer, my God, to Thee,
 Nearer to Thee!

Though like the wanderer, the sun gone down,
 Darkness be over me,
My rest a stone,
 Yet in my dreams I'd be,
Nearer, my God, to Thee,
Nearer, my God, to Thee,
 Nearer to Thee!

There let the way appear
 Steps unto heaven;
All that Thou sendest me
 In mercy given;
Angels to beckon me
Nearer, my God, to Thee,
Nearer, my God, to Thee,
 Nearer to Thee!

Or, if on joyful wing,
 Cleaving the sky,
Sun, moon and stars forgot,
 Upward I fly—
Still all my song shall be,
Nearer, my God, to Thee,
Nearer, my God, to Thee,
 Nearer to Thee!

The latter hymn was written by Mrs. Sarah Adams and Lowell Mason arranged the music. It was in 1841 that it was produced, and was based on an old English melody. The author was the wife of Bridges Adams, an inventor and pamphleteer, who was born in Great Harlow, England, and died in August, 1848.

PASSING.

Low in the West the daylight dips,
 While by the pool the Summer stands,
With stain of purple on her lips
 And scarlet flowers in her hands.

Within the watery mirror there,
 Narcissus-like she sees her face,
So pale, so sweet, so mortal fair,
 And lingers spellbound by its grace.

The morning red is vanished now,
 The splendor of the noon is gone,
And, like a veil on cheek and brow,
 The wreathed mist is clinging wan.

A breath from meadows shorn exhales,
 A sigh goes down the forest ways,
The dryads of the woody vales
 Are mourning for the passing days.

And Summer hears the warning note,
 As by the reedy pools she stands,
Her fading tresses all afloat
 And scarlet flowers in her hands.
—St. Louis Mirror.

Briarsmere.

ESME BARTON, as she rode along on her trusty little cob, paid no heed to the weather, so absorbed was she in her own thoughts.

Ralph Underwood was coming that night to ask her to be his wife, she felt sure, for his manner at the Fletchers' dance had been unmistakable.

What answer should she give him?

ESME DISCOVERED A SHELTER.

Could she ever love a man she did not altogther trust?

Ah, if only Jack could speak she knew what answer she would give if he ever asked the same question, bbut Jack never would, now, though years ago he had shown in a hundred little ways that he loved her.

But that was before his father died, and Briarsmere was found to be mortgaged and all the affairs terribly involved. So now Jack was a poor man, and had even undertaken work as Underwood's agent to pay off the mortgage, which Ralph held.

Esme was rich, and could do as she liked with the fortune she had inherited from her mother, but was powerless to help Jack because of that unwritten law that "a man is to woo, a woman to be wooed."

The rain poured down and at last awoke Esme to a sense of what was going on around her.

The rain was coming down in torrents, and an ominous roll of thunder in the distance made Beauty tremble.

It was a lonely part of the road; only a little cabin, much out of repair, was in sight. She hastened toward it, not knowing if Mrs. O'Grady still occupied the place, or whether she had already gone to live with her sister in Kerry.

On trying to lift the latch, Esme found it was locked, but discovered a shelter in the peat shed at the back.

As she stood there caressing her horse to allay its fears, she was startled to hear a key fitted into the lock of the door in front of the house.

The boards of the mud-covered walls were ill-fitted and rotten, and Esme could distinctly hear two men talking as they entered and shook the water from their clothes.

"A good thing we are here so near the place," said Underwood.

"Yes," answered a voice which made Esme blush in the semi-darkness, "it is a bad storm, but it will soon be over. I am not sorry it has come now, as you will see that something must be done to the place before another tenant occupies it. It isn't fit for a dog to live in."

"I shall do nothing; it's no use spending money on property of this kind. These peasants are used to pigging it. Leave the place alone."

"That is, of course, your affair, Mr. Underwood," said Jack. "In my position as agent it was my duty to point out to you what was needed, but I cannot make you do it. Only I tell you as man to man, that the neglect of your tenant's interests is a disgrace to the neighborhood. I have worked as your agent in order to work off the mortgage which you hold on my property, but I suppose the foreclosure which you threaten must come, for I cannot work for you any longer and have not money to redeem the estate."

"And, pray, why am I to lose your valuable services?" said Underwood.

"You know that during my management your profits have nearly doubled, but when it comes to distilling liquors in underground distilleries and expecting me to be a party to the fraud, I draw the line."

"How dare you speak like this to me!" said Underwood, choking with rage. "You pauper, if I had not employed you, you would have starved."

"You are exaggerating my poverty," said Jack, in a calm tone. "It is true, by honest work I hoped to regain my property, but when you expect dishonest work, you have come to the wrong man."

"By the way," continued Jack, and Esme could hardly catch his words, for he was already on the road, "I have ordered back the pipes and stills."

"The dickens you have," roared Underwood, as he paced the miserable room.

A quarter of an hour later Esme was in the cozy office of her friend and adviser, Mr. Rance.

"It is a large sum of money to invest in landed property, Miss Esme."

"I know," said the girl, in her quick, bright way, "but what does that matter? I have ever so much more when that is spent. Besides I happen to know the mortgage will be foreclosed if this money is not paid, and I have other reasons as well."

Beauty trotting along in the twilight was within a mile of her own warm stable, when she suddenly swerved from a dark figure walking rapidly in the shadow.

Esme, who had been sitting lightly in the saddle, thinking over her afternoon's work, was taken unawares and flung to the ground.

Stooping over her, Jack—for it was he who had unwittingly frightened the cob—lifted her quickly in his arms. She was dazed and stunned, and as her head rested on his shoulder he stooped, and pressing his lips to hers stole the kiss that he had never dared to hope would be his by right.

"Esme," he said, after a pause, in which each read the other's heart, "I never dared to hope that you had given me your love, and I have no right to ask you to be my wife, for in a few weeks I shall have no home. Briarsmere is no longer mine. I kissed you because I could not help it as you lay in my arms, and I thought you had fainted.'

"Briarsmere is mine," said Esme, smiling, "and it is mean of you, Jack, only to want to kiss me when I have fainted."—Chicago Tribune.

SIGHTS IN THE DEEP SEA.

Life in Its Most Attractive Forms Is Found in Profusion.

"Life on the bottom exists in its greatest beauty and profusion in water that is free from sediment and shifting sands. On our Atlantic seaboard the conditions are not very favorable, and though annelids, mollusks and crustaceans abound, the more beautiful forms are scarce.

The delicate sea-pen lives on the mud banks, and forms of great symmetry are found; but this is nothing compared with the wealth of a coral lagoon. The vertical rays of the sun reflected from the bottom make the water as transparent as air; and, as the boat slowly floats across, one can gaze through the glass in the bottom of the boat on a scene of indescribable beauty. Great branching masses of coral of varying hue look like shrubs or even trees. Wonderful anthozoa, or flower animals, and the zoophytes, strange animal plants, are distributed freely over the bottom.

In other places great lichen-covered rocks seem to be spangled with red, star-shaped flowers; and through and about it all the parrot fish flit, nibbling and browsing on the buds. No garden can equal these oceanic paradises in richness of variety of color; yet they are filled with animals almost to the exclusion of plant life. The lichen is a hydroid coral, the star-like flowers are but the vermillion ends of boring annelids, and the parrot fish do not nibble the stony carol, but seek gorgonais, madrepores or small crustaceans. 'Strange world in which the animal kingdom blossoms and the vegetable does not."—North American Review.

The Lost Flag.

As H. M. S. Ringdove was cruising past one of the Solomon group of islands in the Pacific, the lookout reported that the British flag was not flying. An armed body of marines was promptly sent ashore to inquire the reason.

The chief did not, according to a British Columbia paper, waste words in replying. He summoned his favorite wife, and when she appeared, pointed to her. She was clothed from head to foot in the missing Union Jack, the flag having been cut and fashioned into a loose-fitting blouse and skirt.

This, of course, does not settle the question whether trade follows the flag or the flag follows trade in the cannon-covered advance of empire, but it does prove conclusively that the ladies of the Pacific islands, when they acquire civilization, will not need to take lessons of their Angle-Saxon sisters in the art of "making over."

Watermelons Are Fruit.

Some men have never been willing to class the luscious "watermillion" as a vegetable and on this point the United States government has been forced to come to the darky's point of view. The decision has been made by the general board of appraisers on a case arising at Nogales upon the right to import melons as vegetables. The board decided that "the melon is known technically, popularly and commercially at a fruit and therefore dutiable." The same view is taken technically by the department of agriculture and we may now rest assured that the status of the watermelon, muskmelon, cantaloupe and their whole kindred has been raised a few points officially and permanently.

It is astonishing how ignorant railway officials are when asked for the details of an accident on their road.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, DECEMBER 5 1901

"The western half of the United States would sustain a population as great as that of the whole country at present if the waters now utilized were saved and employed in irrigating the ground." That is the judgment of the Secretary of the Interior as expressed and is the result of careful estimates made from all available data. As the statement is made in relation to the subject of irrigation it is evident that Secretary Hitchcock draws the line not far eastward of the mountains. If he means to take Alaska into account, the bi-section of the United States would leave only the mountain and coast states in the western division. The line of division is unimportant, however. The fact that the great west, now sparsly populated, is capable of sustaining eighty million people is a matter of momentous importance to the nation. There is only one thing essential in making practical provision for the duplication of the population of the United States in the great west. That element, as Secretary Hitchcock conclusively shows, is the utilization of water that is now non-serviceable. On this point he says: "The first step in water conservation has been taken by congress in giving authority for setting aside great areas of wooded land, largely for the beneficial influence which they exert upon the water supply; this should be followed by the construction within the forest reserves, and elsewhere when practicable, of substantial dams impounding flood and waste waters." Secretary Hitchcock's demonstration that there homes for eighty million more Americans in the west that can be easily be made available, cannot fail to impress congress with the importance of immediate action in line with the secretary's suggestions. Already there is pressing need for land suitable for home seekers. Public lands that are tillable without artificial irrigation are practically all taken up, and only the semi-arid lands are obtainable. Such lands are worthless without reliable water supply, and that is possible only by government aid, as Secretary Hitchcock suggests.

The statement coming from Denver, Col. of the alleged discovery of a process by means of which more gold is extracted from mineralized rock than the most precise assay indicates it contains, may be safely taken with a liberal mental reservation. The philosopher's stone of the ancient alchemist is an interesting myth, and in this practical age only the credulous among mankind will believe otherwise. No one has any reason to doubt that "Professor" Wynn of Denver produces the results which have been reported. He may have convinced some of the more intelligent and wealthy men of Colorado that a new method of obtaining the precious metal in quantities to order from "any kind of old rock" has been found and is capable of being put into practical operation. Alfred Paraf, the author of oleomargarine and the discoverer of many of the best analine dyes also convinced the owners of the larger Chilean copper mines that the base metal production of their properties when handled by his process was convertible into gold. He demonstrated it satisfactorily before their own eyes. They witnessed the process from the first manipulation of the copper ore until the gold, chemically pure, like that in the Denver experiments, was precipitated from the residuum. Seeing, was to them believing. Even experts were convinced. Millions were invested by them in costly plants and to recure Paraf's patents. When Paraf managed the operation of these plants the gold conversion was in evidence. When they were operated without him base metal was the product. The erratic results of the alchemic process excited suspicion. Then came the discovery of the truth. Prosecution followed the exposure, and Paraf ended his career a felon. The Denver case may not be a case in kind; but the high degree of fineness of the gold is in itself enough to excite suspicion. No man interested in gold production should allow himself to be carried off his feet by the alleged discovery. He can safely afford to wait. Some fellow who may get in on "the ground floor" may have cause to repent.

A speaker at a meeting of the labor leaders at San Francisco gave good advice when he said: "It is the duty of every working man to go to the primaries and to the polls." There are plenty of opportudities for laboring men to have their rights respected through either one of the existing political organizations if they will only make it their business to attend the primary elections. They will accomplish nothing by starting another party.

Right on the heels of the terrible railroad disaster in the east in which nearly one hundred persons were slaughtered comes the news of a ferry-boat collision at San Francisco in which about twenty people were drowned. Someone is responsible and the guilty parties should suffer.

While we are enjoying some of the most glorious weather California has ever known the elements are on the warpath back east and many lives were lost in the recent storm and much damage to property is reported. It means much to live in California.

A French engineer asserts that alcohol is to be the fuel of the future, taking the place of coal and petroleum. It has been the fuel of the past in a good many instances, taking the place of water with a good many men.

COULDN'T CALL HIM CRAZY.

Just a Newspaper Headliner Mumbling From Force of Habit.

The young man with the haggard look sat in the rear car of an elevated train, staring and staring at one of the advertisements.

"English beauty shoes," he mumbled to his companion. "That's what he says."

"Yes," said the other, "but that's too short."

"Hm, hm," the haggard man replied. "Beautiful shoes from England"—

"That won't fit. It's long," was the curt reply.

"Well, then, 'Beautiful English shoes'"—

"That's only three words. You've got to have four, you know."

"That's so, that's so. Ah, I have it!" he cried so loud that all the other passengers in the car gave a jump. "'English shoes of beauty,' 23 letters and spaces at last."

A compassionate old man looked up from his newspaper.

"What's the matter with your friend?" he asked. "Is the chap suffering from delirium tremens?"

"Oh, no," the man addressed replied assuringly. "You see, he's just through with his night's work on a morning newspaper. He's a headline writer, you know, and after a fellow has scribbled off headlines of 23 letters and spaces for about eight hours steady he contracts that habit and can't get over it. Every advertisement, every scrap of paper he sees for several hours afterward until his mind gets rested—well, he begins to count the letters and spaces and turn the wording into a headline that will fit. It isn't exactly delirium tremens. It's something worse. The headlines of 23 letters and spaces go wriggling around in that poor overworked brain much worse than snakes."—Chicago Chronicle.

MILTON RELICS AT HARVARD

Signature In an Autograph Album and the Poet's Copy of "Pindar."

The Harvard library numbers among its treasures an autograph of Milton and a copy of "Pindar" annotated in Milton's own handwriting, with marginal notes in Greek and Latin. Both of these rarities were bequeathed to the university by Charles Sumner.

The "Pindar" is dated 1620 and was doubtless used by Milton during his stay at Cambridge university. At the end he has added an alphabetical index in manuscript, occupying two closely written pages of all the authors cited in his notes, with references to the pages in which their names occur.

Milton's autograph is found in the pages of an autograph album or visitors' book kept, according to a custom common in the sixteenth century, by a Neapolitan nobleman, Camillus Cardoyn by name, who resided in Geneva from 1608 to 1640, where Milton, apparently, visited him. Another autograph in this same album among the hundreds which it contains is that of Thomas Wentworth, the unfortunate Earl of Stafford. Milton's signature is dated Jan. 10, 1639, and is appended to a Latin motto—"Travel changes one's sky, but not one's mind." It may be freely rendered and a quotation from his own "Comus:"

> "If Vertue feeble were,
> Heaven itselfe would stoope to her."

The most notable Milton manuscript known to exist is a little book now owned by Trinity college, Cambridge, England, which contains the poet's copies of his so called minor poems, including "L'Allegro" and "Il Penseroso." In this country, however, it is said that the only original memorials of the great author of "Paradise Lost" are to be found in these two time stained volumes in the possession of the Harvard library.

A Cement Which Resists Acid.

In some branches of industry a cement which is proof against the influence of acids is absolutely essential, and such a substance can be prepared by melting together one part of india rubber with two parts of linseed oil. This should be gradually incorporated with three parts of white bole so as to form a plastic mass. This when heated softens but very little. Though it does not easily dry upon the surface, when once set it is not affected at all by hydrochloric acid and but very little by nitric acid. Its drying and hardening is materially promoted by mixing with one-fifth of its weight of litharge or minium.

Not a Bargain.

"How much will you charge for marrying us, squire?" asked the stalwart bridegroom, painfully conscious of his new suit of ready made clothing.

"I am entitled by law to a fee of $2," replied the justice of the peace.

"Perhaps, Alfred," timidly suggested the blushing bride, "we might get it done somewhere else for $1.98."—Chicago Tribune.

Marveled at It.

"Yes," said Mr. Henry Peck, "I like to go to the circus. One sees so many daring deeds. For instance, did you ever see anything more reckless than the way in which the ringmaster cracks his whip at the ladies who ride the horses?"—Baltimore American.

A Neighborly Disturbance.

First Neighbor—Well, my daughter doesn't play the piano any worse than your son writes poetry.

Second Ditto—Perhaps not, but it can be heard so much farther.—Detroit Free Press.

The desert of Sahara is no little spot. It covers 2,500,000 square miles between the Atlantic ocean and the Nile valley.

The Romans built London about the year 50 A. D., but London wall was not built until 306 A. D.

Next.

It is said that the emperor of China sat up all one night to hear the reading of Li Hung Chang's report of his travels round the world. Considering that it was all Li's, this report seems to have received undue attention.—New York Truth.

Irreparable.

Theatrical Manager (to boy who has fallen from the gallery)—I hope you haven't suffered any injury!

Boy—Any injury? Don't you think it's any injury to lose the best seat in the front row?—Heitere Welt.

NOT MUCH OF AN ORATOR.

A Conductor to Whom a Woman Gave the Wrong Coin.

"Is this all you've got, madam?" asked the conductor on a North Side car as he scrutinized the coin in the semidarkness of the tunnel.

"What's the matter with it?" she asked in such frigid tones that the conductor looked confused.

"Nothing, but"—

"Then if there is nothing the matter with it why do you want me to give you another nickel?"

"Nothing, but that"— he ventured again.

"Well, then, somebody else must have given it to you. I didn't have a penny in my purse."

"Yes, but you did give it to me, madam, and it's all right, but"—

She had got red in the face. The other passengers were watching the outcome, and one youth who was standing craned his neck and got a good look at the coin. He grinned. She saw him grin. That broke what remained of her dignified and chilling patience. She testily snatched the coin from the bewildered conductor. As she was tossing it into her open purse she, too, got a look at the coin. The car was coming out of the tunnel, and it was lighter so that she could make out the coin.

"Why, that is a"— but she was too much confused to finish the sentence.

"Yes, it is a $5 goldpiece, madam. You gave it to me."

"You might have said so," she murmured meekly as she fished out a real nickel.

"Well, you see, I ain't much of an orator, madam," he said and resumed his march down the aisle, reaching for nickels.—Chicago Inter Ocean.

WORKING UP A SICKNESS.

The Story of a Man Who Thought He Had Appendicitis.

"A nervous man recently called on me," said a New Orleans physician, "and asked, 'In what part of the abdomen are the premonitory pains of appendicitis felt?' 'On the left side, exactly here,' I replied, indicating a spot a little above the point of the hip bone.

"He went out, and next afternoon I was summoned in hot haste to the St. Charles hotel. I found the planter writhing on his bed, his forehead beaded with sweat and his whole appearance indicating intense suffering. 'I have an attack of appendicitis,' he groaned, 'and I'm a dead man! I'll never survive an operation!'

"'Where do you feel the pain?' I asked.

"'Oh, right here,' he replied, putting his finger on the spot I had located at the office. 'I feel as if somebody had a knife in me there and was turning it around.'

"'Well, then, it isn't appendicitis at any rate,' I said cheerfully, 'because that is the wrong side.'

"'The wrong side!' he exclaimed, glaring at me indignantly. 'Why, you told me yourself it was on the left.'

"'Then I must have been abstracted,' I replied calmly. 'I should have said the right.' I prescribed something that wouldn't hurt him and learned afterward that he ate his dinner in the dining room the same evening. Oh, yes; he was no doubt in real pain when I called," said the doctor in reply to a question, "but you can make your finger ache merely by concentrating your attention on it for a few moments."—New Orleans Times-Democrat.

Bush Bean Plants.

As the weather begins to brighten and the days to lengthen the handling of this crop becomes much less troublesome, the seeds germinate more freely, and there is much less danger of damping off, yet, for all that, plenty of seed should be allowed to guard against possible blanks. Thinning out to the proper thickness is easily done once they are safely under way. The soil for these should not be overrich, neither stiff nor retentive. Allow ample space, not less than 15 inches, between the lines to give the plants sufficient room for development, and a night temperature of 55 degrees, with a rise of 15 degrees by sun heat, is quite enough to insure strong, healthy growth. A much higher temperature results in the plants becoming drawn, when they are apt to fall around, to the certain injury of the crop, says William Scott in American Gardening.

News and Notes.

Mills' endurance potato is said to be blightproof, and, according to good authority, seems to possess to a remarkable degree qualities which enable it to resist blight.

Consider your market when selecting varieties of tomatoes. Some consumers have very decided preferences in the matter of color. Bright reds may lead in one market, while in another the purplish tint will be preferred.

The hop crop of the world last year, as estimated from reports from hop growing centers, is said to have been less than the average.

Air slaked lime is liberally applied to prevent clubroot in turnips.

The Fruit Bark Beetle.

In September an enemy to be guarded against by the fruit grower is the fruit bark beetle. Professor J. B. Smith of New Jersey says this little borer is almost omnipresent, but becomes most abundant in September and will at that time try every tree that offers the least chance of sustaining it. Its hope is to find some weak or injured tree, low in vitality and in general poor condition, and into this it bores, makes its galleries and starts the tree on the road to certain death. Where entirely suitable trees are not found the beetle does the best it can and bores into healthy peaches, for these offer the best chance of giving way to it. A real healthy young tree will easily dispose of a dozen or 20 borers without difficulty, but when 50 or 100 come in there is serious danger for even a sound tree unless it is unusually vigorous.

Practically, according to Professor Smith, there are only two ways of preventing injury from this insect. The first is to have no old dying trees to breed the beetles in quantities. The second is to keep the young trees as vigorous as possible to prevent a foothold from any reasonable attack. An apple or pear tree injured by blight or by accident may live for two or three years under the attacks of these beetles and will then die, liberating thousands of specimens that will bore into whatever happens to be nearest at hand.

Brief Mention.

The disease of cotton generally known as "cotton rust" are, according to Professor Anderson of South Carolina, not caused by a rust fungus, but are due to the cropping of the land year after year in cotton, and, as is well known, can often be remedied by adding kainit to the soil.

Spanish peanuts raised on a poor, sandy Alabama upland, which in the investigator's opinion would not have produced over 200 pounds of lint cotton per acre, worth from $10 to $12, gave profit at the rate of $18.34 per acre as forage for pigs. The expense of cultivating the peanuts was less than for a similar area of cotton and the soil was benefited by the manure and the peanut vines.

A Texas exchange says that whole trainloads of peas and beans come into that state every year from Kansas, Michigan, New York, California and other faraway states. Texas doesn't raise them, although it can. The wholesalers sell them to the local merchants, who sell them to the people at 50 times the cost of raising them.

A Southern Cultivator correspondent thinks it well to look to forest and stream for sources of income, as the demand for lumber, hard wood and staves is increasing and factories are coming south.

Quick Recovery.

Mr. Verirash Talker (who did not catch the name of his partner)—You see that man behind me—well, if there's one man in this world that I hate, he's the one.

His Partner (in surprise)—Why, that's my husband!

Mr. Verirash Talker (quickly)—Yes—of course—that's why I hate him, lucky dog!—London Telegraph.

ARE YOU DEAF? ANY HEAD NOISES?

ALL CASES OF

DEAFNESS OR HARD HEARING ARE NOW CURABLE

by our new invention. Only those born deaf are incurable.

HEAD NOISES CEASE IMMEDIATELY.

F. A. WERMAN, OF BALTIMORE, SAYS:

BALTIMORE, Md., March 30, 1901.

Gentlemen:—Being entirely cured of deafness, thanks to your treatment, I will now give you a full history of my case, to be used at your discretion.

About five years ago my right ear began to sing, and this kept on getting worse, until I lost my hearing in this ear entirely.

I underwent a treatment for catarrh, for three months, without any success, consulted a number of physicians, among others, the most eminent ear specialist of this city, who told me that only an operation could help me, and even that only temporarily, that the head noises would then cease, but the hearing in the affected ear would be lost forever.

I then saw your advertisement accidentally in a New York paper, and ordered your treatment. After I had used it only a few days according to your directions, the noises ceased, and to-day, after five weeks, my hearing in the diseased ear has been entirely restored. I thank you heartily and beg to remain Very truly yours,

F. A. WERMAN, 730 S. Broadway, Baltimore, Md.

Our treatment does not interfere with your usual occupation.

Examination and advice free. **YOU CAN CURE YOURSELF AT HOME** at a nominal cost.

INTERNATIONAL AURAL CLINIC, 596 LA SALLE AVE., CHICAGO, ILL.

LEGAL.

Application for Patent.

NOTICE OF APPLICATION OF THE Inyo Marble Company of California, a Corporation, for a United States Patent.

INDEPENDENCE, CAL., Nov. 16, 1901.

NOTICE IS HEREBY GIVEN THAT IN pursuance of Chapter Six of Title thirty-two, of the Revised Statutes of the United States, the Inyo Marble Company of California, a corporation organized and existing under and by virtue of the laws of the State of California, whose Post Office address is Room 31, 10th Floor, Mills Building San Francisco, Cal., claiming 120 acres of the mineral deposit bearing marble, lying and being situated within the Mining District, County of Inyo and State of California, has made application to the United States for a patent for the said mining claim, which is more fully described as to metes and bounds by the official plat herewith posted, and by the field notes of survey thereof, now filed in the office of the Register and Receiver of the U. S. Land Office at Independence, which field notes of survey describe the boundaries and extent of said claim on the surface, with magnetic variation at fifteen degrees thirty minutes East in June, 1892, as follows, to wit:

Beginning at the original location corner at the N. E. corner of the S. W. ¼ of Section 14, Township 16 South, Range 37 East, Mount Diablo Meridian. Whence the ¼ Section corner between Sections 14 and 15 bears West 40.00 chains distant the ¼ section corner between 14 and 23 bears South 40.00 chains distant, set post 4 in. square 4½ feet long 12 in. in ground with rock mound marked 1. No. 1.

Thence, the magnetic variation being 15 degrees East, North 14.00 chains. To a 4 spur bears N. W. descending along West slope of spur, 40 chains, 2640 feet. No location corner to be found. At point identified by claimants set post 4 in. square 4½ ft. long 12 in. in ground with rock mound marked 1 No 2

Thence deflecting to left 90 degrees, West descending 13.50 chains cross gulch 10 lks. wide, course North ascend 18 chains. Top of spur bears N 50 degrees W. descend 27 chains. 1782 feet cross wash 25 lks. wide course S. 70 degrees W. 30 chains, 1980 feet. No location corner to be found. At point identified by claimants set post 4 in. square 4½ feet long 12 in. in ground with rock mound marked 1 No. 2 cor. to sections 10, 11, 14, and 15 bears N. 89 degrees 30 minutes W. 10.00 chains distant.

Thence deflecting to left 90 degrees, South descending gradually 4.50 chains cross wash 25 lks. wide, course West and gradual descent. 10.00 chains top of low point of spur bears West gradual descent. 20.00 chains S. W. corner boarding house bears S. 56 degrees 30 minut s E. 9 chains. 24.00 chains S. W. cor. loiving house bears S. 64 degrees 30 minutes E. 7.50 chains. S. W. corner of office upon which location notice is posted bears S. 81 degrees 00 minutes E. 9.00 chains S. W. corner of blacksmith shop at upper excavation of quarry bears N. 61 degrees E. 7.50 chains 40.00 chains, 2640 feet to original location corner set post 4 in. square 4½ feet long in rock mound which I marked 1 No. 4.

Thence deflecting to left 90 degrees, East 2.75 chains road from excavation at quarry bears N. and S. 4.50 chains cross railroad side track from quarry connecting with main line of the Carson and Colorado railroad bears N. 18 degrees 30 minutes E. and S. 18 degrees 30 minutes W. 7.75 chains. Containing an area of 120 acres.

The said mining claim being of record in the office of the Recorder of Inyo county at Independence in the County and State aforesaid in book "E" Land, Water and Mining Claims, p. 471, said mineral deposit being shown upon the plat posted herewith, as near as can be determined from present developments. This claim being for 120 acres of the surface ground shown upon the official plat posted herewith, the said claim being designated as Lot No. 3, in the official plat posted herewith.

Any and all persons claiming adversely the mining ground, premises, or any portion thereof so described, surveyed, platted and applied for, are hereby notified that unless their adverse claims are duly filed according to law, and the regulations thereunder, within the time prescribed by law, within sixty days from the date of the first publication hereof, with the Register of the U. S. Land Office at Independence, in the State of California, they will be barred, in virtue of the provisions of said Statute.

It is hereby ordered that the foregoing notice be published in the Inyo Independent, a weekly newspaper published at Independence, Inyo County, California, for 60 days (10 weeks) which paper I hereby designate as the paper published nearest said land.

S. W. AUSTIN, Register.

First publication, November 22, 1901.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

W. E. Pedley, Plaintiff, vs. William Remsen, Peter A. Graff, Yellett D. Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company, a Corporation, Surprise Canyon Mill and Water Company a Corporation Richmond Mining and Milling Company, a Corporation, John Doe, Richard Roe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

The People of the State of California send Greeting to William Remsen, Peter A. Graff, Yellett D Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company, a Corporation, Surprise Canyon Mill and Water Company a Corporation, Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

You are hereby required to appear in an action brought against you by the above-named plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein within ten days (exclusive of the day of service) after the service on you of this Summons—if served within said County; if served elsewhere within thirty days.

And you are hereby notified that if you fail to so appear and answer the Plaintiff will take judgment for any money or damages demanded in the Complaint, as arising upon contract, or will apply to the Court for any other relief demanded in the Complaint.

Witness my hand and the seal of said Superior Court of the County of Inyo, State of California, this 15th day of October, A. D. 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] In the Superior Court of the County of Inyo, State of Cal.

W. E. Pedley, Plaintiff vs. William Remsen, et als., Defendants.

Church Services.

There will be preaching at the M. E. Church next Sunday evening at 7 o'clock, subject, "The Minister Sent."

Sunday school at 10 o'clock a. m. Let the children all come. Everybody invited to the services.

RICHARD FYSH, Pastor.

Hans Meyer and Ed. Walker are back from Los Angeles.

Godfrey's show to-night and to-morrow night. Don't miss it.

Arthur Cole got back a couple of days ago from a prospecting trip to southern Inyo.

Charley McKay came down from Bishop yesterday and will spend a couple of days in town.

Jas. Jones came down from Fish Spring yesterday with a four-horse load of apples for N. Rhine's.

About 3,000 tons of potatoes will be shipped from Dayton this year. They bring $25. per ton.

Henry Giles and George Thorpe got in from Los Angeles Wednesday, coming from Mojave by team.

Jas. Orndorff, for many years proprietor of the Cafe Royal in San Francisco, is about to open a saloon at Tonopah.

An extra crew of freight handlers has been put on at Mound House, necessitated by the large amount of freight going over the C. & C.

J. L. Frost arrived here from San Francisco last Monday night. He will attend to the local telegraph office and clerk for Mrs. N. Rhine.

Mrs. Ernest Laird arrived from Bakersfield last evening. Ernest expects to be delayed here for the next two months on court business.

Cecil MacFarlane is assisting Ernest Laird in transcribing the testimony in the Hunter-Maxwell case. He is an expert type-writer.

John Anton and Dave Pobst were up from Lone Pine Wednesday on business connected with the bonding of their copper mines in Saline valley.

The Cruz String Band will give a social dance at Lone Pine to-morrow night. They make delightful music and it is worth while to go and listen even if you don't dance.

The postoffice authorities have at last got the mail question straightened out and regular delivery is now made by every stage, daily each way except Sunday.

Don't miss the grand display of holiday goods at N. Rhine's next Monday evening. Everybody will be out, so come early and get a good look and make your selections before the best are gone.

Prof. Godfrey, the great gymnast, ably assisted by Miss Buzan and Little Zelma, will give a first-class show in the pavilion on December 6th and 7th. This show is equal to the best that ever came here and should be well attended.

George W. Cowser came down from Bishop this week to take charge of the Green Monster mine for Roeper & Willis. Mr. Cowser is an experienced miner, and has been working in the Inyo range for the past ten years.

J. E. Nolan, accompanied by his son, Stanley Nolan, were guests at the Independence Hotel a couple of days this week. Mr. Nolan is the owner of the Montezuma mine and is personally superintending the work there.

S. A. Fraser has begun the erection of a two-story addition to his blacksmith shop. The new building will be 24x30 feet: the lower portion will be fitted up as a wheelwright shop and the upstairs will be used as a paint shop. Mr. Fraser will put in a lathe and fit the shop up in a first-class manner.

Mrs. P. MacFarlane, of Montreal, Canada, left Independence for her home last Monday. She has been spending the summer with her brothers, the Mairs family, and while she intended to leave for the East soon her departure was hastened by news of the illness of her daughter. Mrs. MacFarlane made many friends during her sojourn in our midst and all join in the wish that the young daughter's illness may not have a serious result.

The Cruz Orchestra of Lone Pine gave a dance at Mairs' hall Saturday evening. It was well attended by most of the young gentlemen and the ladies—young and old. A supper was served at Bert Rhine's lunch parlor. Mr. Deby, as in everything he undertakes, proved a most efficient floor manager, and Mr. Cabrasco made an able assistant. While a number went to listen and not to dance, the music proved irresistible and most of the good resolutions were broken.

SUPERIOR COURT.

Hon. Walter A. Lamar, Judge.

FRIDAY, Nov. 29, 1901.

People vs. Hunter and Maxwell—Order postponing time of setting trial till December 6, 1901. Order made placing mules in custody of Sheriff.

Estate of Hezekiah W. Fitzgerald, deceased—Letters testamentary issued to Archie W. and Elizabeth Fitzgerald.

FRIDAY, Dec. 6, 1901.

People vs. Hunter and Maxwell—Action dismissed on motion of District Attorney. Counsel for defendant moved to restore mules to possession of defendants. Time for hearing motion set for 2 o'clock p. m.

Donation Party.

The people of town, irrespective of creed or party, tendered a reception and donation party to the new pastor at the M. E. church lost evening. Mr. and Mrs. Fysh have hardly recovered from their long journey, but they appreciated the good will displayed by our townsfolk. Local talent assisted in presenting the following programme:

PROGRAMME.

Instrumental Solo .....Organ
Mr. Muth Rasmussen.
Recitation ..... The Conquered Banner
Mr. P. W. Forbes.
Reading ..... Dooley's Latest
Mr. J. J. McLean.
Song ..... In the Shadow of the Pines
Miss Irma Webb.
Recitation ..... The Old Flag
Mr. W. D. Dehy.
Instrumental Solo.....Organ
Mr. Muth Rasmussen.
Song .....Always
Mr. Paul Mairs.
Recitation ..... Only Friends
Miss Birdie Levy.
Trio
Mrs. Austin, Miss Etta Wood, Mr. W. D. Dehy.
Song .....The Girl I Left in Sunny Tennessee
Mr. Getchell.
Remarks by Mr. Muth Rasmussen and Rev. Mr. Fysh.

In his address Mr. Fysh expressed his pleasure and gratitude for the kindly feeling shown. He impressed upon his hearers the fact that the help between pastor and people must be mutual, that we must consider him one of us and by pulling together advance our spiritual and temporal welfare.

Coffee and sandwiches were then served by the ladies and the remainder of the evening was spent in social intercourse.

Copper Mines Bonded.

During the past summer George A. Tweedie of the State Mining Bureau made a thorough investigation of the extensive copper deposits in the Saline Valley country and as the result of his observation became so thoroughly convinced of their great value that he has succeeded in interesting Boston capitalists and Prof. W. C. Crosby of Boston has secured bonds as follows: Mairs group, three claims, $30,000; Gunn, Grant and McConnell, thirty-two claims and six water claims, $70,000; Anton & Pobst, five claims, $60,000. Ten percent. of these amounts is to be paid on or before December 31, 1901, and the remainder by October 14, 1902. Mr. Tweedie is expected here to-morrow and Prof. Crosby and party will arrive from Boston next week. P. W. Forbes Esq. is attending to the legal part of the work. This looks very much as though something would be done. There have been many disappointments in past negociations, but we cannot but feel sanguine that good will come of this deal. The payment of ten percent. this month will mean a great deal to the owners. It will be difficult to conceive what great good will result to the whole country should these mines be put in operation. It will bring about a change in railroad facilities, population and general improvement that he would be rash indeed who would presume to set a limit to.

Two Fatalities.

Two more fatalities are to be recorded this week, making four violent deaths within a month. George Pryor, an old man who has been taking care of stage horses at Olancha for several years, was killed in a run-away accident at Keeler last week. He was thrown out of a wagon, the wheels passing over his body. He did not seem to be seriously hurt, but on stooping over to pick up a sack that had been thrown out fell back dead.

On Saturday last Charles and Frank Garrison went to work on an incline shaft which they had sunk to a depth of about seven feet on the old Casey mine near Laws. Charley left in a short time and Frank remained at work. He was evidently working in a crouching position when the mass gave way above him. A deep gash was cut in the back of his head and a deep hole, evidently caused by falling on his pick, was found near the temple. Apparently death was caused instantaneously.

School Report.

The following is the report of the primary department of the Lone Pine public school for the school month ending November 22d:

No. boys enrolled, 17; No. girls enrolled, 13; total number, 30.

Roll of honor: Johnnie Anton, Chrissie Silvia, Owen Dearborn, Johnnie Lucas, Rosa Johnson.

MAYTIE JOHNSON.
Teacher.

Court House Repairs

Some very necessary alterations and repairs are being made on the Courthouse. New steps have been put on the porch and new floors put in where needed. A great improvement is putting in a new door from the main hallway to the rear end of the clerk's office. The old doors will be kept locked and the desks placed in the front part of the room where there is good light This will also give direct communication with the records vault.

Real Estate Transfers.

Recorded since last report:

Luther A. Burton to Myron J. Terry—Nov. 25, 1901. Und. 1-6 int. in Molly McGuire mine, South Park Dist.; $250.

C. J. Teagle to Stephen Ogden—Nov. 5, 1901. Und. 1-8 int. in 4 mining claims South Park Dist., $500.

C. J. Teagle to Everett A. Masserly—Nov. 5, 1901. Und. 1-8 int. in above claims, $500.

INYO COUNTY.

An Excellent Article Written for the Pacific Coast Miner by Register S. W. Austin.

The last issue of the Pacific Coast Miner is devoted almost exclusively to Inyo county. While the mining interests are touched upon the most attention is paid to our agricultural interests. There are quite a number of half tones, both views and portraits, and the mechanical work is excellent. We reproduce entire an article by S. W. Austin, which gives much useful information:

"The average man who buys a mine or a hole in the ground which he hopes may become a mine, wishes to look to the management of it, and to do that profitably he must be able to settle his family reasonably near it. The question of the opportunities for home making in a mining country is, therefore a running mate to the question of the value of the mines, and in Inyo county these advantages are very well balanced. The settled portion of the county lies in a narrow groove between the mountain ranges along which the mines are distributed.

"It comprises about 200,000 acres of appropriated land, generously supplied with water. Not all the water supply is handled in a manner to make it most effective, and by a more intelligent use, and by proper storage systems, another 100,000 acres, at least, can be added to the settled portion of the county.

"The Owens River valley is about 100 miles in length, with an average fall of eight feet to the mile, and it has an elevation of about 4,000 feet above sea level. This location is favorable to a great variety of farm products, including all lines of stock raising. All root crops do particularly well, flavor and keeping qualities not being excelled, and fruits, especially those which are the better for a little nipping of cold, reach perfection at this elevation. Small fruits, such as every man delights to have in his own garden, produce abundantly and with little care, while wines made from grapes growing in certain favored localities have been noted for their strength and delicacy of flavor. He is a poor man indeed who cannot have his berry patch and vegetable garden flourishing at his own door.

"The alfalfa raised in Inyo county is clean and of good quality and stock of all kinds thrive upon it. Cattle, sheep and hogs are raised with great profit, but generally on a large scale that does not interest the average home seeker except as it makes him sure of his beef and bacon. The bacon is of as fine a texture and savor as he will be able to buy in the Eastern market. In the equable airs of Owens valley garden flowers attain great beauty of form and color, the violets in in the southern portion of the valley rivaling those of Palo Alto.

"So much for what grows out of the soil. The climate, north of Owens lake, is healthful and invigorating at all times of the year. The average annual temperature is about 56 degrees in the neighborhood of Independence, while south of Owens lake where the settlements are much smaller, it is somewhat higher.

"The currents of air playing up and down between the high inclosing ranges keep the country free from miasma, and the exceeding aridity of the atmosphere is unfriendly to disease germs. It is the usual thing for strangers to remark the strength and activity of very old people, and the paucity of funerals.

"Now all these things will strike the average visitor at once, and then perhaps he will note the very low price of land, which ranges from $1.25 per acre, the government price, to $40 per acre for improved land with water. Few prospective settlers go out of the county without having visited the local land office to learn the possibilities in the way of government land. Distributed through Owens valley he will find that there are still about 25,000 acres of vacant land capable of being irrigated from Owens river and its tributaries, while further south, in the Indian Wells valley in Inyo and Kern counties, there are probably 200,000 acres which can be reclaimed by means of artesian wells or proper storage systems. The vacant tracts in Owens valley are favorably situated within a few miles of railroad stations, or towns, and it will surely be only a matter of a few years when all will be taken.

"But after our visitor has remarked all these things the first question his wife asks him when he gets home is, 'What are the opportunities for the children?' and a very pertinent question it is. The social life of the valley is not greatly different from that of other isolated communities. Material benefits are rather more evenly distributed and cases of actual poverty are exceedingly rare. Without boasting any particular piety, flagrant misdemeanors are quite infrequent, and the prosecuting attorney is the least worked official in the county. The schools, seventeen in number, rank with the best country schools in the State. It was not so very long ago that the course of study of Inyo county as laid down in the Manual, was held up as a model of what a course of study for rural schools should be, and the improvement since then has been uniform and constant. A high school has been recently established at Bishop, in the northern part of the county, and the school advantages of that neighborhood are now equal to those of any community in the State.

'People who are interested in the education of the children will not reckon among the least of their advantages the daily panorama of the high Sierras. The influence of sublime scenery upon the developing mind is undeniable and salutory. It is not possible to do justice to the lordly peaks that group themselves about Mt. Whitney. John Muir, in his 'Mountains of California,' has said a little, but such scenery needs to be lived with to be appreciated. The Sierras afford another advantage in the way of summer entertainment. A day's journey from any point along Owens river carries the pleasure seeker to high camp grounds, pine woods, lakes and falls. Quail are plentiful on the mesas, and ducks in their season along the river. Grouse are found on the lower hills and higher up are deer and bear. In all the lakes and streams are trout, at least four species, including the famous golden trout of Whitney creek, all good sport to catch and better to eat. Three or four pound trout are a frequent catch on the lakes, and twenty pounders are not unheard of. The mountains are so attractive that the summer season makes a little exodus in all the valley towns.

'Suppose now a mine owner has property located in the Inyo, Coso or Panamint mountains, his family may be comfortably placed within a day's journey of him in a home that may be in part, or wholly self-supporting, near good schools and not far from vacation pleasure grounds, the finest in the world. Connection with the outside world is made by way of Reno Nevada, over the Southern Pacific Railroad which terminates at Keeler, or by stage line southward to Mojave. And all these advantages in the way of home making are not thrown in with mining bargains in every county of California."

TO LAKE TAHOE.

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains on Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,100 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above. Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

FROM

POORHOUSE TO PALACE

BY MARY J. HOLMES

CHAPTER X.

It was beginning to be daylight in the city of Boston, and as the gray east gradually brightened and grew red in the coming day, a young man looked out upon the busy world around him with that feeling of utter loneliness which one so often feels in a great city where all is new and strange to him. Scarcely four weeks had passed since the notes of a tolling bell had fallen sadly upon his ear, and he had looked into a grave where they laid his mother to her last dreamless rest. A prevailing fever had effected what the fancied ailments of years had failed to do, and Billy Bender was now an orphan and alone in the wide world. He knew that he had his own fortune to make, and after settling his mother's affairs and finding there was nothing left for him, he had come to the city, and on this morning went forth alone to look for employment, with no other recommendation than the frank, honest expression of his handsome face.

"It was foolish in me to attempt it," thought he, as he stopped in front of a large wholesale establishment. His eye caught the sign on which was lettered "R. J. Selden & Co." The name sounded familiar, and something whispered to him to enter. He did so, and meeting in the doorway a tall, elegant looking young man, he asked for Mr. Selden.

"My uncle," returned the gentleman, who was none other than George Moreland, "has not yet come down, but perhaps I can answer your purpose just as well. Do you wish to purchase goods?"

Billy, thinking that everyone must know his poverty, fancied there was something satirical in the question, but he was mistaken; the manner was natural to the speaker, who, as Billy made no direct reply, again asked: "What would you like, sir?"

"Something to do; for I have neither money nor home," was Billy's prompt answer.

"Will you give me your name?" asked George.

Billy complied, and when he spoke of his native town George repeated it after him, saying: "I have some acquaintances who spend the summer in Chicopee; but you probably have never known them."

Immediately Billy thought of the Lincolns, and now knew why the name of Selden seemed so familiar. He had heard Jenny speak of Ida, and felt certain that R. J. Selden was her father.

For a moment George regarded him intently, and then said: "We seldom employ strangers without a recommendation; still, I do not believe you need any. My uncle is wanting a young man, but the work may hardly suit you," he added, naming the duties he would be expected to perform, which certainly were rather menial. Still, as the wages were liberal, Billy for want of a better, accepted the situation, and was immediately introduced to his business. For some time he only saw George at a distance, but was told by one of the clerks that he was just graduated at Yale, and was now a junior partner in his uncle's establishment.

"We all like him very much," said the clerk, "he is so pleasant and kind, though a little proud, I guess."

This was all that Billy knew of him until he had been in Mr. Selden's employment nearly three weeks; then, as he was one day poring over a volume of Horace which he had brought with him, George, who chanced to pass by, looked over his shoulder, exclaiming, "Why, Bender, can you read Latin? Really, this is a novelty. Are you fond of books?"

"Yes, very," said Billy, "though I have but a few of my own."

"Fortunately, then, I can accommodate you," returned George, "for I have a tolerably good library, to which you can at any time have access. Suppose you come round to my uncle's to-night. Never mind about thanking me," he added, as he saw Billy about to speak; "I hate to be thanked, so to-night, at eight o'clock, I shall expect you."

Accordingly, that evening Billy started for Mr. Selden's. George, who wished to save him from any embarrassment, answered his ring himself, and immediately conducted him to his room, where for an hour or so they discussed their favorite books and authors. At last, George, astonished at Billy's general knowledge of men and things, exclaimed, "Why, Bender, I do believe you are almost as good a scholar as I, who have been through college. Pray, how does it happen?"

In a few words Billy explained that he had been in the habit of working summers and going to school at Wilbraham winters; and then, as it was nearly ten, he hastily gathered up the books which George had kindly loaned him and took his leave. As he was descending the broad stairway he met a young girl fashionably dressed, who stared at him in some surprise. In the upper hall she encountered George, and asked him who the stranger was.

"His name is Bender and he came from Chicopee," answered George.

"Bender from Chicopee!" repeated Ida. "Why, I wonder if it isn't the Billy Bender about whom Jenny Lincoln has gone almost mad."

"I think not," returned her cousin, "for Mrs. Lincoln would hardly suffer her daughter to mention a poor boy's name, much less to go mad about him."

"But," answered Ida, "he worked on Mr. Lincoln's farm when Jenny was a little girl; and now that she is older she talks of him nearly all the time, and Rose says it would not surprise her if she should some day run off with him."

"Possibly it is the same," returned George. "Anyway, he is very fine looking, and a fine fellow, too, besides being an excellent scholar."

The next day, when Billy chanced to be alone, George approached him, and after making some casual remarks about the books he had borrowed, etc., he said, "Did you ever see Jenny Lincoln in Chicopee?"

"Oh, yes," answered Billy, brightening up, for Jenny had always been, and still was, a great favorite with him; "Oh, yes, I know Jenny very well. I worked for her father some years ago, and became greatly interested in her."

"Indeed? Then you must know Henry Lincoln?"

"Yes, I know him," said Billy; while George continued:

"And think but little of him, of course?"

On this subject Billy was non-committal. He had no cause for liking Henry, but would not say so to a comparative stranger. George was about moving away when, observing a little, old-fashioned book lying upon one of the boxes, he took it up and, turning to the fly-leaf, read the name of "Frank Howard."

"Frank Howard! Frank Howard!" he repeated; "where have I heard that name? Who is he, Bender?"

"He was a little English boy I once loved very much; but he is dead now," answered Billy; and George, with a suddenly awakened curiosity, said:

"Tell me about him and his family, will you?"

Without dreaming that George had ever seen them, Billy told the story of Frank's sickness and death—of the noble conduct of his little sister, who, when there was no other alternative, went cheerfully to the poorhouse, winning by her gentle ways the love of those unused to love, and taming the wild mood of a maniac until she was harmless as a child. As he proceeded with his story George became each moment more and more interested, and when at last there was a pause, he asked, "And is Mary in the poorhouse now?"

"I have not mentioned her name, and pray how came you to know it?" said Billy in some surprise.

In a few words George related the particulars of his acquaintance with the Howards and then again asked where both Mary and Ella were.

Billy replied that for a few years back Mary had lived with a Mrs. Mason, while Ella, at the time of her mother's death, had been adopted by Mrs. Campbell. "But," said he, "I never think of Ella in connection with Mary, they are so unlike; Ella is proud and vain and silly, and treats her sister with the utmost rudeness, though Mary is far more agreeable and intelligent, and as I think the best looking."

"She must have changed very much," answered George, "for if I remember rightly she was not remarkable for personal beauty."

He was going to say more, when someone slapped him rudely on the shoulder, calling out, "How are you, old feller, and what is there in Boston to interest such a scapegrace as I am?"

Looking up, Billy saw before him Henry Lincoln, exquisitely dressed, but bearing in his appearance evident marks of dissipation.

"Why, Henry," exclaimed George, "how came you here? I supposed you were drawing lampblack caricatures of some one of the tutors in old Yale. What's the matter? What have you been doing?"

"Why, you see," answered Henry, drawing his cigar from his mouth, "one of the sophs got his arm broken in a row, and as I am so tender-hearted, and couldn't bear to hear him groan, the faculty kindly advised me to leave, and sent on before me a recommendation to the old man. But I fixed 'em. I told 'em he was in Boston, whereas he's in Chicopee, so I just took the letter from the office myself. It reads beautifully. Do you understand?"

All this time Henry had apparently taken no notice of Billy, whom George now introduced, saying he believed they were old acquaintances. With the coolest effrontery Henry took from his pocket a quizzing glass, and, applying it to his eye, said, "I've absolutely studied until I'm near-sighted. How long have the old folks been in Chicopee?"

"Several weeks, I think," answered George; and then, either because he wanted to hear what Henry would say, or because of a reawakened interest in Mary Howard, he continued, "By the way, Henry, when you came so unceremoniously upon us, we were speaking of a young girl in Chicopee whom you have perhaps ferreted out ere this, as Bender says she is fine looking."

Henry stroked his whiskers, which had received far more cultivation than his brains, stuck his hat on one side and answered, "Why, yes, I suppose that in my way I was something of a b'hoy with the fair sex, but really I do not now think of more than one handsome girl in Chicopee, and that is Ella Campbell, but she is young yet, not as old as Jenny—altogether too small fry for Henry Lincoln, Esq. But who is the girl?"

Billy frowned, for he held Mary's name as too sacred to be breathed by a young man of Henry Lincoln's character, while George replied:

"Her name is Mary Howard."

"What, the pauper?" asked Henry, looking significantly at Billy, who replied:

"The same, sir."

"Whew-w!" whistled Henry, prolonging the diphthong to an unusual length. "Why, she's got two teeth at least a foot long, and her face looks as though she had just been in the vinegar barrel and didn't like the taste of it."

"But, without joking, though, how does she look?" asked George; while Billy made a movement as if he would help the insolent puppy to find his level.

"Well, now, old boy," returned Henry, "I'll tell you honestly that the last time I saw her I was surprised to find how much she was improved. She has swallowed those abominable teeth, or done something with them, and is really quite decent looking."

So saying he took his leave. Just then there was a call for Mr. Moreland, who also departed, leaving Billy alone. "It is very strange that she never told me she knew him," thought he; and then taking from his pocket a neatly folded letter, he again read it through. But there was nothing in it about George, except the simple words, "I am glad you have found a friend in Mr. Moreland. I am sure I should like him, just because he is kind to you."

"Yes, she's forgotten him," said Billy, and that belief gave him secret satisfaction. He had known Mary long, and the interest he had felt in her when a homely, neglected child, had not in the least decreased as the lapse of time gradually ripened her into a fine, intelligent looking girl. He was to her a brother still, but she to him was dearer far than a sister; and though in his letters he always addressed her as such, in his heart he claimed her as something nearer, and yet he had never breathed in her ear a word of love or hinted that it was for her sake he toiled both early and late, hoarding up his earnings with almost a miser's care that she might be educated.

Regularly each week she wrote to him, and it was the receipt of these letters and the thoughts of her that kept his heart so brave and cheerful, as, alone and unappreciated, except by George, he worked on, dreaming of a bright future when the one great object of his life should be realized.

(To be continued.)

A Compliment.

The Old Man—Your love for my daughter seems to have grown very fast since you found out I was worth so much money.

The Young Man (admiringly)—No faster, than the subject warranted.

CONQUERED HER RIVAL.

A Pretty and Pathetic Story of Jenny Lind and Grisi.

We have recently read a beautiful incident. Jenny Lind and Grisi were both rivals for popular favor in London. Both were invited to sing the same night at a court concern before the queen. Jenny Lind, being the younger, sang first and was so disturbed by the fierce, scornful look of Grisi that she was at the point of failure when suddenly an inspiration came to her.

The accompanist was striking the final chords. She asked him to rise and took the vacant seat. Her fingers wandered over the keys in a loving prelude, and then she sang a little prayer which she had loved as a child. She hadn't sung it for years. As she sang she was no longer in the presence of royalty, but singing to loving friends in her fatherland.

Softly at first the plaintive notes floated on the air, swelling louder and richer every moment. The singer seemed to throw her whole soul into that weird, thrilling, plaintive "prayer." Gradually the song died away and ended in a sob. There was a silence—the silence of admiring wonder.

The audience sat spellbound. Jenny Lind lifted her sweet eyes to look into the scornful face that had so disconcerted her. There was no fierce expression now; instead a teardrop glistened on the long, black lashes, and after a moment, with the impulsiveness of a child of the tropics, Grisi crossed to Jenny Lind's side, placed her arm about her and kissed her, utterly regardless of the audience.—Our Dumb Animals.

King of Virginia.

Apropos of the British royal titles a reference to colonial possessions appeared in an English sovereign's designation so long ago as the reign of Queen Elizabeth. The poet Spenser dedicated his "Faerie Queen" to Elizabeth, and then he described her as "queen of England, France and Ireland and sovereign of the Dominion of Virginia." It may also be remembered that the Virginians refused to acknowledge Oliver Cromwell's protectorate until he sent a fleet to compel them to do so. Charles II., in return expression of the colonists' loyalty, had himself proclaimed in Virginia on his restoration as "king of Great Britain, Ireland and Virginia." The further statement has been made that Charles caused the arms of Virginia to be quartered with those of England, Ireland and Scotland. Certain it is that they appear so on English coins struck as late as 1773 by order of George III.—Liverpool Post.

THIN AND NERVOUS

HOW A ST. PAUL WOMAN SUFFERED AWFUL TORTURES.

She Was Afflicted With Rheumatism and Indigestion—Now She Gladly Tells Others How She Was Cured.

From the Pioneer Press, St. Paul, Minn.

Anyone who has suffered from either rheumatism or indigestion can appreciate the condition of a frail woman whose body was racked by the agonies caused by a complication of these diseases. Such was the experience of Mrs. J. T. Sloggy, of 107 East Jassamine street, St. Paul, Minn. Happily she found relief by taking the advice of a friend and now, moved by gratitude for her delivery, she tells others how she was cured. To a reporter she said:

"During the winter of 1898 I suffered very much with rheumatism, being confined to my bed some of the time under a physician's care and unable to do any work. I was also troubled with indigestion. When spring came I was thin and nervous, had a poor appetite and was broken down in health generally. That summer I made a visit to Wisconsin and while there met an old friend, Mrs. Ira Wilbur, of Big Springs. She said she had been a great sufferer from indigestion and had been completely cured by Dr. Williams' Pink Pills for Pale People. I knew her word could be relied on so I got a box of the pills and commenced taking them. I felt benefited in a few days, but continued to take them for about five months.

"That winter I had no return of the rheumatism, my appetite improved and I gained in flesh and strength. My cure was permanent and I have not taken any of the pills since.

"I have told many how the pills helped me and I sincerely hope that others suffering in the same way may be induced to try Dr. Williams' Pink Pills for Pale People."

This statement was sworn to by Mrs. Sloggy before G. E. Sampson, a notary public, at St. Paul. Dr. Williams' Pink Pills for Pale People will not only cure rheumatism and indigestion, but are also an unfailing specific for such diseases as locomotor ataxia, partial paralysis, St. Vitus' dance, sciatica, neuralgia, nervous headache, the after-effects of the grip, palpitation of the heart, pale and sallow complexions, and all forms of weakness. At all dealers or direct from Dr. Williams Medicine Co., Schenectady, N. Y., fifty cents per box; six boxes, two dollars and fifty cents.

Customer—"I say, the umbrel'a I bought here last week is all coming to pieces!" Shopman—"Indeed, sir. You have been taking it out and getting it wet, sir, I think."

T. S. Baldwin, the famous æronaut, who recently arrived from the Pan-American Exposition and is now constructing the largest captive balloon in the world at Eleventh and Market streets, San Francisco, at a cost of $35,000, has engaged the services of A. Van der Naillen, Jr., Superintendent of the A. Van der Naillen School of Engineering, 113 Fulton street.

"Soled again," squeaked the deacon's boot as he went down the aisle.

Advice to Students.

To Whom It May Concern: The best College to attend for the purpose of becoming practical Stenographers is, in our judgment, the Gallagher-Marsh, Parrott Building, S. F., Cal. Ernest A. Gurvin, L. A. Washburne, W. J. Nicholson, Official Reporters Supreme Court, State of Cal. Send for catalogue.

"Pa, what's a bachelor?" "A bachelor, my son, is a lucky fellow, but don't tell your ma that I told you."

Piso's Cure is the best medicine we ever used for all affections of the throat and lungs.—Wm. O. Endsley, Vanburen, Ind., Feb. 10, 1900.

"Have you any reason for doubting what I say?" "Yes, I have." "What is it?" "I don't believe you."

Gilt Edge Whiskey costs no more than any others, and being purer should be called for. Wichman, Lutgen & Co., San Francisco, Cal. Sole proprietors for U. S. A.

25 CTS PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists. CONSUMPTION 25 CTS

Nothing Tastes Good

And eating is simply perfunctory—done because it must be.

This is the common complaint of the dyspeptic.

If eating sparingly would cure dyspepsia, few would suffer from it long.

The only way to cure dyspepsia, which is difficult digestion, is to give vigor and tone to the stomach and the whole digestive system.

Hood's Sarsaparilla cured the niece of Frank Fay, 106 N. St., South Boston, Mass., who writes that she had been a great sufferer from dyspepsia for six years; had been without appetite and had been troubled with sour stomach and headache. She had tried many other medicines in vain. Two bottles of Hood's Sarsaparilla made her well.

Hood's Sarsaparilla

Promises to cure and keeps the promise. Don't wait till you are worse, but buy a bottle today.

CANCERS

Tumors, Wens and Skin Eruptions permanently cured, for less money than any doctors on earth. Our method never fails. Come to our hospital and be cured. Examination free. Cure guaranteed or money refunded. DRS. J. L. BOHANNON AND ADDIE EPPS, 12 Turk st. San Francisco, Cal.

WHEN writing to advertisers please mention this paper.

A Turkish Bank Note.

The bill is on imperial green paper, a color held sacred in Turkey, which the government alone is permitted to use. On the top and sides are the following words in Turkish, "To be paid to the bearer, without interest, 20 piasters." At the top of the note is the sultan's toghra, surrounding which is a quotation from the Koran. Underneath are the words, "Twenty piasters, paper money, to be used in the place of gold at the Bank of Constantinople." At the base of the note is the seal of the mint and on the back the seal of the minister of the treasury. The toghra is considered sacred and is guarded by the three highest officials of the mint, whose sole duty is to watch it.

Getting at a Fact.

The colored witness, being asked his age, said to the court:

"Well, suh, I wuz a young man w'en freedom broke out."

"What year was that?"

"Hit wuz de year de Yankees come in, suh."

"You do not seem to have a very accurate idea of time."

"Oh, yes, suh! Hit wuz 'long 'bout hog killin' time."—Atlanta Constitution.

Nut Foods.

Nearly all nuts contain large percentages of nitrogenous constituents and fats. In the nut kernel there is very little waste—in fact, the nourishment is in a concentrated form, and for that reason nuts are best combined or taken with other foods. They are especially valued for their fine, meaty flavor, which is found in no other vegetable food product.

"Straws Show Which Way the Wind Blows,"

and the constantly increasing demand for and steady growth in popularity of St. Jacob's Oil among all classes of people in every part of the civilized world show conclusively what remedy the people use for their rheumatism and bodily aches and pains. Facts speak louder than words, and the fact remains undisputed that the sale of St. Jacob's Oil is greater than all other remedies for outward application combined. It acts like magic, cures where everything else fails; conquers pain.

The Highest Court.

The Denver Times says that when Tom Bagnell was justice of the peace at Altman, the highest incorporated town in the country, standing 12,000 feet above the sea level, he had occasion to fine a disorderly character $10 and costs. The victim of the operation of justice objected to the finding of the court and announced that he would take an appeal.

"What? Appeal, would you?" asked the astonished court. "You can't come any o' that, now. This is the highest court in the United States, and you can't appeal."

She Was an Observer.

"Did George write to you every day while he was traveling around?"

"Yes, every day."

"What regularity!"

"Yes, but I discovered that every one of the letters was written here in his office before he started, and all he had to do was to drop one in the postoffice wherever he chanced to be."

"And how did you find that out?"

"The 'e' in his office typewriter is broken."—Cleveland Plain Dealer.

FROM POORHOUSE TO PALACE

BY MARY J. HOLMES

CHAPTER XI.

In the old brown school house, overshadowed by apple trees and sheltered, on the west by a long, steep hill, where the acorns and wild grapes grew, Mary Howard taught a little flock of twenty-five, coaxing some, urging others and teaching them all by her kind words and winsome ways to love her as they had never before loved an instructor.

When first she was proposed as a teacher in Rice Corner, Widow Perkins, and a few others who had no children to send, held up their hands in amazement, wondering "what the world was comin' to, and if the committeeman, Mr. Knight, s'posed they was goin' to be rid over roughshod by a town pauper; but she couldn't get a stiffcut, for the orthodox minister wouldn't give her one; and if he did, the Unitarian minister wouldn't!"

Accordingly, when it was known that the ordeal had been passed and that Mary had in her possession a piece of paper about three inches square, authorizing her to teach a common district school, this worthy conclave concluded that "either everybody had lost their senses or else Miss Mason, who was present at the examination, had sat by and whispered in her ear the answers to all hard questions."

"In all my born days I never seen anything like it," said the widow, as she distributed her green tea, sweetened with brown sugar, to a party of ladies, which she was entertaining. "But you'll see, she won't keep her time mor'n half out—Sally Ann, pass them nutcakes. Nobody's goin' to send their children to a pauper. There's Miss Bradley says she'll take her'n out the first time they get licked. Have some more sass, Miss Dodge. I want it eat up, for I believe it's a-workin'—but I telled her that warn't the trouble, Mary's too softly to hurt a miskeeter. And so young, too. It's government she'll lack in. If anybody'll have a piece of this dried apple pie, I'll cut it.'

Fortunately, Mary knew nothing of Mrs. Perkins' displeasure, and never dreamed that any feeling existed toward her save that of perfect friendship. Since we last saw her, she had grown into a fine, healthy looking girl. Her face and figure were round and full, and her complexion, though still rather pale, was clear as marble, contrasting well with her dark-brown hair and eyes, which no longer seemed unnaturally large. Still, she was not beautiful, it is true, and yet Billy was not far from right when he called her the finest looking girl in Chicopee; and it was for this reason, perhaps, that Mrs. Campbell watched with jealousy.

Every possible pains had been taken with Ella's education. The best teachers had been hired to instruct her, and she was now at a fashionable seminary, but still she did not possess one-half the ease and gracefulness of manner which seemed natural to her sister. The two girls had seen but little of each other; and oftentimes when Ella met her sister she merely acknowledged her presence by a nod or a simple "how d'ye do?"

When she heard that Mary was to be a teacher she said "she was glad, for it was more respectable than going into a factory or working out." Mrs. Campbell, too, felt in duty bound to express her pleasure, adding that "she hoped Mary would give satisfaction, but 'twas extremely doubtful, she was so young, and possessed of so little dignity!"

Unfortunately Widow Perkins' red cottage stood directly opposite the school house; and as the widow belonged to that stirring few who always "wash the breakfast dishes and make the beds before anyone is up in the house," she had ample leisure to watch and report on the proceedings of the new teacher. Now, Mrs. Perkins' clock was like its mistress, always half an hour in advance of the true time, and Mary had scarcely taught a week ere Mr. Knight, "the committeeman," was duly hailed in the street and told that the "schoolmarm wanted lookin' to, for she didn't begin no mornin' till half-past nine, nor no afternoon till half-past one! Besides that," she added, "I think she gives 'em too long a play spell. Anyways, seems ef some on 'em was out o' doors the hull time."

Mr. Knight had too much good sense to heed the widow's complaints, and he merely replied: "I'm glad on't. Five hours is enough to keep little shavers cramped up in the house—glad on't."

The widow, thus foiled in her attempts at making disturbance, finally gave up the strife, contenting herself with quizzing the older girls, and asking them if Mary could do all the hard sums in arithmetic, or whether she took them home for Mrs. Mason to solve!

In spite, however, of these little annoyances, Mary was contented and happy. She knew that her pupils loved her, and that the greater part of the district were satisfied, so she greeted the widow with her pleasantest smile, and by always being particularly polite, finally overcame her prejudice to a considerable extent.

One afternoon about the middle of July, as Mrs. Perkins was seated by her front window engaged in "stitching shoes," a very common employment in some parts of New England, her attention was suddenly diverted by a tall, stylish-looking young man, who, driving his handsome horse and buggy under the shadow of the apple trees, alighted and entered into conversation with a group of little girls who were taking their usual recess. Mrs. Perkins' curiosity was aroused, and Sally Ann was called to see who the stranger was. But for a wonder Sally Ann didn't know, though she "guessed the hoss was one of the East Chicopee livery."

"He's talkin' to Liddy Knight," said she, at the same time holding back the curtain and stepping aside so as not to be visible herself.

"Try if you can hear what he's sayin'," whispered Mrs. Perkins; but a class of boys in the school house just then struck into the multiplication table, thus effectually drowning anything which Sally Ann might otherwise have heard.

"I know them children will split their throats. Can't they hold up a minute," exclaimed Mrs. Perkins, greatly annoyed at being thus prevented from overhearing a conversation the nature of which she could not even guess.

The stranger was at that moment smilingly saying: "Tell me more about her. Does she ever scold, or has she too pretty a mouth for that?"

"No, she never scolds," said Delia Frost, "and she's got the nicest white teeth, and I guess she knows it, too, for she shows them a great deal."

"She's real white, too," rejoined Lydia Knight, "though pa says she used to be yaller as saffron."

Here there was a gentle rap upon the window, and the girls, starting off, exclaimed: "There, we must go in."

"May I go, too?" asked the stranger, following them to the door. "Introduce me as Mr. Stuart."

Lydia had never introduced anybody in her life, and, following her companions to her seat, she left Mr. Stuart standing in the doorway. With her usual politeness, Mary came forward and received the stranger, who gave his name as Mr. Stuart, saying "he felt much interested in common schools, and therefore had ventured to call."

Offering the seat of honor, Mary resumed her usual duties, occasionally casting a look of curiosity at the stranger, whose eyes seemed constantly upon her. It was rather warm that day, and when Mary returned from her dinner Widow Perkins was greatly shocked at seeing her attired in a light pink muslin dress, the short sleeves of which showed to good advantage her round, white arms. A narrow velvet ribbon confined by a small brooch and a black silk apron, completed her toilet, with the exception of a tiny locket, which was suspended from her neck by a slender gold chain. This last ornament immediately riveted Mr. Stuart's attention, and from some strange cause sent the color quickly to his face. After a time, as if to ascertain whether it were really a locket or a watch, he asked "if Miss Howard could tell him the hour?"

"Certainly, sir," said she, and stepping to the desk and consulting a silver timepiece about the size of a dining plate, she told him that it was half-past three.

When school was out Mr. Stuart, who seemed in no haste whatever, entered into a lively discussion with Mary concerning schools and books, adroitly managing to draw her out upon all the leading topics of the day. At last the conversation turned upon flowers; and when Mary chanced to mention Mrs. Mason's beautiful garden he instantly expressed a great desire to see it, and finally offered to accompany Mary home, provided she had no objections. She could not, of course, say no, and the Widow Perkins came very near letting her buttermilk biscuit burn to a cinder when she saw the young man walking down the road with Mary. Arrived at Mrs. Mason's, the stranger managed to make himself so agreeable that Mrs. Mason invited him to stay to tea. Whoever he was, he seemed to understand exactly how to find out whatever he wished to know; and before tea was over he had learned of Mary's intention to attend the academy in Wilbraham the next autumn.

Finally he said good-night, leaving Mary and Mrs. Mason to wonder—the one what he came there for, and the other whether he would ever come again. The widow, too, wondered and fidgeted as the sun went down behind the long hill.

"It beats all nater what's kept him so long," said she, when he at last appeared and, unfastening his horse, drove off at a furious rate; "but if I live I'll know all about it to-morrow;" and with this consolatory remark she returned to the best room and for the remainder of the evening devoted herself to the entertainment of Uncle Jim and his wife, Aunt Dolly.

That evening Mr. Knight, who had been to the postoffice, called at Mrs. Mason's, bringing with him a letter which bore the Boston postmark. Passing it to Mary, he winked at Mrs. Mason, saying, "I kinder guess how all this writin' works will end; but hain't there been a young chap to see the school?"

"Yes; how did you know it?" returned Mrs. Mason, while Mary flushed more deeply than she did when Billy's letter was handed her.

"Why, you see," answered Mr. Knight. "I was about at the foot of the Blanchard hill, when I see a buggy coming like Jehu. Just as it got agin me it kinder slackened and the fore wheel ran off smack and scissors."

"Was he hurt?" quickly asked Mary.

"Not a bit on't," said Mr. Knight, "but he was scared some, I guess. I got out and helped him, and when he heard I's from Rice Corner he said he'd been into school. Then he asked forty-leven questions about you, and jest as I was settin' you up high, who should come a-canterin' up, with their long-tailed gowns, and hats like men, but Ella Campbell and a great white-eyed pucker, that came home with her from school? Either, Ella's horse was scary or she did it a purpose, for the minit she got near it began to rare, and she would have fell off if that man hadn't catched it by the bit and held her on with t'other hand. I allus was the most sanguinary of men, and I was building castles about him and our little schoolmarm, when Ella came along, and I gin it up, for I see that he was took, and she did look handsome, with her curls a flyin' Wall, as I wasn't of no more use, I whipped up old Charlotte and come on."

"When did Ella return?" asked Mary, who had not before heard of her sister's arrival.

"I don't know," said Mr. Knight. "The first I see of her was cuttin' through the streets on the dead run; but I mustn't stay here gabbin', so good-night, Miss Mason—good-night, Mary—hope you've got good news in that ar letter."

The moment he was gone Mary ran up to her room to read her letter, from which we give the following extract: "You must have forgotten George Moreland, or you would have mentioned him to me. I like him very much, indeed, and yet I could not help feeling a little jealous when he manifested so much interest in you. Sometimes, Mary, I think that for a brother, I am getting too selfish, and I do not wish anyone to like you except myself, but I surely need not feel so toward George, the best friend I have in Boston. He is very kind, lending me books, and has even offered to use his influence in getting me a situation in one of the best law offices in the city."

After reading this letter Mary sat for a long time thinking of George Moreland—of the time when she first knew him—of all that William Bender had been to her since—and wondering, as girls sometimes will, which she liked the best. Billy unquestionably had the strongest claim to her love, but could he have known how much satisfaction she felt in thinking that George still remembered and felt interested in her he would have had some reason for fearing, as he occasionally did, that she would never be to him aught save a sister.

CHAPTER XII.

The summer was drawing to a close, and with it Mary's school. She had succeeded in giving satisfaction to the entire district. Mr. Knight, with whom Mary was a great favorite, offered her the school for the coming winter, but she had decided upon attending school herself, and after modestly declining his offer, told him of her intention.

"But where's the money coming from?" said he.

Mary laughingly asked him how many bags of shoes he supposed she had stitched during the last two years.

"More'n two hundred, I'll bet," said he.

"Not quite as many as that," answered Mary; "but still I have managed to earn my clothes and thirty dollars besides; and this, together with my school wages, will pay for one term and part of another."

"Well, go ahead," returned Mr. Knight. "I'd help you if I could. Go ahead; and who knows but you'll one day be the president's wife."

When Widow Perkins heard that Mary was going away to school she forgot to put any yeast in the bread which she was making, and, bidding Sally Ann "watch it until it riz," she posted off to Mrs. Mason's to inquire the particulars, reckoning up as she went along how much fourteen weeks' wages would come to at nine shillings per week.

But with all her quizzing and "pumping," as Judith called it, she was unable to ascertain anything of importance, and, mentally styling Mrs. Mason, Mary, Judith and all "great gumpheads," she returned home and relieved Sally Ann from her watch over unleavened bread. Both Mrs. Mason and Mary laughed heartily at the widow's curiosity, though, as Mary said, "It was no laughing matter where the money was to come from which she needed for her books and clothing."

Everything which Mrs. Mason could do for her she did, and even Judith, who was never famous for generosity, brought in one Saturday morning a half-worn merino, which she thought "mebby could be turned and sponged, and made into somethin' decent," adding, in an undertone, that "she'd had it out airin' on the clothes hoss for more'n two hours!"

A few days afterward Jenny Lincoln came galloping up to the school house door, declaring her intention of staying until school was out, and having a good time.

"I hear you are going to Wilbraham," said she, "but I want you to go to Mount Holyoke. We are going, a whole lot of us—that is, if we can pass examination. Rose isn't pleased with the idea, but I am. I think 'twill be fun to wash potatoes and scour knives. I don't believe that mother would ever have sent us there if it were not that Ida Selden is going. Her father and her Aunt Martha used to be schoolmates with Miss Lyon, and they have always intended that Ida should graduate at Mount Holyoke. Now, why can't you go, too?"

"I wish I could," said Mary, "but I can't. I haven't money enough, and there is no one to give it to me."

"It wouldn't hurt Mrs. Campbell to help you a little," returned Jenny. "Why, last term Ella spent almost enough for candies and gutta percha toys to pay the expense of half a year's schooling at Mount Holyoke. It's too bad that she should have everything and you nothing."

(To be continued.)

Cures Victims of Drugs.

A church union now exists in New York for the most remarkable purpose on record. Its avowed object is to cure the victims of the morphine and other drug habits and a most impressive list of well-known clergymen have registered themselves in support of the scheme, which is conducted by Dr. W. N. Richie.

The plans of Dr. Richie's work and the means by which he hopes to make it effectual are to be made public as soon as possible. All that is withheld from the public is the elements of the mysterious compound, which is, Dr. Richie alleges, an absolutely infallible panacea.

Men and women who have sunk to the lowest levels of degradation have, it is claimed, by the use of this cure become perfectly regenerated. Physicians of established reputation privately indorse the cure, and the testimonials appear so convincing that the clergymen who have formed a union on the strength of it feel absolutely sure of its efficacy.

Dr. Richie says that he obtained the cure from a friend of his, who in turn obtained it from a German savant. The friend referred to, having once become the slave of morphine and having but 5 cents left in the world, converted it into a 5-cent stamp to address a letter to the German who had originated the cure. The recipe came, was made use of, and the man, when Dr. Richie knew him, was enjoying an honored old age.

A committee has been formed to receive donations for the cure of such patients as are not able to pay.

Could Not Be Repeated.

"I met Higginbee and he stopped me to tell me what his little boy said, but I'll bet one thing."

"Huh! What's that?"

"I'll bet he didn't tell his boy what I said."—Indianapolis Press.

If Satan ever gets short of fuel he ought to be able to use excuses.

FARMS AND FARMERS

A Handy Bag Holder.

A great deal of time is lost in filling grain bags, unless some device is used by which the bag can be kept open and the one filling it have the use of both hands. The upright board (Fig. 1) is made of inch stuff, two feet long and eleven inches wide. The arms (Fig. 3) which support the hopper are held by two triangular boards (Fig. 2), which are nailed to these arms, and to the upright board (Fig. 1), as shown in the illustration. The arms shown at Fig. 3 are each ten inches long, two inches wide and an inch thick, and the ends are screwed to the side of the spout as shown. The spout is made nine inches square, and both this and the hopper should be made of boards eight inches wide. At Fig. 4 a row of wire nails is shown, by which the bag is held in place at the bottom of the hopper. By boring a number of holes

BAG HOLDER.

in the back board (Fig. 1) at intervals of an inch apart, and hanging the device to a heavy wire nail or a heavy screw put in the wall, the bag holder may be raised or lowered to a convenient height.

Fall Plowing.

One trouble with fall plowing is the careless way in which it is done. Oftentimes the land is simply plowed in a careless manner with the thought in mind that it can be finished in the spring if it is to lie fallow. Sometimes the plowing is no more perfect when winter wheat and rye is to be raised. The ground should be as carefully plowed and prepared for grain sown in the winter as for that sown in the spring. As a rule five or six inches is a most satisfactory depth to plow in the fall, although, of course, it depends somewhat on the character of the soil. If the ground is intended for fall seeding, it must be handled in accordance with its character. If inclined to be loose, the harrow and roller should be used until it is well compacted. If the soil is naturally heavy, it should be loosened up just before seeding, by a straight tooth harrow, and if rain should come in a few days after the seed is sown, it always pays to go over the entire plot and loosen up the soil by a light harrowing.

For Scalding Hogs.

With the device shown here, reproduced from the Ohio Farmer, one man can handle the heaviest hog with ease. I have scalded 40 hogs with it, and know what I am saying. Place the hog

HANDY SCALDING DEVICE.

on the rack (Fig. 1), then close it, then proceed as shown in Fig. 2. Lift the hog over the trough by taking hold of the long lever. Lower it into the trough, so that the rack springs clear of the bottom of the trough, then take hold of the cross lever and work it up and down, throwing the carcass from one side to the other, back and forth, until perfectly scalded. Keep trying the hair, so as to know when the proper scalding point is reached. Then swing out on the cleaning rack and take another hog. The figures explain themselves.

Winter Feeding of Wheat.

The consensus of opinion among those who have fed more or less wheat seems to be that wheat can be fed profitably, when comparatively low in price, to nearly all farm stock, provided it is ground or partially broken and fed with some other grain. Wheat and bran was found to be a fair grain ration for horses and wheat and corn meal for swine, while for sheep the wheat was mixed with oats to the best advantage. Ground oats and crushed wheat make a fair ration for the dairy cow, or wheat bran may be fed with any other grains the dairyman is in the habit of using. The experiments of feeding the whole wheat show that often as much as one-quarter of it passes through the animal without being digested, and when the wheat was ground or crushed it was but an indifferent food given alone.

Fertilizers for Small Fruits.

Undoubtedly the judicious use of commercial fertilizers is beneficial to small fruit plants, but it must be applied intelligently, especially if worked with stable manure, to gain the greatest value. A first-class general fertilizer for all small fruit plants is a mixture of either sulphate or muriate of potash, 200 pounds with 500 pounds of dissolved phosphate rock. It may be applied broadcast or with a drill, the quantity named being sufficient for an acre. This mixture should be applied this fall, and can be used by the plants in time to benefit the crop next summer. This mixture should be applied once every two years. It will be understood that the mixture named is for general use. Some other mixtures will do better for some plants, and what will do best can be determined by experimenting, but until the fruit-grower learns just what mixture gives him the best results, he will make no mistake by using the one here advocated.

Thought It Was a Fake.

The first incubator made its appearance in this country in 1845. A Yankee put one on exhibition on Broadway, New York. He charged a shilling to see the wonder and out of curiosity was well patronized. His machine was considered a fake. Men would not believe than an egg could be hatched anywhere except under a hen, so the showman began demonstrating to prove the virtue of his invention. He would break eggs from the machine to show the different stages of incubation, and finally succeeded in convincing a good many that it was not a fraud. Time has proved that it was far from being a humbug.

Safety Blind for Horses.

When you want to get a frightened horse out of a burning stable a blanket thrown over its head renders it as docile as though there were no fire, and why shouldn't the same idea be applied to a runaway horse on the road? In the illustration we show this idea carried out under the invention of Daniel Connerthy, of Chunchula, Ala., and Josef Rothweller, of Chicago, Ill. In order that the appliance for manipulating the blinders may not interfere with the control of the horse on ordinary occasions a separate pair of cords is provided, leading back to the carriage. The blinds are held normally open by springs on the bridle, being hinged to the side straps. A pull on the cords throws a lever out from the rear portion of the hinge and presses the blinds over the eyes, thus shutting out the vision of whatever has frightened the animal. As soon as the pressure is released on the cords the blinds resume their normal position by the action of the springs.

SAFETY BLIND.

No Money in Scrubs.

As a rule the best cattle in Texas are bred and raised by the large ranchman who owns thousands of head; the scrubs, as a rule, are bred and raised by the farmer who owns only a few head. While the ranchman is to be commended for the rapid improvement made in the range herds, yet the farmers should be at the head of the procession when it comes to raising good cattle. No man can afford to raise scrubs, and especially is this true as to the farmer.—Farm and Ranch.

Farm Notes.

All trees should be examined early in the fall for borers.

Farms are getting smaller; the average size in 1850 was 203 acres; in 1890, 137 acres.

Large profits from farming in Alaska are claimed. It has been suggested that stock farms near the larger settlements would pay.

Rape may be fed to best advantage in the early fall, and hence is of valuable assistance in fattening lambs for the fall or early winter.

It costs no more per pound to raise a colt than a steer, and the colt will sell for four times as much as the steer if the colt is of the right kind.

The grape leaf hopper lives on the underside of grape leaves from midsummer until they fall in autumn. Burn all fallen leaves.

Bederwood strawberry seems to be the best all round perfect flowering variety at the Michigan station, either for home use or for general marketing.

Tests at the Geneva (N. Y.) station are said to strikingly confirm the general belief that soda cannot take the place of potash in the growth of plants.

A hired man who persists in swearing at or speaking to the teams in a loud, harsh manner should not be tolerated. All farm animals should be treated with kindness.

Indian Runner ducks are attaining a good degree of favor just now among fanciers and by them are recommended to farmers and other practical folks on account of their great prolificacy.

BECOMING A REPORTER.

A Bit of Experience in the Life of an Immigrant to America.

Things enough happened to take down my self-esteem a good many pegs. It was about this time I made up my mind to go into the newspaper business. It seemed to me that a reporter's was the highest and noblest of all callings. No one could sift wrong from right as he, and punish the wrong. In that I was right. I have not changed my opinion on that point one whit, and I would rather die a good reporter than a millionaire. The power of fact is the mightiest lever of this or of any day. The reporter has his hand upon it, and it is his grievous fault if he does not use it well. I thought I would make a good reporter. My father had edited our local newspaper, and such little help as I had been to him had given me a taste for the business. Being of that mind, I went to the Courier office one morning and asked for the editor. He was not in. Apparently nobody was. I wandered through room after room, all empty, until at last I came to one in which sat a man with a paste-pot and a pair of long shears. This must be the editor. He had the implements of his trade. I told him my errand while he clipped away.

"What is it you want?" he asked, when I had ceased speaking and waited for an answer.

"Work," I said.

"Work!" said he, waving he haughtily away with the shears. "We don't work here. This is a newspaper office".

I went, abashed. I tried the Express next. This time I had the editor pointed out to me. He was just coming through the business office. At the door I stopped him and preferred my request. He looked me over, a lad fresh from the shipyard, with horny hands and a rough coat, and asked:

"What are you?"

"A carpenter," I said.

The man turned upon his heel, with a loud, rasping laugh, and shut the door in my face. For a moment I stood there stunned. His ascending steps on the stairs brought back my senses. I ran to the door and flung it open. "You laugh!" I shouted, shaking my fist at him, standing half way up the stairs. "You laugh now, but wait"—— And then I got the grip of my temper and slammed the door in my turn. All the same, in that hour it was settled that I was to be a reporter. I knew it as I went out in the street.—Jacob Riis in The Outlook.

GONE TO BE A CELESTIAL BRIDE.

Death of Mrs. Brigham Young, "Eternity" Wife of Joseph Smith.

Mrs. Zina D. Young, the most noted of the wives of Brigham Young, the famous Mormon apostle, died recently at Salt Lake City, Utah. She was born in Watertown, N. Y., in 1821, and at 15 became a convert to the doctrines of Mormonism, going directly to the settlement of Kirkland, Ohio. Here her devotion to her religion was so great that she was entrusted with a part of the mysteries of the temple. While there she told of a vision in which she had seen an angel and been invested with the "gift of tongues and interpretation," the power to speak in language used only by the chosen ones of God, and to understand this strange speech.

MRS. ZINA D. YOUNG

She married one of Smith's converts, and two children were born to them. She deserted them at Nauvoo, Ill., when Joseph Smith had a "revelation" that she had been set aside for him as wife for "time and eternity." She was sealed to the prophet as a plural wife, and was his favorite until he was killed by a mob in Illinois.

Brigham Young, who then had several wives, had a "revelation" that she should be sealed to him for "time." She followed Brigham Young in the eventful journey from Illinois to the Salt Lake valley in the late 40's. She trudged behind wagons, slept in tents, cooked for the travelers and bore many hardships, entering the "New Zion" with the first settlers. After the death of Brigham Young she lived in Salt Lake City. She was always an earnest advocate of polygamy.

Only four of the widows of Brigham Young now survive. They live in Salt Lake City.

Curiosity in Books.

The most remarkable book in the world so far as its appearance is concerned is neither written nor printed. It is in the imperial library of Paris and the letters are cut out of tissue paper with a pair of scissors. A sheet of blue tissue, in which the letters are cut, is placed between two pages of white, and so the matter is read.

Old Peruvian Roads.

The Incas of Peru built very fine roads, one system of which traversed the plateau, the other followed the seacoast north and south. The seacoast road is said to have been from 1,500 to 2,000 miles in length and twenty feet in breadth. Many portions of this magnificent system of roads are still fit for use.

Aids to German Trade.

Germany has now expert commercial attaches at New York, Buenos Ayres, Constantinople and St. Petersburg. The services of these gentlemen, who are attached to the consulates general and not to the embassies, have proved very valuable to German trade interests.

Don't give hints; Remember that before a man will lend money he has to be asked for it boldly and prefers good security to good hints.

"JACK" HAVERLY IS DEAD

Kind and Generous and Famed as a Theatrical Manager.

In St. Mark's Hospital, Salt Lake City, "Jack" Haverly, one of the most interesting characters of the American stage, died. He had been ill for several months and heart disease was the immediate cause of death.

"JACK" HAVERLY

His career exemplifies the ups and downs of life and especially of the theatrical business. According to his own statement he had been rich and poor seven times. "A man ought to be ashamed to go broke the seventh time, now oughtn't he?" he was wont to say.

About 1843 he was born at Bellefonte, Ohio, and had to fight the battle of life alone from the start. As a boy he sold newspapers, bananas and peanuts on trains running out of Chicago. When 18 he conceived the idea of starting a show and had the money to back his scheme. His first attempt was at minstrelsy with "Happy" Cal Wagner as the star. Success followed and Haverly adopted the policy of securing the best talent regardless of price. His headquarters were in Chicago, but he owned and controlled theaters in other cities. At one time hi sdaily income was between $10,000 and $20,000. At various times his fortune was estimated at half a million. At the time of his death he was engaged in a mining enterprise, but it is believed was possessed of little, if any, wealth.

He made money rapidly and in addition to being generous and a princely liver, was always devoted to his wife, and was noted for his sterling honesty.

SCHOOLS AND SCHOLARS

A women's building, to cost $30,000, will be erected upon the campus of Indiana University.

According to the report of the Commissioner of Education there are 7,452 secondary schools in the United States, of which 1,957 are private. Of the private schools 924, or 12 per cent of the whole number of secondary schools, are under the control of different religious denominations.

Of the 170 women in Newnham College last year all were English with the exception of two, one of these being an American and the other a Swede. The women as heretofore receive the same honors and take the same examinations but are not granted degrees, which seems a very silly distinction to make.

The Cleveland public school council voted to include the Lord's prayer, the Ten Commandments and the 22d Psalm in the course of study now taught. "We ought to be improving the moral as well as the mental capacities of the children," said Mr. Hobart, a member of the Board, "and I know of no more fitting way to do it than to add the Lord's prayer, the Ten Commandments and the beautiful 22d Psalm to the studies."

There are four colleges in Maine—Bowdoin, Bates, Colby and the University of Maine. There are three normal schools and one training school. Besides there are forty academies which are preparatory schools for colleges. Some of these academies are very well endowed and all of them are prosperous. The total value of the State institutions is $1,695,043, with a total annual income of $221,593. The total amount of money expended on the public schools of Maine last year amounted to $1,701,738, of which the State contributed $520,019, the rest being contributed by the towns. The State of Maine has a population of 694,466, but the towns of the State raised last year $749,251, an excess above the amount required by law of $214,390, or a trifle over $1.07 for each inhabitant. Very few States of the country are as liberal in providing for school purposes.

TO BE IN CHARGE.

Marquis of Cholmondeley Will Manage King Edward's Coronation.

King Edward has appointed George Henry Hugh, Marquis of Cholmondeley, to the office of Lord Great Chamberlain, subject to the decision of the House of Lords in the controversy as to who is entitled to the office, there being several claimants by right of inheritance. If the House of Lords confirms King Edward's appointment, as it is believed it will, the Marquis of Cholmondeley will be one of the most important men in London next year, for as Lord Great Chamberlain he will have charge of the coronation ceremonies in Westminster Abbey, including the invitation list.

CHOLMONDELEY.

No man ever handled his money, when alive, to the satisfaction of his kin, or ever left a will which was suitable to all relatives.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

Issued Every Friday.

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, DECEMBER 12.....1901

A good many Senators seem to be for reciprocity "for politics only." They favor the principle on the stump but oppase the practice in the legislative halls.

Sir Henry Irving at 63 says: "I am not old. In England we count a man young until 70." This will make a whole lot of old roosters who are hovering about in the sixties feel quite chipper.

For the purpose of entertaining ten friends for three hours a New York millionaire recently spread a feast that cost him $100 a plate, but sa be managed to get his name in the papers it is probable he had his money's worth.

Down on the Mexican line at Naco a great bull-fighting amphitheater is in preparation. It is expected that a large part of the patronage will come from the American side, but it will take very gory work to wean Americans from football.

The sooner the wage earning and would-be wage-earning portion of the world discovers that competency is the solution of the employment problem, the sooner the hard luck stories of enforced idleness will cease to be dinned into the ears of busy employers.

Arizona has sufficient population and property value to become the forty-sixth state of the union. Eastern congressmen point to Nevada as an example of arrested development, and maintain that the same thing may happen to Arizona. This is unfair to both of those mining commonwealths. Nevada is attracting renewed attention, and as her mineral resources are developed will increase in population. Arizona will never have less population than it has to-day.

The Chinese Six Companies are taking up an enforced collection to be used in buying congressmen who feel that a little coin would pave the way to voting against the extension of the exclusion act. The amount collected is $7 from every Chinaman in the country and it is thought $120,000 will be forthcoming, the amount is too small. From present indications there will be very opposition to the passage of a law that will keep the heathens out of the United States.

The time spent by Theodore Roosevelt in the west will prove of advantage to this section of the country, now that he is president. His first message has a strong western flavor and shows that he understands thoroughly the the importance of reclaiming arid lands, the preservation of the forests, the construction of the Nicaragua canal and the exclusion of Chinese laborers. On all these subjects he presents the views entertained by the intelligent people of the Pacific coast.

The expectation of dwellers in the Pacific coast states are more fully realized in the president's message than ever before. While the document is broad in its Americanism, covering every part of the national domain, it is especially fitted to meet the needs of this section. This peculiarity arises from the fact that the Pacific states are more directly interested than any other section in the leading issues that will come before congress. In several of the subjects touched upon in the message the Pacific states are immediately concerned, while the interests of the other states are indirect or remote. In his attitude on the Chinese exclusion question the president goes even farther than was expected by the people of the Pacific coast. He not only urges continued exclusion of Chinese immigrants, but suggests that the exclusion law be made still more stringent. He says: "I regard it as necessary . . . to reenact immediately the law excluding Chinese laborers and to strengthen it wherever necessary in order to make its enforcement entirely effective." With this strong and explicit statement of the president's views in support of the exclusion act there is no longer cause to fear that the gate will be thrown open for Chinese immigration

On the important question of irrigation the president takes an affirmative stand that admits of no question. He fully appreciates the necessity of a comprehensive plan of water supply for the semi-arid sections and he points to the imperative need of government aid in accomplishing the purpose. The undertaking is too great for corporate or even state effort, as he clearly explains. He correctly places the irrigation policy on a level with river and harbor improvements, showing that all sections of the country would be benefited. And he sums up the general benefits that would result from irrigation by saying: "Our people as a whole will profit for successful home-making is but another name for the upbuilding of the nation" In relation to the tariff and reciprocity questions President Roosevelt closely follows the precedent of his immediate predecessor. He says: "Nothing could be more unwise than to disturb the business interests of the country by any general tariff change at this time." This position he supplements by saying that "reciprocity must be treated as the hand-maiden of protection." This is equivalent to affirming the axiom that it is wise to "let well enough alone." The Nicaragua canal and the Pacific cable, in which the coast states are directly interested, are both strongly endorsed by the president. In every feature affecting this section, in fact the president gives unmistakable evidence of his solicitude for the interests of the great west which he has personally learned to love.

Wellington's Endurance.

Wellington on one occasion started, Sir Herbert Maxwell tells us, at 7 a. m., rode to a place 28 miles distant, here held a review and was back at the place from which he had started for dinner between 4 and 5 p. m., says Goldwin Smith in The Atlantic. He galloped 26 miles and back to see whether damage had been done to a pontoon train. He rode 17 miles in two hours from Freneda to Ciudad Rodrigo, where he dined, gave a ball and supped, was in the saddle again at 3 a. m., galloped back to Freneda by 6 and was doing business again at noon. He rose regularly at 6 and wrote till 9 and after dinner wrote again from 9 till 12.

It must be essential to every general and indeed to every man who is bearing a heavy load of anxious business to be a good sleeper. Napoleon was a first rate sleeper; so was Pitt; so was Brougham; so was Mr. Gladstone; so was Wellington.

At Salamanca Wellington, having given his order for the battle, said to his aid-de-camp: "Watch the French through your glass, Fitz Roy. I am going to take a rest. When they reach that copse near the gap in the hills, wake me." Then he lay down and was fast asleep in a minute. In the midst of the critical operations before Waterloo, feeling weary, he laid himself down, put a newspaper over his face and took a nap.

For Exercise Why Not Walk?

The best exercise in the world is walking.

A person who knows how to walk intelligently can get along without a gymnasium. No other form of exercise brings so many muscles into play and develops them so normally. The most popular games are those in which walking forms a prominent part. Golf, croquet and in a sense cricket and even bicycling merely give an excuse for walking.

Every one knows how to walk properly. It is because of carelessness that so many walk badly. The body should be carried erect, the chest well out, the head back, while the arms should swing freely at the sides. The pace should be regulated to one's strength.

Every one should walk fast enough and far enough to get the body in a comfortable glow. To get the best results from walking one should give his undivided attention to it. In other words, he should walk for the pleasure of it and not carry worries with him.

Excessive walking is injurious. Never walk just after a heavy meal or after violent exercise. And after a walk it is well to rest for 10 or 15 minutes before taking up severe mental work.

Lamb In Either Case.

One of the editors who read the manuscript of Henry Thew Stephenson's "Patroon Van Volkenberg" thought that the author might be a good man to know. Accordingly he wrote a pleasant personal letter, inviting a better acquaintance, and, as one of the tests of companionable fitness, inquired whether the author preferred Lamb or Milton.

Mr. Stephenson replied, acknowledging the pleasure the letter had given him and saying:

"I do not know whether you ask if I like Lamb or mutton or Lamb or Milton best, but in either case it's Lamb."

Even the reflection on the editor's handwriting could not detract from the editorial approbation of Mr. Stephenson's choice, and the new partnership of minds was immediately formed.—Youth's Companion.

Would Rather Smoke Than Eat.

"One day," writes an American in Havana, "I came across an old Cuban woman sitting disconsolately on a rock near Morro castle. She told me in Spanish that for three days she had had nothing to eat but a loaf of bread and coffee. She looked it. I gave her a Spanish dollar and followed in her wake. She entered the first cafe she came to and bought a drink and a cigar. I couldn't help laughing to see her as she walked along the street, puffing away at the weed purchased with my money. She seemed perfectly contented. The Cubans, even the women, would rather smoke than eat. They take only two meals a day, breakfast about 10 o'clock and dinner at 4 in the afternoon."

Pigeons' Nests.

A curious preference of certain pigeons for the use of metallic objects in building their nests is noted by M. Maurice Dusolier in The Revue Scientifique. He assures us that several pairs of these birds that he has observed in Paris have raised their young in nests made entirely of hairpins! These articles they collected in the paths of the Luxembourg. The young pigeons grew up normally as they would in a softer nest. M. Dusolier believes that there is a useful suggestion in this for pigeon fanciers, who are often overanxious, he thinks, to see that their charges have soft material for their nests.

He Went.

He—Half past 11! Isn't that clock fast?

She—I think not.

He—Well, I guess my watch is like myself—it is slow.

She—But it is not exactly like you.

He—Indeed?

She—No—it goes.—Harlem Life.

Sow Pansy Seed.

Sow pansy seed every August or September in order to always have young plants. If you have no cold frame or old hotbed for them, perhaps May or June would be a better time to plant. Grow the plants in some out of the way nook and transplant to the garden in August. Have the soil very rich, and when the plants are blooming give weekly doses of liquid manure. Do not set the plants too close. Have at least six inches of "elbow room." More would be better. If crowded, they grow spindling and weak.

Pansies should be grown in a well drained situation, for if water stands on them or ice forms on the bed they will "winter kill." For winter protection mix leaf mold with old, fine horse manure in about equal parts. A layer two inches deep should cover the pansy bed. This should be worked down under the plants that it need not injure the foliage; over the plants a covering of leaves lightly thrown on and held in place by evergreen boughs, just enough to keep the leaves from blowing away, but not enough to make them pack solidly.—Vick.

SUMMER PLANTING.

Setting Strawberries In August, Quick Way to Get a Matted Row.

It has been figured out that selling strawberry plants for summer setting, even at double prices, is not as good as selling in spring at spring rates. Early in the summer advanced strawberry plants are like Fig. 1. A is the first runner set, starting from the parent plant, which is not shown. B is the second and C the third. A has good roots at least four inches long, many of the plants being first class To B the roots are less numerous and only two inches long, while C is just starting

SETTING STRAWBERRIES.

roots and in many cases has not any. If B's roots are started sufficiently to carry the plant, then careful digging of A will leave it uninjured and able to continue the series, C rooting in time and others following. In many cases B is not very well rooted, and one sacrifices many plants in a short time, besides an indefinite number which would have sprung from the strongest plants dug. Time is more valuable, and it takes more to get an equal number, though perhaps this is offset by getting the money eight or nine months sooner.

A writer in The Country Gentleman, in which the foregoing considerations were originally presented, further tells that, instead of discarding the smaller plants of the series A B C, he takes the three and sets as in Fig. 2, not cutting them apart, but planting A and B as best he can and laying a small stone or piece of earth to hold C in position until it takes root. D K is the line by which the plants A are set. He has filled gaps in matted rows about the middle of August with runners used in this way, setting three abreast, so as to equal the width of row in other places. Less than a month after it was difficult to see just where the repairs had been made. Instead of making the plant A more difficult to grow by having its younger sisters B and C attached, it seems to start more quickly, and all grow as freely as if still attached to the parent—that is, if the weather is favorable.

In summer planting it is best to do it immediately after a good soaking rain, and in periods of drought with feeble plants it is best not to do it at all, as every minute of time is needed to give the plants time to store fruit food for next year's bearing Some of the finest strawberries he ever produced were grown on plants set in early September, but it was an exceptionally fine autumn, with little freezing weather before Christmas. Had frosty nights set in in September, with early winter cold, the plants would not have got a sufficient hold of the ground to have done anything

If one does much out of season planting, it is best, according to the writer, to grow one's own plants. By the method outlined it is plainly an advantage to have a patch of your own, and then you can select a class of runners of about the same age and vigor and get a uniform plantation. By using the full series upon a runner you get in a few weeks' time a matted row of a foot or more in width, all of which will fruit next year. If the season is good from time of setting in August, quite a lot of other plants will be produced which may be retained and used for setting in the spring.

Unchanged.

The lapse of years makes quite a difference in things, and Rip Van Winkle was not to blame for feeling out of place after his long nap.

"Everything is new," he murmured pitifully, the while a tear pushed manfully away at his eyelid. "Nothing is like it used to be. Oh, for the sight of something familiar!"

Wandering into a store, he carelessly picked up a comic paper, more to hide his emotion than anything else. Suddenly he gave a cry of exceeding great joy.

"The same old jokes!" he sobbed joyfully. "The same old jokes!"—Kansas City Independent.

A Flattering Indorsement.

Father (to son who has recently entered the practice of law)—Well, my boy, are you making any headway in your profession?

Son—Am I? Well, I think I have a right to consider myself an adept now.

Father—Indeed! What experience have you had to justify that confidence?

Son—A man called me a liar today, and he was a pretty good judge too.—Boston Courier.

NEW ADVERTISEMENTS.

NOTICE OF ASSESSMENT.

INYO MARBLE CO., OF CALIFORNIA.

Location of principal place of business, San Francisco, California. Location of works, Inyo Inyo county, California.

NOTICE IS HEREBY GIVEN, that at a meeting of the Board of Directors, held on the 30th day of November, 1901, an assessment, No. 35, of five (5) cents per share was levied upon the capital stock of the corporation, payable immediately in United States Gold Coin, to the Secretary, at the office of the Company, Room 31, 10th Floor, Mills Building, San Francisco, California.

Any stock on which this assessment shall remain unpaid on the 15th day of January, 1902, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Monday, the 10th day of February, 1902, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

CHARLES E. ANDERSON, Secretary.

P. H. MACK, W. M.

ARE YOU DEAF? ANY HEAD NOISES?

ALL CASES OF

DEAFNESS OR HARD HEARING ARE NOW CURABLE

by our new invention. Only those born deaf are incurable.

HEAD NOISES CEASE IMMEDIATELY.

F. A. WERMAN, OF BALTIMORE, SAYS:

BALTIMORE, Md., March 30, 1901.

Gentlemen:—Being entirely cured of deafness, thanks to your treatment, I will now give you a full history of my case, to be used at your discretion.

About five years ago my right ear began to sing, and this kept on getting worse, until I lost my hearing in this ear entirely.

I underwent a treatment for catarrh, for three months, without any success, consulted a number of physicians, among others, the most eminent ear specialist of this city, who told me that only an operation could help me, and even that only temporarily, that the head noises would then cease, but the hearing in the affected ear would be lost forever.

I then saw your advertisement accidentally in a New York paper, and ordered your treatment. After I had used it only a few days according to your directions, the noises ceased, and to-day, after five weeks, my hearing in the diseased ear has been entirely restored. I thank you heartily and beg to remain Very truly yours,

F. A. WERMAN, 730 S. Broadway, Baltimore, Md.

Our treatment does not interfere with your usual occupation.

Examination and advice free. YOU CAN CURE YOURSELF AT HOME at a nominal cost.

INTERNATIONAL AURAL CLINIC, 536 LA SALLE AVE., CHICAGO, ILL.

LEGAL.

Application for Patent.

NOTICE OF APPLICATION OF THE Inyo Marble Company of California, a Corporation, for a United States Patent.

INDEPENDENCE, CAL., Nov. 16, 1901.

NOTICE IS HEREBY GIVEN THAT IN pursuance of Chapter Six of Title thirty-two, of the Revised Statutes of the United States, the Inyo Marble Company of California, a corporation organized and existing under and by virtue of the laws of the State of California, whose Post Office address is Room 31, 10th Floor, Mills Building San Francisco, Cal., claiming 120 acres of the mineral deposit bearing marble, lying and being situated within the Mining District, County of Inyo and State of California, has made application to the United States for a patent for the said mining claim, which is more fully described as to metes and bounds by the official plat herewith posted, and by the field notes of survey thereof, now filed in the office of the Register and Receiver of the U. S. Land Office at Independence, which field notes of survey describe the boundaries and extent of said claim on the surface, with magnetic variation at fifteen degrees thirty minutes East in June, 1882, as follows, to wit:

Beginning at the original location corner at the N. E. corner of the S. W. ¼ of Section 14, Township 16 South, Range 37 East, Mount Diablo Meridian. Whence the ¼ Section corner between sections 11 and 15 bears West 40.00 chains distant the ¼ section corner between 14 and 23 bears South 40.00 chains distant, set post 4 in. square 4½ feet long 12 in. in ground with rock mound marked 1. No. 1.

Thence, the magnetic variation being 15 degrees East, North 11.50 chains. To a 4 inch spur bears N. W. descending along West slope of spur, 40 chains, 2640 feet. No location corner to be found. At point identified by claimants set post 4 in. square 4½ ft. long 12 in. in ground with rock mound marked 1 No 2

Thence deflecting to left 90 degrees, West descending 15.50 chains cross gulch 10 lks. wide, course North ascend 18 chains. Top of spur bears N. 50 degrees W. descend 27 chains, 1782 feet cross wash 25 lks. wide course S. 70 degrees W. 30 chains, 1980 feet. No location corner to be found. At point identified by claimants set post 4 in. square 4½ feet long 12 in. in ground with rock mound marked 1 No. 3 cor. to sections 10, 11, 14, and 15 bears N. 89 degrees 30 minutes W. 10.00 chains distant.

Thence deflecting to left 90 degrees, South descending gradually 4.50 chains cross wash 25 lks. wide, course West and gradual descent. 10.00 chains top of low point of spur bears West gradual descent. 20.00 chains S. W. corner boarding house bears S. 56 degrees 30 minutes E. 9 chains. 24.00 chains S. W. cor. lodging house bears S. 64 degrees 30 minutes E. 7.50 chains. S. W. corner of office upon which location notice is posted bears S. 81 degrees 00 minutes E. 9.00 chains S. W. corner of blacksmith shop at upper excavation of quarry bears N. 61 degrees E. 7.50 chains 40.00 chains, 2640 feet to original location corner set post 4 in. square 4½ feet long in rock mound which I marked 1 No. 4.

Thence deflecting to left 90 degrees, East 2.75 chains road from excavation at quarry bears N. and S. 4.50 chains cross railroad side track from quarry connecting with main line of the Carson and Colorado railroad bears N. 18 degrees 30 minutes E. and S. 18 degrees 30 minutes W. 7.75 chains. Road to quarry bears N. W. and S. E. 10.00 chains S. W. corner of boarding house bears N. 9 degrees 30 minutes W. S. W. corner of blacksmith shop at excavation at upper quarry bears N. 10 degrees W. 20 chs. excavation at lower quarry bears N. 8 degrees W. 19.00 chs. excavation at upper quarry 150 ft. above lower quarry bears N. 11 degrees W. 21.00 chs. 13.00 chains cross railroad switch track from office to upper marble quarry N. W. and S. E. 29.00 chains excavation in deposit of marble 10 lks. to left. 30.00 chains, 1980 feet to corner No. 1, at place of beginning.

Containing an area of 120 acres.

The said mining claim being of record in the office of the Recorder of Inyo county at Independence in the County and State aforesaid in Book "F" Land, Water and Mining Claims, p. 471, said mineral deposit being shown upon the plat posted herewith, as near as can be determined from present developments. This claim being for 120 acres of the surface ground shown upon the official plat posted herewith, the said claim being designated as Lot No. 37 in the official plat posted herewith.

Any and all persons claiming adversely the mining ground, premises, or any portion thereof so described, surveyed, platted and applied for, are hereby notified that unless their adverse claims are duly filed according to law, and the regulations thereunder, within the time prescribed by law, within sixty days from the date of the first publication hereof, with the Register of the U. S. Land Office at Independence, in the State of California, they will be barred, in virtue of the provisions of said Statute.

It is hereby ordered that the foregoing notice be published in the Inyo Independent, a weekly newspaper published at Independence, Inyo County, California, for 60 days (10 weeks) which paper I hereby designate as the paper published nearest said land.

S. W. AUSTIN, Register.

First publication, November 22, 1901.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

W. E. Pedley, Plaintiff, vs. William Remsen, Peter A. Graff, Yellett D. Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company a Corporation, Surprise Canyon Mill and Water Company a Corporation Richmond Mining and Milling Company, a Corporation, John Doe, Richard Roe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

The People of the State of California send Greeting to William Remsen, Peter A. Graff, Yellett D Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company, a Corporation, Surprise Canyon Mill and Water Company a Corporation, Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

You are hereby required to appear in an action brought against you by the above-named plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein within ten days (exclusive of the day of service) after the service on you of this Summons—if served within said County; if served elsewhere within thirty days.

And you are hereby notified that if you fail to so appear and answer the Plaintiff will take judgment for any money or damages demanded in the Complaint, as arising upon contract, or will apply to the Court for any other relief demanded in the Complaint.

Witness my hand and the seal of said Superior Court of the County of Inyo, State of California, this 15th day of October, A. D. 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] In the Superior Court of the County of Inyo, State of Cal.

W. E. Pedley, Plaintiff vs. William Remsen, et als., Defendants.

Church Services.

There will be preaching at the M. E. Church next Sunday evening at 7 o'clock, subject, "Good Listeners." Preaching at Lone Pine at 11 a. m.

Sunday school at 10 o'clock a. m. Let the children all come. Everybody invited to the services.

RICHARD FYSH, Pastor.

MARRIED.

ROMERO—FUENTEZ—At Lone Pine, Cal., December 11, 1901, by A. C. Harvey J. P., Ramon Romero and Miss Annie Fuentez, both of Lone Pine.

MILLNER—SHAW—At Bishop, Cal., December 11, 1901, John F. Millner, of Benton, Cal., and Miss Margie Shaw of Bishop, Cal.

MARSH—DODGE—At Lone Pine, Cal., December 11, 1901, by Rev. Richard Fysh, Gustave F. Marsh and Elizabeth M. Dodge, both of Lone Pine.

—The groom is an industrious young man, while the bride is an estimable young lady. The young couple started for Los Angeles the same evening, where they expect to remain for a month and then return to take up their home at Lone Pine. The Independent extends congratulations and good wishes.

School closes to-day until after the holidays.

Thirteen carloads of lumber came down over the C. & C this week for the William Penn colony.

Ad. Smith got in Wednesday from Randsburg where he moved the family of Dr. Allingham.

Better pack your water pipes. It's a nasty job fixing them up after Jack Frost gets in his work.

Ed Girard came up from the Reward Wednesday and has gone to work for A. M. Squires at Mazourka.

Bert Rhine is putting up a two-story front elevation to his dwelling and finishing up the entire building.

Several carloads of horses were shipped east from Reno last week. They were going to South Africa.

There was a goodly gathering at the church Sunday evening to hear Mr. Fysh preach on "The Minister Sent".

The Inyo Mercantile Co. has received a fine lot of holiday goods, which are now on exhibition. Call and see them.

The Sunday school has charge of the Christmas tree and expects us all to lend a hand toward making it the event of the year for the little fellers.

The new furnaces being put in at the Keeler Soda Works will cost in the neighborhood of $10,000. Each brick represents a value of thirty cents.

C. D. Curless came in yesterday from Mountain Spring. Mr. Curless has been mining there for some time and reports a favorable outlook for that section.

Mrs. James Jones and Miss Allie Jones were visitors in town this week. They came down to attend the meeting of the Rebekah Lodge Tuesday evening.

Mr. and Mrs. J. J. Gunn left for Minnietta yesterday. Mr. Gunn is deeply interested in the sale of the Saline copper mines and met Prof. Crosby and party at Keeler.

Inquiries for asbestos deposits and for the mineral are becoming numerous. Prospectors who have deposits of this mineral will find the present time an opportunity to interest capital.

Quite a number of Bishop people have been in town this week as principals or witnesses in the Harness—Bulpitt case. The case was closed yesterday and most of them returned this morning.

It is learned from San Francisco that the map and register of mines in Inyo county compiled under the direction of State Mineralogist Aubury, will be ready for distribution about the first of April next.

Hon. T. B. Rickey came down from Carson on Wednesday's train and will spend several days here. Mr. Rickey says the weather was delightfully warm in Carson when he left and is surprised to find it so cold here.

The Reno reduction works has been put in first class order and the smelter started up on custom ores. They should send a representative to this county and there is no doubt they would secure a great deal of business.

Edw. Hanrahan arrived here last Saturday evening from San Francisco. Mr. Hanrahan has been in the employ of A. Carlisle and Co. for several years past and his health being impaired he will try the benefit of Inyo climate for a while.

SUPERIOR COURT.

Hon. Walter A. Lamar, Judge.

TUESDAY, Dec. 10, 1901.

Estate of John W. Stockton, deceased—George N. Stockton appointed administrator.

T. C. Harness vs. F. H. Bulpitt—This being the time to which this action had heretofore been continued, all parties appeared in court for trial. A. K. Briggs sworn and placed under the rule. Andrew Clark called by defendant and examined. Mrs. Isabella Bulpitt, Mrs. M. Powers, W. T. Bunney and Mrs. E. E. Matlack sworn and examined.

WEDNESDAY, Dec. 11, 1901.

Harness vs. Bulpitt—J. H. Shannon resumed the stand. W. W. Yandell, M. S. McLeod, A. K. Briggs, J. E. Meroney and F. H. Bulpitt examined.

THURSDAY, Dec. 12, 1901.

Harness vs. Bulpitt—J. E. Meroney recalled and examined; defence rests. T. H. Woodworth and U. G. Clark examined in rebuttal. J. E. Meroney recalled. Case submitted without argument. Plaintiff may prepare findings. Action taken under advisement by the Court.

Copper Experts Arrive.

George A. Tweedie of the State Mining Bureau arrived here last Saturday for the purpose of examining the Saline Valley mines. Prof. W. C. Crosby and party from Boston came down over the C. & C. Wednesday and went direct to Keeler, where they were met by necessary outfits and went direct to Saline from there. Arlie Mairs and M. Muldoon left yesterday for the mines by way of Big Pine and will meet the party at Saline. Upon the result of this investigation the first payment will be made, and to a certain extent the examination can be only superficial. Nothing can be done in the way of exploration in the limited time before December 31st. As but little more can be ascertained beyond Mr. Tweedie's report, and they were prepared to buy if what he said proved to be true, the visit of Professor Crosby can be said to be made simply for the purpose of ascertaining if his report was correct. It is probable that something definite may be learned by next week.

Prospecting In Death Valley.

Through a report from San Francisco to the Los Angeles Mining Review, it is learned that State Mineralogist Lew E. Aubury has just received a letter from Mr. G. E. Bailey, now in Death Valley, Inyo county, stating that prospectors for borax are very active and that they have made many discoveries both in San Bernardino and Inyo counties. Mr. Bailey further says there are rumors of the sale of the Tecopa gold mines, which, if so, means the active development of mines in the southeastern part of Inyo county He also states that districts near the Nevada line, and anywhere near to parties of railroad surveyors are full of prospectors, and that there are two parties at work in the northeastern corner of San Bernardino near Clark's Creek.

Mojave Notes.

Bill Withrow is in Bakersfield at the hospital trying to get his broken collar bone to grow together again.

Samuel C. Yandell left Los Angeles Monday afternoon for Phoenix and the Arizona mines.

John Strohmeyer came in from Inyo county Thursday with his big freight team. Guess he is going to load up on "the beer that made Mojave famous," ank try to get back with it before Christmas.—Tomahawk.

At the regular meeting of the Rebekah lodge last Tuesday evening the following officers were elected for the ensuing term: Miss Susie Roughney, Noble Grand: Miss Lizzie Thompson, Vice-Grand; Dr. J. D. Blair, Treasurer; Miss Rose Roeper, Secretary. The officers will be installed January 10th, when the appointive officers will be made known. Each lady member was privileged to bring an escort and a pleasant social evening ensued.

The Institute for the teachers of Inyo County will be held in the Academy Chapel, Bishop, December 17, 18, 19, and 20. 1901. An extensive programme has been prepared, State Superintendent T. J. Kirk will be in attendance and a cordial invitation is extended to all friends of education to be present.

J. J. Morton came up from Keeler yesterday returning the same evening. For some time past John Knupple, well known to old timers, has been causing a disturbance at Keeler and it is feared that he is mentally unbalanced. Mr. Morton made an affidavit as to the facts and he will be examined on a charge of insanity.

Professor Godfry's performances at the pavilion were very well attended in spite of the cold weather. The gentleman, assisted by his wife and little daughter, gave a first class acrobatic performance. He gave a thrilling tight-wire walking exhibition on Sunday afternoon the wire being stretched across the main street.

A choice display of Christmas goods was on view at Mrs. Rhine's Holiday Opening Monday evening. Everybody dropped in to take a look and all were treated with customary courtesy by Mrs. Rhine and her staff of employes. Many of the gifts were marked sold before the close of the evening.

The Independence Dancing Club gave another of their delightful hops at Mairs hall last evening. The Cruz Band furnished the music and the boys are congratulating themselves on having over bid Tonopah and secured their services or the New Years ball.

Rev. E. W. Van Deventer will be here Saturday December 21st at 2 p. m. and hold quarterly conference. He will conduct the services at the M. E. Church on Sunday, the 22nd, at 11 a. m. and at 7 p. m. Official members are requested to be present.

PARK PROTECTION.

Memorandum of Secretary of Interior to Congress.

The Secretary of the Interior, in his annual report to be presented to congress at the coming session, presents an outline of the practice to govern the administration of national forest reserves as follows:

GENERAL POLICY.

Additional forest reserves should be created. * * Every effort should be made to gain the good will of residents in and near the reserves and especially to create public sentiment against forest fires and willingness to assist in reducing them. The use of real agricultural land within forest resererves for agricultural purposes should be promoted and encouraged. * * Systematic investigation of the reserves should be untertaken and every effort should be made to make them accessible and useful. Each reserve, and each part of a reserve should be dealt with on its own merits. The present system of uniform rules for diverse conditions is simply destructive. * *

ADMINISTRATIVE POLICY.

1. In accordance with your intention, the chief weight should hereafter be laid on field work. * *

2. Field and office work should be brought into close contact and every unnecessary step should be removed. * *

3. As opportunity offers from time to time the office of superintendent should gradually be dispensed with and the necessary supervision over supervisors and rangers should be reached through the medium of inspectors familiar with the woods.

4. The direction, control and discipline of their subordinates in the field, and the responsibility for them and their work, should be left as largely as possible with the higher resident forest officers. * *

5. Every effort should be made to create an esprit du corps among the forest officers. To this end good work should be recognized by promotion. * *

GRAZING.

1. The government, through its forest officers, after consultation with the representatives of the various interests involved, should decide on the number of head to be grazed in each forest reserve, or each subdivision of a reserve, and should establish the boundaries between cattle range and sheep range.

2. The local associations should assign ranges to owners within the limits thus laid down, subject to official approval.

3. Both owners and the local associations should be held responsible for the observance of the terms of the permits, and for the prevention of fire and overgrazing.

4. Each sheep owner should have the exclusive right to his range, and the same should apply within reasonable limits to groups of cattle owners.

5. Permits should run for five years.

6. Residents should have precedence in all cases over tramp owners and owners from other states.

7. Local questions should be decided on local grounds and on their own merits in each separate case.

8. Since the forest reserves are usually summer ranges, provision should be made for necessary routes of transit.

9. The policy of the government should be based on regulation rather than prohibition, except in special cases, it being understood that the avoidance of overgrazing is equally in the interest of all parties.

BUSINESS PRACTICE.

1. Before the opening of the next field season the rules and regulations governing the forest reserves should be thoroughly revised and enough copies should be printed to insure familiarity with their provisions on the part of all settlers located within them and of those who make use of their resources. At present unfortunate ignorance is the rule.

2. The sale of mature live timber whose removal would benefit the forest should be encouraged.

3. The relations between the government and the purchaser should be as direct, simple and business like as possible

4. Dead, down and hopelessly injured timber should be disposed of in all cases as rapidly as possible. * *

5. Timber ready for the ax should be advertised in advance of applications and marked and measured in advance of sale whenever the conditions of the forest, the probable market and the force available will permit. * * A register of timber ready for sale should be kept for public inspection in the office of every supervisor. Market prices should rule.

7. Applications for timber cutting should reach the general land office from the field accompanied by all papers necessary for a decision. * * No other single feature of the present administration has led to so much criticism as the failure to take prompt action.

7. Authority to grant applications for small amounts of timber * should be vested * in the forest officers in the field.

8. A record of the timber sold, as well as applications for sales, should be maintained. * *

9. The cutting of unmarked timber should be strictly prohibited. * *

12. The present policy of appointing as forest officers men totally unacquainted with the conditions or requirements of their work should be discontinued.

13. Forest officers should be required to live in the reserve where they work. Exceptions should only be tolerated in the case of residents in the immediate vicinity under special circumstances.

14. Supervisors who have much work to do, as is notably the case in the Black Hills, are at present tied to the office by the amount of routine correspondence which claims their attention. Such officials should have a clerk or stenographer and should be given the assistance in the field of rangers of a higher grade than those at present employed.

15. Proper provision should be made for expenses of travel and subsistence of forest officers moving about by common carriers in the performance of their duty.

16. As occasion serves head rangers, with pay of $1,000 a year, should be given charge of ordinary rangers and should occupy to some degree the position of assistants to the supervisors. * *

17. Permanent rangers should receive not less than $75 a month * and should be required to keep as many horses as the efficient performance of their work may demand. * *

18. A set form, to be filled in with data of training experience, should accompany every application for a field position. The present form is inadequate and incomplete.

19. The first duty of forest officers is to protect the forest against fire, Rangers should be ordered, as they are now forbidden, to leave their own beats when necessary to assist in extinguishing fires on adjoining beats. * *

20. Prompt payment of temporary assistants engaged to fight fires should replace the present dilatory practice, which has seriously interfered with fire protection by discouraging the settlers.

21. The system of daily reports by forest rangers should be abolished at once. It serves no useful purpose and fails wholly to secure faithful work. On the contrary it is a constant provocation to falsehood and encourages a feeling that the report, and not the work, is the matter of first importance. * *

22. The construction of trails should be pushed throughout the reserves and the blazing of boundary lines, the collection of information regarding advisable increases or retrenchments of the reserved area, the mapping of the timber, and similar work should proceed steadily throughout the year whenever the forest officers can be spared from other field duties.

23. Every forest officer in charge of a reserve should be required at once to ascertain, map and report the patented occupied lands within such reserve, the character of such patent, and the names and occupation of the owners. Officers of local land offices should be instructed to furnish promptly any necessary information. It should be the duty of every forest officer to report at once any fraudulent entries or claims within his charge.

24. Lists of ownership of all lands within the forest reserves should be prepared at once by the general land office and placed in the hands of the field men.

Real Estate Transfers.

Recorded since last report:

F. B. Moore and R. W. Thompson to Edward Hartman and Robert Thompson Oct. 30, 1901—Jack Pot mine Mt. Springs canyon, $2.

F. M. Reynolds et als to Roosevelt Oil Co., May 25th 1901—Oil land at Olancha-$1.

M. H. Bush to W. H. Uhlmeyer, Nov. 14, 1901—Und. ½ int in Sunny Side mine, $5.

J. H. Underhill to M. S. McLeod, Nov. 27, 1901—164.39 acres in 31-6-33, $1400.

Eastern Slope Land and Stock Association to I. P. Yaney, Aug. 10, 1901—Correction deed.

I. P. Yaney to Eastern Slope Land and Stock Association Aug. 10, 1901—Correction deed.

Samuel R. Kennedy to W. W. and Ben H. Yandell, Oct. 31, 1901—160 acres in 14-8-33, $10.

W. W. and Ben H. Yandell to Samuel R. Kennedy, Oct. 31, 1901—60 acres in 29-7-33, $10.

The Sunday edition of the Los Angeles Herald contains an Article on Owens Valley writen by James E. Reynolds. Mr. Reynolds was formerly a resident of Georges Creek but has lived in Ventura for a number of years.

Old Boreas started up in a business-like manner last Tuesday and it has been very cold all the week.

TO LAKE TAHOE

A TRIP OF RARE ITEREST.

Passengers on west-bound overland trains o Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leav- promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the mo ning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spen examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,10 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

Why a Woman

Is Able to Help Sick Women When Doctors Fail.

How gladly would men fly to woman's aid did they but understand a woman's feelings, trials, sensibilities, and peculiar organic disturbances.

Those things are known only to women, and the aid a man would give is not at his command.

To treat a case properly it is necessary to know all about it, and full information, many times, cannot be given by a woman to her family physician. She cannot bring herself to tell everything, and the physician is

MRS. G. H. CHAPPELL.

at a constant disadvantage. This is why, for the past twenty-five years, thousands of women have been confiding their troubles to us, and our advice has brought happiness and health to countless women in the U.S.

Mrs. Chappell, of Grant Park, Ill., whose portrait we publish, advises all suffering women to use Lydia E. Pinkham's Vegetable Compound, as it cured her of inflammation of the ovaries and womb; she, therefore, speaks from knowledge, and her experience ought to give others confidence. Address Mrs. Pinkham's Laboratory, Lynn, Mass.

English Quail Stew.

For four plump quails provide four oysters, four tablespoonfuls of butter, three large cupfuls of ox tail soup or rich stock, two small glasses of port or madeira, two tablespoonfuls of onion vinegar, the same of India relish and mushroom catchup, celery salt, white pepper and four slices of crisp, brown toast. Leave the quails whole, simply opening down the breast. Put the butter in a frying pan over a hot fire and when brown lay the quails in the pan. Cover and cook ten minutes. Turn and cook ten minutes more. When browned on both sides, add the soup or stock, wine, catchup and relish. When it boils again, add celery salt and pepper to season and thicken with a tablespoonful of flour wet up in cold water. Stir it gradually until it boils. Turn each quail on its back and insert an oyster. Cook five minutes and serve on slices of toast with the liquid poured over all.

The Eight Hour Day.

The eight hour day is not such a new thing. On April 2, 1792, the town of Partridgefield, Mass., now Peru, voted "to grant £150 for repairing highways in said town, to be worked out 2 thirds in June next, at 3s 6d per Day, and the other third in September at 3s per day. Eight hours in a day to be Deemed a Day's Work."

She Agreed With Him.

Husband—But you must admit that my taste is better than yours.

Wife—Yes, of course it is.

Husband—I'm surprised to hear you say so.

Wife—Oh, there's nothing remarkable about it! The mere fact that you married me and I married you proves it.

Brooklyn, N. Y., Oct. 31st—After investigating Garfield Tea, which is quite universally acknowledged to be the best family remedy, it is not difficult to explain its success—it is the medicine for GOOD RESULTS. It is manufactured here by the Garfield Tea Co. in their new and attractive laboratory and is made wholly from simple, sweet, and withal health-giving HERBS. Garfield Tea is the ORIGINAL herb cure for constipation and sick headache.

This signature is on every box of the genuine **Laxative Bromo-Quinine** Tablets the remedy that cures a cold in one day

Of course the barber expects to wait upon a good many rough customers.

SIGNIFICANT QUESTIONS.

How the Small Boy Succeeded In Breaking Bad News Gently.

"What do you want, little boy?"

"Is this where Mr. Upjohn lives, ma'am?"

"Yes."

"The Mr. Upjohn that runs the bank?"

"He is an officer in the bank."

"The Mr. Upjohn that went down town on a trolley car this morning?"

"I presume he went on a trolley car. What"—

"Is he the Mr. Upjohn that was in that horrible street car accident?"

"I haven't heard of his being in any street car accident."

"Didn't hear 'at he'd sprained his ankle jumpin' out o' the car when the train run into it?"

"No, my little boy; you frighten me. What has"—

"Didn't hear how he run into a drug store for a piece o' courtplaster to stick on a little cut he'd got over the eye?"

"Not at all. For mercy's sake"—

"He isn't in, is he, ma'am?"

"No; he's"—

"Name's John U. Upjohn, isn't it?"

"Yes, that's his name."

"Then he's the same man. He won't be here for an hour or two, I guess, 'cause he's stoppin' to have one o' his teeth tightened that got knocked a little bit loose when he was jumpin' out o' danger, y' know."

"Little boy, tell me the whole story. I think I can bear it now."

"Well, ma'am, he's in the hospittle with four ribs broke, an' one leg's in a sling, an' his nose is knocked kind o' sideways, but he's gettin' along all right, an' he'll be out again in about a month, an' here's a letter f'm the doctor tellin' y' all about it, ma'am."—Boston Traveler.

THE COOKBOOK.

A cup of butter means sixteen tablespoons. When we measure butter in a cup, we measure it packed solid.

One cup of sauce means one cup of liquid, regardless of the amount of thickening and butter that you use.

A novel and dainty way of cooking little new onions is to boil them and serve them on toast, similar to asparagus.

Stir all sauces with a wooden spoon until they thicken and begin to leave the sides of the pan. Add flavoring essences after taking the pot from the fire.

After boiling a ham let it cool in the water in which it was cooked. This helps to make it more tasty, moist and tender. The same rule applies to tongue or corned beef.

Sardines broiled in a chafing dish are nice for Sunday night suppers. Use just enough of the oil in the box to cover the bottom of the dish and keep the fish from sticking. When they are browned on both sides, sprinkle liberally with lemon juice and serve hot.

Three Ways.

An Englishman, an Irishman and a Scotchman, making a tour around the city a short time since, were observed looking through a confectioner's window at a beautiful young woman serving in the shop.

"Oh," exclaimed Mr. Patrick, "do let us be after spending half a crown with the dear craytur, that we may look at her convaniently and have a bit of chat wid her."

"You extravagant dog," said Mr. Bull. "I'm sure one-half of the money will be sufficient. But let us go in, by all means. She's a charming girl."

"Ah, wait a wee," interposed Mr. McAndrew. "Dinna ye ken it'll serve our purpose equally weel just to ask the bonnie lassie to gie us twa sixpences for a shilling and inquire where's Mr. Toompson's house and sic like. We're no hungry and may as weel save the siller."—Birmingham Mercury.

Old spiders, which have neither web nor the materials to make one, often hunt about to find out the webs of other spiders, younger and weaker than themselves, with whom they venture battle. The invader generally succeeds, and the younger spider is driven out to make a new web, and the old spider remains in possession until a stronger spider invades the web and drives it out. When thus dispossessed, the spider seldom ventures another attack, but tries to subsist upon the few insects that may fall accidentally into its clutches and eventually dies of hunger.

BRIGADIER-GENERAL LUDLOW.

In His Death a Brilliant Officer and Brave Soldier Passes Away.

In the death at Morristown, N. J., of Brig. Gen. William Ludlow, the United States Army has lost one of its most brilliant officers, and the country a man who was brave in battle, of unquestioned integrity, famous the world over as an engineer and who in many important and difficult positions acquitted himself with honor. Distinguished in his bearing, Gen. Ludlow illustrated the highest type of the American soldier. He was a graduate of West Point, served in the civil war and in the Santiago campaign he was classed with the best commanders in the field.

BRIG. GEN. LUDLOW

Gen. Ludlow was a graduate of West Point and on leaving that institution in 1864 was appointed engineer on the staff of Gen. Hooker. He was assistant engineer of Gen. Sherman's army on the famous march to the sea.

In the Cuban war he commanded the extreme right wing of the American forces at Santiago. He had a brigade of regulars and displayed great bravery under heavy fire. He was rewarded with the rank of major general of volunteers, and went to Havana as military commander of the city under Gen. Brooke. He reorganized the police force and gave the Cubans many surprises by the thoroughness with which he enforced sanitary regulations and checked vice and immorality.

Gen. Ludlow returned from Cuba in March, 1900, a brigadier general in the regular army. He was appointed president of the United States Army War College and went to Europe to study the armies of foreign nations. Upon the completion of his report he was ordered to the Philippines, where he was to be military governor of the Visayas. On the outward trip he was taken sick with tuberculosis and on reaching Manila was ordered home. He returned in May, but the climate of his native land failed to benefit him and an heroic figure passes away in his death.

QUEER STORIES

The first sugar manufactured in this country was made in New Orleans in 1796.

The first table cutlery made in the United States was in Greenfield, Mass., in 1824.

In the south of China silkworms have been reared and silk manufactured for over 3,000 years.

QUEER STORIES !*! ovstwu,1tMr!!

A caterpillar can eat six hundred times its weight of food in a month.

Whereas in England only one farmer in twenty-five owns his own farm, in Norway 109,000 out of 120,000 own their farms.

There has been invented in Paris a slot machine, which not only furnishes the postage stamp, but licks it and affixes it to the envelope.

The average cost of the body of a modern long electric car is $2,000; the average price of a set of double trucks for such a car is $600, and the average cost of the motor is $1,500, making the total cost of the car $4,100.

Children with measles are wrapped in red cloth by French peasant women. Noticing this, Chatinier pasted red paper on the window where patients having measles lived, and the results, in all cases, without medicine, have been favorable. He finds that other colors, especially strong shades of violet, excite the skin, while subdued red light rests it.

In a case reported by a French physician, a woman had been growing thin and weak for three years, with all the signs of dyspepsia, and had had sixteen successive attacks of erysipelas. It was at last decided that hair dye must be the cause. Examination showed that this dye contained resorcin, and on stopping its use health has gradually returned.

There is no simple way to distinguish between olive and cottonseed oil when buying. Personal acquaintance with the dealer, his guarantee and the label of the packer are sometimes serviceable guides. A properly cultivated taste will also assist. Regarding the wholesomeness of these and other vegetable oils, there is a difference of opinion. Some people regard cottonseed oil positively injurious to health, while others believe it to be practically harmless.

The Job He Preferred.

Just after the fall of Bloemfontein soldiers were called upon, owing to the scarcity of civilians, to work the railway. The weary men were lying in camp one night after a hard day's work, when a sergeant called out:

"Any of you men want to put your names down as railway porters, drivers, stokers, or for any other appointment connected with the railway?"

The silence was broken only by snores. Then one Tommy slowly raised his head and drowsily muttered:

"Put me down as a sleeper."—London Spare Moments.

A Colonial Protest.

Japan is certainly in earnest in demanding admission for her people to Australia. Britain, on the other hand, isn't in the least degree in earnest about facilitating the exclusion of the brown man who is risinsg in the East. Being safe herself from the curse of inferior peoples in her midst to undersell her artisans and mongrelize her race and lower her standard of civilization, Britain cares very little, or understands very little, what happens or may happen to Australia in these respects.—Sydney Bulletin.

Portugal's King Is Poor.

Regal power and wealth do not always go together. The King of Portugal is probably the poorest sovereign in Europe. He is supposed to receive $410,000 a year, but it is alleged it is some time since he received anything at all, because money is uncommonly "tight" in the national exchequer. many of the royal dependents pay their tradesmen with credit notes, but no doubt in the future when Portugal, by practicing the strictest economy, rights herself they will be above par.

A COLUMBUS STATUE.

The Story of a Brass Founder's Transformation of Gambrinus.

A story is told of a brass founder who was one day visited by a friend acting as agent for one of the cities of Central America. The agent asked what it would cost to cast a statue of Christopher Columbus for the public square of the city. The amount was far in excess of the sum which the man had at his disposal. He was about leaving in despair of being able to secure the statue when the brass founder said:

"Come back in the junk yard and let us see what can be found there."

He went back, and the brass founder showed him a colossal statue of Gambrinus, recently removed from the front of a large brewing establishment. Under his feet rested a beer keg, in his hand was a large and overflowing schooner, his beard was long and shaggy, and about his brows was wreathed a garland of barley and hops.

"Why, this will never do," said the commission merchant. "I want a statue of Columbus."

"Wait until I have touched this one up. Come back in about a week and see what you think of it. If it suits you, you can have it for the amount you have at your disposal."

As soon as the visitor had gone the brass founder set two men at work on the figure of Gambrinus. They removed the beer keg from under his right foot and placed there an anchor and a coil of rope, from his hand they removed the goblet and substituted a globe, with the continents traced on it; from his brow they took the wreath of barley and hops and substituted a wreath of laurel and then proceeded to trim up his whiskers. The finishing touch consisted in putting at the base of the statue "Cristoforo Colombo."

When the commission merchant came, he was delighted with the figure and, purchasing it, shipped it to the Central American city, where it adorns the public square and is looked upon with veneration by the citizens of that town. —New York Times.

FIRES CAUSED BY NAILS.

Particularly Guarded Against by Firms That Handle Cotton.

"Speaking of insurance matters," said a listener, "I suppose the plain, old fashioned nail has caused more fires in the big establishments where machinery is used in many and complicated ways than any other little thing in existence. The only thing needed is for it to come in contact with some other hard material with sufficient force to cause a spark and heat generation. Nails have really produced a heavy per cent of the cotton fires of the country. During recent years, on account of steps taken by the owners and conductors of the larger cotton and byproduct plants at the instance of insurance men, the nail has not been such a prolific producer of fires.

"A way has been found, for instance, in cotton gins, cotton mills and in plants where cottonseed are put through manufacturing processes, of extracting nails and other weighty and flinty substances that may find lodgment in these inflammable products. Gravity is the natural force used. Nails and rocks and materials of this kind are heavier than cotton and its byproducts, and they have a tendency to force their way to the bottom of the heap. By allowing these products to pass over a rolling belt arrangement these heavier materials filter toward the bottom and are finally extracted, so that when the cotton or the cottonseed passes through the grind in the various manufacturing processes there is but little danger from fire so far as these things are concerned."—New Orleans Times-Democrat.

About Writing One's Name.

People who sign their letters with wild flourishes or initials only and give no address offer one of the worst of compliments to their correspondent by egotistically assuming that their handwriting must be of such familiar importance to him or that they and their affairs are so present to his mind that further identification is unnecessary. Having their signature cut from the end of a letter and the address from its heading pasted on the envelope which incloses a reply is a bad compliment which many persons bring upon themselves by an unpardonable illegibility. It is a singular fact that accidental misspelling or mispronunciation of one's name generally constitutes a greater affront and is provocative of more annoyance than a studied insult.—All the Year Round.

YOU KNOW WHAT YOU ARE TAKING When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c

Once a girl hears someone say she's pretty, the whole world cannot undeceive her.

The Small of the Back

That is where some people feel weak all the time.

They are likely to be despondent and it is not unusual to find them borrowing trouble as if they hadn't enough already.

The fact is their kidneys are weak, either naturally or because of sickness, exposure, worry or other influences.

"I am thankful to say," writes J. L. Campbell, of Sycamore, Ill., "that Hood's Sarsaparilla has cured me. For many years I was troubled with backache. At times I was so bad I had to be helped from the bed or chair. I am now well and strong and free from pain." What this great medicine did for him it has done for others.

Hood's Sarsaparilla

Promises to cure and keeps the promise. Begin treatment with Hood's today.

SYRUP OF FIGS

IS AN EXCELLENT FAMILY LAXATIVE—IT IS REFRESHING TO THE TASTE AND ACTS PLEASANTLY AND GENTLY. IT ASSISTS ONE TO OVERCOME HABITUAL CONSTIPATION PERMANENTLY

With many millions of families Syrup of Figs has become the ideal home laxative. The combination is a simple and wholesome one, and the method of manufacture by the California Fig Syrup Company ensures that perfect purity and uniformity of product, which have commended it to the favorable consideration of the most eminent physicians and to the intelligent appreciation of all who are well informed in reference to medicinal agents.

Syrup of Figs has truly a laxative effect and acts gently without in any way disturbing the natural functions and with perfect freedom from any unpleasant after effects.

In the process of manufacturing, figs are used, as they are pleasant to the taste, but the medicinally laxative principles of the combination are obtained from plants known to act most beneficially on the system.

FROM POORHOUSE TO PALACE

BY MARY J. HOLMES

CHAPTER XII.—(Continued.)

Here Jenny's remarks were interrupted by the loud rattling of wheels, and the halloo of many voices. Going to the door, she and Mary saw coming down the road at a furious rate the old hay cart, laden with young people from Chicopee, who had been berrying in Sturbridge and were now returning home in high glee. The horses were fantastically trimmed with ferns and evergreens, while several of the girls were ornamented in the same way. Conspicuous among the noisy group was Ella Campbell. Henry Lincoln's broad-brimmed hat was resting on her long curls, while her white sun-bonnet was tied under Henry's chin. The moment Jenny appeared the whole party set up a shout so deafening that the Widow Perkins came out in a trice to see "if the Old Harry was to pay, or what." No sooner did Henry Lincoln get sight of Mary than springing to his feet, and swinging his arm around his head, he screamed out: "Three cheers for the schoolma'am and her handsome lover, Billy! Hurrah!"

"Wasn't that smart?" said Jenny, when at last the hay cart disapeared from view, and the noise and dust had somewhat subsided. Then as she saw the tears in Mary's eyes she added, "Oh, I wouldn't care if they did tease me about Billy Bender. I'd as lief be teased about him as not."

"It isn't that," said Mary, smiling in spite of herself, at Jenny's frankness. "It isn't that. I didn't like to hear Ella sing with your brother, when she must have known he meant to annoy me."

"That certainly was wrong," returned Jenny, "but Ella isn't so much to blame as Henry, who seems to have acquired a great influence over her during the few weeks he has been at home. You know she is easily flattered, and I dare say Henry has fully gratified her vanity in that respect, for he says she is the only decent looking girl in Chicopee. But see, there comes Mrs. Mason; I guess she wonders what is keeping you so long."

The moment Mrs. Mason entered the school room, Jenny commenced talking about Mount Holyoke, her tongue running so fast that it entirely prevented anyone else from speaking until she stopped for a moment to take breath. Then Mrs. Mason very quietly remarked that if Mary wished to go to Mount Holyoke she could do so, Mary looked up inquiringly, wondering what mine had opened so suddenly at her feet; but she received no explanation until Jenny had bidden her good-by and gone. Then she learned that Mrs. Mason had just received one hundred dollars from a man in Boston, who had years before owed it to her husband, and was unable to pay it sooner. "And now," said Mrs. Mason, "there is no reason why you should not go to Mount Holyoke, if you wish to."

* * * * * * *

"Oh, what a forlorn-looking place!" exclaimed Rose Lincoln, as from the windows of the crowded vehicle in which they had come from the cars she first obtained a view of the not very handsome village of South Hadley.

Rose was in the worst of humors, for by some mischance Mary was on the same seat with herself, and consequently she was very much distressed and crowded. She, however, felt a little afraid of Aunt Martha, who she saw was inclined to favor the object of her wrath, so she restrained her fault-finding spirit until she arrived at South Hadley, where everything came in for a share of her displeasure.

"That the seminary!" said she contemptuously, as they drew up before the building. "Why, it isn't half as large or handsome as I supposed. Oh, horror! I know I shan't stay here long."

The furniture of the parlor was also very offensive to the young lady, and when Miss Lyon came in to meet them she, too, was secretly styled "a prim, fussy, slippery-tongued old maid." Jenny, however, who always saw the bright side of everything, was completely charmed with the sweet smile and placid face. After some conversation between Miss Lyon and Aunt Martha it was decided that Rose and Jenny should room together, as a matter of course, and that Mary should room with Ida. Rose had fully intended to room with Ida herself, and this decision made her very angry; but there was no help for it, and she was obliged to submit.

And now in a few days life at Mount Holyoke commenced in earnest. Although perfectly healthy, Mary looked rather delicate, and it was for this reason, perhaps, that the sweeping and dusting of several rooms were assigned to her, as her portion of the labor. Ida and Rose fared much worse, and were greatly shocked when told that they both belonged to the wash circle!

"I declare," said Rose, "it's too bad. I'll walk home before I'll do it;" and she glanced at her white hands, to make sure they were not already discolored by the dreadful soapsuds!

Jenny was delighted with her allotment, which was dish-washing.

"I'm glad I took a lesson at the poorhouse years ago," said she one day to Rose, who snappishly replied:

"I'd shut up about the poorhouse, or they'll think you the pauper instead of Madam Howard."

"Pauper? Who's a pauper?" asked Lucy Downs, eager to hear so desirable a piece of news.

Ida Selden's large black eyes rested reprovingly upon Rose, who nodded toward Mary, and forthwith Miss Downs departed with the information, which was not long in reaching Mary's ears.

"Why, Mary, what's the matter?" asked Ida, when, toward the close of the day, she found her companion weeping in her room. Without lifting her head Mary replied, "It's foolish in me to cry, I know, but why need I always be reproached with having been a pauper? I couldn't help it. I promised mother I would take care of little Allie as long as she lived, and if she went to the poorhouse I had to go too."

"And who was little Allie?" asked Ida, taking Mary's hot hands between her own.

In a few words Mary related her history, omitting her acquaintance with George Moreland, and commencing at the night when her mother died. Ida was warm-hearted and affectionate, and cared but little whether one were rich or poor if she liked them. From the first she had been interested in Mary, and now winding her arms about her neck, and kissing away her tears, she promised to love her, and to be to her as true and faithful a friend as Jenny. This promise, which was never broken, was of great benefit to Mary, drawing to her side many of the best girls in school, who soon learned to love her for herself, and not because the wealthy Miss Selden seemed so fond of her.

Soon after Mary went to Mount Holyoke she had received a letter from Billy, in which he expressed his pleasure that she was at school, but added that the fact of her being there interfered greatly with his plan of educating her himself. "Mother's ill health," said he, "prevented me from doing anything until now, and just as I am in a fair way to accomplish my object someone else has stepped in before me. But it is all right, and as you do not seem to need my services at present I shall next week leave Mr. Selden's employment, and go into Mr. Worthington's law office as clerk, hoping that when the proper time arrives I shall not be defeated in another plan which was formed in boyhood, and which has become the great object of my life."

Mary felt perplexed and troubled. Billy's letters of late had been more like those of a lover than a brother, and she could not help guessing the nature of "the plan formed in boyhood." She knew she should never love him except with a sister's love, and though she could not tell him so her next letter lacked the tone of affection with which she was accustomed to write, and was on the whole a rather formal affair. Billy, who readily perceived the change, attributed it to the right cause, and from that time his letters became far less cheerful than usual.

Mary usually cried over them, wishing more than once that Billy would transfer his affection from herself to Jenny, and it was for this reason, perhaps, that without stopping to consider the propriety of the matter, she first asked Jenny to write to him, and then encouraged her in answering his notes, which became gradually longer and longer, until at last his letters were addressed to Jenny, while the notes they contained were directed to Mary!

CHAPTER XIII.

Rapidly the days passed on at Mount Holyoke. Autumn faded into winter, whose icy breath floated for a time over the mountain tops, and then melted away at the approach of spring, which, with its swelling buds and early flowers, gave way in its turn to the long bright days of summer. And now only a few weeks remained ere the annual examination at which Ida was to be graduated.

Neither Rose nor Jenny were to return the next year, and nothing but Mr. Lincoln's firmness and good sense had prevented their being sent for when their mother first heard that they had failed to enter the middle class. Mrs. Lincoln's mortification was undoubtedly greatly increased from the fact that the despised Mary had entered in advance of her daughters. "Things are coming to a pretty pass," said she. "Yes, a pretty pass; but I might have known better than to send my children to such a school."

She insisted upon sending for Rose and Jenny, but Mr. Lincoln promptly replied that they should not come home. Still, as Rose seemed discontented, complaining that so much exercise made her side and shoulder ache, and as Jenny did not wish to remain another year unless Mary did, he consented that they should leave school at the close of the term, on condition that they went somewhere else.

"I shall never make anything of Henry," said he, "but my daughters shall receive every advantage, and perhaps one or the other of them will comfort my old age."

He had spoken truly with regard to Henry, who was studying, or pretending to study, law in the same office with Billy Bender. But his father heard no favorable accounts of him, and from time to time large bills were presented. So it is no wonder the disappointed father sighed, and turned to his daughters for the comfort his only son refused to give.

For the examination at Mount Holyoke great preparations were being made. Rose, knowing she was not to return, seemed to think all further effort on her part unnecessary; and numerous were the reprimands, to say nothing of the black marks which she received. Jenny, on the contrary, said she wished to retrieve her reputation for laziness, and leave behind a good impression. So, never before in her whole life had she behaved so well, or studied as hard as she did during the last few weeks of her stay at Mount Holyoke. Ida, who was expecting her father, aunt and cousin to be present at the anniversary, was so engrossed with her studies that she did not observe how sad and low-spirited Mary seemed. She had tasted of knowledge and now thirsted for more; but it could not be; the funds were exhausted, and she must leave the school, never perhaps to return again.

"How much I shall miss my music, and how much I shall miss you," she said one day to Ida, who was giving her a lesson.

"It's too bad you haven't a piano," returned Ida, "you are so fond of it, and improve so fast!" Then after a moment, she added, "I have a plan to propose, and may as well do it now as at any time. Next winter you must spend with me in Boston. Aunt Martha and I arranged it the last time I was at home, and we even selected your room, which is next to mine, and opposite to Aunt Martha's. Now, what does your ladyship say to it?"

"She says she can't go," answered Mary.

"Can't go!" repeated Ida. "Why not? Jenny will be in the city, and you are always happy where she is; besides, you will have a rare chance for taking music lessons of our best teachers; and then, too, you will be in the same house with George, and that alone is worth going to Boston for, I think."

Ida little suspected that her last argument was the strongest objection to Mary's going, for, much as she wished to meet George again, she felt that she would not on any account go to his home, lest he should think she came on purpose to see him. There were other reasons, too, why she did not wish to go. Henry and Rose Lincoln would both be in the city, and she knew that neither of them would scruple to do or say anything which they thought would annoy her. Mrs. Mason, too, missed her, and longed to have her at home; so she resisted all Ida's entreaties, and the next letter which went to Aunt Martha carried her refusal.

In a day or two Mary received two letters, one from Billy and one from Mrs. Mason, the latter of which contained money for the payment of her bills; but, on offering it to the principal, how was she surprised to learn that her bills had not only been regularly paid and receipted, but that ample funds were provided for the defraying of her expenses during the coming year. A faint sickness stole over Mary, for she instantly thought of Billy Bender, and the obligation she would now be under to him forever. Then it occurred to her how impossible it was that he should have earned so much in so short a time; and as soon as she could trust her voice to speak, she asked who it was that had thus befriended her.

The preceptress was not at liberty to tell, and with a secret suspicion of Aunt Martha, Mary returned to her room to read the other letter, which was still unopened. Her head grew dizzy, and her spirits faint, as she read the passionate outpouring of a heart which had cherished her image for years, and which, though fearful of rejection, would still tell her how much she was beloved. "It is no sudden fancy," said he. "Once, Mary, I believed my affection for you returned, but now you are changed. Your letters are brief and cold, and when I look around for the cause I am led to fear that I was deceived in thinking you ever loved me. If I am mistaken, tell me so; but if I am not, if you can never be my wife, I will school myself to think of you as a brother would think of an only and darling sister."

For several days Mary had not been well, and the excitement produced by Billy's letter tended to increase her illness. During the hours in which she was alone that day she had ample time for reflection, and before night she wrote a letter to Billy, in which she told him how impossible it was for her to be the wife of one whom she had always loved as an own and dear brother. This letter caused Mary so much effort, and so many bitter tears, that for several days she continued worse, and at last gave up all hope of being present at the examination.

"Oh, it's too bad!" said Ida, "for I do want you to see Cousin George, and I know he'll be disappointed, too, for I never saw anything like the interest he takes in you."

A few days afterward, as Mary was lying thinking of Billy, and wondering if she had done right in writing to him as she did, Jenny came rushing in, wild with delight.

Her father was downstairs, together with Ida's father, George and Aunt Martha. "Most the first thing I did," said she, "was to inquire after Billy Bender! I guess Aunt Martha was shocked, for she looked so queer. George laughed, and Mr. Selden said he was doing well, and was one of the finest young men in Boston."

During the whole of George's stay at Mount Holyoke Rose managed to keep him at her side, entertaining him occasionally with unkind remarks concerning Mary, who, she said, was undoubtedly feigning her sickness so as not to appear in her classes where she knew she could do herself no credit; "but," said she, "as soon as the examination is over she'll get well fast enough and bother us with her company at Chicopee."

In this Rose was mistaken, for when the exercises closed Mary was still too ill to ride, and it was decided that she should remain a few days until Mrs. Mason could come for her. With many tears Ida and Jenny bade their young friend good-by, but Rose, when asked to go up and see her, turned away disdainfully, amusing herself during their absence by talking and laughing with George Moreland.

The room in which Mary lay commanded a view of the yard and gateway; and after Aunt Martha, Ida and Jenny had left, she arose, and stealing to the window, looked out upon the company as they departed. She could readily divine which was George Moreland, for Rose Lincoln's shawl and satchel were thrown over his arm, while Rose herself walked close to his elbow, apparently engrossing his whole attention. Once he turned around, but fearful of being observed, Mary drew back behind the window curtain, and thus lost a view of his face.

(To be continued.)

Zulus of the Railroads.

"Do you know what a Zulu is?" said an old railroad man. The traveling man who was waiting for his train smiled in a way that was meant to indicate he knew all the species of Zulus that ever existed, and told the railroad man about the Africans, called Zulus, who maintained that continent's reputation for fighting before the Boers stepped in.

Little was doing in the railroad man's line just then, so he listened.

"Well, they may be Zulus all right enough," he remarked, "but they are not the sort of Zulus that travel on railroads. There is the kind that runs into these yards," and he pointed down the track, where a box car stood.

A stone pipe protruded through a hole in the door. The pipe was at an angle of about 35 degrees. A cloud of smoke was coming from it. Four blooded horses and a man were the occupants of that. The man was the Zulu. Taking care of valuable stock en route from one market to another was his business. He was a type of a class that railroad men on every line haev named the Zulus. They fit up the center of the cars for a sort of living room, and there in the midst of their animals live as happily as the road's president who passes them in his private car.—Chicago Inter Ocean.

Caution is often tossed to the winds but never brought back by them.

IT'S A BIG INDUSTRY

Lumber Business Ranks Among the Most Important.

GREAT IN THE WEST.

Description of How Operations Are Conducted in Washington.

The Lumber Camp and Its Equipment, the Day's Work and the Part that Each Man Takes in It, the Felling of Great Trees and Moving Logs to the Landings, and the Biggest Saw Mill in the World.

HAULING THE LOGS ON THE SKIDWAY TO THE LANDING.

The lumber industry of this country ranks among its most important. In the New England States, in New York and Pennsylvania, in the Virginias, in the Southern States, in the Northern Central States, and in the far West, especially in the Northwestern States, it employs millions of capital and thousands of men. It is true that in the New England and Middle States the industry is declining, the stock having been depleted, still it is yet important as the statistics show. During the past season Maine has manufactured nearly half a billion feet of logs, Pennsylvania over a half billion and the Virginias nearly as much. Michigan has exceeded its record, and Wisconsin and Minnesota have nearly equaled their best outputs. The Southern States, with the assistance of modern and improved machinery, have increased their output, especially Texas, whose operations are reported larger than those of any other State east of the Rocky Mountains. The Northwestern States, however, are to be credited with the largest increase, says Williamsport Grit, though Idaho has made strides which will soon place it in the foremost rank of lumber producing States. Of the former, Washington at present stands out most conspicuous and supplies a most interesting subject for consideration.

RAFTING LOGS AT THE FOOT OF A LANDING ON PUGET SOUND.

The lumber business of Washington is represented by figures that are almost incomprehensible. The Pacific Lumber Trade Journal presents statistics relating to the State, which show a total of 24,002 men employed the year round, receiving daily wages amounting to $55,645, making a grand total for the year of $14,265,175. Here are the figures in detail:

Where employed.	No.	Wages paid. Daily.	Wages paid. Yearly.
Sawmills	7,025	$14,050	$ 4,215,000
Shingle mills	3,800	10,450	2,090,000
Logging camps	8,026	20,065	5,016,250
Sash and door factories	631	1,420	425,925
Planing mills and box factories	1,140	2,565	769,500
Barrel, tub and pail factories	148	323	96,900
Shingle bolt camps	2,000	3,800	760,000
Retail yards	217	434	130,200
Miscellaneous	1,015	2,538	761,400
Totals	24,002	$55,645	$14,265,175

The daily output of the Western Washington mills alone is astounding. Each day there are 7,425,000 feet of lumber turned out and 28,580,000 feet of shingles. This is the product of 352 mills.

In the Logging Camp.

Right in the heart of the forest the lumber camp is located, and with its carpet of fragrant pine needles, its canopy of green branches and the little brook of pure spring water flowing past the door of the cook house, it is an ideal spot. It is such a spot as the city bred people travel hundreds of miles to find during the hot summer months, and yet this is a place where the men congregate at night, and after the evening meal gather around the fire and swap stories, totally oblivious of their surroundings and of the beauties of nature.

But this is their shop—it is to them what the machine shop is to the mechanic; what the store is to the tired clerk, and the office to the business man—for it is here that they toil for their daily bread. Many of them have been bred in the forest, and the scragly cedars and the tall firs are an old story to them. To them it is nothing that their daily lifet is one of constant danger, for many a poor fellow has been carried into camp before the close of the day's work maimed and bleeding and perhaps crushed in hideous manner by some accident—perhaps a tree falling on him and pinning him beneath its tremendous weight, or perhaps struck by a flying stick sent through the air like a rocket when the great tree crashes to earth. It is a matter of everyday occurrence to them.

The day's work commences when day breaks, and the men are hurrying to their places in the forest. The horses are taken from the stables, and before long steam has been raised in the many small boilers and the forest takes on an air of activity that only a few hours before seemed impossible. All through the long day the "fellers" are busy with their assistants and many a giant of the forest is laid low; the sawyers cut the big stick up into the proper lengths; the "swamper" clears away the brush; the "barker" strips off the rough bark; the "hook-tender" performs his part of the work; the "hand-skidder" causes the log to be conveyed to the railroad, and the work of the man of the logging camp is over.

With the completion of the railroad and branches, landings, skid-roads from the landings, camp buildings, consisting of cook house, bunk house, barn and blacksmith shop, then it is that the actual work of logging commences. Every man has his particular work to do, and his business is to do his work well and to keep ahead of the fellow back of him. The first ones to start out are the "feller" and his "helper." Their business is to fell the trees. The position of "feller" requires a man of experience and good judgment, for he must fell the trees so they will not break up; he must fell them near the skid-road, so they may be as accessible as possible. This may, on the face of it, seem easy, but when it is taken into consideration that the trees lean in all directions, and that the wind blows from all points of the compass, it is evident that it requires experience, skill and a lot of hard work to "throw a tree" in a different direction from that in which it would naturally fall. This is accomplished, first, by under-cutting on the side toward which it is to fall; and, second, when the tree is nearly sawed through to the undercut, by driving steel wedges in the saw kerf on the opposite side of the tree to that in which the "feller" wants it to go. Many of these "fellers" become so expert that they can fell a tree so that it will fall and drive a stake set upright in the ground 100 feet away.

The sawyers, usually two in number, follow the "fellers," and having had instructions from the foreman as to what lengths are required, they saw the trees into the proper lengths in a good and workmanlike manner. This is a particular part of the work, for if the saw is allowed to run so that the cut varies six to eight inches from a straight line, in a log four feet in diameter or more, it would entail a serious loss.

Following the sawyers comes the "swamper." His work consists in clearing all brush, windfalls, etc., away from the space lying between the tree and the nearest skid-road. Sometimes the services of a team of horses are required to haul the old logs out of the way. The "swamper" is a busy man, and if so disposed is always able to find something to do.

Along the Skid Road.

Following the "swamper" are the "barkers." Their number depends largely upon the time of the year when the cutting is being done. In the spring, when the sap is running, and the bark comes off easily, two or three men are able to do the same amount of work which requires double that number later in the season. The bark of the Douglas fir tree is sometimes eight or ten inches thick, making it impossible to drag the log unless the bark is at least stripped from the side which lies next to the skids. The barkers usually cut through the bark along the top of the log with their broad-bladed barking axes, then use their barking irons to pry it off down each side of the log. These barking irons resemble nothing so much as a steel crow bar, with one end flattened and bent a little to facilitate the prying off of the bark.

When the log is barked the "hook tender" is the next man to take it in charge. He casts his eye along all sides of the log and decides on which side it will "ride" most easily, after which he "snips" or bevels the end of the log on that side which it is to ride, in order to keep the log from bunting against a skid and throwing it out of place. A log well sniped and riding along easily on its proper side is the proof a "hook-tender's" skill. The "hook-tender" has charge of the log until the team takes it away to the skid-road, and in this connection the "hand-skidder" comes in.

The latter gets small skids, five or six inches in diameter, and arranges them along the path the log is to take to the skid-road. The log being all barked and sniped and the hand skids arranged, the team comes along with the wire rope and steel block. The log is first rolled on its "riding side;" then the block and tackle are used several times, depending on the distance and the nature of the ground, until it is dragged to the skid-road, where the team hitches to it direct and starts for the landing. Not the least important workman in the logging camp is the "greaser," who goes in front of the log with a pailful of grease and a stick with a cloth on one end, with which he swipes grease on every skid, so that the log will slip over easily. On the return trip he follows the team and sweeps off every skid, so that the road will be clean for the next log.

From four to ten horses are required to haul the logs, depending upon the size of the timber. The locomotive also plays an important part and it winds its way in and out among the stumps and valleys back to the landing for another load. The logs are rolled from the cars on to the roadway down which they slide into the water where they are arranged into rafts with from thirty to fifty logs to each section; then they are ready for the tug to take them to market.

Such a crew of men will put in during the entire season an average of about 3,000 feet a day. If the logger wishes to increase his output he must put in another crew, as each man in a crew has his particular work to do and merely to increase the number of men in a crew is to lighten the work of some particular one without increasing the output. Such a division of labor and apportionment of work as described forms what is commonly termed a logging camp. In comparing the old way of logging, where oxen were used in place of horses and also in place of the railroad, it is evident that steam and horses can do more, and in less time, than oxen, and it is only a question of time when the horse will join the ox and modern machinery will supplant the one as it has already done the other. The exit of the steam locomotive is also prophesied in the near future, and with it may go the "feller," for it is within the bounds of possibility that the giants of the forest will be laid low by means of a hot electric wire and silent motors will carry the logs to the water's edge.

Largest Mill in the World.

The largest cargo lumber mill in the world is situated at Port Blakeley, nine miles across Puget Sound from Seattle. The mill proper is situated in a sheltered cove, and as the steamer approaches the boom limits containing millions of feet of logs can be seen. The mill is situated at the upper end of the cove, and the mill and yard area exceeds ten acres. The mill proper is of the two-story kind, the dimensions being 102x450 feet, which enable it to saw the largest timbers in the woods.

Last year the output of the Port Blakeley mill exceeded 109,000,000 feet, more than the output of any other mill in the United States. The company caters exclusively to the cargo trade, and vessels may be seen at their docks almost any time loading for nearly every port in the world.

PORT BLAKELEY SAWMILL, LARGEST IN THE WORLD.

Begone, Dull Care!

A Droitwich barber was just finishing lathering a customer, and was talking volubly, as usual.

"Yes, sir," he said, "there's no carelessness allowed by our employer. Every time we cut a customer's face we are fined sixpence, and if we make an ugly gash it costs us a shilling."

Then, picking up and brandishing his razor, he added: "But I don't care a rap to-day. I've just won a sovereign."—London Answers.

It is not safe for a girl to let her steady see her in kitchen duds until after the wedding invitations are out. After that he can't get away.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

Issued Every Friday

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, DECEMBER 20.....1901

Maclay regards the Schley verdict as a vindication of himself. Some people would not know what had happened if they were kicked.

The court house at Bakersfild is now heated by the use of oil as fuel. Wood is becoming scarce in the San Joaquin valley and oil will soon come into use in every county for heating purposes.

President Roosevelt recommended in his message the creation of a new cabinet office, the incumbent of which shall be designated Secretary of Commerce and Industries. He had not a word to say about the creation of a cabinet office of Mines and Mining.

The United States is now recognized all over the globe as a "world power" that fears nothing and will protect her own people, not only from Chinese invasion, but from all undesirable and dangerous classes of immigrants, anarchists especially, included.

The adverse verdict of a majority of the Schley court of Inquiry has not injured the admiral a particle in the estimation of the people; on the contrary it has helped him. With the calm judgment of history the names of Dewey and Schley will stand pre-eminent.

Since it has been assured that the Chinese exclusion bill will be re-enacted Minister Wu has not been so bland and diplomatic as usual. He is now quoted as saying: "The American people are biased beyond argument and reason does not appeal to them." Mr. Wu is getting woozy.

The Immigration Restriction League is busily engaged in the task of educating congress up to the point of adopting a thorough educational standard as a requisite for admission of immigrants and as public opinion favors the idea it is quite probable we may have such a standard provided at this session of Congress.

This is the season of the year when the purse strings relax and the little folks expect to be remembered by Santa Claus. The stores are putting on their holiday attire and never before have our dealers so well anticipated every wish of the people. There are presents for big and little at prices within the reach of all. For the next two weeks love will have an inuing and happy boys and girls will be sorry that "Christmas comes but once a year."

Some interesting figures are presented by the commercial agency of R. G. Dun & Co. relative to the present and past living expenses in the United States. The general conclusion is to the effect that prices to consumers are now 30 per cent higher than they were a few years ago. This example is given: "If a man purchased his supplies for one year on December 1 of this year and they would have cost $101.37, while the same quantities of the same articles would aggregate only $72.45 on July 1, 1897." These comparative figures are derived from yearly statements of prices for staples.

Mrs. Stanford has formally turned over her fortune of $30,000,000 to the Stanford University and that college now has the largest endowment of any educational institution in the world. The immense revenue to be derived will be better appreciated when we compare Mrs. Stanford's gift to the $10,000,000 Andrew Carnegie is to give to found a national university at Washington. The boys and girls of California are exceedingly fortunate. With two Universities like the State now has there will be no excuse for an ambitious boy or girl not having a finished education if they only have the grit to work for it.

The following are the views of the conservative London Mining Journal as to the prospects of the copper market in the near future with special reference to the European demand: "Apart from the question of American stocks, which must constitute the dominating factor for some time to come, the present price of copper is amply justified from a European statistical point of view. Here in England the rate of consumption has been satisfactorily maintained, and, with the impending electrification of several railways, the equipment of further underground tubes in London, the adoption of electric lighting and electric tramways by various municipalities, coupled with the busy state of our leading locomotive builders and the free use of copper for various purposes, there seems no reason to anticipate any diminution of our domestic demand for some considerable time to come. On the continent the conditions are certainly less favorable, particularly in Germany where a commercial crisis of some severity has had to be faced. In sighing for fresh commercial worlds to conquer, Germany rather overshot the mark during the prosperity of 1898–9. Signs of renewed activity are, however, not wanting, and a better demand for copper is again reported to be springing up. France has shown some falling off since last year, but in much less marked degree than Germany. Russia, on the other hand, seems likely to largely augment the purchases of copper. In anticipation of this, the intended establishment of a large copper smelting works in the neighborhood of the Caucasus is reported. With any sensibly increased demand, a temporary copper famine is not the remote contingency some people may imagine, and this seems to have dawned on the ursine operators, very few bears being met with now on the floor of the London Metal Exchange."

STANDARD TIME.

A Table of the Hour Reckonings of All Nations.

The difficulty of appreciating the difference in time that prevails between different countries is very general, and the following list is printed for the purpose of a ready reference guide by which to calculate the time of any occurrence in another country. All nations except Spain, Portugal and Russia calculate their time from the meridian of Greenwich, accepting as standard some even hour meridian east or west of Greenwich. For instance:

Western European time, or that of the meridian of Greenwich, is legal in England, Belgium, Holland and Luxemburg.

Central European time, or one hour east of Greenwich, is legal in Germany, Austria-Hungary, Bosnia and Herzegovina, the Kongo Free State, Denmark, Italy, Servia, Sweden, Norway and Switzerland.

Eastern European time, or two hours east of Greenwich, is adopted by Bulgaria, Roumania, Natal and Turkey in Europe.

Eight hours east of Greenwich applies to the Philippines.

Nine hours east of Greenwich is adopted by central Australia and Japan.

Ten hours east of Greenwich is official in Victoria, Queensland and Tasmania.

Eleven and a half hours east has been adopted by New Zealand.

The United States, Canada and Mexico have adopted the fifth, sixth, seventh and eighth hours west of Greenwich.

The Hawaiian Islands adopt the meridian of 10½ hours west.

In Spain the meridian of Madrid, 14 minutes 45 seconds west of Greenwich, is legal; in Portugal, that of Lisbon, or 36 minutes 39 seconds west, and in Russia, that of St. Petersburg, or 2 hours, 1 minute and 13 seconds east of Greenwich.—Detroit Free Press.

THE PIANO AT ITS BEST.

Four Times a Year None Too Often to Have a Piano Tuned.

"There are plenty of people," said a piano tuner, "who let their pianos go one, two, three years without tuning, and in some cases pianos thus neglected may not get very, very woefully off, but a piano should be tuned every three months. That would be none too often to keep it in order.

"As a matter of fact, a piano begins to get out of tune again at once after it has been tuned. How could it be otherwise? Nothing stands still. This difference would at first be so slight as scarcely to be perceptible to any but the practiced and sensitive ear of an expert tuner, but it is there. Doesn't a clock begin to run down as soon as it is wound up? Four times a year a piano ought to be tuned, but only a comparatively small percentage of people give their pianos that attention which is needed to keep them in their most perfect loveliness of tone. Piano makers and dealers of course are looking after the tuning of their pianos in stock scrupulously and carefully all the time. You don't hear pianos out of tune in a piano wareroom. They never let them get out of tune there. They aim, in fact, at keeping them as near perfection as they can.

"We are pretty sure to find in every new piano something pleasing and attractive. Some share at least of this pleasing quality comes from its being in perfect tune. In fact, to keep any piano at its best it must be kept in tune, and to attain the results most satisfactory to all, to the owner and the neighbors alike, a tuning tonic should be administered to every piano not less than four times a year."—New York Sun.

Two Anecdotes of Colonel Ingersoll.

Senators Morrill, Voorhees and Gorman were conversing together outside the senate chamber. Colonel Ingersoll chanced to pass by. Mr. Voorhees greeted him and said: "We are discussing the meaning of 'improbable.' What is your definition of the word?" Promptly Colonel Ingersoll replied, "It is a negro going in an opposite direction from a brass band."

Colonel Ingersoll was a temperate man, but not a teetotaler. One day Mrs. James G. Blaine was passing through Fifteenth street opposite the treasury department, when out from a liquid refreshment saloon came Colonel Ingersoll and a friend. "My dear colonel," said she, "you would not be seen coming out of such a place, would you?" "My dear madam," replied he, "would you expect me to stay there all the time?"—Washington Times.

Making the Choir Sing.

Many conscientious ministers have had trouble with wayward choirs, but not all have had Dr. Samuel West's witty address or management. There had been difficulty with the singers, and they had given out that they should not sing on the next Sunday. This was told to Dr. West. "Well, well, we will see," he said and on Sunday morning gave out his hymn. After reading it he said very emphatically, "You will begin with the second verse:

"Let those refuse to sing
Who never knew our God."

The hymn was sung.

An Englishman's Manners.

Note, as has long been noted, that the only manners the Englishman cares about are what our country cousins call "table manners." He can lay enormous stress upon these without seeming to thaw out, for they really express nothing, and meticulous nicety in the forms of eating and drinking pleases his innate sense of refinement and chimes in with his dislike for making a mess. Yet a certain Frenchman may not have been far wrong, after all, in saying that "the English would surely not frown so upon a man's mopping up sauce with a piece of bread if they themselves had ever had any sauce worth mopping up." It may be that the Englishman's perfection of deportment at meals comes in part from a lack of temptation to do otherwise. But the truth is none the less apparent that the complicated conventions regarding what to do and what to avoid at table that obtain in England do not in any way involve that outward expressiveness which the Englishman abhors. He can obey them without prejudice to his impassivity. And this cult of impassiveness, of self repression, is essentially Spartan—that of the savage.—Scribner's.

His Final Request.

A Scotch farmer, celebrated in his neighborhood for his immense strength and skill in athletic exercises, very frequently had the pleasure of contending with people who came to try their strength against him. Lord D., a great pugilistic amateur, went from London on purpose to fight the athletic Scot. The latter was working in an inclosure at a little distance from his house when the noble lord arrived. His lordship tied his horse to a tree and addressed the farmer. "Friend, I have heard marvelous reports of your skill and have come a long way to see which of us two is the better wrestler."

The Scotchman, without answering, seized the nobleman, pitched him over the hedge and then set about working again. When Lord D. got up, "Well," said the farmer, "have you anything to say to me?"

"No," replied his lordship, "but perhaps you'd be good enough to throw me my horse."—Public Opinion.

Fooled the Passengers.

A man sitting in an electric car the other day pulled out of his pocket his handkerchief, when out sprang what seemed to be a snake. It wriggled and jumped around on the floor at a great rate. The ladies screamed and huddled together, the men made for it, and one stamped his foot on it, but upon examination it proved to be a copper wound bass piano wire, which the man with the handkerchief had coiled up in his pocket and, having become uncoiled, jumped to the floor. How the women looked daggers at him after they became quieted down was a caution. He soon got off, we presume to put it in the piano that needed it, not because of the looks of the women.—Salem Gazette.

Once Was Enough.

This is one of General Miles' stories. In the Confederate army, Longstreet's corps was making a night march. About 4 o'clock in the morning, when every one was worn out, a Georgia regiment stopped. A Georgia soldier put his rifle up against the tents on the other side of where Longstreet was.

"Well," he said, "this is pretty hard—to fight all day and march all night. But I suppose I can do it for love of my country." He continued: "I can go hungry, I can fight, if need be, I can die for my country, because I love my country. But when this war is over I'll be blowed if I'll ever love another country!"—Woman's Journal.

Plant Selling and Fruit Raising.

Apropos of systems of strawberry culture, a correspondent of Gardening remarks: Above all, do not allow the runners to set too thick in the row, unless you are in the plant business. Plant selling and fruit raising is not, as a rule, a desirable combination. Every spring we sell a few thousand plants from our narrow matted rows—dug along the edges—but it is done more as an accommodation to the neighbors than a money making scheme. Every time a plant is dug from such rows we feel that just so much fruit is being taken up, besides injuring the adjoining plant roots more or less. Whether the price obtained from this weeding out process offsets the loss and injury is a question in our minds, with a big letter Q. It is the writer's humble opinion that the operation comes more properly under the heading of charity than finance.

A Beautiful Ornamented Tree.

Among the especially beautiful ornaments of our gardens the cut leaved beech holds a high place in common

CUT LEAVED BEECH.

with its ally, the fern leaved beech. A fine specimen is the more highly valued from the variety being of rather slow growth. Few finer specimens may be seen, says Meehan's Monthly, than the one here illustrated, which is growing on the grounds of a rare lover of gardening of Wynnewood, Pa.

A Scoop.

"What did your wife do when she found those poker chips in your overcoat pocket?" asked the practical joker.

"She took the matter very coolly. She found out where they came from and sent a messenger boy to get them cashed."—Washington Star.

Quick and Effective.

Willie—How did you break your wife of the "advanced woman" craze?

Wise—Told her everybody thought it meant "advanced" in years.—Kansas City Independent.

Vaseline Pancakes.

Cæsar's creek, on the Florida coast, was named after a famous old pirate called Black Cæsar, whose profession added to the risks of marine insurance. After the pirates the Florida wreckers came, of whom H. A. Willoughby, in his "Across the Everglades," tells this story:

A large steamer was stranded on the reef not far from Cape Florida. No sooner had she struck than the news spread rapidly along the shore. The people for 20 miles around gathered on the beach opposite the stranded steamer. Among them were a number of Indians from the Everglades, who chanced to be down there and knew what a "wreck" meant to the wreckers.

The steamer, loaded with an assorted cargo, began to break up, and barrels, cases and boxes drifted gradually ashore. There were casks of wine, boxes of soap, cases of bottles of wine and iron and a hundred other articles. The Indians seized upon the wine and soon were in a condition that allowed the white men to secure the more valuable prizes.

The squaws struck a bonanza in a case of vaseline. They thought it a new variety of the white man's frying fat and, starting a fire, fried pancakes in it. What a dish—pancakes a la Seminole!

Messages by Vibration.

Curiously enough, the fact appears, according to a recent traveler among the Indians of Catuquinarn, between the rivers Embrya and Embyrasu, that these people have long employed a wireless telephony, but rather after the order of unwritten science.

It is made by digging a hole in the ground inside a house and laying the bottom with coarse sand, well piled. On this is laid a wooden drum or hollow cylinder of wood, half filled with fine sand and layers of broken wood, bone and powdered mica—the upper part of the cylinder, which is empty, rising above the floor of the hut and closed first by leather, then by wood, and lastly by india rubber. Outside, the cylinder is packed round with fragments of wood, leather and resins, and covered with hard rubber at the level of the soil.

To use this peculiar apparatus the drum is struck by a wooden hammer, and the vibration is evidently transmitted through the soil. The answer is heard in the drum, which acts as a resonator, and messages are thus sent over 1,500 yards from house to house.

Tired Eyes.

A correspondent of Popular Science News tells of a party of Alpine climbers who, having spent five hours among the snows of the mountains, returned to their homes after dark. A great change had to all appearance taken place since the night before. Instead of being illuminated in the usual way, the place was supplied with green lights.

It took the travelers a little time to realize that they were suffering from Daltonism, or color blindness, superinduced by eye fatigue. The intense light caused by the sun shining upon the snow had for the time rendered them unable to judge of colors and given rise to their curious mistake. Three hours elapsed before the eyes regained their normal condition.

Chevreul explains that the eye cannot gaze long upon a given color without tending to become insensible to it. When the eye looks long upon a color, it should be rested by the complementary color. Thus an eye that has grown tired with green should be rested by red, which is green's complementary color.

ARE YOU DEAF? ANY HEAD NOISES?

ALL CASES OF

DEAFNESS OR HARD HEARING ARE NOW CURABLE

by our new invention. Only those born deaf are incurable.

HEAD NOISES CEASE IMMEDIATELY.

F. A. WERMAN, OF BALTIMORE, SAYS:

BALTIMORE, Md., March 30, 1901.

Gentlemen:—Being entirely cured of deafness, thanks to your treatment, I will now give you a full history of my case, to be used at your discretion.

About five years ago my right ear began to sing, and this kept on getting worse, until I lost my hearing in this ear entirely.

I underwent a treatment for catarrh, for three months, without any success, consulted a number of physicians, among others, the most eminent ear specialist of this city, who told me that only an operation could help me, and even that only temporarily, that the head noises would then cease, but the hearing in the affected ear would be lost forever.

I then saw your advertisement, accidentally in a New York paper, and ordered your treatment. After I had used it only a few days according to your directions, the noises ceased, and to-day, after five weeks, my hearing in the diseased ear has been entirely restored. I thank you heartily and beg to remain Very truly yours,

F. A. WERMAN, 730 S. Broadway, Baltimore, Md.

Our treatment does not interfere with your usual occupation.

Examination and advice free. YOU CAN CURE YOURSELF AT HOME at a nominal cost.

LEGAL.

Application for Patent.

NOTICE OF APPLICATION OF THE Inyo Marble Company of California, a Corporation, for a United States Patent.

INDEPENDENCE, CAL., Nov. 16, 1901.

NOTICE IS HEREBY GIVEN THAT IN pursuance of Chapter Six of Title Thirty-two, of the Revised Statutes of the United States, the Inyo Marble Company of California, a corporation organized and existing under and by virtue of the laws of the State of California, whose Post Office address is Room 31, 10th Floor, Mills Building, San Francisco, Cal., claiming 120 acres of the mineral deposit bearing marble, lying and being situated within the Mining District, County of Inyo and State of California, has made application to the United States for a patent for the said mining claim, which is more fully described as to metes and bounds by the official plat herewith posted, and by the field notes of survey thereof, now filed in the office of the Register and Receiver of the U. S. Land Office at Independence, which field notes of survey describe the boundaries and extent of said claim on the surface, with magnetic variation at fifteen degrees thirty minutes East in June, 1892, as follows, to wit:

Beginning at the original location corner at the N. E. corner of the S. W. ¼ of Section 14, Township 16 South, Range 37 East, Mount Diablo Meridian. Whence the ¼ Section corner between Sections 14 and 15 bears West 40.00 chains distant the ¼ section corner between 14 and 23 bears South 40.00 chains distant, set post 4 in. square 4½ feet long 12 in. in ground with rock mound marked 1. No. 1.

Thence, the magnetic variation being 15 degrees East, North 14.50 chains. To a ridge spur bears N. W. descending along West slope of spur, 40 chains, 2640 feet. No location corner to be found. At point identified by claimants set post 4 in. square 4½ ft. long 12 in. in ground with rock mound marked 1 No. 2.

Thence deflecting to left 90 degrees, West descending 13.50 chains cross gulch 10 lks. wide, course North ascend 18 chains. Top of spur bears N. 50 degrees W. descend 27 chains, 1782 feet cross wash 25 lks. wide course S. 70 degrees W. 30 chains, 1980 feet. No location corner to be found. At point identified by claimants set post 4 in. square 4½ feet long 12 in. in ground with rock mound marked 1 No. 3 cor. to sections 10, 11, 14, and 15 bears N. 89 degrees 30 minutes W. 10.00 chains distant.

Thence deflecting to left 90 degrees, South descending gradually 4.50 chains cross wash 25 lks. wide, course West and gradual descent 10.00 chains top of low point of spur bears West gradual descent. 20.00 chains S. W. corner boarding house bears S. 56 degrees 30 minutes E. 9 chains. 24.00 chains S. W. cor. boarding house bears S. 64 degrees 30 minutes E. 7.50 chains. S. W. corner of office upon which location notice is posted bears S. 81 degrees 00 minutes E. 9.00 chains S. W. corner of blacksmith shop at upper excavation of quarry bears N. 61 degrees E. 7.50 chains. 40.00 chains, 2640 feet to original location corner set post 4 in. square 4½ feet long in rock mound which I marked 1 No. 4.

Thence deflecting to left 90 degrees, East 2.75 chains road from excavation at quarry bears N. and S. 4.50 chains cross railroad side track from quarry connecting with main line of the Carson and Colorado railroad bears N. 18 degrees 30 minutes E. and S. 18 degrees 30 minutes W. 7.75 chains. Road to quarry bears N. W. and S. E. 10.00 chains S. W. corner of boarding house bears N. 9 degrees 30 minutes W. S. W corner of blacksmith shop at excavation at upper quarry bears N. 10 degrees W. 20 chs. excavation at lower quarry bears N. 8 degrees W. 19.00 chs. excavation at upper quarry 150 ft. above lower quarry bears N. 11 degrees W. 21.00 chs. 13.00 chains cross railroad switch track from office to upper marble quarry N. W. and S. E. 29.00 chains excavation in deposit of marble 10 lks. to left. 30.00 chains, 1980 feet to corner No. 1, at place of beginning.

Containing an area of 120 acres.

The said mining claim being of record in the office of the Recorder of Inyo county at Independence in the County and State aforesaid in book "F" Land, Water and Mining Claims, p. 471, said mineral deposit being shown upon the plat posted herewith, as near as can be determined from present developments. The claim being for 120 acres of the surface ground shown upon the official plat posted herewith, the said claim being designated as Lot No. 37 in the official plat posted herewith.

Any and all persons claiming adversely the mining ground, premises, or any portion thereof so described, surveyed, platted and applied for, are hereby notified that unless their adverse claims are duly filed according to law, and the regulations thereunder, within the time prescribed by law, within sixty days from the date of the first publication hereof, with the Register of the U. S. Land Office at Independence, in the State of California, they will be barred, in virtue of the provisions of said Statute.

It is hereby ordered that the foregoing notice be published in the Inyo Independent, a weekly newspaper published at Independence, Inyo County, California, for 60 days (10 weeks) which paper I hereby designate as the paper published nearest said land.

S. W. AUSTIN, Register.

First publication, November 22, 1901.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

W. E. Pedley, Plaintiff, vs. William Remsen, Peter A. Graff, Yellett D. Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company a Corporation, Surprise Canyon Mill and Water Company a Corporation Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

The People of the State of California send Greeting to William Remsen, Peter A. Graff, Yellett D. Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company, a Corporation, Surprise Canyon Mill and Water Company a Corporation, Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

You are hereby required to appear in an action brought against you by the above-named plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein within ten days (exclusive of the day of service) after the service on you of this Summons—if served within said County; if served elsewhere within thirty days.

And you are hereby notified that if you fail to so appear and answer the Plaintiff will take judgment for any money or damages demanded in the Complaint, as arising upon contract, or will apply to the Court for any other relief demanded in the Complaint.

Witness my hand and the seal of said Superior Court of the County of Inyo, State of California, this 15th day of October, A. D. 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] In the Superior Court of the County of Inyo, State of Cal.

W. E. Pedley, Plaintiff vs. William Remsen, et als., Defendants.

Church Services.

Rev. E. W. Van Deventer, D. D., will preach at the M. E. Church Sunday at 11 a. m. and 7 p. m. Communion after sermon in the evening. Quarterly Conference at the church on Saturday at 2 p. m. Cordial invitation to all.

Rev. Richard Fysh will preach at Georges Creek on Sunday, December 29th, at 2:30 p. m.

Sunday school at 10 o'clock a. m. Let the children all come. Everybody invited to the services.

RICHARD FYSH, Pastor.

BORN.

MORTON—At Lone Pine, Cal., December 12, 1901, to Mr. and Mrs. J. J. Morton, a daughter.

The days will begin to lengthen after to-morrow.

The Piutes will have a pow-wow at Georges Creek next week.

Tommy Kehoe has got back from Los Angeles and is greatly improved by his trip.

Regular meeting of Inyo Lodge No. 221 F. & A. M. to-morrow night. Election of officers.

Fred Schabbell Sr., is quite ill at Camp Independence, Dr. Blair was sent for this morning.

The Cruz Orchestra will give a grand ball at Lone Pine on Chrismas night, December 25th.

Rev. E. W. Van Deventer arrived at Independence last evening and is the guest of Rev. Mr. Fysh.

The Tonopah paper contains sixteen saloon advertisements. There appears to be no hotel there.

Mrs. John E. Jones of Round Valley is visiting her parents, Mr. and Mrs. C. A. Walter, at Camp Independence.

Mrs. W. A. Lamar arrived home last Monday from San Jose. Her health has improved very much.

The Inyo Mercantile Co. has a beautiful display of Christmas goods on exhibition. Call and see them.

Gus. and Garfield Goodale passed through town yesterday on their way to Bakersfield. They have bought a place over there.

Superintendent Squires has temporarily suspended work at Mazourka because of the cold weather. Their water supply is cut off.

The ladies of town are busy getting a Christmas tree ready, and all the little folks should come out and bring the big ones in tow.

John Strohmeyer pulled out of Mojave last Friday for Independence. There were three other big teams and all heavily loaded with holiday goods.

Mrs. Leon Marx arrived from Globe, Arizona, on last Saturday's stage and will spend Christmas with her parents, Mr. and Mrs. Fred Schabbell, at Camp Independence.

C. F. Singletary, a well known mining man of San Jose, was at Independence this week. He expects to spend considerable time looking over the mining situation here.

It is reported that the leases on Tonopah mines which expire on January 1st, will be extended for another term of months, but the royalties will be gauged by the richness of the ore extracted.

Henry Levy is making a number of improvements on the Independence Hotel. The saloon building is to be altered and refitted and a new billiard table will soon be added to the equipment.

Ben. T. Williams came up from Keeler Wednesday morning and will spend the holidays at Independence. He has been at Cerro Gordo for some time past but says that owing to the cold weather work will be suspended for some time.

Messrs. Watson, Crosby and Tweedie went north yesterday morning on their way to San Francisco with samples from the Saline copper mines. Nothing definite is known concerning the result of their examination and probably will not be until assays have been made.

John Clarke has his stage line from Candelaria to Tonopah in good running order. Stages leave Candelaria Monday, Wednesday and Friday mornings at 10 o'clock, arriving in Tonopah the same evening at 10 p. m. The line is thoroughly equipped with good stock and fine coaches and the service is excellent. Fare, $7.00.

Our Heaviest Taxpayers.

As a matter of public interest we publish the following list of taxpayers of this county who pay taxes to the amount of one hundred dollars or over. A resume of the figures shows that farm and stock interests pay by far the largest amount, aggregating $9,485.78. This includes the heaviest taxpayer in the county, T. B. Rickey, $1,294.22; next in order being mining interests, $3,274.90, of which the Pacific Borax Co. pays $1,241. 10; merchants pay $1,517.72 and canal companies $901.98.

Grand Jury Report.

To the Honorable Walter A. Lamar, Judge of the Superior Court in and for the County of Inyo State of California.

We, the Grand Jury, impaneled in the said Superior Court on the 17th day of December, A. D., 1901, herewith respectfully submit a partial report, as follows:

1. We find that the County Hospital has sixteen male inmates and one female inmate; that they are well cared for and that the buildings and surroundings are kept in a neat and comfortable condition.

2. We have examined the books of the various county officers and find them kept in good systematic form and legible; and that the moneys in the hands of the Treasurer agree with the balance as shown by his books at this date. As we have appointed a committee to employ an expert to review all of the books, we can only make a partial report on this subject at this time and will make our final report on February 18th, A. D., 1902, to which day we have adjourned.

3. We have examined the county court-house and its surroundings and find the various offices kept in a neat manner and that the property generally is in a good condition, but would recommend that the Board of Supervisors make some suitable arrangement for the disposal of the surplus fittings and furniture which are stored in the various offices and attic of the court-house.

4. It having been reported to this jury that minors are in the habit of visiting saloons and places of public resort where gambling is going on, and also participating in the games, we respectfully ask that our peace officers be called upon to enforce the law upon such subjects more stringently.

5. We find that the County Treasurer has no office nor furniture and recommend that he be furnished the same.

6. No criminal matters having been brought to our notice, we feel that our county is to be congratulated upon the moral and law-abiding condition of our citizens.

All of which is respectfully submitted,

J. S. GORMAN,
Foreman of said Grand Jury.

Dated December 18th, A. D., 1901.

Henry T. Thomsen arrived at Independence Wednesday evening from Mendocino county, where he is engaged in the stock business. He will spend a week visiting with relatives at Camp Independence and will visit his sisters, Mrs. W. D. Roberts and Mrs. John E. Jones at Round Valley, before returning home.

Wm. E. Cox Esq., of the William Penn Colonial Association, was at Independence Wednesday. Mr. Cox states that a party of four gentleman from Long Beach has been examing the Eastside lands for the past week and that as the result of its investigations about fourteen families will come and settle.

The thirteen carloads of lumber that came south last week were not for the W. P. C. A.

Teachers' Institute.

The Inyo County Teachers' Institute, which has been in session at Bishop this week, adjourns to-day. Following is the program which has been presented:

Music, "America."
Invocation.....Rev. A. Clark
Roll Call.
Remarks.....County Superintendent
"Duties and Qualifications of a Teacher," Miss M. Richards.
"The Teacher In and Out of School," Miss Lucy Harper.
Discussion .....Institute
Address, State Superintendent T. J. Kirk
Lecture, "The Child," Prof. A. B. Coffey
Music.

TUESDAY EVENING.

Music.
Lecture, "Getting There,"..Prof. Coffey

WEDNESDAY.

Roll Call. Music.
"Primary Language," Miss M. Peterson
"Primary Geography," Miss M. Chalfant
"Primary History,".....Miss M. Isbell
"Applied Kindergarten,"....
....Miss M. Bradshaw
"First Grade Work,"Miss I. Cunningham
Discussion .....Institute
Lecture, "The Child and Environment," Prof. Alexander B. Coffey.
Music.

1:30 P. M.

Music.
"Nature Study,".....Miss E. Gunter
"Art Study,".....Miss H. Buss
Discussion .....Institute
"Poetry in Schools,"..Mrs. Mary Austin
"Unperceived Force in Character Building,".....Miss M. Truscott
"Correlation,".....Miss G. Turner
Lecture.....State Superintendent Kirk
Lecture, "The Expression of Life,"
....Prof. Coffey
Music.

WEDNESDAY EVENING.

Music.
Lecture, "Young America," Prof. Coffey

THURSDAY.

Roll Call. Music.
"Intermediate Reading," Miss M Meysan
"Books,".....Mrs. R. S. Bigelow
Discussion .....Institute
"Music,".....Miss M. Johnson
"Relation of Parent, Child, and School," Mrs. M. E. T. Stevens.
"Use and Abuse of an Institute,"....
.....J. W. Hanby
Lecture, "The Child and Nature,"
.....Prof. Coffey

1:30 P. M.

Music.
"School Government," Mrs. E. M. Clarke
Discussion .....Institute
"Verbs,".....Miss L. Shirley
Discussion .....Institute
"Culture of Imagination," A. E. Janvier
Discussion .....Institute
"What Shall I Do,".....Miss L. Darrah
Lecture..... State Superintendent Kirk
Lecture, Language: Its Purpose and Mode,".....Prof. Coffey
Music.

THURSDAY EVENING.

Music.
Lecture, ...Prof. Coffey
Address.....J. H. Shannon

FRIDAY.

Music.
"Reading,".....Miss Clara Reynolds
"Educational Notes," Miss L. Hallengren
Lecture, "The Lesson of History."
....Prof. Coffey
Miscellaneous Business.
Reports of Committees.
Adjournment.
"Auld Lang Syne."

Hotel Arrivals.

The following persons registered at the local hotels during the week:

INDEPENDENCE HOTEL.

Y. C. Valencia and wife, A. Lyons, Bakersfield; J. L. Laird, L. E. Girard, A. M. Squires, Mazourka; W. N. Cook, J. Pascoe, Reward: Jas. Jenkins, Frank Dearborn, P. Ruiz, Lone Pine; Frank Shaw, M. Merton, E. Powers, J. S. McGee, A. S. Kilpatrick, Bishop; C. F. Singletery, San Jose.

NORMAN HOUSE.

T. B. Rickey, Carson, J. W. Leeper, Kernville; W. H. Wells, Round Valley; W. J. Dunn, R. W. Scottt A. L. Kinsley, D. Delaney, M. S. McLeod, R. W. Ford, W. Watterson, Bishop; W. H. Uhlmeyer, A. C. McDonald, Big Pine; G. E. Little, Whittier; Wm. E. Cox, Los Angeles; J. W. Eewby, Reward.

Real Estate Transfers.

Recorded since last report:

Chas. M. Green to Ramon Cannas, Oct. 10, 1901—Jenkins ranch, Lone Pine, $350.

Lilian E. Dunlap to Frank Shaw, July 23, 1900—80 acres in 22—6—32, $340.

Sophia T. Huntress and Margaret Watson to Mabel E Geiger, Oct. 29, 1901—W ½ lots 6 and 7, Block S, Academy addition to town of Bishop, $10.

Christmas Tree.

There will be a Christmas tree at the M. E. Church, Christmas eve. The following are the committees:

Tree—Chas. Mulholland, Paul Mairs.

Decoration—Mrs. Moffatt, Miss Lizzie Thompson, Paul Mairs, Chas. Mulholland.

Finance—Mrs. P. W. Forbes, Miss Maud Cook.

Program—Mesdames Nettie Webb, Mary Austin, Leora Rhine, Sophia Frank, Lily Meroney.

Purchasing—Mesdames Nellie Densmore, Sadie Mulholland, Mr. J. Meroney.

Mr. Geo. Willis, Assistant Santa Claus.

Invitation is extended to every one to put presents on the tree. All are requested to hand presents to the Committee on Decoration not later than 5:30 Tuesday afternoon. The programme is to commence at 7 p. m. sharp. Everybody cordially invited to attend.

The Independence Social Club will give a grand ball on New Year's Eve, December 31st. The services of the Cruz Orchestra has been secured and special features will be added which will make it the affair of the season.

Dr. Clifford Baxter, D. D. S., will be at Independence next Monday, the 23rd., to remain about ten days. All parties having dental work requiring attention are requested to make an appointment at an early date.

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains o Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spen examining the famous Comstock Mines (now being worked to a perpendicular depth of 2,10 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

The Duty of Mothers.

What suffering frequently results from a mother's ignorance; or more frequently from a mother's neglect to properly instruct her daughter!

Tradition says "woman must suffer," and young women are so taught. There is a little truth and a great deal of exaggeration in this. If a young woman suffers severely she needs treatment, and her mother should see that she gets it.

Many mothers hesitate to take their daughters to a physician for examination: but no mother need hesitate to write freely about her daughter or herself to Mrs. Pinkham's Laboratory at Lynn, Mass., and secure from a woman the most efficient advice without charge.

MISS PFALZGRAF

Mrs. August Pfalzgraf, of South Byron, Wis., mother of the young lady whose portrait we here publish, wrote in January, 1899, saying her daughter had suffered for two years with irregular menstruation—had headache all the time, and pain in her side, feet swelled, and was generally miserable. She received an answer promptly with advice, and under date of March, 1899, the mother writes again that Lydia E. Pinkham's Vegetable Compound cured her daughter of all pains and irregularity.

Nothing in the world equals Lydia E. Pinkham's great medicine for regulating woman's peculiar monthly troubles.

Cholly—"Your papa kicked me out when I asked him for your hand." Miss Gabby—"Papa is so intense. He puts his soul into everything he undertakes."

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

Some men act "as cool as a cucumber," and look about as seedy.

FAKE HAIR PREPARATIONS.

Do Hair No Good, But Often Cause It to Fall Out.

Many hair preparations are "fake" because they are merely scalp irritants. They often cause a dryness, making the hair brittle, and, finally, lifeless. Dandruff is the cause of all trouble with hair. It is a germ disease. The germ makes cuticle scales as it digs to the root of the hair, where it destroys the hair's vitality, causing the hair to fall out. To cure Dandruff, the germ must be killed. "Destroy the cause, you remove the effect." Newbro's Herpicide is the only preparation that kills the dandruff germ, thereby leaving the hair to grow luxuriantly.

The prosperous publican does not advertise his big bar-gains.

E W Grove

This signature is on every box of the genuine Laxative Bromo-Quinine Tablets the remedy that cures a cold in one day

"So Miss Primrose has purchased a kodak?" "Yes, I presume she thinks she can catch a man that way."

Time proves all things. It has seen Wizard Oil cure pain for over forty years. Many people know this.

As a rule, men who mind their own business have mind enough to make good business men.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

A doctor's fees, for instance, would you call them ill-gotten gains?

Advice to Students.

To Whom It May Concern: The best College to attend for the purpose of becoming practical Stenographers is, in our judgment, the Gallagher-Marsh, Parrott Building, S. F., Cal. Ernest A. Gurvin, L. A. Washburne, W. J. Nicholson, Official Reporters Supreme Court, State of Cal. Send for catalogue.

"Make the best of things" is excellent advice to give your cook.

We learned recently that the A. Van der Naillen School of Electrical Engineering of San Francisco were compelled to refuse taking in any more students in Electrical Engineering until November 20th. This evidently shows the demand for electrical engineers throughout the country.

The life-saver generally manages to find employment in divers of places.

The Best Prescription for Malaria Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

"Dolly acts like one possessed." "Yes, she is engaged to me."

I am sure Piso's Cure for Consumption saved my life three years ago.—MRS. THOS. ROBBINS, Maple Street, Norwich, N. Y., Feb. 17, 1900.

"How is it that Dr. N. has so many patients?" "Oh, his wife gives a dinner every month, and the people who get dyspepsia there keep him busy."

RAILWAY RUMBLES.

Our miles of railroad track exceed by more than 10,000 all the tracks of Europe.

The Dominion of Canada has granted $88,884,557 and 39,725,130 acres of land to railways.

More than 45,000,000 passengers a year go through the North Union and South Union stations in Boston.

In most European railways the principal difference between second class and first class lies in the color of the seat cushions, first class being usually red, second class gray.

The average cost of the body of a modern long electric car is $2,000, the average price of a set of double trucks for such a car is $600, and the average cost of the motor is $1,500, making the total cost of the car $4,100.

Some of the Austrian railways have followed the German custom of selling numbered seats in the cars of fast trains, both first and second class. An extra charge of from about 25 to 50 cents is made for these seats, according to distance.

The other day, just as a train was about to leave Kutas, in Hungary, for Palfalva, an official appeared and put seals on the wheels of the engine. The passengers had to get off and walk. The company was 296 crowns in arrears in payment of taxes. Next day the taxes were paid, and the train proceeded.

Insect Plagues.

The insect plagues of summer are no matter of jest. Man must strive with them as he strives against the other hostile forces of nature. He must fight the Hessian fly or the wheat crop will not be garnered, he must fight the weevil or the grain will perish in the bins, he must fight the army worm or the cattle will starve in the pastures, he must fight the tent caterpillar and the borer or his forests will wither and the streams disappear. The entomologist, therefore, wages the war of civilization against forces all the more terrible because of their minuteness and apparent insignificance.—St. Louis Globe-Democrat.

HIS LIFE THREATENED

EXPERIENCE OF A TROOPER IN THE EIGHTH OHIO CAVALRY.

The Incident Occurred When the Regiment Was at Camp Charleston and Narrowly Escaped a Fatal Ending.

The chief bugler of the Eighth Ohio Cavalry in the stirring days of the Civil war was Thomas J. Patton, who now lives, at 70 years of age, in Urbana, Ohio. As in the case of many others his life was threatened in after years by the results of an almost forgotten accident. While his regiment was at Camp Charleston, Mr. Patton was thrown from his horse, sustaining a sprained ankle and the fracture of three ribs. In an interview just published by the Champaign Democrat, of Urbana, he says:

"It was almost eleven years ago that I was stricken with partial paralysis, the result of my fall at Camp Charleston. I lost my appetite, my kidneys were affected and I was confined to my bed under medical treatment. The disease affected my right hand so that I could not lift it. I suffered an almost entire loss of memory and could not talk except with great effort."

"But you seem well and hearty now," said the reporter. "How did you regain your health?"

"I am well and hearty," answered the veteran. "It came about in this way. Four years ago I read in a newspaper of a case similar to mine that had been cured by Dr. Williams' Pink Pills for Pale People, and I purchased some. They are the best medicine in the world. Not only did they help my paralysis but they built up my health in every way. Since taking them I have not been troubled with catarrh, from which I had before been a constant sufferer. I feel better and brighter now than I have for years."

It is a well established fact that Dr. Williams' Pink Pills for Pale People are an unfailing specific not only for partial paralysis, but for locomotor ataxia, St. Vitus' dance, neuralgia, nervous headache, rheumatism, anaemia, after-effects of the grip, palpitation of the heart, pale and sallow complexions and all forms of weakness either in male or female. At all druggists, or direct from Dr. Williams Medicine Co., Schenectady, N. Y., 50 cents per box; six boxes for $2.50.

A Salmon's Leap.

One of the directors of the Norwegian fisheries has been endeavoring to discover the height a salmon will leap when clearing a waterfall which obstructs its passage up stream. Masts were placed below the fall to insure accurate measurements. It is stated that a fish can leap to the height of twenty feet. When a fish failed to clear the fall at one bound, it remained in the falling water and then, with a rapid twist of the body, gave a spring and was successful.

AN ASIATIC DESPOT.

Abdur Rahman Khan, the Dead Ameer of Afghanistan.

Abdur Rahman Khan, Ameer of Afghanistan, whose death occurred recently, was one of the most picturesque and powerful figures in Asia. He was born in 1830 and had been on the throne 21 years. His life was a stormy one. For 12 years of his early manhood he was an exile, kept out of Afghanistan by the jealous fears of his uncle, Shere Ali, against whom he had sided when Ali and the other two sons of the famous Dost Mahomed were fighting for the throne. It was in 1868 that he fled the country and for 10 years before, in 1880, he re-entered Afghanistan to ascend the throne, he was the guest of the Czar, living on Russia's bounty in the city of Samarcand. The Russians have accused him of the grossest ingratitude in these later years when he has treated Russia almost as an enemy.

ABDUR KHAN.

The opportunity of Abdur Rahman Khan, the exile, came in 1880 and he was equal to it. Shere Ali had been driven from the throne of Cabul. A fugitive from the British vengeance that was pursuing the great men of the Afghans who connived at the murder of British subjects, he died in the northern part of his country. His son, Yakoub Khan, had hardly been proclaimed Ameer when the British mission under Sir Louis Cavagnari, was massacred in Cabul and Yakoub was dethroned and led a prisoner to India. Meanwhile Abdur Rahman had crossed the border, assured of the support of some of the leading men, and proclaimed himself Ameer. His coming was welcomed by the British and his rule began in 1880.

Afghanistan's 4,000,000 people are made up of many diverse and even antagonistic elements. He put down with a heavy hand the uprising of the Ghilzais, who numbered about one-fourth of his people. He compelled the wildest tribesmen among the mountains to pay taxes and the taxes he levied were no bagatelle. He had never pretended to govern his country on rosewater principles. Nobody asserts that he won the love of his people, but he established his supremacy, became the ruler of a united Afghanistan and received general recognition as the strongest Ameer since the days of the old Duranis. He established various industries and acquainted his people with some of the best features of civilized life.

His heir is Habib Oullah, who is 39 years of age.

BARBERS WHO MAKE MONEY.

Those Who Serve Patrons at Their Homes Get Large Tips.

The itinerant barber of to-day who corresponds to the early idea of this personage by going from place to place, attending his clients in their homes and not awaiting them in his own or his employer's shop, is by no means a figure of the past in New York, but prospers here still. These barbers are workmen who have acquired a following of their own and find customers enough who want to be shaved at home to insure them a living. They are able with a limited number to get along, as the expense involved is not great.

There is, for instance, no rent, and this makes it possible for a barber to succeed with a more limited number of regular patrons than might otherwise be thought necessary. The number of these men has greatly increased during the past years and they represent the barbers who are fearful of undertaking the responsibility of their own shops and are yet desirous of being more independent than the ordinary employe. The most successful of these barbers are usually more desirably placed than their employers. They have no responsibility and earn a regular income as well as being treated with consideration by their bosses, who are always anxious to keep such men. The itinerant barbers who serve their clients at their own homes are able to do this at only a slight advance on the usual amount. Sent out from the shops they receive four times as much as would be asked in them.—New York Sun.

TILE GRAIN ELEVATORS.

During the past two years numerous departures from the old methods of building elevators have been made and in most instances the innovations have resulted favorably. Steel bin elevators, with two, three or four bins detached

A TILE GRAIN ELEVATOR.

from the machinery building, are now quite common. At Duluth there are several made of concrete.

The bins shown in the picture, while not comprising part of a wheat elevator, are no less remarkable on that account. There are eighteen of them with a combined capacity of half a million bushels, and they form part of the plant being erected in Minneapolis.

The material used is principally tile with steel bands running through part of it. From the outside nothing but tile is in sight. The elevator will cost $200,000 when completed.

Begone, Dull Care!

A Droitwich barber was just finishing lathering a customer, and was talking volubly, as usual.

"Yes, sir," he said, "there's no carelessness allowed by our employer. Every time we cut a customer's face we are fined sixpence, and if we make an ugly gash it costs us a shilling."

Then, picking up and brandishing his razor, he added: "But I don't care a rap to-day. I've just won a sovereign."—London Answers.

Another girl who has been all kissed up will shortly marry another man.

Salt Rheum

It may become chronic.

It may cover the body with large, inflamed, burning, itching, scaling patches and cause intense suffering. It has been known to do so.

Do not delay treatment.

Thoroughly cleanse the system of the humors on which this ailment depends and prevent their return.

The medicine taken by Mrs. Ida E. Ward, Cove Point, Md., was Hood's Sarsaparilla. She writes: "I had a disagreeable itching on my arms which I concluded was salt rheum. I began taking Hood's Sarsaparilla and in two days felt better. It was not long before I was cured and I have never had any skin disease since."

Hood's Sarsaparilla

Promises to cure and keeps the promise. It is positively unequaled for all cutaneous eruptions. Take it.

PACIFIC REGALIA COMPANY.

Business of This Industry Requires a Larger Factory and More Capital.

The Pacific Regalia Company, of Portland, Or., has been re-incorporated by Paul Pferdner, J. L. Mitchell, John S. Pinney, T. B. McDevitt and May Pferdner, with $50,000 capital stock. The company manufactures badges, buttons, regalia and lodge supplies of all kinds. The factory now operates 30 machines of various kinds and will be still further enlarged to accomodate its growing business.

A DARWINIAN THEORY.

Why the Drowning Man Always Throws Up His Hands.

The usual idea that a drowning man is stretching out his hands for aid or "catching at straws" is not altogether satisfactory. A possible explanation has lately been suggested, and this supposes that the drowning man, losing all his acquired habits and even some of those inherited from more recent parents, in his terror goes back to the instinctive movements of his arboreal ancestors, and the movements of the drowning man are those of a frightened ape seeking safety by clinging to the nearest tree.

The movement is certainly instinctive, for it can only be eliminated by considerable training and voluntary efforts, and yet it is fatal to the individual, for the specific gravity of no human body is so nearly that of water that the removal of the arms from the supporting fluid at once sinks the face beneath the surface. In cases of so called "cramps" the victim, often a highly trained swimmer, generally throws up the hands, but these cases are probably due to heart failure, and a similar movement takes place on land when the subject receives a fatal heart wound, and it is even a common expression of shock or astonishment. The ordinary movements of walking or running would keep a man's face above water, but these curious climbing movements of both hands and feet make floating impossible and are responsible for many deaths by drowning.—Cincinnati Enquirer.

DISCOVERED BY ACCIDENT.

How the Paving Value of Asphalt Was Brought to Notice.

All forms of bituminous pavements, whether manufactured from natural or artificial asphalt, are in fact artificial stone pavements. The industry started with the use of the natural rock asphalt from the mines in the Val de Travers, Canton Neufchatel, Switzerland. The mines were discovered in 1721, but it was 1849 that its utility as a road covering was first noticed. The rock was then being mined for the purpose of extracting the bitumen contained in it for use in medicine and arts. It is a limestone found impregnated with bitumen, of which it yields on analysis from 8 to 14 per cent.

It was observed that pieces of rock which fell from the wagon were crushed by the weight of wheels, and under the combined influence of the traffic and heat of the sun a good road surface was produced. A macadam road of asphalt rock was then made which gave very good results, and finally in 1854 a portion of the Rue Bergere was laid in Paris of compressed asphalt on a concrete foundation. In 1858 a still larger sample was laid, and from that time it has been laid year by year in Paris. From Paris it extended to London, being laid on Threadneedle street in 1869 and Cheapside in 1870 and in successive years on other streets.—Municipal Journal and Engineer.

Silence You Can See.

There is no such thing as silence in this world. It is an impossibility. That is partly the reason why science has enabled us to see it.

The explanation of the paradox is this: Silence, as we understand it, simply means that there are sounds too delicate or too loud for the ear to register. In other words, when we can't hear anything we call that condition "silence." But wherever you are there are sounds around you. Even in the deepest mine the air vibrates and makes a sound. An instrument has been invented that will catch these sounds and permit of the vibrations being represented pictorially on a screen, and in that way you may see silence and properly understand what it means.

By comparing the pictures of noises with those of that condition of things known as silence we gain an idea of the difference between a noisy night, for instance, and one when "absolute silence reigns," as the novelist puts it. It is rather surprising to find so much disturbance at the time when everything appears to be perfectly quiet.—Pearson's Weekly.

Wife—How do you like my new hat?

Husband—The idea of paying big prices for—

Wife—Big prices! Why, I made it myself.

Husband—Um—yes—er—as I was saying, the idea of paying big prices for such monstrosities as the milliners are showing! Now, your hat is a work of art. Looks as if it came from Paris. Beautiful, my dear!—New York Weekly.

Diplomatic.

The late Lord Savile used to say, according to The Candid Friend, "that high diplomatists had always to be on their guard against intriguing women, mainly Russian agents, who would use any wile to extract information. During the Russo-Turkish war, when Europe was always on the verge of a crisis and Russian statesmen were most anxious to know what England would do under given circumstances, a lady came up to him suddenly at a ball and said:

"I hear that the Russians have made a forced march and entered Constantinople," hoping no doubt that he would be surprised into some indiscreet expression.

He merely replied:

"Ineed! And I suppose the sultan has conferred on them the order of the Turkish Bath!"

The lady continued gravely:

"And they say in Paris that if England does not interfere the eastern question is settled in favor of Russia."

"And that," replied his excellency, "is, I suppose, the new judgment of Paris."

Wood Too Hard to Burn.

There are certain kinds of wood that are too hard to burn, or refuse to ignite for some other reason, such as ironwood and the good brier root, but it is a curiosity to come across a piece of common deal—the soft, light wood of which so many boxes are made—that cannot be set fire to.

The piece of wood in question was common white deal from Sweden, but was remarkable for its comparative weight. It had formed part of a boat belonging to a whaler and had been dragged below the surface of the water to the depth of more than half a mile by a harpooned whale. The length of line and the short distance from the point of descent after being struck at which the whale rose to the surface was a proof of the depth to which it had dragged the boat.

Only part of the boat came up again at the end of the line, and it was taken on board when the whale had been killed. That piece of wood was so hard that it would not burn in a gas jet. The weight of water had compressed it.—London Standard.

No Limit to New Ideas.

There never has been a time when the individual has stood for so much as he does at present. There has never been a time when individuality and personal initiative brought such amazing rewards. There never has been a time when the individual could or did exert so much influence as at present. There is no individual today so insignificant that, if he became the medium of a new or potent idea, he would be prevented by uncontrollable conditions from expressing his idea and reaping his just reward.

In all ages up to this man has been, owing to his limitations of physical force, a plaything of conditions, a slave of his environment. Skill and intelligence were but two of the factors in his progress, bounded and restrained by limitations to their employment. Now, however, with universal energy at the disposal of each individual, this terrestrial sphere scarce puts bounds to his field of influence.—Cassier's Magazine.

Fruit Acids Kill Germs.

A writer in a scientific periodical states that it is not generally known that fruit acids are germicidal. "The juice," he says, "of limes and lemons is as deadly to cholera germs as corrosive sublimate or sulphur fumes or formaldehyde or any other disinfectant. It is so powerful a germicide that if the juice of one lime or lemon be squeezed into a glass of water that is then left standing for ten or fifteen minutes the water will be disinfected. It makes little difference where the water has been obtained or whether it has been boiled or filtered." As boiled or filtered water is not always obtainable this is worth remembering.

What You Put In Your Mouth.

It is through the mouth that most malignant germs find their way into the body, and therefore one would think that it was hardly necessary to warn people against the risks they are running in using it as a sort of third hand. One would imagine that hardly any one needed cautioning against holding money with the lips, and yet an immense number of otherwise thoroughly cleanly people indulge in this dirty, dangerous practice.

$100 REWARD, $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

BEST FOR THE BOWELS

Cascarets

CANDY CATHARTIC

10¢ 25¢ 50¢ ALL DRUGGISTS.

CANDY CATHARTIC — Cascarets taste good. Eat them like candy. They remove any bad taste in the mouth, leaving the breath sweet and perfumed. It is a pleasure to take them, and they are liked especially by children.

SWEETEN THE STOMACH — Cascarets sweeten the stomach by cleansing the mouth, throat and food channel. That means, they stop undigested food from souring in the stomach, prevent gas forming in the bowels, and kill disease germs of any kind that breed and feed in the entire system.

PURELY VEGETABLE — Cascarets are purely vegetable and contain no mercurial or other mineral poison. They consist of the latest discoveries in medicine, and form a combination of remedies unequaled to make the blood pure and rich and make clean skin and beautiful complexion.

LIVER TONIC — Cascarets tone the stomach and bowels and stir up the lazy liver. They do not merely soften the stools and cause their discharge, but strengthen the bowels and put them into lively, healthy condition, making their action natural.

MILD BUT SURE — Cascarets never grip nor gripe. They act quietly, positively and never cause any kind of uncomfortable feeling. Taken regularly they make the liver act regularly and naturally as it should. They keep the sewerage of the body properly moving and keep the system clean.

BOON FOR MOTHERS — Cascarets increase the flow of milk in nursing mothers. If the mother eats a tablet, it makes her milk mildly purgative and has a mild but certain effect on the baby. In this way they are the only safe laxative for the nursing infant.

CURE CONSTIPATION — Cascarets taken patiently, persistently, will cure any form of constipation, no matter how old or how often other remedies have failed. They are absolutely guaranteed to cure any case, or purchase money will be cheerfully refunded.

NEVER SOLD IN BULK — Cascarets cost 10c, 25c, 50c a box. Samples sent free for the asking. We publish no testimonials but sell Cascarets on their merit under absolute guarantee to cure. Buy and try a box to-day, or write us for free samples and booklet. 470

Address STERLING REMEDY CO., CHICAGO or NEW YORK.

$100 REWARD will be paid to any reader of this paper who will report to us any attempt of substitution, or sale of "something just as good" when Cascarets are called for, and furnish evidence upon which we can convict. All correspondence confidential.

Blood Poison

THE MOST DESTRUCTIVE OF ALL HUMAN DISEASES.

The poison ejected from the fangs of the rattlesnake is not more surely fatal than the virus of Contagious Blood Poison, which pollutes and vitiates the blood, destroys the tissues and bones and eats like a canker sore into the flesh.

This disease appears first in the form of a little sore or blister; soon the glands begin to swell, pimples break out on the body, the mouth and throat become sore, making it painful to eat or swallow; dreadful ulcers appear on the tongue, copper colored splotches and other characteristic signs of Blood Poison come as the disease progresses, and the destructive virus takes deeper hold upon the system. The medical men are as sorely perplexed over the character of this blood poison as ever; they tell you to take mercury and potash alternately for three years, but the stomach of no human being can stand this treatment long; besides, they do not cure the disease permanently, as thousands know from experience.

S. S. S. is the only guaranteed purely vegetable blood purifier, and the only antidote for this peculiar virus; it purifies the blood and builds up the constitution. The appetite improves almost from the first dose, the sores soon show signs of healing, and the unsightly, dirty splotches and eruptions grow paler and paler, and finally disappear.

OUR FREE HOME TREATMENT.

Our book on Contagious Blood Poison gives more information about this disease than you can possibly get from any other source. It describes accurately and fully the symptoms as they appear in each stage of the malady, enabling the reader to correctly diagnose his own case, and, by following the instructions laid down in this book, to successfully treat himself at home. Should the patient need any special direction or advice, our physicians will be glad to correspond with and help him along in every possible way. Don't hesitate to write fully about your condition; what you have to say about yourself will never go beyond our office. You can have the best medical advice and this valuable little book without any cost to you whatever. Our physicians are in correspondence with hundreds all the time, and have successfully treated thousands of cases. Don't despair of a cure because something else has failed.

S. S. S. has for nearly 50 years been known and used as a remedy for this dreadful disease. Gently, but thoroughly, it removes all traces of the poison without the least injury to the system. THE SWIFT SPECIFIC CO., Atlanta, Ga.

FROM POORHOUSE TO PALACE

BY MARY J. HOLMES

CHAPTER XIV.

Mary returned home and a few days later was solicited to take charge of a small select school. But Mrs. Mason thought it best for her to return to Mount Holyoke and accordingly she declined Mr. Knight's offer, greatly to his disappointment, and that of many others.

One morning about a week after her return she announced her intention of visiting her mother's grave. "I am accustomed to so much exercise," said she, "that I can easily walk three miles, and perhaps on my way home I shall get a ride."

Mrs. Mason made no objection, and Mary was soon on her way. She was a rapid walker, and almost before she was aware of it reached the village. As she came near Mrs. Campbell's the wish naturally arose that Ella should accompany her. Looking up, she saw her sister in the garden and called to her.

"Wha-a-t?" was the very loud and uncivil answer which came back to her, and in a moment Ella appeared round the corner of the house, carelessly swinging her straw hat and humming a fashionable song. On seeing her sister she drew back the corners of her mouth into something which she intended for a smile, and said, "Why, I thought it was Bridget calling me, you looked so much like her in that gingham sunbonnet. Won't you come in?"

"Thank you," returned Mary. "I was going to mother's grave, and thought perhaps you would like to accompany me."

"Oh, no," said Ella, in her usual drawling tone, "I don't know as I want to go. I was there last week, and saw the monument."

"What monument?" asked Mary, and Ella replied:

"Why, didn't you know that Mrs. Mason, or the town, or somebody, had bought a monument, with mother's and father's and Franky's and Allie's names on it?"

Mary, hurrying on, soon reached the graveyard, where, as Ella had said, there stood by her parents' graves a large, handsome monument. William Bender was the first person who came into her mind, and as she thought of all that had passed between them, and of this last proof of his affection, she seated herself among the tall grass and flowers which grew upon her mother's grave and burst into tears. She had not sat there long ere she was roused by the sound of a footstep. Looking up, she saw before her the young gentleman who the year previous had visited her school in Rice Corner. Seating himself respectfully by her side, he spoke of the three graves, and asked if they were her friends who slept there. There was something so kind and affectionate in his voice and manner that Mary could not repress her tears, and, snatching up her bonnet, which she had thrown aside, she hid her face in it and again wept.

For a time Mr. Stuart suffered her to weep, and then gently removed the gingham bonnet, and, holding her hand between his, he tried to divert her mind by talking upon other topics, asking her how she had been employed during the year, and appearing greatly pleased when told that she had been at Mount Holyoke. Observing at length that her eyes constantly rested upon the monument, he spoke of that, praising its beauty and asking if it were her taste.

"No," said she. "I never saw it until to-day, and did not even know it was here."

"Someone wished to surprise you, I dare say," returned Mr. Stuart "It was manufactured in Boston, I see. Have you friends there?"

Mary replied that she had one, a Mr. Bender, to which Mr. Stuart quickly rejoined. "Is it William Bender? I have heard of him through our mutual friend, George Moreland, whom you perhaps have seen."

Mary felt the earnest gaze of the large, dark eyes which were fixed upon her face, and coloring deeply, she replied that they came from England in the same vessel.

"Indeed!" said Mr. Stuart. "When I return to the city shall I refresh his memory a little with regard to you?"

"I'd rather you would not," answered Mary. "Our paths in life are very different; and he, of course, would feel no interest in me."

"Am I to conclude that you, too, feel no interest in him?" returned Mr. Stuart, and again his large eyes reseted on Mary's face with a curious expression.

But she made no reply, and, soon rising up said it was time for her to go home.

* * * * * * *

Vacation was over, and again in the halls of Mount Holyoke was heard the tread of many feet, and the sound of youthful voices as one by one the pupils came back to their accustomed places. For a time Mary was undecided whether to return or not, for much as she desired an education she could not help feeling delicate about receiving it from a stranger, but Mrs. Mason, to whom all her thoughts and feelings were confided, advised her to return, and accordingly the first day of the term found her again at Mount Holyoke, where she was warmly welcomed by her teachers and companions. Still, it did not seem like the olden time, for Ida was not there, and Jenny's merry laugh was gone.

Patiently and perseveringly through the year she studied, storing her mind with useful knowledge; and when at last the annual examination came, not one in the senior class stood higher, or was graduated with more honor than herself. Mrs. Mason, who was there, listened with all a parent's pride and fondness to her adopted child, as she promptly responded to every question. But it was not Mrs. Mason's presence alone which incited Mary to do so well. Among the crowd of spectators she caught a glimpse of a face which twice before she had seen—once in the school room at Rice Corner and once in the graveyard at Chicopee. Turn which way she would, she felt rather than saw how intently Mr. Stuart watched her, and when at last the exercises were over, and she with others arose to receive her diploma, she involuntarily glanced in the direction whence she knew he sat. For an instant their eyes met, and in the expression of his she read an approval warmer than words could have expressed.

That night Mary sat alone in her room, listening almost nervously to the sound of every footstep, and half-starting up if it came near her door. But for certain reasons Mr. Stuart did not think proper to call, and while Mary was confidently expecting him he was several miles on his way home.

In a day or two Mary returned to Chicopee, but did not, like Ella, lay her books aside and consider her education finished. Two or three hours each morning were devoted to study, or reading of some kind. For several weeks nothing was allowed to interfere with this arrangement, but at the end of that time the quiet of Mrs. Mason's house was disturbed by the unexpected arrival of Aunt Martha and Ida, who came up to Chicopee for the purpose of inducing Mrs. Mason and Mary to spend the coming winter in Boston. At first Mrs. Mason hesitated, but every objection which either she or Mary raised was so easily put aside that she finally consented, saying she would be ready to go about the middle of November.

CHAPTER XV.

"Come this way, Mary. I'll show you your chamber. It's right here next to mine," said Ida Selden, as on the evening of her friend's arrival she led her up to a handsomely furnished apartment, which for many weeks had borne the title of "Mary's room."

"Oh, how pleasant!" was Mary's exclamation, as she surveyed the room in which everything was arranged with such perfect taste.

Mary was too happy to speak, and, dropping into the easy-chair, she burst into tears. In a moment Ida, too, was seated in the same chair, with her arm around Mary's neck. Then, as her own eyes chanced to fall upon some vases, she brought one of them to Mary, saying, "See, these are for you—a present from one who bade me present them with his compliments to the little girl who nursed him on board the Windermere, and who cried because he called her ugly!"

Mary's heart was almost audible in its beating, and her cheeks took on the hue of the cushions on which she reclined. Returning the vase to the mantelpiece, Ida came back to her side, and, bending close to her face, whispered: "Cousin George told me of you years ago, when he first came here, but I forgot all about it, and when we were at Mount Holyoke I never suspected that you were the little girl he used to talk so much about. But a few days before he went away he reminded me of it again, and then I understood why he was so much interested in you. I wonder you never told me you knew him, for, of course, you like him. You can't help it."

Mary only heard a part of what Ida said. "Just before he went away." Was he gone, and should she not see him after all? A cloud gathered upon her brow, and Ida, readily divining its cause, replied, "Yes, George is gone. Either he or father must go to New Orleans, and so George, of course, went. Isn't it too bad? I cried and fretted, but he only pulled my ears, and said he should think I'd be glad, for he knew we wouldn't want a six-footer domineering over us, and following us everywhere, as he would surely do were he at home."

Mary felt more disappointed than she was willing to acknowledge, and for a moment she half-wished herself back in Chicopee, but soon recovering her equanimity, she ventured to ask how long George was to be gone.

"Until April, I believe," said Ida; "but anyway you are to stay until he comes, for Aunt Martha promised to keep you. I don't know exactly what George said to her about you, but they talked together more than two hours, and she says you are to take music lessons and drawing lessons, and all that. George is very fond of music."

The next morning between 10 and 11 the doorbell rang, and in a moment Jenny Lincoln, whose father's house was just opposite, came tripping into the parlor. She had lost in a measure that rotundity of person so offensive to her mother, and it seemed to Mary that there was a thoughtful expression on her face never seen there before, but in all other respects she was the same affectionate, merry-hearted Jenny.

"I just this minute heard you were here, and came over just as I was," said she. After asking Mary if she wasn't sorry George had gone, and if she expected to find Mr. Stuart, she said, "I suppose you know Ella is here, and breaking everybody's heart, of course. She went to a concert with us last evening, and looked perfectly beautiful. Henry says she is the handsomest girl he ever saw, and I do hope she'll make something of him, but I'm afraid he is only trifling with her."

If there was a person in the world whom Mary thoroughly detested it was Henry Lincoln, and her eyes sparkled and flashed so indignantly that Ida noticed it, and secretly thought that Henry Lincoln would for once find his match. After a time Mary turned to Jenny, saying, "You haven't told me a word about—about William Bender. Is he well?"

Jenny blushed deeply, and, hastily replying that he was the last time she saw him, started up, whispering in Mary's ear, "Oh, I've got so much to tell you—but I must go now."

Ida accompanied her to the door, and asked why Rose, too, did not call. In her usual frank, open way Jenny answered, "You know why. Rose is so queer."

Ida understood her, and replied, "Very well; but tell her that if she doesn't see fit to notice my visitors I certainly shall not be polite to hers."

This message had the desired effect, for Rose, who was daily expecting a Miss King from Philadelphia, felt that nothing would mortify her more than to be neglected by Ida, who was rather a leader among the young fashionables. Accordingly, after a long consultation with her mother, she concluded it best to call upon Mary. In the course of the afternoon, chancing to be near the front window, she saw Mr. Selden's carriage drive away from his door with Ida and her visitor.

"Now is my time," thought she; and without a word to her mother or Jenny she threw on her bonnet and shawl, and in her thin French slippers stepped across the street and rang Mr. Selden's doorbell. Of course she was "so disappointed not to find the young ladies at home," and, leaving her card for them, tripped back highly pleased with her own cleverness.

Meantime Ida and Mary were enjoying their ride about the city, until, coming suddenly upon an organ grinder and monkey, the spirited horses became frightened and ran, upsetting the carriage and dragging it some distance. Fortunately Ida was only bruised, but Mary received a severe cut upon her head, which, with the fright, caused her to faint. A young man who was passing down the street, and saw the accident, immediately came to the rescue; and when Mary awoke to consciousness Billy Bender was supporting her and gently pushing back from her face the thick braids of her long hair.

"Who is she? Who is she?" asked the eager voices of the group around; but no one answered until a young gentleman, issuing from one of the fashionable saloons, came blustering up, demanding "what the row was."

Upon seeing Ida, his manner changed instantly, and he ordered the crowd to "stand back," at the same time forcing his way forward until he caught a sight of Mary's face.

"Whew! Bill," said he, "your old flame, the pauper, isn't it?"

It was fortunate for Henry Lincoln that Billy Bender's arms were both in use, otherwise he might have measured his length upon the sidewalk. As it was, Billy frowned angrily upon him, and in a fierce whisper bade him beware how he used Miss Howard's name. By this time the horses were caught, another carriage procured, and Mary, still supported by Billy Bender, was carefully lifted into it and borne back to Mr. Selden's house.

Many of Ida's friends, hearing of the accident, flocked in to see and to inquire after the young lady who was injured. Among the first who called was Lizzie Upton from Chicopee. On her way home she stopped at Mrs. Campbell's, where she was immediately beset by Ella, to know "who the beautiful young lady was that Henry Lincoln had so heroically saved from a violent death—dragging her out from under the horses' heels!"

Lizzie looked at her a moment in surprise, and then replied, "Why, Miss Campbell, is it possible you don't know it was your own sister?"

It was Henry Lincoln himself who had given Ella her information, without, however, telling the lady's name; and now, when she learned that 'twas Mary, she was too much surprised to answer, and Lizzie continued: "I think you are laboring under a mistake. It was not Mr. Lincoln who saved your sister's life, but a young law student, whom you perhaps have seen walking with George Moreland."

Ella replied that she never saw George Moreland, as he left Boston before she came; and then as she did not seem at all anxious to know whether Mary was much injured or not, Lizzie soon took her leave. Long after she was gone Ella sat alone in the parlor, wondering why Henry should tell her such a falsehood, and if he really thought Mary beautiful. Poor, simple Ella! She was fast learning to live on Henry Lincoln's smile, to believe each word that he said; to watch nervously for his coming, and to weep if he stayed away.

(To be continued.)

MAKING GIRLS HAPPY ON FARMS

Mrs. Meredith Tells About the School for Farmers' Wives in Minnesota.

What the West is doing in the way of training girls to live happy lives on farms was very ably shown at Huntington hall, Boston, recently by Mrs. Virginia C. Meredith, preceptress of the school of agriculture of Minnesota university.

Mrs. Meredith has herself conducted a successful stock farm for many years, and she believes thoroughly in the farm life for young people.

"The farm home," she said, "is to my mind the ideal home, and I am glad to say the thought in our school is always to educate the girl for the life she will have to live.

"At first we had only boys in the school, but when these, noticing that their sisters and sweethearts needed to learn just what they were learning, begged us to take girls, too, we did so, and now for four years we have been training farmers' daughters to make happy farm homes.

"Our girls study side by side with the boys the different breeds of live stock and the various developments of plant life. A farmer's wife needs to know how to tell a shorthorn from a longhorn, and what season is best for planting corn.

"We have been hearing in the past much about the man's desire to get away from the farm. The reason for his restlessness lies in the dissatisfaction of his women folk with farm life. They needed to be taught that it was interesting to make a farm home.

"We give our girls special work adapted to women in the home, such as cookery, which extends through the three years, dairy chemistry, and plant life. Butter-making is not drudgery to the girl who understands the why of it, and sewing is rapidly ceasing to become a lost art now that girls see that patterns are comprehensible things and not Chinese puzzles.

"The girl is taught, too, about textiles, a most interesting subject from the farmer's standpoint; and she attends lectures on household art in which suitability is shown to be the desideratum of a purchase of furniture.

"The application made in our school of mechanical drawing—that of designing model farmhouses—will have a great influence on the coming farm home of Minnesota. When the present generation build houses they will be convenient ones."

ONLY ONE SURVIVES.

SEXTETTE OF INDIANANS WHO WERE FAMOUS.

General Lew Wallace and His Noted Contemporaries of the Hoosier State—Harrison, Hendricks, Gray, Gresham and Voorhees.

General Lew Wallace is the sole survivor of a sextette of famous Indianans who were contemporaneous and who stood in the front rank among Americans of their day. Less than a score of years ago the names of Gresham, Gray, Harrison, Hendricks, Voorhees and Wallace were familiar to every one who kept in touch with national politics. These men were conspicuous figures at national conventions of their respective parties and high honors were conferred upon them. In the early 80's they were a dominant force in statecraft. Gresham was in Arthur's cabinet; Harrison, in the Senate, was a leader talked of for the Presidency; Wallace was minister to Turkey and enjoying his greatest popularity as the author of a novel read in every home where literature finds a place; Hendricks was the favorite of the Western Democrats for the Presidential nomination, and in the convention of 1884 was given second place with Cleveland on the ticket; Isaac P. Gray was Governor of the State; and Daniel W. Voorhees, the "Tall Sycamore of the Wabash," was making the Senate chamber ring with his thundering eloquence or winning golden opinions by his suavity and tact. To-day the grass peeps forth over

GEN. LEW WALLACE.

the graves of all except Wallace. He is still active. His mind is alert, his memory clear and his imagination powerful. There are no clogs in the machinery of his ponderous brain, the products of which are no less entertaining and instructive than in days gone by, though his best work is undoubtedly done, and the soldier-statesman-author-artist will be remembered in years to come for what he has already accomplished, rather than for what is yet to come.

Born in Brookville, Franklin County, Ind., April 10, 1827, Lew Wallace was the son of David Wallace, who was Governor of Indiana in 1837. He was studying law when the Mexican war broke out and enlisted in the First Indiana Infantry. After the war he took up the practice of law in Crawfordsville. For four years he served in the Indiana State Senate. He was a Democrat then, but he left the party shortly before the war broke out. Governor Morton called upon him to raise six regiments in response to Lincoln's call for volunteers, which he did, and went to the front as Colonel of one of them, which he himself uniformed. He was speedily promoted to a brigadier generalship and commanded the center wing of the army at Fort Donaldson. So conspicuously did his ability shine on this occasion that he was promoted to a major generalship and commanded a division at Shiloh and Corinth. He saved Cincinnati from capture by Gen. Kirby Smith in 1863. With 5,800 men he intercepted the march of Gen. Jubal Early, who had 25,000 men, preventing his entrance into Washington, and in July, 1864, fought the battle of Monocacy, which resulted in a Union defeat. Gen. Halleck promptly relieved Wallace of the command of the Eighth Army Corps, but he was reinstated by order of Gen. Grant, who declared that Wallace's generalship at Monocacy was beyond criticism. He was one of the members of the court that tried the assassins of President Lincoln. He was Governor of Utah from 1878 to 1881, and in 1881 was appointed minister to Turkey. While in Constantinople he became intimate with the Sultan, and studied Turkish character. After his return from Constantinople Gen. Wallace resumed his residence at Crawfordsville.

MEN WHO REFUSED TITLES.

Distinguished Englishmen Who Regarded Rank as an Empty Honor.

Not all Englishmen are seeking titles of nobility. At least there have been many subjects of the crown who might have worn coronets, but declined to accept them for varying reasons that were at least sufficient to themselves. The late William Ewart Gladstone was a notable example of the latter order of humanity, for the peerage which time after time was held out to him was always rigidly rejected.

Swinburne might have had a "Sir" before his name had he chosen to accept the baronetcy which was offered him some years ago, but with true democratic independence he refused to accept a title which, after all, could do little to enhance his fame.

Similarly, Mr. Watts, R. A., whose pictures are known the wide world over, could have ranked with Lord Leighton had not he stoutly asserted his objection to titles and elected to remain as he was.

Lord Tennyson, when first approached on the question of accepting a peerage, was strongly opposed to the idea, but eventually succumbed to the offer on the ground that his son would inherit the title and that he was therefore justified in taking it.

It is rumored that the late Professor Huxley was offered a knighthood by Mr. Gladstone—an offer which was politely but firmly declined. A similar honor was proposed to his distinguished contemporary, Professor Tyndall, and was also declined without hesitation.

It is an open secret that Charles Dickens might have added the word "bart" to his illustrious name had he chosen to do so.

A few years before the demise of Verdi, the illustrious composer, the late King Humbert sent for the maestro and offered him a dukedom in recognition of his services to music. Verdi refused the gracious offer with dignified courtesy, whereupon the king admitted that he was quite right.

"For," said his majesty, "all the titles in Italy could not make you greater than you are."

DR. ROBERT KOCH.

Discoverer of Phthisis Bacillus, and Foremost Bacteriologist of the Age.

Dr. Robert Koch, discoverer of phthisis bacillus, and who has announced that bovine tuberculosis cannot be transmitted to the human system, is regarded as the foremost bacteriologist of the age. He is 65 years of age, and at 29 was a country physician in a little German village, attending to rude farmers and peasants.

DR. ROBERT KOCH.

In 1880 he entered the University of Bonn as an assistant, and two years later made himself world famous by the announcement that he had discovered the bacillus of tubercle—the dread creator of consumption. The idea of innoculation followed in the train of his discovery, and patients flocked to his laboratory by thousands. He was appointed professor of hygiene and of bacteriology in the University of Berlin and given free scope to prosecute his studies of the cholera bacillus and other dread germs hostile to human life. Dr. Koch is as modest as he is famous.

Palms for Arid Plains.

The Department of Agriculture seems to entertain the belief that the date palm may solve the problem of what to do with the arid and alkali lands of Arizona, California and other Western States. Experiments have been made in the past by the department and experiment stations, but renewed interest is being taken by the section of plant introduction of the Department of Agriculture, and Prof. D. G. Fairchild, agricultural explorer for the department, now traveling in Africa, has procured a number of suckers, or offshoots, from the delta of the Nile, which he has shipped to the department and which will be distributed in the southwestern part of this country.

In the United States the date is an article of luxury, but in its native country it is a most important food, many regions in Arabia and the Sahara being uninhabitable but for the date palm. The United States annually imports nearly $1,000,000 worth of dates, but it is possible, the department believes, to raise all the dates needed in this country. The date palm, although grown profitably only in arid and semi-arid regions, is not in the proper sense of the word a desert plant. It requires a fairly abundant, and, above all, a constant supply of water at the roots, and at the same time it delights in a perfectly dry and very hot climate. The date palm is able to stand much more cold than an orange tree, but not so much as a peach tree.

Noisy Sunbeams.

Fill a glass vessel with lampblack, colored silk or worsted. Focus the rays of the sun in a lens—that is, hold a magnifying glass so that the rays pass through it before they fall on the glass vessel. Then revolve in the light, between the lens and the vessel, a disk with an opening or a slit in it, so that the light is alternately falling on the vessel and being shut out. Now listen, and you will hear a noise when the light passes through the slit, but there will be silence when it is shut out. You must place your ear close to the glass, holding the silk or other substance.

Another experiment is to use a prism instead of an ordinary lens. This makes a rainbow, and as the rays pass through the slit it is possible to tell that some parts of the solar spectrum—as it is called—produce a sound as they fall on the glass vessel, while other parts have no effect.

The Museum Beetle.

The museum beetle is as queer a fellow as the bookworm. He lives in museums only and eats exhibits. Wool, furs, bric-a-brac, wood, pictures, chemicals—anything which a museum contains is fare for the museum beetle, and he often does great damage to collections. He is small and dust-colored. Caretakers know him well and are ever on the lookout for him, but despite their zeal he manages somehow to thrive and multiply, and there is probably not a museum in the land that is not pestered with him.

Light Bad on the Eyes.

By the advice of eminent oculists the authorities of Munich have decided no longer to use gas or petroleum for lighting schoolrooms.

SULTAN IN DANGER.

POWERFUL PARTY CLAMORS FOR HIS RETIREMENT.

Would Place on the Throne the Former Sultan, Murad V., Who Has Been Confined in a Prison Palace for Twenty-five Years.

The efforts being made to release from captivity a former Sultan of Turkey, Murat V., who has been confined in the palace of Cheragan since his deposition in 1876, recall an interesting chapter of political life in that wonderful city of intrigue, ambition, love and cruelty, Constantinople. From its very foundation, Constantinople has been the theater of much that was tragical and much that was melodramatic, yet no period is of more absorbing interest to the student of history than that covering the reign of the last three Sultans, Abdul-Aziz, Murat V. and Abdul Hamid II., whom an English poet has called Abdul the Damned.

MURAT V.

The story opens in 1861, when the Sultan Aziz, the representative of the Young Turkey party and consequently of progress and advancement, ascended the throne. The beginning of his reign was marked with many evidences of modern advancement. He established free schools, built railroads, founded a navy, and in many other ways evidenced his appreciation of the spirit of modern progress. As a reformer he desired to visit other European countries to study conditions and determine how far their application might be made at home. He evaded the Mohammedan law which declares that all the ground upon which the Sultan treads must be his own by having Turkish earth placed beneath the soles of all his boots and shoes. But his junket turned out sadly. He acquired a hatred for European civilization and on his return home he dismissed all his liberal ministers, spent the nation's money like a drunken spendthrift, sent all over the world for the most beautiful women for his harem and devoted himself entirely to pleasure. He developed a mania for building palaces because of a prophecy that when he ceased building then would he die. After five years of idle and licentious life he was aroused one day by being told that he was Sultan no longer. He and his mother and fourteen of his wives were conveyed to the old seraglio and the Young Turkey party placed his nephew, Murat V., on the throne.

ABDUL-HAMID.

A Second Dethronement.

Much was expected of Murat. He had received a liberal education, was

PRISON OF SULTAN MURAT V.

known to be favorably inclined to western civilization, and the reform element confidently expected the establishment of a constitutional government. But it was not to be.

A few days after the ascension of Murat the ex-Sultan, Aziz, died. He became Azizat, either by assassination or through suicide. The latter theory was held by some, the former by others, among them one Tcherkess Hassan, whose sister was the favorite wife of Aziz. Hassan set out on a tour of revenge. He armed himself with a revolver and a knife and forced an entrance into the Beylerbey Palace, where the ministers of the Young Turkey party were in session. Before he was disarmed he had killed seven persons and wounded eight others. Next day he was hanged.

The reform party was completely disorganized by the killing and wounding of so many of their ablest members and the Old Turkey party, or reactionaries, seized the reins of power. They deposed Murat V. and placed Abdul Hamed, his brother, on the throne. Murat has since been confined in the Cheragan palace.

After the lapse of so many years the reform party are plotting for the forced retirement of the present Sultan and the placing of Murat on the throne. They have a fair chance of succeeding. Abdul Hamid has made a sorry ruler, and there is a strong belief in Turkey that a change of rulers would be beneficial. The present Sultan has spent more money on his harem than on his army and navy. He has reduced the peasants to abject poverty and the country has been going from bad to worse since his enthronement. He lives in perpetual fear of assassination and at any time one may hear of his passing away.

WAGON-LOADING ATTACHMENT.

In excavating dirt in large quantities it is common practice to use teams and scrapers to draw the dirt to a dump, or else to employ a large number of men to shovel the dirt into carts to be drawn away. The former method is slow work, in view of the small loads which can be taken, while the latter is expensive because of the cost of labor and the necessity of keeping the teams idle while the loading is going on. Adam Gehringer, of Philadelphia, Pa., has just patented an apparatus which should overcome these objections, a picture of his invention being shown herewith. It consists of two traction wheels, supporting a steel frame, on which are mounted three buckets on an endless chain. The lower part of the frame is scoop-shaped, to take up the dirt, and the buckets revolve through the back portion of the scoop to receive the load which is to be elevated to the wagon. All that is necessary is to attach the loader to the cart by a short chain and start the horse, the man at

SHOVEL AND ELEVATOR COMBINED.

the handles guiding the elevator into the proper position to discharge the dirt into the wagon. There is nothing complicated about the apparatus, and it is not liable to break or get out of order.

ONLY 48 1-2 INCHES TALL.

A Diminutive Specimen of Humanity Now in a Hampshire Town.

The smallest man in New Hampshire and one of the most diminutive in the United States is Archie L. Brown, of Goffstown, who boasts a stature of but 48½ inches and who weighs only 90 pounds.

A. L. BROWN

Mr. Brown was born in Marlboro, Mass., July 18, 1876. His parents are of average height and no other in the family differs in physical appearance from mankind generally. He has lived in Brockton and Boston, Mass., and appeared in all the theaters of the latter city. His feet and hands correspond in size with the rest of his body, he wearing a child's size shoe, No. 10, and a No. 5 glove.

The dwarf is of a musical turn of mind and plays with skill upon the banjo, organ and zither. Also, he is a pleasing speaker and frequently entertains large assemblies. He is able to support himself by selling popcorn and does a thriving business. Mr. Brown is a member of the Epworth League and the Sons of Veterans.

The Bridge-Builder.

In a series of articles on "Careers of Danger and Daring," in the St. Nicholas, the description of the bridge-builder is mostly confined to the workmen on the great bridge over the East River, New York. It is nerve-testing even to read of the hazards which these men run. A foreman speaks of them thus:

"See those timbers right at the top that come together in a point? Well, the boys walk those cross-timbers all the time. It's nothing on the ground, but up there with the wind blowing—well, you try it!

"I saw one fellow do a thing that knocked me. He stopped half-way across a timber not over eight inches wide, took out his match-box, stood on his right foot, lifted his left foot, and struck a match on his left heel. Then he nursed the flame in his hands, got his pipe going good and walked across the timber."

"Why didn't he wait to light his pipe until he got across?"

The foreman shook his head: "I give it up. He just happened to think of it then, and he did it."

Mr. Thommason's Troubles.

When I came home yesterday the maid met me at the door.

"Mr. Thommason," she said, "some one with a bill was here yesterday."

I glanced in the parlor and saw that the room was full of neighbors.

"Some one with a bill?" I queried; "was it the lawyer?"

"No," answered Marie, with a smile, "it was the stork."

I have since heard that some people say that the dialogue between the maidservant and myself was arranged beforehand, so as to give out the impression in the neighborhood that I was a wit, but that's a lie.—Indianapolis Sun.

Honesty a Primary Requisite.

Brains and great executive ability are potent factors in a man's success, but without the firmest and most thoroughly grounded principles of cardinal honesty they are factors which cannot make for success. It is the combination of great ability and sterling integrity that places men in control of large interests and keeps them there.—Ladies' Home Journal.

To Make Good Tea or Coffee.

To make good tea and coffee the water should be taken at the first bubble. Remember, continued boiling causes the water to part with its gases and become flat. This is the cause of much bad tea and coffee.—Ladies' Home Journal.

When people discover a man's weakness they hit it every time they shoot.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

Issued Every Friday

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, DECEMBER 27.....1901

There is to be another whisky trust, but there is no danger that the beverage will be placed beyond the reach of the masses.

The censure passed upon Schley by the marjority of the inquiry court was of the red tape sort. Admiral Dewey cares little for red tape He judges by results.

Senator Hanna receives more mail thanany other Senator. It averages three bushels a day. Apparently a great many people believe that Mr. Hanna is still it.

It costs the government eight times more to carry the mails than it costs the express companies to have their matter hauled. Postmaster Smith should animadvert on this fact.

The pleasure of these sunny days in California is marred a little by reading about the fearful snowstorms in the East and learning what o ls o ne Americans are who stay in such a blizzard blasted land when they can come West and frolic.

The San Francisco Call is shocked to find an anti-monarchical sentiment among the miners in the Yukon territory, but this is not surprising for the Call is one of the papers that is grieved to find an anti-imperialistic sentiment in the United States,

The proposed tariff commission will serve a two-fold purpose—it will make a place for political favorites at good salaries but more than that, it will give Congress an excuse for postponing an action demanded by the people and opposed by the trust beneficiaries of the tariff.

Admiral Schley can afford to take the mild censure of Admirals Benham and Ramsey, since he has the indorsement of Admiral Dewey. The country will accept the judgment of the hero of Manila bay in preference to that of men who may yet hope for favors from the navy department.

Secretary Gage has recommended the repeal of what are known as the "miscellaneous war taxes." He says "they are in their nature vexatious, in some instances oppressive, and separately considered yield but small revenue." The recommendation suits the country and Congress should live up to it.

A statistician estimates that if all the armies of Europe were drawn up in a long procession, with their artillery, baggage-wagons and other equipments, the line would extend for upward of 24,000 miles, or virtually form a continous array all round the globe; and that is the kind of military ring the workingmen of Europe have to support.

The Carson News says, "protection is a defensive and not an offensive policy." That depends upon how it is applied. When it enables a domestic trust to sell at a profit its products in a foreign country for less than it charges home consumers, it can hardly be regarded as defensive of the pockets and purses of those who pay the premium.

The New York Journal prints an article describing the plans for the laying of the Pacific cable, eight thousand miles long, from San Francisco to Manila by way of Guam and Honolulu. The article says that the laying of the cable is assured, the Pacific Commercial Company, John W. Mackay, president, having been organized to put it down. The cost will be about twenty million dollars.

The President can extend the scope of civil service examination almost indefinitely without further legislation. He can by personal influence, compel cabinet officers and bureau heads to observe the spirit of law strictly instead of hiding evasion of it under the letter. He can do much to protect them as well as himself from the continual solicitation of members of congress, which is the most hostile influence the civil service has to fear.—Minneapolis Tribune.

That no definite action was taken at the meeting of representatives of the refining companies respecting prices of lead is evidenced in the report telegraphed from New York last Tuesday, in which it was stated that the "price is now $4. The report sent out last week was that a price of $3.50 had been agreed upon. A second report from New York received last Wednesday states that at a meeting of the Executive Committee of the American Smelting and Refining Company, it was decided to cut the price of lead from 4.37½ cents a pound to 4 cents.

The national irrigation movement is gaining much headway. The President's message and the annual report of the Secretary of the Interior have very recently called the attention of the whole country to the importance of the subject, and strongly urged that Congress should take action upon it—the reclamation of the arid public lands, so as to open them up to home builders, having been endorsed in the platforms of both the great political parties in the last national campaign. In a nutshell, the central and controlling motive and object of the national irrigation movement is to create millions of happy and prosperous American homes in parts of our territory now utterly desolate and uninhabitable, and to do this in a way that will, beyond all question, benefit every class of our people and every section of our country. The movement is gaining strength with remarkable rapidity as its objects are coming to be generally understood throughout the country.

PUZZLES FOR JUDGES

SIMPLE WORDS THAT HAVE TANGLED UP ENGLISH COURTS.

Some Terms of Almost Everyday Use That Proved to Be Too Profound For the Intelligence of the Learned Bench and Bar.

In a case that came before a famous lord justice some time ago the counsel for the prosecution in the evidence had to mention a "blouse."

The judge asked what a blouse was, and it was explained that this was part of a lady's dress. But the case came to a dead stop for the time, for the judge did not know which part, and after some hesitation the barrister admitted that he wasn't sure. Several learned brothers gave their opinion, some opining a blouse was the upper half of a lady's costume, while others insisted it must be the lower half. The entire court, filled with learned celebrities whose heads held all the laws of Britain, from pitch and toss to manslaughter, argued it out, but nobody was sure. The judge thought it was the lower half, but a junior barrister who had lately been married said he thought that that half was called a skirt, but did not feel certain. At length a lady was called, who set the court right.

Another odd dilemma happened not long ago when in the Hobson "horse faking" case the word "fetlock" arose. A fetlock, as everybody knows, is the ankle of a horse. The court asked what it was, however, and the prosecuting counsel was nonplused. The witnesses were out of court save one, and he knew nothing. The judge thought a fetlock was a sort of hind knee, otherwise "hock," but one learned brother was quite certain it was the lock of hair that hangs over a horse's forehead. The defendant's solicitor opined it was that part of the harness which slips over the tail, the crupper, and another legal celebrity agreed with the judge. Finally the court had to call a stable groom to clear up the mystery.

In a case that was settled some years since the recorder was brought up short by a phrase used by the counsel for defense, who spoke of a transaction concerning a pound of "blacklead." This is a common and useful article, but the counsel on being asked to explain its nature said it was a black substance used for boot polishing. The recorder thought it was a mineral used in lead pencils, but another barrister asserted it to be a "tough kind of lead used for roofing houses." The case was brought to a standstill, and one lawyer, unsurpassed in legal knowledge, declared that blacklead was a slang term for pig iron as produced in the north country. A fourth expounder of the law vaguely suggested it was the opposite of white lead, and finally a domestic servant put the court right, and the assembly at last learned that it was used for blacking stoves.

Another dilemma was produced a little while ago on the western circuit by the introduction of the words "dry nurse" in an address to the court. This bewildered the judge, who asked if a dry nurse was a nurse who dried babies after they had been washed. That solution did not occur to the learned counsel, who, after some hesitation, said he thought it meant a nurse who was not addicted to drinking and therefore most suitable to look after infants. Nobody seemed to know what the term really meant, though several more guesses were made, the last of them that a dry nurse was one who could not amuse children.

The court was again nonplused by a statement made that somebody concerned in the case supposed to suffer from melancholia was really "as jolly as a sandboy." The judge wanted to know what a sandboy was in order to form some idea as to the exact degree of jollity involved. The counsel could not tell him, though one suggested it was a boy who sanded the roads and the other thought it might be a lad building sand castles on the seashore. The whole court stopped to discuss what a sandboy was and why he was jolly, but they could not solve the problem.

It is hardly believable that anybody should not know what a "snaffle" is, but a London magistrate recently desired to be informed, and nobody could tell him what a snaffle might be. A solicitor thought it was the same thing as the "curb," and the clerk had an idea it was a kind of cold in the head which horses caught, causing them to snuffle a good deal.—London Answers.

A Famous Temple.

The most magnificent work of architecture in the world is the Taj Mahal, in Agra, Hindustan. It was erected by Shah Jehan to the memory of his favorite queen. It is octagonal in form, of pure white marble, inlaid with jasper, carnelian, turquoise, agate, amethysts and sapphires. The work took 22,000 men 20 years to complete, and though there were free gifts and the labor was free the cost is estimated at $10,000,000.

Helping Him.

Mr. Backward—Well—er—yes, since you ask me, I was thinking of consulting a fortune teller.

Miss Coy—To find out whom you will marry, eh?

Mr. Backward—Why—er—yes. I—

Miss Coy—Why not ask me and save the fortune teller's fee toward the price of the ring?—Philadelphia Press.

An Order Could Be Filled.

Customer (in Boston restaurant)—Waiter, have you any fried eels?

Waiter—We have eels, sir, and they are susceptible of being fried.—Leslie's Weekly.

The first mention of stamps is in the letters of the old Bishop Synesius of Cyrene, on the Greek coast of Africa, 400 years after the Christian era.

PERT PERSONALS.

A few weeks ago John L. Sullivan wanted to fight Spain. Who has tied him?—Chicago Times-Herald.

Edna Wallace Hopper, having legally eliminated her last name, is no longer a "grass" Hopper.—Chicago Times-Herald.

John Shoemaker and Ella Glew were married in a Denver suburb last Sunday. Ella will no doubt stick to him until the last.—Denver Post.

While not an impartial participant in the proceedings, Don Carlos manages to attract a great deal of attention by his performance on the coach line.—Washington Star.

REVEALMENT.

Let me tell how rhythm with its rhyme should row:
As the laugh of leaves when soft zephyrs blow;
As the waves with gracile hand
Write their names upon the sand.

Let me tell how music with its verse should mate:
As the dark with dawn, rapt, inviolate;
As the soil and sun disclose
Sweet communion in a rose.

Let me tell how fancy from the heart should leap:
As the cloud full fraught rises from the deep;
As the spring at God's behest
Wakes, and, lo, the world is blest!

—Clarence Urmy in Independent.

ON THEIR SEA LEGS.

Cattle and Horses Do Not Get Frightened In Rough Weather.

"Do the horses and cattle get frightened and make much disturbance in rough weather?" asked the writer of a New York dealer who ships cattle abroad.

"Bless you, no. They've got sea legs that would put an old salt to shame. Occasionally a horse will lose his ballance, but a bullock is the greatest balancer you ever saw. They are knowing brutes too. You know, we put them four in a pen. Well, you'll never find all four standing up or lying down at one time. They figure the thing out and decide how they'll get the most room and most comfort. So two of them stand up while two lie down. When they get tired, they shift the watch.

"The horses like to be talked to when there's a big sea on and things are pretty lively. They always like certain men better than others. So do the cattle. We have one man who can do anything with them. Every bullock and horse on the boat knows him by the time we've been out two days. He comes in handy when there's an accident.

"It's mighty seldom that a serious accident happens nowadays, but once in awhile a horse or a bullock does get thrown and breaks a leg or does some bad damage. We don't carry a veterinary. The men know as much about ordinary cattle and horse ailments as any vet, and if one of the brutes breaks his leg there's nothing for it but to kill him. A veterinary couldn't do anything for him.

"The company charges from $6 to $20 a head for carrying cattle and from $27 to $250 a head for horses. When the government inspectors stopped overcrowding, they cut down the carrying capacity of some boats 75 head. That made a pretty big hole in the ship's profits in the course of a year."—Exchange.

Lincoln's Swear Word.

One story that is told of Lincoln relates to that extreme, correctively critical attitude which Secretary Seward always maintained toward the president.

Mr. Lincoln and the secretary had managed to escape from a man who had been boring them, and as they reached the house the president threw himself into an armchair and exclaimed:

"By jings, governor, we are here!"

Mr. Seward replied by asking in a reproving tone:

"Mr. President, where did you learn that inelegant expression?"

Mr. Lincoln immediately turned to several young men who had entered the room in time to hear the exclamation and said:

"Young gentlemen, excuse me for swearing before you. 'By jings' is swearing, for my good old mother taught me that anything that had a 'by' before it is swearing. I won't do so any more."—Youth's Companion.

Only Sunburned.

Last summer two little girls in a College avenue family were repeatedly remonstrated with by their indulgent mother for playing bareheaded in the sun. "You will be burned so badly," said she to them finally, "that people will think you are black children." Her warning had little effect, however, and she gave up trying to keep their hats on.

One day she sent them to a neighbor a block or so distant to make some inquiries concerning a washwoman. Mrs. S., the neighbor in question, mistook them for the children of a Mrs. Black who lived in another street nearby.

"You are the little Black children, are you not?" she asked.

"Oh, no," came the prompt response from the elder. "Only sunburned."—Indianapolis News.

Wonderful Stones.

The brain of the tortoise was supposed to contain a wonderful stone which was efficacious in extinguishing fire and when placed under the tongue would produce prophetic inspiration. Another stone possessing the latter property was to be found in the eye of the hyena. The head of the cat, however, was thought to contain what would undoubtedly have been the most wonderful and most desirable treasure of all could it have only had a real instead of an imaginary existence, for that man who was so fortunate as to possess this precious stone would have all his wishes granted.—Chambers' Journal.

A RARE VOLUME BY PENN.

Only Known Copy Is Owned by Quakers In Philadelphia.

The only known copy of Penn's issue of "Magna Charta," published in 1687 by the Bradford Press, is the property of the Meeting For Sufferings, a representative body of the Friends' yearly meeting in Philadelphia. Its title is "The Excellent Privilege of Liberty and Propriety; Being the Birthright of the Freeborn Subjects of England." The copy is not generally open to the public.

The peculiar significance of this book is that a half dozen years after Penn founded his colony he wished to have the colonists keenly realize that they would have to stand for their rights in the new country as well as the old, where they had been so cruelly persecuted. He wrote this book in order that they might be informed on the constitution of their local government and know what were the legal bases of their rights as citizens.

Curiously enough the only proof there is that this work was William Penn's is the statement made by Chief Justice David Lloyd in 1728, a great Quaker leader who was Penn's attorney general at the time the book was issued. Chief Justice Lloyd was also at that time an intimate friend of William Penn and consequently knew whereof he spoke.

The volume was reproduced in facsimile by the Philobiblon club in 1897 for a limited number of subscribers. The original volume, however, must always remain the rare thing that it is, one of the best expressions of liberty under law that the mind of the great founder could conceive.—Philadelphia Press.

After a Struggle.

"Georgie," said a fond mother to a little 4-year-old, "you must take the umbrella to school with you, or you will get wet. It rains hard."

"I want the little one," he said, meaning the parasol.

"No, my dear. That is for dry weather. You must take this and go like a good boy."

Georgie did as he was bid and got to school comfortably.

After school hours it had stopped raining, and Georgie trudged home with the remnants of the umbrella under his arm.

"Oh, Georgie, what have you been doing with my umbrella?" said his mother when she saw the state it was in.

"You should have let me had the little one," said he. "This was such a great one it took four of us to pull it through the door."—Leslie's Weekly.

Muzzling the Ox.

One morning our washwoman, a lady of color—very dark color—came hastily in and, without any preliminaries, exclaimed: "Sparatualism? What is sparatualism, Miss Coga?"

My sister explained as well as she could and asked why she wished to know.

"Well, you see," she went on excitedly, "Sarah—she's my daughter, you know, and she went last week to live with a lady what says she is a sparatualist, and she says if Sarah takes anything she'll know it. Sarah's going to leave!"—Harper's Magazine.

The heaviest precious stone is the zircon, which is 4½ times heavier than an equal quantity of water. The lightest is the opal, only twice as heavy as water.

F. A. WERMAN, OF BALTIMORE, SAYS:

BALTIMORE, Md., March 30, 1901.

Gentlemen:—Being entirely cured of deafness, thanks to your treatment, I will now give you a full history of my case, to be used at your discretion.

About five years ago my right ear began to sing, and this kept on getting worse, until I lost my hearing in this ear entirely.

I underwent a treatment for catarrh, for three months, without any success, consulted a number of physicians, among others, the most eminent ear specialist of this city, who told me that only an operation could help me, and even that only temporarily, that the head noises would then cease, but the hearing in the affected ear would be lost forever.

I then saw your advertisement accidentally in a New York paper, and ordered your treatment. After I had used it only a few days according to your directions, the noises ceased, and to-day, after five weeks, my hearing in the diseased ear has been entirely restored. I thank you heartily and beg to remain Very truly yours,

F. A. WERMAN, 739 S. Broadway, Baltimore, Md.

Our treatment does not interfere with your usual occupation.

Examination and advice free. YOU CAN CURE YOURSELF AT HOME at a nominal cost.

INTERNATIONAL AURAL CLINIC, 596 LA SALLE AVE., CHICAGO, ILL.

LECAL.

Application for Patent.

NOTICE OF APPLICATION OF THE Inyo Marble Company of California, a Corporation, for a United States Patent.

INDEPENDENCE, CAL., Nov. 16, 1901.

NOTICE IS HEREBY GIVEN THAT IN pursuance of Chapter Six of Title thirty-two, of the Revised Statutes of the United States, the Inyo Marble Company of California, a corporation organized and existing under and by virtue of the laws of the State of California, whose Post Office address is Room 31, 10th Floor, Mills Building San Francisco, Cal., claiming 120 acres of the mineral deposit bearing marble, lying and being situated within the Mining District, County of Inyo and State of California, has made application to the United States for a patent for the said mining claim, which is more fully described as to metes and bounds by the official plat herewith posted, and by the field notes of survey thereof, now filed in the office of the Register and Receiver of the U. S. Land Office at Independence, which field notes of survey describe the boundaries and extent of said claim on the surface, with magnetic variation at fifteen degrees thirty minutes East in June, 1892, as follows, to wit:

Beginning at the original location corner at the N. E. corner of the S. W. ¼ of Section 14, Township 16 South, Range 37 East, Mount Diablo Meridian. Whence the ¼ Section corner between Sections 14 and 15 bears West 40.00 chains distant the ¼ section corner between 14 and 23 bears South 40.00 chains distant, set post 4 in. square 4½ feet long 12 in. in ground with rock mound marked 1. No. 1.

Thence, the magnetic variation being 15 degrees East, North 14.50 chains. To a 11 spur bears N. W. descending along West slope of spur, 40 chains, 2640 feet. No location corner to be found. At point identified by claimants set post 4 in. square 4½ ft. long 12 in. in ground with rock mound marked 1 No. 2

Thence deflecting to left 90 degrees, West descending 15.50 chains cross gulch 10 lks. wide, course North ascend 18 chains. Top of spur bears N. 50 degrees W. descend 27 chains, 1782 feet cross wash 25 lks. wide course S. 70 degrees W. 36 chains, 1980 feet. No location corner to be found. At point identified by claimants set post 4 in. square 4½ feet long 12 in. in ground with rock mound marked 1 No. 3, to sections 10, 11, 14, and to bears N. 89 degrees 30 minutes W. 10.00 chains distant.

Thence deflecting to left 90 degrees, South descending gradually 4.50 chains cross wash 25 lks. wide, course West and gradual descent. 16.00 chains top of low point of spur bears West gradual descent. 23.50 chains S. W. corner boarding house bears S. 50 degrees 30 minutes E. 9 chains. 24.00 chains S. W. cor. lodging house bears S. 61 degrees 00 minutes E. 7.00 chains. S. W. corner of office upon which location notice is posted bears S. 81 degrees 00 minutes E. 9.00 chains S. W. corner of blacksmith shop at upper excavation of quarry bears N. 61 degrees E. 7.50 chains 40.00 chains, 2640 feet to original location corner set post 4 in. square 4½ feet long in rock mound which I marked 1 No. 4.

Thence deflecting to left 90 degrees, East 2.75 chains road from excavation at quarry bears N. and S. 4.50 chains cross railroad side track from quarry connecting with main line of the Carson and Colorado railroad bears N. 18 degrees 30 minutes E. and S. 18 degrees 30 minutes W. 7.75 chains. Road to quarry bears N. W. and S. E. 10.00 chains S. W. corner of boarding house bears N. 9 degrees 30 minutes W. S. W. corner of blacksmith shop at excavation at upper quarry bears N. 10 degrees W. 20 chs. excavation at lower quarry bears N. 8 degrees W. 19.00 chs. excavation at upper quarry 150 ft. above lower quarry bears N. 11 degrees W. 21.00 chs. 13.00 chains cross railroad switch track from office to upper marble quarry N. W. and S. E. 19.00 chains excavation in deposit of marble 10 lks. to left. 40.00 chains, 1980 feet to corner No. 1, at place of beginning.

Containing an area of 120 acres.

The said mining claim being of record in the office of the Recorder of Inyo county at Independence in the County and State aforesaid in book "F" Land, Water and Mining Claims, p. 271, said mineral deposit being shown upon the plat posted herewith, as near as can be determined from present developments. This claim being for 120 acres of the surface ground shown upon the official plat posted herewith, the said claim being designated as Lot No. 37 in the official plat posted herewith.

Any and all persons claiming adversely the mining ground, premises, or any portion thereof so described, surveyed, platted and applied for, are hereby notified that unless their adverse claims are duly filed according to law, and the regulations thereunder, within the time prescribed by law, within sixty days from the date of the first publication hereof, with the Register of the U. S. Land Office at Independence, in the State of California, they will be barred, in virtue of the provisions of said Statute.

It is hereby ordered that the foregoing notice be published in the Inyo Independent, a weekly newspaper published at Independence, Inyo County, California, for 60 days (10 weeks) which paper I hereby designate as the paper published nearest said land.

S. W. AUSTIN, Register.

First publication, November 22, 1901.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

W. E. Pedley, Plaintiff, vs. William Remsen, Peter A. Graff, Yellett D. Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company a Corporation, Surprise Canyon Mill and Water Company a Corporation Richmond Mining and Milling Company, a Corporation, John Doe, Richard Roe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

The People of the State of California send Greeting to William Remsen, Peter A. Graff, Yellett D. Dechert, Nelson G. Fairman, Surprise Mining and Milling Company, a Corporation, Inyo Consolidated Mining Company, a Corporation, Surprise Valley Mining and Water Company, a Corporation, Surprise Canyon Mill and Water Company, a Corporation, Richmond Mining and Milling Company, a Corporation, John Doe, Richard Doe, Charles Doe, John Roe, Richard Roe, Charles Roe, Bartholomew Doe, Anson Doe and Robert Doe, Defendants.

You are hereby required to appear in an action brought against you by the above-named plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein within ten days (exclusive of the day of service) after the service on you of this Summons—if served within said County; if served elsewhere within thirty days.

And you are hereby notified that if you fail to so appear and answer the Plaintiff will take judgment for any money or damages demanded in the Complaint, as arising upon contract, or will apply to the Court for any other relief demanded in the Complaint.

Witness my hand and the seal of said Superior Court of the County of Inyo, State of California, this 15th day of October, A. D. 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] In the Superior Court of the County of Inyo, State of Cal.

W. E. Pedley, Plaintiff vs. William Remsen, et al., Defendants.

Summons.

W. A. HARRIS, 508 Stimson Building, Los Angeles, Cal., and MACK & FORBES Independence, Cal., Attorneys for Plaintiff.

NOTICE OF ASSESSMENT.

INYO MARBLE CO., OF CALIFORNIA.

Location of principal place of business, San Francisco, California. Location of works, Inyo Inyo county, California.

NOTICE IS HEREBY GIVEN, that at a meeting of the Board of Directors, held on the 29th day of November, 1901, an assessment, No. 39, of five (5) cents per share was levied upon the capital stock of the Corporation, payable immediately in United States Gold Coin, to the Secretary, at the office of the Company, Room 31, 10th Floor, Mills Building, San Francisco, California.

Any stock on which this assessment shall remain unpaid on the 15th day of January, 1902 will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Monday, the 10th day of February, 1902, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

CHARLES E. ANDERSON, Secretary.

Sunday school at 10 o'clock a. m. Let the children all come. Everybody invited to the services.

RICHARD FYSH, Pastor.

BORN.

COE—At Big Pine December 26, 1901. to Mr. and Mrs. J. H. Coe, a son.

DIED.

TRASK—At Camp Independence, December 20, 1901, Marvin W. Trask, a native of Missouri, aged 52 yrs.

GREGG—At Big Pine, Cal., December 24, 1901, Stephen Gregg, son of Mr. and Mrs. S. G. Gregg, aged 22 yrs.

J. E. Parker has gone to Tonopah.

Charley McKay was down from Bishop early in the week

The Board of Education met in regular session this morning.

John J. Valentine, president of the Wells Fargo company is dead.

W. A. Tricky, of Bishop has been spending several days in town.

Ered Stewart came up from Keeler to attend the meeting of the Board of Education.

J. L. Frost, who has been clerking for Mrs. N. Rhine, left for San Francisco this week.

A man named Fry passed through town this week with an eight-horse team en route for Tonopah.

Black Jack has now got a new $75 phonograph and the small boys are correspondingly happy.

Mrs. Mamie C. Clarke is visiting with friends at Independence. She expects to return to Bishop to-morrow.

John Strohmeyer got in from Mojave with the big team on Wednesday. He had on over eight tons of freight.

Work on the Black Eagle mine has been temporarily suspended and the men came to town last Saturday to spend the holidays.

Several couple from Independende attended the ball at Lone Pine Christmas night, and all report having had a most enjoyable time.

A play and a minstrel show are in course of preparation and will be given soon, but the date of each has not yet been decided upon.

Dr. Clifford Baxter D. D. S., has opened his office in the Independence Hotel. Anybody requiring dental work done will find him there.

Henry Levy expects to leave for San Francisco in a few days and will take a month's vacation. He will take his son Milt and place him in school there.

Hon. T. B. Rickey left Saturday for his home in Carson. Mr. Rickey says that his cattle are looking better than he ever saw them at this time of the year.

Walter Hanby got back from back from Bishop early in the week. He has been engaged to expert the county books under instructions from the grand jury.

George Parish passed through town yesterday with a six-horse team en route for Tonopah. Since leaving here about ten years ago he has spent several years in Central and South America.

John Schober came in last Monday from Mohave with an eight-animal team loaded with freight for Bishop. Mr. Schober has been teaming in the vicinity of Bakersfield for the past year.

Painter Reynolds with the assistance of Paul Mairs has about completed his job on the Court House. The building looks very much better both inside and out, the work exhibiting good taste.

Another long-lost mine has been found. This time it is the "Lost Dutchman." At the rate long-lost mines are now being found it will not be long before there will not be many more to find and seachers will discover themselves in the sad position of Othello—their occupation gone.

Bev. Hunter left for Florida yesterday with thirty head of horses and mules for that market. He expects to be gone about two months. He has made several trips to the South with horses and claims that even with the greater cost of freight he can do better there than he can in California.

The New Year Ball.

The social event of the season will be the Grand Ball at Mairs Hall in New Year eve.

The Cruz Orchestra of Lone Pine is especially engaged to furnish music for the occasion, which will ensure to the dancers, all that can be desired to pass a pleasant evening. Judging from the interest displayed by the ladies for the past week in the preparation of special gowns for the occasion, it is expected that the showing to be made will surpass that of the style exhibited on the opening night at Grau's Grand Opera. Among the special features of the evening will be a Minuet, to be danced by Mr. Dehy.

Among the costumes will be noticed the following:

Paul Mairs, black gown decollete trimmed with pink silk, ornaments a skinned heel; Ivan Bunney, white organdie and white slippers, hair dressed high to cover the cow-lick, ornament, a rabbit's foot; Howard Mairs, pink tulle with black velvet shoulder knots, ornament, a lonely blue-bell; Will Dehy, red organdie with red silk slip, ornament, a wish-bone; Lester Laird, black organdie, decollete, trimmed with berthe of red roses, jewels opals and pearls; Norm. Mairs, pink nuns-veiling, ornament, a single white rose; Guy Reed, black skirt and fancy white bodice, ornament, a glass eye; Julian Eibeshutz, pink taffeta waist with kangaroo dip, black skirt, hair pompadour, ornaments, cold feet; Chas. Mulholland, yellow crepe de chine, with red hair ornament and freckles to match; Otto Bradshaw, pale blue silk, edged with swans-down, a curry-comb fan: Pete Mairs, cream colored chiffon with black velvet bolero, ornament, a marble heart; Jacob Vagt, baby blue grenadine, ornament, a fetching smile; Louis Schabbell, black velvet and point lace, ornament, a stove lifter; John Bell, white flour sacking with draw string at the neck, ornament, a graceful carriage.

The Grand March will start promptly 8:30 p. m. and will be led by Mr. Paul Mairs.

The affair will pe in charge of the following committees:

General Manager, Chas. Mulholland. Floor Directors, Paul Mairs, Jake Vagt. Caller, Harry Cook. Tickets, $1.50.

Supper at the Norman House.

Chistmas Tree.

The church was filled to overflowing Christmas eve with folks old and young, for this was the time when peace and goodwill brings all together in a spirit of good-fellowship. A stately pine that had sighed and whispered to itself for years up on Mt. Kearsarge, was now surprised to find itself the center of an admiring crowd. A hundred tapers glimmered on its green branches and it was heavily laden with a lot of pretty toys to gladden the children's hearts. Perhaps what pleased the beautiful tree most was the ecstatic gaze of a hundred children and and a tremor of delight stirred the boughs when Santa Claus himself pronounced her a thing of beauty. Though many a longing look was cast treeward and some of the program fell on deaf ears, the children were good while the following was rendered.

Voluntary ..... Wm. Rasmussen

Solo ..... Irma Webb
Recitation ..... Lulu Moffatt
Song ..... Children
Recitation ..... Freda Rhine
Arrival of Santa Claus and distribution of gifts.

Stevie Gregg Dead.

Stevie Gregg, son of Mr. and Mrs. S. G. Gregg, died at Big Pine last Tuesday. The primary cause of his death was Brights disease, from which he has been suffering for several years. He contracted pneumonia whice hastened his end. Stevie was an amiable boy with a kind and lovable disposition. We knew him from infancy and he was always one of our prime favorites. His early childhood was passed at Independence and his former schoolmates received the news of his death with sincere grief. The bereaved parents have the heartfelt sympathy of this community.

Marvin W. Trask died at the Hospital last Friday and was buried in the Odd Fellows cemetery at Independence on Saturday; the deceased was an old resident of this county. He had been ill for a long time and his death was not unexpected. A brother lives in San Francisco and the burial arrangements were made under telegraphic instructions from him.

Inyo Lodge No. 221, F. & A. M. at its regular meeting held last Saturday evening, elected the following officers to serve for the ensuing Masonic year: Thomas C. Boland, W. M.; Irving H. Mulhollond, S. W.; John S. Gorman, J. W.; John E. Meroney, Sec.; Omie I. Mairs, Treas.

John Baxter got back from Los Angeles last Tuesday and is greatly improved in health. He consulted Dr. Bicknell and by his advice underwent an operation for hydrocele at the California Hospital. Mr. Baxter speaks very highly of the treatment he received there.

The trouble which has been experienced in securing twelve men to try the alleged Modoc lynchers is probably explainable on the presumption that the citizens called upon to perform the duty fear that they will be a hung jury in the end.

Look out for your water pipes. A heavy frost is predicted for to-night. The weather report shows that we are considerably short on water supply. The lack of rainfall begins to look serious.

Prof. Thomas Cara will be in town on Monday and Tuesday of next week. The Proffessor is a first class piano tuner and will tune your piano for $8.

Tonopah Production.

The ore production of Tonopah has blocked every smelter on the Pacific Coast. Selby is flooded with the rich ore of this camp and gave orders to ship no more. The smelters of Everett and Tacoma have enough on hand to keep them busy for two months to come, and the orders have been received to "ship no more for the present; our yards are piled high with Tonopah ore."

The Company has just made arrangements with Captain Davis of the Black Point mill at Dayton to run his mill exclusively on the ores ot this place. Mr. Davis has leased a nearby mill and will in a few days drop its stamps on Tonopah rock. There is enough ore now upon the dumps to keep a 90-stamp mill running steadily for one year. Tonopah bids fair to outrival Nome in richness, and in production the famous Treadwell of Alaska will have to look to its laurels. Before another year shall have elapsed Tonopah's bullion production will be the largest of any mining district in the world. To-day its wealth is fabulous and with the proper machinery to develop and penetrate the bowels of this district its production will increase millions of dollars. The Comstock has yielded over six hundred and fifty millions of dollars. Tonopah will do better than that.—Bonanza.

Fr m Tonopah

J. S. Stotler came down from Tonopah yesterday and will visit Ballarat and Los Angeles before returning. He says that John McSweeny and Neil McLean are doing very well in the teaming business. Just now there is a stagnation in business owing to the fact that the smelters are choked up with Tonopah ore and the producers cannot get return on their product. It has been found impracticable to work the ore in the Dayton mills. At Sodaville the platforms are all full and thousands of tons of $200 ore are piled up in the sagebrush. The same condition prevails at Candelaria. At the mines the leasers only have sacks enough to make an outside wall, the interior space being piled full of high grade ore loose. The Company is building concrete foundations and installing new machinery with which to sink two double compartment shafts to a depth of 500 feet. He estimates that there is $4,000,000 of ore piled up on the dumps. Golden, and others who have the means, will doubtless install plants for treating their low grade ores, while the small leasers will probably sell to the Company. A new hotel is about completed and will be open for business in about two weeks. Mr. Stotler says it is by far the greatest camp he ever saw.

Hotel Arrivals.

The following persons registered at the local hotels during the week:

NORMAN HOUSE.

N. M. Hollinay, Los Angeles, Geo. McConnell, Keeler, Dr. J. P, Porter, wife and daughter, S. F., R. L. Charles, wife and daughter, S. F., Prof. Thos. Cara, Reno, Dr. J. M. McArthur, Isabella, C. F. Meyers, John Meyers, Harry Cook, Mazourka, Chas. Peterson, Fish Spring, Wm. M. Downer, San Francisco, Jack Reed, Frank Lenot, Owen Jones, Black Eagle, J. S. Stotler, Tonopah, J. H. Shannon, Bishop.

INDEPENDENCE HOTEL.

J. C. Newlon, P. Knowlton, J. W. Newby, Geo. St Clair, Reward, D. K. Zimmerman, Tonopah, Fred Burckhardt, Henry Burckhardt, Lone Pine, W. A. Trickey, Clay Hampton, Bishop, Chas. Rose, Tinnemaha, M. Marks, S. F., W. G. Dixon, Big Pine.

Delightful Entertainment

The Porter—Charles Concert Company gave two performances in town this week and gave us a rare musical treat. They have followed the east slope of the Sierras from Reno and will go as far south as Keeler. Mr. and Mrs. Porter rank with the best soloists in the state, and the illustrated songs make a pleasing and realistic variety. The company has an extensive repetoire, the program of the two evenings being entirely different. They intend to visit us again next year and their coming will be looked forward to with great pleasure by our people.

Real Estate Transfers.

Recorded since last report:

Geo. W. Davis and wife to F. A. Hyde Dec. 2, 1901—224.35 acres, including Keeler townsite.

F. A. Hyde to Inyo Development Co., Dec. 6, 1901—Same land as above, $5.00 All lots in townsite of Keeler reserved.

SUPERIOR COURT.

Hon. Walter A. Lamar, Judge.

MONDAY, Dec. 29, 1901.

Estate of John J. McKay, deceased—Final account allowed and settled. Decree of distribution made.

Two hundred hoboes are in the vicinity of Tehachapi on their way south to spend the winter in a more congenial clime The southern cities and counties are preparing with rock piles to entertain the weary tourists.

Summons.

IN THE JUSTICE'S COURT OF THIRD TOWNSHIP, COUNTY OF INYO, STATE OF CALIFORNIA.

BEN. H. YANDELL, Plaintiff,
vs.
L. H. R. VON RUECAU and W. J. CHAMBERS, Defendants.

THE PEOPLE OF THE STATE OF CALIFORNIA send greeting to L. H. R. Von Ruecau and W. J. Chambers, defendants.

You are hereby directed to appear before me at my office, at Independence in said Township and answer the complaint in an action entitled as above, brought against you in the Justice's Court of Third Township, County of Inyo, State of California, within five days after service on you of this summons,—if served within city and county, township or city in which this action is brought; or, if served out of said township or city, but in this county, within ten days; or within twenty days if served elsewhere.

And you are hereby notified that unless you appear and answer as above required the said plaintiff will take judgment for any money or damages demanded in the complaint, as arising upon contract, or he will apply to the Court for the relief demanded in the complaint.

Given under my hand this 10th day of August, 1901. A. V. DAVIDSON.

Justice of the Peace of said Township.

Ben. H. Yandell, in pro. per., attorney for plaintiff.

TO LAKE TAHOE.

A TRIP OF RARE ITEREST.

Passengers on west-bound overland trains o Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leavpromptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the mo ning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spen examining the famous Comstock Mines (now being worked to a perpendicular depth of 2,10 feet) with their massive hoisting and pumping machinery. Returning, see Time Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

TOPICS OF MOMENT TO AGRICULTURISTS

Experiences of Successful Farmers Succinctly Told for the Benefit of Ambitious Tillers of the Soil.

APPLES FOR EXPORT TRADE.

One of the leading growers of Albemarle Pippins, of Virginia, one of the chief money crops of the Blue Ridge section of Virginia and adjoining States, is the winter apple adapted to the export trade, the requirements of which are very exacting. Still with proper selection of land upon which to plant, and a thorough knowledge of the special conditions requisite for the growing and maturing of the several varieties marketed abroad, there is certainly no crop that can be raised along the Blue Ridge Mountains that gives as good returns for the money invested. Nearly all the successful apple orchards in Virginia are grown in rough mountain coves in black stony soil, and some of the most successful are on land almost worthless for general farming purposes. The writer visited an orchard a few days since from which the crop was sold two years ago for $4,500 on the trees, leaving the culls, which were sold for $500. The land upon which this orchard was planted was bought thirty years ago for two dolars an acre. It is a mountain cove with northeast exposure, black soil and very stony, and the variety grown was the Albemarle or Yellow Newton Pippin.

From the first introduction the Albemarle Pippin has been a favorite in the English market, owing to its good shipping qualities and exceeding fine flavor; and it is not unusual to see them selling in the wholesale markets of Liverpool for twice or three times the price commanded by other American apples; it is not unusual for them to sell in the English markets at from $8.00 to $10.00 per barrel. There are two distinct varieties of this apple—the "Yellow" and the "Green." The Yellow Albemarle or Newton Pippin is far superior to the green and is decidedly the one to plant for the export trade on account of its large size, bright color and better keeping qualities.

This apple is very susceptible to the influences of soil, climate and elevation. The tree is rather slender and of slow growth, becoming large and spreading as it attains age. It is always characterized by a rough bark. It is very slow to beging bearing, but in a favorable locality is an abundant producer every other year after it attains the age of fifteen years. It succeeds best in a mountain cove with a northeast or southeast exposure. It must have the morning sun and a high elevation to prevent it from clouding.

The Pippin should never be planted on ordinary flat or ridge land, for it is impossible to produce fine export fruit on such land, and a pippin orchard that does not produce good export fruit is a very poor investment, for poor pippins will not command as much on the market as good red apples. and it will positively not bear except every other year, and in many localities where the bets of red apples are grown it will not bear at all. It is generally conceded that the pippin in point of flavor stands at the head of winter apples. It is a good keeper when properly handled, but shows bruises very distinctly and requires careful packing. Unless certain that the pippin can be grown to a high state of perfection, one had best plant something else.

WHY ORCHARD TREES FAIL.

While 250,000,000 trees were sold by nurserymen last spring, only 150,000,000 are alive to-day, including all planted by fruit growers in past years. This is as nearly as I can quote Professor Bailey's first words before the recent Nurserymen's Association at Niagara Falls, says a correspondent of "Green's Fruit Grower." I quote from memory and may not be quite accurate in figures in every instance. Only one tree in sixteen lives at all. Only one in five lives to yield any fruit. Only one in one hundred that lives gives anything like good results. The loss of seeds is equally as great. These facts indicate great carelessness, or lack of experience in planting trees or seeds, yet the loss is no greater than that which seems to occur to the usual forces of nature, though in nature there is no waste of substance. The robin hatches, say, five young birds each season. If all the young lived, in ten years the increase from one pair of birds would amount to 50,000 birds; thus the world would be overrun with robins. In nature not one seed in one thousand lives to make a plant or tree, and of those that live not one in one hundred ever reaches the blossoming stage. Not one fish egg of 1,000 hatches, and but few that hatch survive long enough to reach mature size. If all the fish eggs hatched and all young fishes lived, the waters of the earth would become solid with fish, so as to impede navigation.

It is not the fault of nurserymen that more trees sold and planted do not live to produce abundant harvests of fine fruit. Many people who plant trees have not the experience necessary to make them live and thrive. Many planters do not do as well as they know how to do in planting trees. If every planter made all of his trees live and produce as they might the markets would be flooded. John Burrows considers the personality of each tree and vine. As we passed over his place he would remark: "This tree or vine needs more pruning; this vine was pruned too closely; that one needs spraying; the other needs having its fruit thinned," etc. He knows the personal needs of each. Time sifts out all dross, hence nurserymen should be watchful. If poor varieties are sold they will be discarded later. If you sell poor trees your trade will diminish. The careless planting of trees by the orchardist creates a larger demand from nurserymen. While it is your duty to instruct the fruit grower who plants your products, you are not responsible if that man neglects your advice.

WOULD GROW ALL TOBACCO IN AMERICA.

Secretary Wilson announced to-day that experts of the Agricultural Department will hunt all over the United States and its possessions for conditions favorable to the cultivation of filler tobacco, such as is now raised in Cuba, so that if possible all the filler tobacco used in this country eventually may be raised within the boundaries of the United States.

"The United States," he said, "is now paying $8,000,000 for wrapper tobacco. We have succeeded in finding in this country the conditions under which all the wrapper tobacco we need can be raised here, and experts of the Department of Agriculture for the first time are seeking soils adaptable to the cultivation of the fine filler product. We have parts of Pennsylvania, Ohio and Texas selected for the investigation of our experts, and land for similar purposes will be selected in all our new island possessions with a view to ascertaining how and under what conditions the filler product can be built up here."—From a Washington Letter.

ECONOMIC PROGRESS.

If we were asked to name the greatest improvements that have been made in farming within the past fifty years, we would name the introduction of the Early Rose potato, which opened the way for so many other new varieties, that have not only increased our potato crop and improved the quality, but have shortened the growing season so that they are no longer left to ripen until the ground freezes over them. The next, in order of time, was the building of the silo, and filling it so that the farm stock, and especially milch cows, can have succulent feed in the winter. The Babcock test, which enables the dairyman to know the amount of butter fat in the milk of each cow, that he may select the best and send the poor ones to the slaughter. It is not as generally used as it should be, but it has helped when properly used on the farm or at the creamery where milk is bought upon its value for butter-making. The centrifugal cream separator is not only saving much loss of cream, but giving a better, because cleaner, butter. The corn shedder, that has led Western farmers to save the corn fodder that was formerly wasted, really adds millions of dollars to the value of the corn crop each year, or will when generally used, and it will be as much a part of the equipment of the corn grower as reapers and binders and thrashing machines are of the wheat grower.—American Cultivator.

GIRDLED TREES.

Standing near a blacksmith shop at Highlands Cal., are two or three large orange trees that have been divested of every particle of bark for a distance of two feet along the main trunk of the trees. Strange that the plants do not die. But somehow they continue in fair condition, and show no indication of giving up the battle for life. There are few exogenous plants that will survive the entire loss of bark in this way. The American tulip tree presents some noted examples of life under these conditions. The orange tree is subject to but one serious disease in California, and it is doubtful if another plant in all this section shows so much vitality. But the Highland case is the first on record where it lives without bark, and feeds through the hard-wood cells of the interior of the trunk.

BEES ARE BAROMETERS.

Such should be the title of these insects, for whoever observes them carefully finds it easy enough to foretell exactly the kind of weather to be expected. At least that is the opinion of many raisers of bees.

Generally the bee stays at home when rain is in the air. When the sky is simply dark and cloudy these busy workers do not leave their dwelling all at once. A few go out at first, as though the queen had sent out messengers to study the state of the atmosphere.

The greater number remain on observation until the clouds begin to dissipate and then the battalions entire rush out in search of their nectar. A bee never goes out in a fog.

In Arizona the orchardists are fixing a shelter for their orange trees. The cost will be about $500 an acre, but it is thought this protection against the heat of the midday summer sun and the danger of frost will almost pay, in one season, for this expenditure.

A DOMESTIC COMEDY.

THE VARIED RESULTS OF REARRANGING THE FURNITURE.

Mrs. Blank's Mania For Changing the Appearance of the Rooms Brought Trouble to the Male Contingent and Sorrow to Herself.

"Do you change the position of the furniture when you clean a room?" inquired housewife No. 1 of a friend in the course of a heart to heart talk.

"Do I? Why, yes, indeed! I don't feel as if the room is cleaned unless I change the furniture a little bit. Do you?"

"Well, I usually change the ornaments around and so forth, but in the spring and fall I like to change everything in a room—completely alter the whole appearance of it. Then I fancy the things are all new, and they seem to look prettier somehow. But, do you know, my husband doesn't like it at all!"

"Neither does mine! Isn't that singular? Men are so peculiar!"

"Yes, indeed they are!"

So many housekeepers share the views of these two that a story with a moral will not be out of place.

It was the other night only that Mr. Blank went unsuspiciously up stairs to bed at an unusually early hour, leaving his wife reading in the sitting room. He had a headache and carried a goblet of water in his right hand. Fearlessly advancing into the dark bedroom Mr. Blank suddenly felt both legs violently cut from under him. He clutched wildly at the air and said several things of an exclamatory nature, but there was nothing to save him. He went down.

"Good gracious, Henry!" ejaculated Mrs. Blank, hurrying to the scene of disaster. "What is the matter? Where are you? Why don't you light the gas?" Suiting the action to the word, she beheld her husband sprawling across the bed; the glass he had carried had discharged its contents across the pillowshams and shivered on the floor.

Mr. Blank did the talking for the next ten minutes. He said that of all the blankety blank folly of which the mind could conceive this of changing furniture around was the worst. He said it was a pretty thing for a man to walk into his own room and have to fall over things in the dark. He said he wouldn't stand it; the furniture must be replaced where it formerly stood.

"I shan't do anything of the kind," replied Mrs. Blank. "It looks very much nicer where it is. Why don't you feel where you are going when you get into a dark room?"

"S'pose you'd like me to crawl in on all fours!" snarled Mr. Blank. "I couldn't feel where the bed was unless I happened to touch the footboard. I thought I could walk clear over to the bureau. I tell you it's a confounded crank you have on this subject. Some day you'll precipitate a serious accident."

"If any one precipitates, it'll be you, I should think," retorted Mrs. Blank icily. And the furniture remained where it was.

It was the next evening that Master Blank undertook to carry a pile of schoolbooks from the dining room to the sitting room. He had a bottle of ink in his hand, and he thought he knew exactly where the center table was. In the course of his peregrinations in search of it, however, he came into violent collision with the glass door of the bookcase, which he broke. There were also inky traces discernible on the carpet when Mrs. Blank came in. This time there was some balm for her feelings. She could spank Master Blank and did it with the best will in the world.

Her own downfall was not long in coming, however, although for a few days only minor inconveniences were met with, such as the abrasion of ankles against chair rockers and slight bruises received by means of sudden contact with unforeseen obstacles. Last evening Mrs. Blank undertook to transfer the cage of her pet parrot from the window where it spends the day to the snug corner where it passes the night. She did not trouble to light the gas, and by some unaccountable mental lapse she had forgotten the precise point at which a tabouret, on which stood a jardiniere, was stationed. She charged into the tabouret with considerable force, was overbalanced by the weight of the cage in her arms and took a header with a resounding crash. The parrot shrieked, and, unable to distinguish friend from foe, inflicted a severe bite on her mistress' finger. Mr. Blank came in hurriedly, picked up his wife and assisted in making an inventory of sundry contusions. Then they lifted the parrot cage, badly bent, and the jardiniere with a piece chipped out of it and the tabouret somewhat scratched, and then Mr. Blank observed quietly:

"I have just one thing to ask you, Mrs. Blank. Was I right?"

"No, you were not!" retorted Mrs. Blank savagely. "Serious accident? What's serious about this. I should like to know? For goodness' sake, Henry, don't stand there trying to look like a martyr! If you must have the furniture moved back, I'll move it!" And she did.—Philadelphia Record.

Preoccupation.

"Why do you speak so slightingly of that eminent scientist?"

"I didn't mean to speak slightingly of him," answered the young man with the striped shirt front, "but it does seem peculiar to me that a man who knows just when the next comet will arrive and just how far it is to the moon should be so utterly ignorant when it comes to a question of when it's time for dinner or what train to take to get to the nearest town."

The London Lancet having given King Edward a "clean bill of health," the preliminary arrangements for the coronation ceremonies may now proceed without further misgivings.

An ex-treasurer of Arlington, Mass., comes pretty close to holding the guilt record. He has pleaded guilty to an indictment of twenty-eight counts.

It is singular and significant how monstrous each corporate combination appears to the organs of the opposition combination.

As a practical reformer the new ruler of Afghanistan might act as tutor for some more enlightened potentates.

S. F. N. U. No. 47, 1901

SYRUP OF FIGS

IS AN EXCELLENT FAMILY LAXATIVE—IT IS REFRESHING TO THE TASTE AND ACTS PLEASANTLY AND GENTLY. IT ASSISTS ONE TO OVERCOME HABITUAL CONSTIPATION PERMANENTLY

With many millions of families Syrup of Figs has become the ideal home laxative. The combination is a simple and wholesome one, and the method of manufacture by the California Fig Syrup Company ensures that perfect purity and uniformity of product, which have commended it to the favorable consideration of the most eminent physicians and to the intelligent appreciation of all who are well informed in reference to medicinal agents.

Syrup of Figs has truly a laxative effect and acts gently without in any way disturbing the natural functions and with perfect freedom from any unpleasant after effects.

In the process of manufacturing, figs are used, as they are pleasant to the taste, but the medicinally laxative principles of the combination are obtained from plants known to act most beneficially on the system.

To get its beneficial effects—buy the genuine—Manufactured by
